FinCEN defines a check casher as a business that will cash checks and/or sell monetary or other instruments over $1,000 per customer on any given day. If a company, such as a local mini-market, will cash only personal checks up to $100 per day AND it provides no other financial services or instruments (such as money orders or money transmittals), then that company would NOT be considered a check casher for regulatory purposes or have to register as an MSB.

Exemptions from CTR Filing Requirements

MSBs are subject to BSA regulations and OFAC sanctions and, as such, should be filing CTRs, screening customers for OFAC matches, and filing SARs, as appropriate. MSBs cannot exempt their customers from CTR filing requirements like banks can, and banks may not exempt MSB customers from CTR filing, unless the "50 Percent Rule" applies.

The "50 Percent Rule" states that if a MSB derives less than 50 percent of its gross cash receipts from money service activities, then it can be exempted. If the bank exempts a MSB customer under the "50 Percent Rule," it should have documentation evidencing the types of business conducted, receipt volume, and estimations of MSB versus non-MSB activity.

Policies and Procedures for Opening and Monitoring NBFI and MSB Relationships

Banks that maintain account relationships with NBFIs or MSBs should perform greater due diligence for these customers given their higher risk profile. Management should implement the following due diligence procedures for MSBs:

- Identify all NBFI/MSB accounts;
- Determine that the business has met local licensing requirements;
- Ascertain if the MSB has registered or re-registered with FinCEN and obtain a copy of the filing or verify the filing on FinCEN's website;
- Determine if the MSB has procedures to comply with BSA regulations and OFAC monitoring;
- Establish the types and amounts of currencies/instruments handled, and any additional services provided;
- Note the targeted customer base;
- Determine if the business sends or receives international wires and the nature of the activity;
- Determine if the MSB has procedures to monitor and report suspicious activity; and
- Obtain a copy of the MSBs independent BSA review, if available.

Management should document in writing the responses to the items above and update MSB customer files at least annually. In addition, management should continue to monitor these higher risk accounts for suspicious activity. The FDIC does not expect the bank to perform an examination of the MSB; however, the bank should take reasonable steps to document that MSB customers are aware of and are complying with appropriate regulations.

For additional information, examiners should instruct bank management to consult the FinCEN website developed specifically for MSBs. This website contains guidance, registration forms, and other materials useful for MSBs to understand and comply with BSA regulations. Bank customers who are uncertain if they are covered by the definition of MSBs can also visit this site to determine if their business activities qualify.

Foreign Correspondent Banking Relationships

Correspondent accounts are accounts that financial institutions maintain with each other to handle transactions for themselves or for their customers. Correspondent accounts between a foreign bank and U.S. financial institutions are much needed, as they facilitate international trade and investment. However, these relationships may pose a higher risk for money laundering.

Transactions through foreign correspondent accounts are typically large and would permit movement of a high volume of funds relatively quickly. These correspondent accounts also provide foreign entities with ready access to the U.S. financial system. These banks and other financial institutions may be located in countries with unknown AML regulations and controls ranging from strong to weak, corrupt, or nonexistent.

The USA PATRIOT Act establishes reporting and documentation requirements for certain high-risk areas, including:

- Special due diligence requirements for correspondent accounts and private banking accounts which are addressed in 31 CFR 103.181.
- Verification procedures for foreign correspondent account relationships which are included in 31 CFR 103.185.
- Foreign banks with correspondent accounts at U.S. financial institutions must produce bank records, including information on ownership, when requested by regulators and law enforcement, as detailed in Section 319 of the USA PATRIOT Act and codified at 31 CFR 103.185.

The foreign correspondent records detailed above are to be provided within seven days of a law enforcement request and within 120 hours of a Federal regulatory request. Failure to provide such records in a timely manner may result in the U.S. financial institution's required termination of the foreign correspondent account. Such foreign correspondent relationships need only be terminated upon the U.S. financial institution's written receipt of such instruction from either the Secretary of the Treasury or the U.S. Attorney General. If the U.S. financial institution fails to terminate relationships after receiving notification, the U.S. institution may face civil money penalties.

The Treasury was also granted broad authority by the USA PATRIOT Act (codified in 31 USC 5318[A]), allowing it to establish special measures. Such special measures can be established which require U.S. financial institutions to perform additional recordkeeping and/or reporting or require a complete prohibition of accounts and transactions with certain countries and/or specified foreign financial institutions. The Treasury may impose such special measures by regulation or order, in consultation with other regulatory agencies, as appropriate.

Shell Banks

Sections 313 and 319 of the USA PATRIOT Act implemented (by 31 CFR 103.177 and 103.185, respectively) a new provision of the BSA that relates to foreign correspondent accounts. Covered financial institutions (CFI) are prohibited from establishing, maintaining, administering, or managing a correspondent account in the U.S. for or on behalf of a foreign shell bank.

A correspondent account, under this regulation, is defined as an account established by a CFI for a foreign bank to receive deposits from, to make payments or other disbursements on behalf of a foreign financial institution, or to handle other financial transactions related to the foreign bank. An account is further defined as any formal banking or business relationship established to provide:

- Regular services,
- Dealings, and
- Other financial transactions,

and may include:

- Demand deposits,
- Savings deposits,
- Any other transaction or asset account,
- Credit account, or
- Any other extension of credit.

A foreign shell bank is defined as a foreign bank without a physical presence in any country. Physical presence means a place of business that:

- Is maintained by a foreign bank;
- Is located at a fixed address (other than solely an electronic address or a post-office box) in a country in which the foreign bank is authorized to conduct banking activities;
- Provides at that fixed address:
  - One or more full-time employees,
  - Operating records related to its banking activities; and
- Is subject to inspection by the banking authority that licensed the foreign bank to conduct banking activities.

There is one exception to the shell bank prohibition. This exception allows a CFI to maintain a correspondent account with a foreign shell bank if it is a regulated affiliate. As a regulated affiliate, the shell bank must meet the following requirements:

- The shell bank must be affiliated with a depository institution (bank or credit union, either U.S. or foreign) in the U.S. or another foreign jurisdiction.
- The shell bank must be subject to supervision by the banking authority that regulates the affiliated entity.

Furthermore, in any foreign correspondent relationship, the CFI must take reasonable steps to ensure that such an account is not being used indirectly to provide banking services to other foreign shell banks. If the CFI discovers that a foreign correspondent account is providing indirect services in this manner, then it must either prohibit the indirect services to the foreign shell bank or close down the foreign correspondent account. This activity is referred to as "nested" correspondent banking and is discussed in greater detail below under "Foreign Correspondent Banking Money Laundering Risks."

Required Recordkeeping on Correspondent Banking Accounts

As mentioned previously, a CFI that maintains a foreign correspondent account must also maintain records identifying the owners of each foreign bank. To minimize recordkeeping burdens, ownership information is not required for:

- Foreign banks that file form FR-7 with the Federal Reserve, or
- Publicly traded foreign banks.

A CFI must also record the name and street address of a person who resides in the U.S. and who is willing to accept service of legal process on behalf of the foreign institution. In other words, the CFI must collect information so that law enforcement can serve a subpoena or other legal document upon the foreign correspondent bank.

Certification Process

To facilitate information collection, the Treasury, in coordination with the banking industry, Federal regulators and law enforcement agencies, developed a certification process using special forms to standardize information collection. The use of these forms is not required; however, the information must be collected regardless. The CFI must update, or re-certify, the foreign correspondent information at least once every three years.

For new accounts, this certification information must be obtained within 30 calendar days after the opening date. If the CFI is unable to obtain the required information, it must close all correspondent accounts with that foreign bank within a commercially reasonable time. The CFI should review certifications to verify their accuracy. The review should look for potential problems that may warrant further research or information. Should a CFI know, suspect, or have reason to suspect that any certification information is no longer correct, the CFI must request the foreign bank to verify or correct such information within 90 days. If the information is not corrected within that time, the CFI must close all correspondent accounts with that institution within a commercially reasonable time.

Foreign Correspondent Banking Money Laundering Risks

Foreign correspondent accounts provide clearing access to foreign financial institutions and their customers, which may include other foreign banks. Many U.S. financial institutions fail to ascertain the extent to which the foreign banks will allow other foreign banks to use their U.S. accounts. Many high-risk foreign financial institutions have gained access to the U.S. financial system by operating through U.S. correspondent accounts belonging to other foreign banks. These are commonly referred to as "nested" correspondent banks.

Such nested correspondent bank relationships result in the U.S. financial institution's inability to identify the ultimate customer who is passing a transaction through the foreign correspondent's U.S. account. These nested relationships may prevent the U.S. financial institution from effectively complying with BSA regulations, suspicious activity reporting, and OFAC monitoring and sanctions.

If a U.S. financial institution's due diligence or monitoring system identifies the use of such nested accounts, the U.S.

financial institution should do one or more of the following:

- Perform due diligence on the nested users of the foreign correspondent account, to determine and verify critical information including, but not limited to, the following:
    - Ownership information,
    - Service of legal process contact,
    - Country of origin,
    - AML policies and procedures,
    - Shell bank and licensing status,
    - Purpose and expected volume and type of transactions;
- Restrict business through the foreign correspondent's accounts to limited transactions and/or purposes; and
- Terminate the initial foreign correspondent account relationship.

Necessary Due Diligence on Foreign Correspondent Accounts

Because of the heightened risk related to foreign correspondent banking, the U.S. financial institution needs to assess the money laundering risks associated with each of its correspondent accounts. The U.S. financial institution should understand the nature of each account holder's business and the purpose of the account. In addition, the U.S. financial institution should have an expected volume and type of transaction anticipated for each foreign bank customer.

When a new relationship is established, the U.S. financial institution should assess the management and financial condition of the foreign bank, as well as its AML programs and the home country's money laundering regulations and supervisory oversight. These due diligence measures are in addition to the minimum regulation requirements.

Each U.S. financial institution maintaining foreign correspondent accounts must establish appropriate, specific, and, where necessary, enhanced due diligence policies, procedures, and controls as required by 31 CFR 103.181. The U.S. financial institution's AML policies and programs should enable it to reasonably detect and report instances of money laundering occurring through the use of foreign correspondent accounts.

The regulations specify that additional due diligence must be completed if the foreign bank is:

- Operating under an offshore license;
- Operating under a license granted by a jurisdiction designated by the Treasury or an intergovernmental agency (such as the Financial Action Task Force [FATF]) as being a primary money laundering concern; or
- Located in a bank secrecy or money laundering haven.

Internal financial institution policies should focus compliance efforts on those accounts that represent a higher risk of money laundering. U.S. financial institutions may use their own risk assessment or incorporate the best practices developed by industry and regulatory recommendations.

Offshore Banks

An offshore bank is one which does not transact business with the citizens of the country that licenses the bank. For example, a bank is licensed as an offshore bank in Spain. This institution may do business with anyone in the world except for the citizens of Spain. Offshore banks are typically a revenue generator for the host country and may not be as closely regulated as banks that provide financial services to the host country's citizens. The host country may also have lax AML standards, controls, and enforcement. As such, offshore licenses can be appealing to those wishing to launder illegally obtained funds.

The FATF designates Non-Cooperative Countries and Territories (NCCTs). These countries have been so designated because they have not applied the recommended international anti-money laundering standards and procedures to their financial systems. The money laundering standards established by FATF are known as the Forty Recommendations. Further discussion of the Forty Recommendations and NCCTs can be found at the FATF website.

Payable Through Accounts

A payable through account (PTA) is a demand deposit account through which banking agencies located in the U.S. extend check writing privileges to the customers of other domestic or foreign institutions. PTAs have long been used in the U.S. by credit unions (for example, for checking account services) and investment companies (for example, for checking account services associated with money market management accounts) to offer customers the full range of banking services that only a commercial bank has the ability to provide.

International PTA Use

Under an international PTA arrangement, a U.S. financial institution, Edge corporation, or the U.S. branch or agency of a foreign bank (U.S. banking entity) opens a master checking account in the name of a foreign bank operating outside the U.S. The master account is subsequently divided by the foreign bank into "sub-accounts" each in the name of one of the foreign bank's customers. Each sub-account holder becomes a signatory on the foreign bank's account at the U.S. banking entity and may conduct banking activities through the account.

Financial institution regulators have become aware of the increasing use of international PTAs. These accounts are being marketed by U.S. financial institutions to foreign banks that otherwise would not have the ability to offer their customers direct access to the U.S. banking system. While PTAs provide legitimate business benefits, the operational aspects of the account make it particularly vulnerable to abuse as a mechanism to launder money. In addition, PTAs present unique safety and soundness risks to banking entities in the U.S.

Sub-account holders of the PTA master accounts at the U.S. banking entity may include other foreign banks, rather than just individuals or corporate accounts. These second-tier foreign banks then solicit individuals as customers. This may result in thousands of individuals having signatory authority over a single account at a U.S. banking entity. The PTA mechanism permits the foreign bank operating outside the U.S. to offer its customers, the sub-account holders, U.S. denominated checks and ancillary services, such as the ability to receive wire transfers to and from sub-accounts and to cash checks. Checks are encoded with the foreign bank's account number along with a numeric code to identify the sub-account.

Deposits into the U.S. master account may flow through the foreign bank, which pools them for daily transfer to the U.S. banking entity. Funds may also flow directly to the U.S. banking entity for credit to the master account, with further credit to the sub-account.

Benefits Associated with Payable Through Accounts

While the objectives of U.S. financial institutions marketing PTAs and the foreign banks which subscribe to the PTA service may vary, essentially three benefits currently drive provider and user interest:

- PTAs permit U.S. financial institutions to attract dollar deposits from the home market of foreign banks without jeopardizing the foreign bank's relationship with its clients.
- PTAs provide fee income potential for both the U.S. PTA provider and the foreign bank.
- Foreign banks can offer their customers efficient and low-cost access to the U.S. banking system.

Risks Associated with Payable Through Accounts

The PTA arrangement between a U.S. banking entity and a foreign bank may be subject to the following risks:

- *Money Laundering risk* – the risk of possible illegal or improper conduct flowing through the PTAs.
- *OFAC risk* – the risk that the U.S. banking entity does not know the ultimate PTA customers which could facilitate the completion of sanctioned or blocked transactions.
- *Credit risk* - the risk the foreign bank will fail to perform according to the terms and conditions of the PTA agreement, either due to bankruptcy or other financial difficulties.
- *Settlement risk* - the risk that arises when the U.S. banking entity pays out funds before it can be certain that it will receive the corresponding deposit from the foreign bank.
- *Country risk* - the risk the foreign bank will be unable to fulfill its international obligations due to domestic strife, revolution, or political disturbances.
- *Regulatory risk* - the risk that deposit and withdrawal transactions through the PTA may violate State and/or Federal laws and regulations.

Unless a U.S. banking entity is able to identify adequately, and understand the transactions of the ultimate users of the foreign bank's account maintained at the U.S. banking entity, there is a potential for serious illegal conduct.

Because of the possibility of illicit activities being conducted through PTAs at U.S. banking entities, financial institution regulators believe it is inconsistent with the principles of safe and sound banking for U.S. banking entities to offer PTA services without developing and maintaining policies and procedures designed to guard against the possible improper or illegal use of PTA facilities.

Policy Recommendations

Policies and procedures must be fashioned to enable each U.S. banking entity offering PTA services to foreign banks to:

- Identify sufficiently the ultimate users of its foreign bank PTAs, including obtaining (or having the ability to obtain) substantially the same type of information on the ultimate users as the U.S. banking entity obtains for its domestic customers.
- Review the foreign bank's own procedures for identifying and monitoring sub-account holders, as

well as the relevant statutory and regulatory requirements placed on the foreign bank to identify and monitor the transactions of its own customers by its home country supervisory authorities.
- Monitor account activities conducted in the PTAs with foreign banks and report suspicious or unusual activity in accordance with Federal regulations.

Termination of PTAs

It is recommended the U.S. banking entity terminate a PTA with a foreign bank as expeditiously as possible in the following situations:

- Adequate information about the ultimate users of the PTAs cannot be obtained.
- The U.S. banking entity cannot adequately rely on the home country supervisor to require the foreign bank to identify and monitor the transactions of its own customers.
- The U.S. banking entity is unable to ensure that its PTAs are not being used for money laundering or other illicit purposes.
- The U.S. banking entity identifies ongoing suspicious and unusual activities dominating the PTA transactions.

Private Banking Activities

Private banking has proven to be a profitable operation and is a fast-growing business in U.S. financial institutions. Although the financial service industry does not use a standard definition for private banking, it is generally held that private banking services include an array of all-inclusive deposit account, lending, investment, trust, and cash management services offered to high net worth customers and their business interests. Not all financial institutions operate private banking departments, but they typically offer special attention to their best customers and ensure greater privacy concerning the transactions and activities of these customers. Smaller institutions may offer similar services to certain customers while not specifically referring to this activity as private banking.

Confidentiality is a vital element in administering private banking relationships. Although customers may choose private banking services to manage their assets, they may also seek confidential ownership of their assets or a safe, legal haven for their capital. When acting as a fiduciary, financial institutions may have statutory, contractual, or ethical obligations to uphold customer confidentiality.

Typically, a private banking department will service a financial institution's wealthy foreign customers, as these customers may be conducting more complex transactions and using services that facilitate international transactions. Because of these attributes, private banking also appeals to money launderers.

Examiners should evaluate the financial institution management's ability to measure and control the risk of money laundering in the private banking area and determine if adequate AML policies, procedures, and oversight are in place to ensure compliance with laws and regulations and adequate identification of suspicious activities.

Policy Recommendations

At a minimum, the financial institution's private banking policies and procedures should address:

- Acceptance and approval of private banking clients;
- Desired or targeted client base;
- Products and services that will be offered;
- Effective account opening procedures and documentation requirements; and
- Account review upon opening and ongoing thereafter.

In addition, the financial institution must:

- Document the identity and source of wealth on all customers requesting custody or private banking services;
- Understand each customer's net worth, account needs, as well as level and type of expected activity;
- Verify the source and accuracy of private banking referrals;
- Verify the origins of the assets or funds when transactions are received from other financial service providers;
- Review employment and business information, income levels, financial statements, net worth, and credit reports; and
- Monitor the account relationship by:
    - Reviewing activity against customer profile expectations,
    - Investigating extraordinary transactions,
    - Maintaining an administrative file documenting the customer's profile and activity levels,
    - Maintaining documentation that details personal observations of the customer's business and/or personal life, and
    - Ensuring that account reviews are completed periodically by someone other than the private banking officer.

Financial institutions should ensure, through independent review, that private banking account officers have adequate documentation for accepting new private banking account funds and are performing the responsibilities detailed above.

Enhanced Due Diligence for Non-U.S. Persons Maintaining Private Banking Accounts

Section 312 of the USA PATRIOT Act, implemented by 31 CFR 103.181, requires U.S. financial institutions that maintain private banking accounts for non-U.S. persons to establish enhanced due diligence policies, procedures, and controls that are designed to detect and report money laundering.

Private banking accounts subject to requirements under Section 312 of the USA PATRIOT Act include:

- Accounts, or any combination of accounts with a minimum deposit of funds or other assets of at least $1 million;
- Accounts established for one or more individuals (beneficial owners) that are neither U.S. citizens, nor lawful permanent residents of the U.S.; or
- Accounts assigned to or managed by an officer, employee, or agent of a financial institution acting as a liaison between the financial institution and the direct or beneficial owner of the account.

Regulations for private banking accounts specify that enhanced due diligence procedures and controls should be established where appropriate and necessary with respect to the applicable accounts and relationships. The financial institution must be able to show it is able to reasonably detect suspicious and reportable money laundering transactions and activities.

A due diligence program is considered reasonable if it focuses compliance efforts on those accounts that represent a high risk of money laundering. Private banking accounts of foreign customers inherently indicate higher risk than many U.S. accounts; however, it is incumbent upon the financial institution to establish a reasonable level of monitoring and review relative to the risk of the account and/or department.

A financial institution may use its own risk assessment or incorporate industry best practices into its due diligence program. Specific due diligence procedures required by Section 312 of USA PATRIOT Act include:

- Verification of the identity of the nominal and beneficial owners of an account;
- Documentation showing the source of funds; and
- Enhanced scrutiny of accounts and transactions of senior foreign political figures, also known as "politically exposed persons" (PEPs).

<u>Identity Verification</u>

The financial institution is expected to take reasonable steps to verify the identity of both the nominal and the beneficial owners of private banking accounts. Often, private banking departments maintain customer information in a central confidential file or use code names in order to protect the customer's privacy. Because of the nature of the account relationship with the bank liaison and the focus on a customer's privacy, customer profile information has not always been well documented.

Other methods used to maintain customer privacy include:

- Private Investment Corporation (PIC),
- Offshore Trusts, and
- Token Name Accounts.

PICs are established to hold a customer's personal assets in a separate legal entity. PICs offer confidentiality of ownership, hold assets centrally, and provide intermediaries between private banking customers and the potential beneficiaries of the PICs or trusts. A PIC may also be a trust asset. PICs are incorporated frequently in countries that impose low or no taxes on company assets and operations, or are bank secrecy havens. They are sometimes established by the financial institution for customers through their international affiliates – some high profile or political customers have a legitimate need for a higher degree of financial privacy. However, financial institutions should exercise extra care when dealing with beneficial owners of PICs and associated trusts because they can be misused to conceal illegal activities. Since PICs issue bearer shares, anonymous relationships in which the financial institution does not know and document the beneficial owner should not be permitted.

Offshore trusts can operate similarly to PICs and can even include PICs as assets. Beneficial owners may be numerous; regardless, the financial institution must have records demonstrating reasonable knowledge and due diligence of beneficiary identities. Offshore trusts should identify grantors of the trusts and sources of the grantors' wealth.

Furthermore, OFAC screening may be difficult or impossible when transactions are conducted through PICs, offshore trusts, or token name accounts that shield true identities. Management must ensure that accounts maintained in a name other than that of the beneficial owner are subject to the same level of filtering for OFAC as other accounts. That is, the OFAC screening process must include the account's beneficial ownership as well as the official account name.

Documentation of Source of Funds

Documentation of the source of funds deposited into a private banking account is also required by Section 312 of the USA PATRIOT Act. Customers will frequently transfer large sums in single transactions and the financial institution must document initial and ongoing monetary flows in order to effectively identify and report suspicious activity. Understanding how high net worth customers' cash flows, operational income, and expenses flow through a private banking relationship is an integral part of understanding the customer's wealth picture. Due diligence will often necessitate that the financial institution thoroughly investigate the customer's expected transactions.

Enhanced Scrutiny of Politically Exposed Persons

Enhanced scrutiny of accounts and transactions involving senior foreign political figures, their families and associates is required by law in order to guard against laundering the proceeds of foreign corruption.

Illegal activities related to foreign corruption were brought under the definition of money laundering by Section 315 of USA PATRIOT Act. Abuses and corruption by political officials not only negatively impacts their home country's finances, but can also undermine international government and working group efforts against money laundering. A financial institution doing business with corrupt PEPs can be exposed to significant reputational risk, which could result in adverse financial impact through news articles, loss of customers, and even civil money penalties (CMPs). Furthermore, a financial institution, its directors, officers, and employees can be exposed to criminal charges if they did know or should have known (willful blindness) that funds stemmed from corruption or serious crimes.

As such, PEP accounts can present a higher risk. Enhanced scrutiny is appropriate in the following situations:

- Customer asserts a need to have the foreign political figure or related persons remain secret.
- Transactions are requested to be performed that are not expected given the customer's account profile.
- Amounts and transactions do not make sense in relation to the PEP's known income sources and uses.
- Transactions exceed reasonable amounts in relation to the PEP's known net worth.
- Transactions are large in relation to the PEP's home country financial condition.
- PEP's home country is economically depressed, yet the PEP's home country transactions funding the account remain high.
- Customer refuses to disclose the nominal or beneficial owner of the account or provides false or misleading information.
- Net worth and/or source of funds for the PEP are unidentified.

Additional discussion of due diligence procedures for these accounts can be found in interagency guidance issued in FDIC FIL-6-2001, dated in January 2001, "Guidance on Enhanced Scrutiny for Transactions That May Involve the Proceeds of Foreign Official Corruption."

Fiduciary and Custody Services within the Private Banking Department

Although fiduciary and agency activities are circumscribed by formal trust laws, private banking clients may delegate varying degrees of authority (discretionary versus nondiscretionary) over assets under management to the financial institution. In all cases, the terms under which the assets are managed are fully described in a formal agreement, also known as the "governing instrument" between the customer and the financial institution.

Even though the level of authority may encompass a wide range of products and services, examiners should determine the level of discretionary authority delegated to private banking department personnel in the management of these activities and the documentation required from customers to execute transactions on their behalf. Private banking department personnel should not be able to execute transactions on behalf of their clients without proper documentation from clients or independent verification of client instructions.

Concerning investments, fiduciaries are also required to exercise prudent investment standards, so the financial institution must ensure that if it is co-trustee or under direction of the customer who retains investment discretion, that the investments meet prudent standards and are in the best interest of the beneficiaries of the trust accounts.

Trust agreements may also be structured to permit the grantor/customer to continue to add to the corpus of the trust account. This provides another avenue to place funds into the banking system and may be used by money launderers for that purpose.

Investment management services have many similar characteristics to trust accounts. The accounts may be discretionary or nondiscretionary. Transactions from clients through a private banking department relationship manager should be properly documented and able to be independently verified. The portfolio manager should also document the investment objectives.

Custodial services offered to private banking customers include securities safekeeping, receipts and disbursements of dividends and interest, recordkeeping, and accounting. Custody relationships can be established in many ways, including referrals from other departments in the financial institution or from outside investment advisors. The customer, or designated financial advisor, retains full control of the investment management of the property subject to the custodianship. Sales and purchases of assets are made by instruction from the customer, and cash disbursements are prearranged or as instructed, again by the customer. In this case, it is important for the financial institution to know the customer. Procedures for proper administration should be established and reviewed frequently.

Numbered Accounts

A numbered account, also known as a pseudonym account, is opened not under an individual or corporate name, but under an assigned number or pseudonym. These types of numbered accounts are typically services offered in the private banking department or the trust department, but they can be offered anywhere in the institution.

Numbered accounts present some distinct customer advantages when it comes to privacy. First, all of the computerized information is recorded using the number or pseudonym, not the customer's real name. This means that tellers, wire personnel, and various employees do not know the true identity of the customer. Furthermore, it protects the customer against identity theft. If electronic financial records are stolen, the number or pseudonym will not provide personal information. Statements and any documentation would simply show the number, not the customer's true name or social security number.

However, numbered accounts offered by U.S. financial institutions must still meet the requirements of the BSA and specific customer identification and minimum due diligence documentation should be obtained. Account opening personnel must adequately document the customer due diligence performed, and access to this information must be provided to employees reviewing transactions for suspicious activity.

If the financial institution chooses to use numbered accounts, they must ensure that proper procedures are in place. Here are some minimum standards for numbered or pseudonym accounts:

- The BSA Officer should ensure that all required CIP information is obtained and well documented. The documentation should be readily available to regulators upon request.
- Management should ensure that adequate suspicious activity review procedures are in place. These accounts are considered to be high risk, and, as such, should have enhanced scrutiny. In order to properly monitor for unusual or suspicious activities, the person(s) responsible for monitoring these accounts must have the identity of the customer revealed to them. <u>All transactions for these accounts should be reviewed at least once a month or more frequently.</u>
- The financial institution's system for performing OFAC reviews, Section 314(a) Requests, or any other inquiries on its customer databases, must be able to check the actual names and relevant information of these individuals. Typically the software will screen just the account name on the trial balance. Consequently, if the name is not on the trial balance, then it could be overlooked in this process. Management should thoroughly document how it will handle such situations, as well as each review that is performed.

Examiners should include the fact that the financial institution's policy allows for numbered accounts on the "Confidential – Supervisory Section" page of the Report of Examination. Given the high risk nature of this account type, examiners should review them at every examination to ensure that management is adequately handling these accounts.

Pouch Activities

Pouch activities involve the use of a common carrier to transport currency, monetary instruments, and other documents usually from outside the U.S. to a domestic bank account. Pouches can originate from an individual or another financial institution and can contain any kind of document, including all forms of bank transactions such as demand deposits and loan payments. The contents of the pouch are not always subject to search while in transport, and considerable reliance is placed on the financial institution's internal control systems designed to account for the contents and their transfer into the institution's accounts.

Vulnerabilities in pouch systems can be exploited by those looking for an avenue to move illegally-gained funds into the U.S. Law enforcement has uncovered money laundering schemes where pouches were used to transfer:

- Bulk currency, both U.S. and foreign, and
- Sequentially numbered monetary instruments, such as traveler's checks and money orders.

Once these illegal funds are deposited into the U.S. financial institution, they can be moved – typically through use of a wire transfer – anywhere in the world. As such, pouches are used by those looking to legitimize proceeds and obscure the true source of the funds.

Financial institutions establish pouch activities primarily to provide a service. The risks associated with a night deposit drop box (one example of pouch activity) are very different from financial institutions that provide document and currency transport from their international offices to banking offices in the U.S.

A prime benefit of having pouch services is the speed with which international transactions can be placed in the U.S. domestic banking system by avoiding clearing a transaction through several international banks in order to move the funds into the U.S. This benefit is particularly advantageous for customers in countries that do not do direct business with the U.S., including those countries that:

- May require little or no customer identification,
- Are well-known secrecy havens, or
- Are considered NCCTs.

Examination Guidance

Examiners should ascertain if a financial institution offers pouch services. If it does provide these services, examiners must verify that all pouch activity is included in AML programs and is thoroughly monitored for suspicious activity.

Examiners are strongly encouraged to be present during one or more pouch openings during the examination. By reviewing the procedures for opening and documenting items in the pouches, along with records maintained of pouch activities, examiners should be able to ascertain or confirm the degree of risk undertaken and the sufficiency of AML program in relation to the institution's pouch activity.

Special Use Accounts

Special use accounts are in-house accounts established to handle the processing of multiple customer transactions within the financial institution. These accounts are also known as concentration accounts, omnibus, or suspense accounts and serve as settlement accounts. They are used in many areas of a financial institution, including private banking departments and in the wire transfer function. They present heightened money laundering risks because controls may be lax and an audit trail of customer information may not be easy to follow since transactions do not always maintain the customer identifying information with the transaction amount. In addition, many financial institution employees may have access to the account and have the ability to make numerous entries into and out of the account. Balancing of the special use account is also not always the responsibility of one individual, although items posted in the account are usually expected to be processed or resolved and settled in one day.

Financial institutions that use special use accounts should implement risk-based procedures and controls covering access to and operation of these accounts. Procedures and controls should ensure that the audit trail provides for association of the identity of transactor, customer and/or direct or beneficial owner with the actual movement of the funds. As such, financial institutions must maintain complete records of all customer transactions passing through these special use accounts. At a minimum, such records should contain the following information:

- Customer name,
- Customer address,
- Account number,
- Dollar value of the transaction, and
- Dates the account was affected.

Wire Transfer Activities

The established wire transfer systems permit quick movement of funds throughout the U.S. banking system and internationally. Wire transfers are commonly used to move funds in various money laundering schemes. Successive wire transfers allow the originator and the ultimate beneficiary of the funds to:

- Obtain relative anonymity,
- Obfuscate the money trail,
- Easily aggregate funds from a large geographic area,
- Move funds out of or into the U.S., and
- "Legitimize" illegal proceeds.

Financial institutions use two wire transfer systems in the U.S., the Fedwire and the Clearing House Interbank Payments System (CHIPS). A telecommunications network, the Society for Worldwide Interbank Financial Telecommunications (SWIFT), is often used to send messages with international wire transfers.

Fedwire transactions are governed by the Uniform Commercial Code Article 4a and the Federal Reserve Board's Regulation J. These laws primarily facilitate business conduct for electronic funds transfers; however, financial institutions must ensure they are using procedures for identification and reporting of suspicious and unusual transactions.

Wire Transfer Money Laundering Risks

Although wire systems are used in many legitimate ways, most money launderers use wire transfers to aggregate funds from different sources and move them through accounts at different banks until their origin cannot be traced. Money laundering schemes uncovered by law enforcement agencies show that money launderers aggregate funds from multiple accounts at the same financial institution, wire those funds to accounts held at other U.S. financial institutions, consolidate funds from these larger accounts, and ultimately wire the funds to offshore accounts in countries where laws are designed to facilitate secrecy. In some cases the monies are then sent back into the U.S. with the appearance of being legitimate funds.

It can be challenging for financial institutions to identify suspicious transactions due to the:

- Large number of wire transactions that occur in any given day;
- Size of wire transactions;
- Speed at which transactions move and settle; and
- Weaknesses in identifying the customers (originators and/or beneficiaries) of such transactions at the sending or receiving banks.

A money launderer will often try to make wire transfers appear to be for a legitimate purpose, or may use "shell companies" (corporations that exist only on paper, similar to shell banks discussed above in the section entitled "Foreign Correspondent Banking Relationships"), often chartered in another country. Money launderers usually look for legitimate businesses with high cash sales and high turnover to serve as a front company.

Mitigation of Wire Transfer Money Laundering Risks

Familiarity with the customer and type of business enables the financial institution to more accurately analyze transactions and thereby identify unusual wire transfer activity. With appropriate CDD policies and procedures, financial institutions should have some expectation of the type and volume of activity in accounts, especially if the account belongs to a high-risk entity or the customer uses higher-risk products or services. Consideration should be given to the following items in arriving at this expectation:

- Type and size of business;
- Customer's stated explanation for activity;
- Historical customer activity; and
- Activity of other customers in the same line of business.

Wire Transfer Recordkeeping Requirements

BSA recordkeeping rules require the retention of certain information for funds transfers and the transmittal of funds. Basic recordkeeping requirements are established in 31 CFR 103.33 and require the maintenance of the following records on all wire transfers originated over $3,000:

- Name and address of the originator,
- Amount of the payment order,
- Execution date of the payment order,
- Payment instructions received from the originator,
- Identity of the beneficiary's financial institution, and
- As many of the following items that are received with the transfer order:
  - Name and address of the beneficiary,
  - Account number of the beneficiary, and
  - Any other specific identifier of the beneficiary.

In addition, as either an intermediary bank or a beneficiary bank, the financial institution must retain a complete record of the payment order. Furthermore, the $3,000 minimum limit for retention of this information does not mean that wire transfers under this amount should not be reviewed or monitored for unusual activity.

Funds Transfer Record Keeping and Travel Rule Regulations

Along with the BSA recordkeeping rules, the Funds Transfer Recordkeeping and Travel Rule Regulations became effective in May of 1996. The regulations call for standard recordkeeping requirements to ensure all institutions are obtaining and maintaining the same information on all wire transfers of $3,000 or more. Like the BSA recordkeeping requirements, these additional recordkeeping requirements were put in place to create a paper trail for law enforcement to investigate money laundering schemes and other illegal activities.

Industry best practices dictate that domestic institutions should encourage all foreign countries to attach the identity of the originator to wire information as it travels to the U.S. and to other countries. Furthermore, the financial institution sending or receiving the wire cannot ensure adequate OFAC verification if they do not have all of the appropriate originator and beneficiary information on wire transfers.

Necessary Due Diligence on Wire Transfer Customers

To comply with these standards and regulations, a financial institution needs to know its customers. The ability to trace funds and identify suspicious and unusual transactions hinges on retaining information and a strong knowledge of the customer developed through comprehensive CDD procedures. Financial institution personnel must know the identity and business of the customer on whose behalf wire transfers are sent and received. Wire room personnel must be trained to identify suspicious or unusual wire activities and have a strong understanding of the bank's OFAC monitoring and reporting procedures.

Review and monitoring activity should also take place subsequent to sending or receiving wires to further aid in identification of suspicious transactions. Reviewers should look for:

- Unusual wire transfer activity patterns;
- Transfers to and from high-risk countries; or
- Any of the "red flags" relating to wire transfers (refer to the "Identification of Suspicious Transactions" discussion included within this chapter.)

Risks Associated with Wire Transfers Sent with "Pay Upon Proper Identification" Instructions

Financial institutions should also be particularly cautious of wire transfers sent or received with "Pay Upon Proper Identification" (PUPID) instructions. PUPID transactions allow the wire transfer originator to send funds to a financial institution location where an individual or business does not have an account relationship. Since the funds receiver does not have an account at the financial institution, he/she must show prior identification to pick up the funds, hence the term PUPID. These transactions can be legitimate, but pose a higher than normal money laundering risk.

Electronic Banking

Electronic banking (E-Banking) consists of electronic access (through direct personal computer connection, the Internet, or other means) to financial institution services, such as opening deposit accounts, applying for loans, and conducting transactions. E-banking risks are not as significant at financial institutions that have a stand-alone "information only" website with no transactional or application capabilities. Many financial institutions offer a variety of E-banking services and it is very common to obtain a credit card, car loan, or mortgage loan on the Internet without ever meeting face-to-face with a financial institution representative.

The financial institution should have established policies and procedures for authenticating new customers obtained through E-banking channels. Customer identification policies and procedures should meet the minimum requirements of the USA PATRIOT Act and be sufficient to cover the additional risks related to customers opening accounts electronically. New account applications submitted over the Internet increase the difficulty of verifying the application information. Many financial institutions choose to require the prospective customer to come into an office or branch to complete the account opening process, while others will not. If a financial institution completes the entire application process over the Internet, it should consider using third-party databases or vendors to provide:

- Positive verification, which ensures that material information provided by an applicant matches information from third-party sources;
- Negative verification, which ensures that information provided is not linked to previous fraudulent activity; and
- Logical verification, which ensures that the information is logically consistent.

In addition to initial verification, a financial institution must also authenticate the customer's identity each time an attempt is made to access his/her private information or to conduct a transaction over the Internet. The authentication methods involve confirming one or more of these three factors:

- Information only the user should know, such as a password or personal identification number (PIN);
- An object the user possesses, such as an automatic teller machine (ATM) card, smart card, or token; or
- Something physical of the user, such as a biometric characteristic like a fingerprint or iris pattern.

Automated Clearing House Transactions and Electronic Initiation Systems

Additionally, the National Automated Clearing House Association (NACHA) has provided standards which mandate the use of security measures for automated clearing house (ACH) transactions initiated through the Internet or electronically. These guidelines include ensuring secure access to the electronic and Internet systems in conjunction with procedures reasonably designed to identify the ACH originator.

Interagency guidance on authenticating users of technology and the identity of customers is further discussed in FDIC FIL-69-2001, "Authentication in an Electronic Environment." This FIL not only identifies the risk of access to systems and information, it also emphasizes the need to verify the identity of electronic and/or Internet customers, particularly those who request account opening and new services online.

MONITORING BANK SECRECY ACT COMPLIANCE

Section 8(s) of the Federal Deposit Insurance Act, which implements 12 U.S.C. 1818, requires the FDIC to:

- Develop regulations that require insured financial institutions to establish and maintain procedures reasonably designed to assure and monitor compliance with the BSA;
- Review such procedures during examinations; and
- Describe any problem with the procedures maintained by the insured depository institution within reports of examination.

To satisfy Section 8(s) requirements, at a minimum, examiners must review BSA at each regular safety and soundness examination. In addition, the FDIC must conduct its own BSA examination at any intervening Safety and Soundness examination conducted by a State banking authority if such authority does not review for compliance with the BSA. Section 326.8 of the FDIC's Rules and Regulations establishes the minimum BSA program requirements for all state nonmember banks, which are necessary to assure compliance with the financial recordkeeping and reporting requirements set forth within the provisions of the Treasury regulation 31 CFR 103.

Part 326.8 of the FDIC's Rules and Regulations

Minimum Requirements of the BSA Compliance Program

The BSA compliance program must be in writing and approved by the financial institution's board of directors, with approval noted in the Board minutes. Best practices dictate that Board should review and approve the policy annually. In addition, financial institutions are required to develop and implement a Customer Identification Program as part of their overall BSA compliance program. More specific guidance regarding the CIP program requirements can be found within the "Customer Identification Program" discussion within this section of the DSC Risk Management Manual of Examination Policies (DSC Manual).

A financial institution's BSA compliance program must meet four minimum requirements, as detailed in Section 326.8 of the FDIC's Rules and Regulations. The procedures necessary to establish an adequate program and assure reasonable compliance efforts designed to meet these minimum requirements are discussed in detail below:

1. *A system of internal controls.* At a minimum, the system must be designed to:

    a. Identify reportable transactions at a point where all of the information necessary to properly complete the required reporting forms can be obtained. The financial institution might accomplish this by sufficiently training tellers and personnel in other departments or by referring large currency transactions to a designated individual or department. If all pertinent information cannot be obtained from the customer, the financial institution should consider declining the transaction.
    b. Monitor, identify, and report possible money laundering or unusual and suspicious activity. Procedures should provide that high-risk accounts, services, and transactions are regularly reviewed for suspicious activity.
    c. Ensure that all required reports are completed accurately and properly filed within required timeframes. Financial institutions should consider centralizing the review and report filing functions within the banking organization.
    d. Ensure that customer exemptions are properly granted, recorded, and reviewed as appropriate, including biennial renewals of "Phase II" exemptions. Exempt accounts must be reviewed at least annually to ensure that the exemptions are still valid and to determine if any suspicious or unusual activity is occurring in the account. The

BSA compliance officer should review and initial all exemptions prior to granting and renewing them.

e. Ensure that all information sharing requests issued under Section 314(a) of the USA PATRIOT Act are checked in accordance with FinCEN guidelines and are fully completed within mandated time constraints.
f. Ensure that guidelines are established for the optional providing and sharing of information in accordance with 314(b) of the USA PATRIOT Act and the written employment verification regulations (as specified in Section 355 of the USA PATRIOT Act).
g. Ensure that the financial institution's CIP procedures comply with regulatory requirements.
h. Ensure that procedures provide for adequate customer due diligence in relation to the risk levels of customers and account types. Adequate monitoring for unusual or suspicious activities cannot be completed without a strong CDD program. The CDD program should assist management in predicting the types, dollar volume, and transaction volume the customer is likely to conduct, thereby providing a means to identify unusual or suspicious transactions for that customer.
i. Establish procedures for screening accounts and transactions for OFAC compliance that include guidelines for responding to identified matches and reporting those to OFAC.
j. Provide for adequate due diligence, monitoring, and reporting of private banking activities and foreign correspondent relationships. The level of due diligence and monitoring must be commensurate with the inherent account risk.
k. Provide for adequate supervision of employees who accept currency transactions, complete reports, grant exemptions, open new customer accounts, or engage in any other activity covered by the Financial Recordkeeping and Reporting of Currency and Foreign Transactions regulations at 31 CFR 103.
l. Establish dual controls and provide for separation of duties. Employees who complete the reporting forms should not be responsible for filing them or for granting customer exemptions.

2. *Independent testing for compliance with the BSA and Treasury's regulation 31 CFR Part 103*. Independent testing of the BSA compliance program should be conducted by the internal audit department, outside auditors, or qualified consultants. Testing must include procedures related to high-risk accounts and activities. Although not required by the regulation, this review should be conducted at least annually. Financial institutions that do not employ outside auditors or consultants or that do not operate internal audit departments can comply with this requirement by utilizing employees who are not involved in the currency transaction reporting or suspicious activity reporting functions to conduct the reviews. The BSA compliance officer, even if he/she does not participate in the daily BSA monitoring and reporting of BSA, can never suffice for an independent review.

The scope of the independent testing should be sufficient to verify compliance with the financial institution's anti-money laundering program. Additionally, all findings from the audit should be provided within a written report and promptly reported to the board of directors or appropriate committee thereof. Testing for compliance should include, at a minimum:

a. A test of the financial institution's internal procedures for monitoring compliance with the BSA, including interviews of employees who handle cash transactions and their supervisors. The scope should include all business lines, departments, branches, and a sufficient sampling of locations, including overseas offices.
b. A sampling of large currency transactions, followed by a review of CTR filings.
c. A test of the validity and reasonableness of the customer exemptions granted by the financial institution.
d. A test of procedures for identifying suspicious transactions and the filing of SARs. Such procedures should incorporate a review of reports used by management to identify unusual or suspicious activities.
e. A review of documentation on transactions that management initially identified as unusual or suspicious, but, after research, determined that SAR filings were not warranted.
f. A test of procedures and information systems to review compliance with the OFAC regulations. Such a test should include a review of the frequency of receipt of OFAC updates and interviews to determine personnel knowledge of OFAC procedures.
g. A test of the adequacy of the CDD program and the CIP. Testing procedures should ensure that established CIP standards are appropriate for the various account types, business lines, and departments. New accounts from various areas in the financial institution should be sampled to

ensure that CDD and CIP efforts meet policy requirements.

h. A review of management reporting of BSA-related activities and compliance efforts. Such a review should determine that reports provide necessary information for adequate BSA monitoring and that they capture the universe of transactions for that reporting area. (For example, the incoming wire transfer logs should contain all the incoming transfers for the time period being reviewed).

i. A test of the financial institution's recordkeeping system for compliance with the BSA.

j. Documentation of the scope of the testing procedures performed and the findings of the testing.

Independent Testing Workpaper Retention

Retention of workpapers from the independent testing or audit of BSA is expected and those workpapers must be made available to examiners for review upon request. It is essential that the scope and findings from any testing procedures be thoroughly documented. Procedures that are not adequately documented will not be accepted as being in compliance with the independent testing requirement.

3. *The designation of an individual or individuals responsible for coordinating and monitoring day-to-day compliance with BSA.* To meet the minimum requirement, each financial institution must designate a senior official within the organization to be responsible for overall BSA compliance. Other individuals in each office, department or regional headquarters should be given the responsibility for day-to-day compliance. The senior official in charge of BSA compliance should be in a position, and have the authority, to make and enforce policies. This is not intended to require that the BSA administrator be an "executive officer" under the Federal Reserve Board's Regulation O.

4. *Training for appropriate personnel.* At a minimum, the financial institution's training program must provide training for all operational personnel whose duties may require knowledge of the BSA, including, but not limited to, tellers, new accounts personnel, lending personnel, bookkeeping personnel, wire room personnel, international department personnel, and information technology personnel. In addition, an overview of the BSA requirements should be given to new employees and efforts should be made to keep executives and directors informed of changes and new developments in BSA regulations.Training should be comprehensive, conducted regularly, and clearly documented. The scope of the training should include:

    - The financial institution's BSA policies and procedures;
    - Identification of the three stages of money laundering (placement, layering, and integration);
    - "Red flags" to assist in the identification of money laundering (similar to those provided within the "Identification of Suspicious Transactions" discussion within this chapter);
    - Identification and examples of suspicious transactions;
    - The purpose and importance of a strong CDD program and CIP requirements;
    - Internal procedures for CTR and SAR filings;
    - Procedures for reporting BSA matters, including SAR filings to senior management and the board of directors;
    - Procedures for conveying any new BSA rules, regulations, or internal policy changes to all appropriate personnel in a timely manner; and
    - OFAC policies and procedures.

Depending on the financial institution's needs, training materials can be purchased from banking associations, trade groups, and outside vendors, or they can be internally developed by the financial institution itself. Copies of the training materials must be available in the financial institution for review by examiners.

BSA VIOLATIONS AND ENFORCEMENT

Procedures for Citing Apparent Violations in the Report of Examination

Apparent Violations of the U.S. Department of the Treasury's regulation 31 CFR 103 - Financial Recordkeeping and Reporting of Currency and Foreign Transactions

As stated previously, Treasury's regulation 31 CFR 103 establishes the minimum recordkeeping and reporting requirements for currency and foreign transactions by financial institutions. Failure to comply with the requirements of 31 CFR 103 may result in the examiner citing an apparent violation(s). Apparent violations of 31 CFR 103 are generally for specific issues such as:

- Failure to adequately identify and report large cash transactions in a timely manner;

- Failure to report Suspicious Activities, such as deposit layering or structuring cash transactions;
- Failure to reasonably identify and verify customer identity; and
- Failure to maintain adequate documentation of financial transactions, such as the purchase or sale of monetary instruments and originating or receiving wire transfers.

All apparent violations of the BSA should be reported in the Violations of Laws and Regulations pages of the Report of Examination. When preparing written comments related to apparent violations cited as a result of deficient BSA compliance practices, the following information should be included in each citation:

- Reference to the appropriate section of the regulation;
- Nature of the apparent violation;
- Date(s) and amount of the transaction(s);
- Name(s) of the parties to the transaction;
- Description of the transaction; and
- Management's response, including planned or taken corrective action.

In preparing written comments for apparent violations of the BSA, examiners should focus solely on statements of fact, and take precautions to ensure that subjective comments are omitted. Such statements would include an examiner attributing the infraction to a cause, such as management oversight or computer error. For all violations of 31 CFR 103, the Treasury reserves the authority to determine if civil penalties should be pursued. Examiner comments on the supposed causes of apparent violations may affect the Treasury's ability to pursue a case.

Random, isolated apparent violations do not require lengthy explanations or write-ups in the Report of Examination. In such cases, the section of the regulation violated, and identification of the transaction and/or instance will suffice. Examiners are also encouraged to group violations by type. When there are several exceptions to a particular section of the regulation, for example, late CTR filing, examiners should include a minimum of three examples in the Report of Examination citation. The remainder of the violations under that specific regulation can be listed as a total, without detailing all of the information. For example, detail three late CTR filings with customer information, dates, and amounts, but list a total in the apparent violation write-up for 55 instances identified during the examination.

If an examiner chooses not to include each example in the apparent violation citation, the examiners should provide bank management with a separate list so that they can identify and, if possible, correct the particular violation. A copy of the list must also be maintained in the BSA examination workpapers.

Additionally, deficient practices may violate more than one regulation. In such circumstances, the apparent violations can be grouped together. However, all of the sections of each violated regulation must be cited. Each apparent violation must be recorded on the BSA Data Entry sheet and submitted with the Report of Examination for review and transmittal.

Apparent Violations of Section 326.8 of the FDIC Rules and Regulations

In situations where deficiencies in the BSA compliance program are serious or systemic in nature, or apparent violations result from management's inability or unwillingness to develop and administer an effective BSA compliance program, examiners should cite an apparent violation(s) of the appropriate subsection(s) of Section 326.8, within the Report of Examination. Additionally, apparent violations of 31 CFR 103 that are repeated at two or more examinations, or dissimilar apparent violations that are recurring over several examinations, may also point towards a seriously deficient compliance program. When such deficiencies persist within the financial institution, it may be appropriate for examiners to consider the overall program to be deficient and cite an apparent violation of Section 326.8.

Specifically, an apparent violation of Section 326.8(b)(1) should be cited when the weaknesses and deficiencies identified in the BSA compliance program are significant, repeated, or pervasive. Citing a Section 326.8(b)(1) violation indicates that the program is inadequate or substantially ineffective. Furthermore, these deficiencies, if uncorrected, significantly impair the institution's ability to detect and prevent potential money laundering or terrorist financing activities.

An apparent violation of Section 326.8(b)(2) should be cited when weaknesses and deficiencies cited in the Customer Identification Program mitigate the institution's ability to reasonably establish, verify and record customer identity. An apparent violation of 326.8(b)(2) would generally be associated with specific weaknesses that would be reflected in apparent violations of 31 CFR 103.121, which establishes the minimum requirements for Customer Identification Programs.

An apparent violation of Section 326.8(c) should be cited for a specific program deficiency to the extent that deficiency is attributed to internal controls, independent testing, individual responsible for monitoring day-to-day compliance, or training. If an apparent violation of Section 326.8(c) is determined to be an isolated program weakness that does not significantly impair the effectiveness of the overall compliance program, then a Section 326.8(b) should **not** be cited. If one or more program violations are cited under Section 326.8(c), or are accompanied by notable infractions of Treasury's regulation 31 CFR 103, or management is unwilling or unable to correct the reported deficiencies, the aggregate citations would likely point toward an ineffective program and warrant the additional citing of a 326.8(b) program violation, in addition to the other program, and/or financial recordkeeping violations.

When preparing written comments related to apparent violations cited as a result of deficient BSA compliance program, as defined in Section 326.8, the following information should be included in each citation:

- Nature of the violation(s);
- Name(s) of the individual(s) responsible for coordinating and monitoring compliance with the BSA (BSA officer);
- Specific internal control deficiencies that contributed to the apparent violation(s); and
- Management's response, including planned or taken corrective action.

BSA Workpapers Evidencing Apparent Violations

BSA examination workpapers that support BSA/AML apparent violation citations, enforcement actions, SARs, and CMP referrals to the Treasury should be maintained for 5 years, since they may be needed to assist further investigation or other supervisory response. Examination workpapers should not generally be included as part of a SAR, enforcement action recommendation, or Treasury referral, but may be requested for additional supporting information during a law enforcement investigation.

Civil Money Penalties and Referrals to FinCEN

When significant apparent violations of the BSA, or cases of willful and deliberate violations of 31 CFR 103 or Section 326.8 of the FDIC's Rules and Regulations are identified at a state nonmember financial institution, examiners should determine if a recommendation for CMPs is appropriate. This assessment should be conducted in accordance with existing examiner guidance for consideration of CMPs, detailed within the DSC Manual.

Civil penalties for negligence and willful violations of BSA are detailed in 31 CFR 103.57. This section states that negligent violations of any regulations under 31 CFR 103 shall not exceed $500. Willful violations for any reporting requirement for financial institutions under 31 CFR 103 can be assessed a civil penalty up to $100,000 and no less than $25,000. CMPs may also be imposed by the FDIC for violations of final Cease and Desist Orders issued under our authority granted in Section 8(s) of the Federal Deposit Insurance Act (FDI Act). In these cases, the penalty is established by Section 8(i)(2) of the FDI Act at up to $5,000 per day for each day the violation continues. Recommendations for civil money penalties for violations of Cease and Desist Orders should be handled in accordance with outstanding FDIC Directives.

Furthermore, Section 363 of the USA PATRIOT Act increases the maximum civil and criminal penalties from $100,000 to up to $1,000,000 for violations of the following sections of the USA PATRIOT Act:

- Section 311: Special measures enacted by the Treasury for jurisdictions, financial institutions, or international transactions or accounts of primary money laundering concern;
- Section 312: Special due diligence for correspondent accounts and private banking accounts; and
- Section 313: Prohibitions on U.S. correspondent accounts with foreign shell banks.

Referring Significant Violations of the BSA to FinCEN

Financial institutions that are substantially noncompliant with the BSA should be reviewed by the FDIC for recommendation to FinCEN regarding the issuance of CMPs. FinCEN is the administrator of the BSA and has the authority to assess CMPs against any domestic financial institution, including any insured U.S. branch of a foreign bank, and any partner, director, officer, or employee of a domestic financial institution for violations of the BSA and implementing regulations. Criminal prosecution is also authorized, when warranted. However, referrals to FinCEN do not preclude the FDIC from using its authority to take formal administrative action.

Factors to consider for determining when a referral to FinCEN is warranted and the guidelines established for preparing and forwarding referral documentation are detailed in examiner guidance. When examiners identify serious BSA program weaknesses at an institution, including significant apparent violations, the examiner should consult with the Regional SACM before proceeding further.

Generally, a referral should be considered when the types and nature of apparent violations of the BSA result from a nonexistent or seriously deficient BSA and anti-money laundering compliance program; expose the financial institution to a heightened level of risk for potential money laundering activity; or demonstrate a willful or flagrant disregard for the requirements of the BSA. Normally, isolated incidences of noncompliance should not be referred for penalty consideration. Even if the type of violation was cited previously, referral would not be appropriate if the apparent violations involved are genuine misunderstandings of the BSA requirements or inadvertent violations, the deficiencies are correctable in the normal course of business and proper corrective action has been taken or committed to by management.

A referral may be warranted in the absence of previous violations if the nature of apparent violations identified at the current examination is serious. An example would be failing to file FinCEN Form 104, Currency Transaction Report, on nonexemptible businesses or businesses that, while exemptible, FinCEN, as a matter of policy will not authorize the financial institution to exempt. To illustrate, the failure to file CTRs on transactions involving an individual or automobile dealer (both nonexemptible) is of greater concern to FinCEN than a failure to file CTRs on a recently opened supermarket which has not yet been added to the bank's exempt list or a golf course where the financial institution believed that it qualified for a unilateral exemption as a sports arena. This doesn't mean that the failure to file CTRs on a supermarket should never be referred. Failure to file CTRs on a supermarket that is a front for organized crime, that has no customers yet has large receipts, or that has currency transaction activity that far exceeds its expected revenues would warrant referral.

Mitigating Factors to Consider

Other considerations in, deciding whether to recommend criminal/civil penalties include the financial institution's past history of compliance, and whether the current system of policies, procedures, systems, internal controls, and training are sufficient to ensure a satisfactory level in the future. Senior management's attitude and commitment toward compliance as evidenced by their involvement and devotion of resources to compliance programs should also be considered. Any mitigating factors should be given full consideration. Mitigating factors would include:

- The implementation of a comprehensive compliance program that ensures a high level of compliance including a system for aggregating currency transactions.
- Volunteer reporting by the institution of apparent violations discovered on its own during the course of internal audits. This does not apply to situations where examiners disclose apparent violations and the institution comes forward voluntarily to head off a possible referral.
- Positive efforts to assist law enforcement, including the reporting of suspicious transactions and the filing of Suspicious Activity Reports.

It should be noted that FinCEN does not categorize violations as substantive or technical. However, FinCEN does recognize the varying nature of violations and the fact that not all violations require a referral.

Content of a Well-Developed Referral

A well-developed referral is one that contains sufficient detail to permit FinCEN to ascertain: the number, nature and severity of apparent violations cited; the overall level of BSA compliance; the severity of any weaknesses in the financial institution's compliance program; and the financial institution's ability to achieve a satisfactory level of compliance in the future.

A summary memorandum detailing these issues should be prepared by the field examiner and submitted to the Regional Office for review. At a minimum, each referral should include a copy of this memorandum, the Report of Examination pages that discuss BSA findings, and a civil monetary penalty assessment. Documents contained in the referral package need to be conclusion-oriented and descriptive with facts supporting summary conclusions. It is not sufficient to say that the financial institution has written policies and procedures or that management provides training to employees. Referrals are much more useful when they discuss the specific deficiencies identified within the compliance programs, policies and procedures, systems, management involvement, and training.

Discussing the Referral Process with Financial Institution Management

Examiners should not advise the financial institution that a civil money penalty referral is being submitted to FinCEN. If an investigation by law enforcement is warranted, it may be compromised by disclosure of this information. It is permissible to tell management that FinCEN will be notified of all apparent violations of the BSA cited. However, examiners are not to provide any oral or written communication to the financial institution passing judgment on the willfulness of apparent violations.

Criminal Penalties

Treasury regulation 31 CFR 103.59 notifies institutions that they can be subject to criminal penalties if convicted for willful violations of the BSA of not more than $1,000 and/or one year in prison. If such a BSA violation is committed to further any other Federal law punishable by more than a year in prison (such as fraud, money laundering, theft, illegal narcotics sales, etc.) then harsher penalties can be imposed. In these cases, the perpetrator, upon conviction, can be fined not more than $10,000 and/or be imprisoned not more than 5 years.

In addition, criminal penalties may also be charged against any person who knowingly makes any false, fictitious, or fraudulent statement or representation in any BSA report. Upon conviction of such an act, the perpetrator may be fined not more than $10,000 and/or imprisoned for 5 years.

Certain violations of the BSA allow for the U.S. Government to seize the funds related to the crime. The USA PATRIOT Act amended the BSA to provide for funds forfeiture in cases dealing with foreign crimes, U.S. interbank accounts, and in connection with some currency transaction reporting violations. Furthermore, the U.S. Government can seize currency or other monetary instruments physically transported into or out of the U.S. when required BSA reports go unfiled or contain material omissions or misstatements.

Supervisory Actions

The FDIC has the authority to address less than adequate compliance with the BSA through various formal or informal administrative actions. If a specific violation of Section 326.8 or 31 CFR 103 is not corrected or the same provision of a regulation is cited from one examination to the next, Section 8(s) of the FDI Act requires the FDIC to consider formal enforcement action as described in Section 8(b) or 8(c) of the FDI Act. However, the FDIC has determined that informal enforcement action, such as a Board Resolution or a Memorandum of Understanding may be a more appropriate supervisory response, given related circumstances and events, which may serve as mitigating factors.

Violations of a technical and limited nature would not necessarily reflect an inadequate BSA program; as such, it is important to look at the type and number of violations before determining the appropriate administrative action. If the Regional Office reviews a case with significant violations, it should determine whether an enforcement action is necessary. Under such circumstances, if the Regional Office determines that a Cease and Desist action is **not** appropriate, then documentation supporting that decision should be maintained at the Regional Office and a copy of that documentation submitted to the Special Activities Section in Washington, D.C.

Memoranda of Understanding (MOU) and Board Resolutions (BBR)

In certain cases, the Regional Office may determine that a BBR or a MOU is an appropriate action to deal with an institution's BSA weaknesses. BBRs should only be used in circumstances where recommendations are minor and do not affect the overall adequacy of the institution's BSA compliance program. Unlike a BBR, a MOU is a bi-lateral agreement between the financial institution and the FDIC. When the Regional Office deems that a MOU is appropriate, the examiners, reviewer, the Regional SACM, and the Regional legal department may work together to formulate the provisions of the action and obtain appropriate approvals as soon as possible after the examination.

Cease and Desist Orders

Section 8(s) of the FDI Act grants the FDIC the power to issue Cease and Desist Orders solely for the purpose of correcting BSA issues at state nonmember banks. In situations where BSA/AML program weaknesses expose the institution to an elevated level of risk to potential money laundering activity, are repeatedly cited at consecutive examinations, or demonstrate willful noncompliance or negligence by management, a Section 8(b) Order to Cease and Desist should be considered by the Regional Office. Cases referred to FinCEN for civil money penalties should also be reviewed for **formal** supervisory action.

When a Cease and Desist Order is deemed to be appropriate, the examiners, reviewer, the Regional SACM, and the Regional legal department should work together to formulate the provisions of the action and obtain appropriate approvals as soon as possible after the examination. Specific details are contained in the Formal and Informal Actions Procedures (FIAP) Manual.

Removal/Prohibition Orders

If deficiencies or apparent violations of Section 326.8 or 31 CFR 103 involve negligent or egregious action or inaction by institution-affiliated parties (IAPs), other formal actions may be appropriate. In such situations where the IAP exposes the institution to an elevated risk of, or has facilitated or participated in actual transactions involving money laundering activity, utilization of Section

8(e) of the FDI Act, a removal/prohibition action, should be considered.

In cases where apparent violations of Section 326.8 and/or 31 CFR Section 103 have been committed by an IAP(s) and appear to involve criminal intent, examiners should contact the Regional SACM or other designees about filing a SAR on the IAP(s). If the involvement of the IAP(s) in the criminal activity warrants, the Regional Office should also consider contacting the Federal Bureau of Investigation (FBI) or other Federal law enforcement agency via phone or letter to provide them a referral of the SAR and indicate the FDIC's interest in pursuit of the case.

IDENTIFICATION OF SUSPICIOUS TRANSACTIONS

Effective BSA/AML compliance programs include controls and measures to identify and report suspicious transactions in a timely manner. An institution should have in place a CDD program sufficient to be able to make an informed decision about the suspicious nature of a particular transaction. This section highlights unusual or suspicious activities and transactions that may indicate potential money laundering through structured transactions, terrorist financing, and other schemes designed for illicit purposes. Often, individuals involved in suspicious activity will use a combination of several types of unusual transactions in an attempt to confuse or mislead anyone attempting to identify the true nature of their activities.

Structuring is the most common suspicious activity reported to FinCEN. Structuring is defined as breaking down a sum of currency that exceeds the $10,000 CTR reporting level per the regulation, into a series of transactions at or less than $10,000. The transactions do not need to occur on any single day in order to constitute structuring. Money launderers have developed many ways to structure large amounts of cash to evade the CTR reporting requirements. Examiners should be alert to multiple cash transactions that exceed $10,000, but may involve other monetary instruments, bank official checks, travelers' checks, savings bonds, loans and loan payments, or even securities transactions as the offsetting entry. The transactions could also involve the exchange of small bank notes for large ones, but in amounts less than $10,000. Structuring of cash transactions to evade CTR filing requirements is often the easiest of suspicious activities to identify. It is subject to criminal and civil violations of the BSA regulations as implemented within 31 CFR 130.63. This regulation states that any person who structures or assists in structuring a currency transaction at a financial institution for the purpose of evading CTR reporting, or causes or attempts to cause a financial institution to fail to file a CTR, or causes the financial institution to file a CTR that contains a material omission or misstatement of fact, is subject to the criminal and civil violations of the BSA regulations. Financial institutions are required by the BSA to have monitoring procedures in place to identify structured transactions.

Knowledge of the three stages of money laundering (discussed below) has multiple benefits for financial institutions. These benefits include, but are not limited to, the following:

- Identification and reporting of illicit activities to FinCEN,
- Prevention against losses stemming from fraud,
- Prevention against citation of apparent violations of BSA and SAR regulations, and
- Prevention against assessment of CMPs by FinCEN and/or the FDIC.

The following discussions and "red flag" lists, while not all-inclusive, identify various types of suspicious activity/transactions. These lists are intended to serve as a reference tool and should not be used to make immediate and definitive conclusions that a particular activity or series of transactions is illegal. They should be viewed as potentially suspicious warranting further review. The activity/transactions may not be suspicious if they are consistent with a customer's legitimate business.

The Three Stages of Money Laundering

There are three stages in typical money laundering schemes:

1. Placement,
2. Layering, and
3. Integration.

Placement

Placement, the first stage of money laundering, involves the placement of bulk cash into the financial system without the appearance of being connected to a criminal activity. There are many ways cash can be placed into the system. The simplest way is to deposit cash into a financial institution; however, this is also one of the riskier ways to get caught laundering money. To avoid notice, banking transactions involving cash are likely to be conducted in amounts under the CTR reporting thresholds; this activity is referred to as "structuring."

Furthermore, the use of false identities to conduct these transactions is common; banking officers should be vigilant in looking for false identification documents. In an attempt to conceal their activities, money launderers will often resort to "smurfing" activities to get illicit funds into a financial institution. "Smurfing" is the process of using several individuals to deposit illicit cash proceeds into many accounts at one or several financial institutions in a single day.

Furthermore, cash can be exchanged for traveler's checks, food stamps, or other monetary instruments, which can then also be deposited into financial institutions. Placement can also be done by purchasing goods or services, such as a travel/vacation package, insurance policies, jewelry, or other "high-ticket" items. These goods and services can then be returned to the place of purchase in exchange for a refund check, which can then be deposited at a financial institution with less likelihood of detection as being suspicious. Smuggling cash out of a country and depositing that cash into a foreign financial institution is also a form of placement. Illegally-obtained funds can also be funneled into a legitimate business as cash receipts and deposited without detection. This type of activity actually combines placement with the other two stages of money laundering, layering and integration, discussed below.

Layering

The second stage of money laundering is typically layering. This stage is the process of moving and manipulating funds to confuse their sources as well as complicating or partially eliminating the paper trail. Layering may involve moving funds in various forms through multiple accounts at numerous financial institutions, both domestic and international, in a complex series of transactions. Examples of layering transactions include:

- Transferring funds by check or monetary instrument;
- Exchanging cashier's checks and other monetary instruments for other cashier's checks, larger or smaller, possibly adding additional cash or other monetary instruments in the process;
- Performing intrabank transfers between accounts owned or controlled by common individuals (for example, telephone transfers);
- Performing wire transfers to accounts under various customer and business names at other financial institutions;
- Transferring funds outside and possibly back into the U.S. by various means such as wire transfers, particularly through "secrecy haven" countries;
- Obtaining certificate of deposit (CD) secured loans and depositing the loan disbursement check into an account (when the loan is defaulted on, there is no loss to the bank); and
- Depositing a refund check from a canceled vacation package or insurance policy.

Layering transactions may become very complex and involve several of these methods to hide the trail of funds.

Integration

The third stage of money laundering is integration, which typically follows the layering stage. However, as mentioned in the discussion of the placement stage, integration can be accomplished simultaneously with the placement of funds. After the funds have been placed into the financial system and insulated through the layering process, the integration phase is used to create the appearance of legality through additional transactions such as loans, or real estate deals. These transactions provide the criminal with a plausible explanation as to where the funds came from to purchase assets and shield the criminal from any type of recorded connection to the funds.

During the integration stage, the funds are returned in a usable format to the criminal source. This process can be achieved through various schemes, such as:

- Inflating business receipts,
- Overvaluing and undervaluing invoices,
- Creating false invoices and shipping documents,
- Establishing foreign trust accounts,
- Establishing a front company or phony charitable organization, and
- Using gold bullion schemes.

These schemes are just a few examples of the integration stage; the possibilities are not limited.

Money Laundering Red Flags

Some activities and transactions that are presented to a financial institution should raise the level of concern regarding the possibility of potential money laundering activity. Evidence of these "red flags" in an institution's accounts and transactions should prompt the institution, and examiners reviewing such activity, to consider the possibility of illicit activities. While these red flags are not evidence of illegal activity, these common indicators should be part of an expanded review of suspicious activities.

General

- **Refusal or reluctance to proceed with a transaction, or abruptly withdrawing a transaction.** A customer may be reluctant to proceed, or may even withdraw all or a portion of a transaction after being informed that a CTR will be filed, or that the purchase of a monetary instrument will be recorded. This action would be taken to avoid BSA reporting and recordkeeping requirements.

- **Customer refusal or reluctance to provide information or identification.** A customer may be reluctant, or even refuse to provide identifying information when opening an account, cashing a check, recording the purchase of a monetary instrument, or providing information necessary to file a CTR.

- **Structured or recurring, non-reportable transactions.** An individual or group may attempt to avoid BSA reporting and recordkeeping requirements by breaking up, or structuring a currency transaction or purchase of monetary instruments in amounts less than the reporting/recordkeeping thresholds. Transactions may also be conducted with multiple banks, branches, customer service representatives, accounts, and/or on different days in an attempt to avoid reporting requirements.

- **Multiple third parties conducting separate, but related, non-reportable transactions.** Two or more individuals may go to different tellers or branches and each conduct transactions just under the reporting/recordkeeping threshold. (This activity is often referred to as "smurfing.")

- **Even dollar amount transactions.** Numerous transactions are conducted in even dollar amounts.

- **Transactions structured to lose the paper trail.** The bank may be asked to process internal debits or credits containing little or no description of the transaction in an attempt to "separate" a transaction from its account.

- **Significant increases in the number or amount of transactions.** A large increase in the number or amount of transactions involving currency, the purchase of monetary instruments, wire transfers, etc., may indicate potential money laundering.

- **Transactions which are not consistent with the customer's business, occupation, or income level.** Transactions should be consistent with the customer's known business or income level.

- **Transactions by non-account holders.** A non-account holder conducts or attempts to conduct transactions such as currency exchanges, the purchase or redemption of monetary instruments, with no apparent legitimate reason.

<u>Cash Management: Branch and Vault Shipments</u>

- **Change in currency shipment patterns.** Significant changes in currency shipment patterns between vaults, branches and/or correspondent banks as noted on cash shipment records may indicate a potential money laundering scheme occurring in a particular location.

- **Large increase in the cash supply.** A large, sustained increase in the cash balance would normally cause some increase in the number of CTRs filed. Another example of a red flag in this area would be a rapid increase in the size and frequency of cash deposits with no corresponding increase in non-cash deposits.

- **Currency shipments to or from remote locations**. Unusually large transactions between a small, remote bank and a large metropolitan bank may also indicate potential money laundering.

- **Significant exchanges of small denomination bills for large denomination bills**. Significant increases resulting from the exchange of small denominations for large denominations may be reflected in the cash shipment records.

- **Significant requirement for large bills.** Branches whose large bill requirements are significantly greater than the average may be conducting large currency exchanges. Branches that suddenly stop shipping large bills may be using them for currency exchanges.

- **International cash shipments funded by multiple monetary instruments.** This involves the receipt of funds in the form of multiple official bank checks, cashier's checks, traveler's checks, or personal checks that are drawn on or issued by U.S. financial institutions. They may be made payable to the same individual or business, or related individuals or businesses, and may be in U.S. dollar amounts that are below the BSA reporting/recordkeeping threshold. Funds are then shipped or wired to a financial institution outside the U.S.

- **Other unusual domestic or international shipments.** A customer requests an outgoing shipment or is the beneficiary of a shipment of currency, and the instructions received appear inconsistent with normal cash shipment practices. For example, the customer directs the bank to ship the funds to a foreign country and advises the bank to expect same day return of funds from sources different than the beneficiary named, thereby changing the source of the funds.

- **Frequent cash shipments with no apparent business reason**. Frequent use of cash shipments that is not justified by the nature of the customer's business may be indicative of money laundering.

Currency Exchanges and Other Currency Transactions

- **Unusual exchange of denominations**. An individual or group seeks the exchange of small denomination bills (five, ten and twenty dollar bills) for large denomination bills (hundred dollar bills), without any apparent legitimate business reason.

- **Check cashing companies**. Large increases in the number and/or amount of cash transactions for check cashing companies.

- **Unusual exchange by a check cashing service.** No exchange or cash back for checks deposited by an individual who owns a check cashing service can indicate another source of cash.

- **Suspicious movement of funds.** Suspicious movement of funds out of one financial institution, into another financial institution, and back into the first financial institution can be indicative of the layering stage of money laundering.

Deposit Accounts

- **Minimal, vague or fictitious information provided**. An individual provides minimal, vague, or fictitious information that the financial institution cannot readily verify.

- **Lack of references or identification.** An individual attempts to open an account without references or identification, gives sketchy information, or refuses to provide the information needed by the financial institution.

- **Non-local address**. The individual does not have a local residential or business address and there is no apparent legitimate reason for opening an account with the bank.

- **Customers with multiple accounts.** A customer maintains multiple accounts at a bank or at different banks for no apparent legitimate reason. The accounts may be in the same names or in different names with different signature authorities. Routine inter-account transfers provide a strong indication of accounts under common control.

- **Frequent deposits or withdrawals with no apparent business source**. The customer frequently deposits or withdraws large amounts of currency with no apparent business source, or the business is of a type not known to generate substantial amounts of currency.

- **Multiple accounts with numerous deposits under $10,000**. An individual or group opens a number of accounts under one or more names, and makes numerous cash deposits just under $10,000, or deposits containing bank checks or traveler's checks, or a combination of all of these.

- **Numerous deposits under $10,000 in a short period of time**. A customer makes numerous deposits under $10,000 in an account in short periods of time, thereby avoiding the requirement to file a CTR. This includes deposits made at an ATM.

- **Accounts with a high volume of activity and low balances**. Accounts with a high volume of activity, which carry low balances, or are frequently overdrawn, may be indicative of money laundering or check kiting.

- **Large deposits and balances.** A customer makes large deposits and maintains large balances with little or no apparent justification.

- **Deposits and immediate requests for wire transfers or cash shipments**. A customer makes numerous deposits in an account and almost immediately requests wire transfers or a cash shipment from that account to another account, possibly in another country. These transactions are not consistent with the customer's legitimate business needs. Normally, only a nominal amount remains in the original account.

- **Numerous deposits of small incoming wires or monetary instruments, followed by a large outgoing wire**. Numerous small incoming wires and/or multiple monetary instruments are deposited into an account. The customer then requests a large outgoing wire to another institution or country.

- **Accounts used as a temporary repository for funds.** The customer appears to use an account as a temporary repository for funds that ultimately will be transferred out of the financial institution, sometimes to foreign-based accounts. There is little account activity.

- **Funds deposited into several accounts, transferred to another account, and then transferred outside of the U.S.** This involves the deposit of funds into several accounts, which are then combined into one account, and ultimately transferred outside the U.S. This activity is usually not consistent with the known legitimate business of the customer.

- **Disbursement of certificates of deposit by multiple bank checks.** A customer may request disbursement of the proceeds of a certificate of deposit or other investments in multiple bank checks, each at or under $10,000. The customer can then negotiate these checks elsewhere for currency. The customer avoids the CTR requirements and severs the paper trail.

- **Early redemption of certificates of deposits**. A customer may request early redemption of certificates of deposit or other investments within a relatively short period of time from the purchase date of the certificate of deposit or investment. The customer may be willing to lose interest and incur penalties as a result of the early redemption.

- **Sudden, unexplained increase in account activity or balance**. There may be a sudden, unexplained increase in account activity, both from cash and from non-cash items. An account may be opened with a nominal balance that subsequently increases rapidly and significantly.

- **Limited use of services.** Frequent large cash deposits are made by a corporate customer, who maintains high balances but does not use the financial institution's other services.

- **Inconsistent deposit and withdrawal activity.** Retail businesses may deposit numerous checks, but there will rarely be withdrawals for daily operations.

- **Strapped currency**. Frequent deposits of large amounts of currency, wrapped in currency straps that have been stamped by other financial institutions.

- **Client, trust and escrow accounts**. Substantial cash deposits by a professional customer into client accounts, or in-house company accounts, such as trust and escrow accounts.

- **Large amount of food stamps.** Unusually large deposits of food stamps, which may not be consistent with the customer's legitimate business.

Lending

- **Certificates of deposits used as collateral.** An individual buys certificates of deposit and uses them as loan collateral. Illegal funds can be involved in either the certificate of deposit purchase or utilization of loan proceeds.

- **Sudden/unexpected payment on loans**. A customer may suddenly pay down or pay off a large loan, with no evidence of refinancing or other explanation.

- **Reluctance to provide the purpose of the loan or the stated purpose is ambiguous**. A customer seeking a loan with no stated purpose may be trying to conceal the true nature of the loan. The BSA requires the bank to document the purpose of all loans over $10,000, with the exception of those secured by real property.

- **Inconsistent or inappropriate use of loan proceeds**. There may be cases of inappropriate disbursement of loan proceeds, or disbursements for purposes other than the stated loan purpose.

- **Overnight loans.** A customer may use "overnight" loans to create high balances in accounts.

- **Loan payments by third parties.** Loans that are paid by a third party could indicate that the assets securing the loan are really those of a third party, who may be attempting to conceal ownership of illegally, gained funds.

- **Loan proceeds used to purchase property in the name of a third party, or collateral pledged by a third party.** A customer may use loan proceeds to purchase, or may pledge as collateral, real property in the name of a trustee, shell corporation, etc.

- **Permanent mortgage financing with an unusually short maturity, particularly in the case of large mortgages.**

- **Structured down payments or escrow money transactions**. An attempt to "structure" a down payment or escrow money transaction may be made in order to conceal the true source of the funds used.

- **Attempt to sever the paper trail**. Attempts may be made by the customer or bank to sever any paper trail connecting a loan to the collateral.

- **Wire transfer of loan proceeds**. A customer may request that loan proceeds be wire transferred for no apparent legitimate reason.

- **Disbursement of loan proceeds by multiple bank checks**. A customer may request disbursement of loan proceeds in multiple bank checks, each under $10,000. The customer can then negotiate these checks elsewhere for currency. The customer avoids the currency transaction reporting requirements and severs the paper trail.

- **Loans to companies outside the U.S.** Unusual loans to offshore customers, and loans to companies incorporated in "secrecy havens" are higher risk activities.

- **Financial statement.** Financial statement composition of a business differs greatly from those of similar businesses.

Monetary Instruments

- **Structured purchases of monetary instruments.** An individual or group purchases monetary instruments with currency in amounts below the $3,000 BSA recordkeeping threshold.

- **Replacement of monetary instruments**. An individual uses one or more monetary instruments to purchase another monetary instrument(s).

- **Frequent purchase of monetary instruments without apparent legitimate reason**. A customer may repeatedly buy a number of official bank checks or traveler's checks with no apparent legitimate reason.

- **Deposit or use of multiple monetary instruments**. The deposit or use of numerous official bank checks or other monetary instruments, all purchased on the same date at different banks or different issuers of the instruments may indicate money laundering. These instruments may or may not be payable to the same individual or business.

- **Incomplete or fictitious information**. The customer may conduct transactions involving monetary instruments that are incomplete or contain fictitious payees, remitters, etc.

- **Large cash amounts.** The customer may purchase cashier's checks, money orders, etc., with large amounts of cash.

Safe Deposit Boxes

- **Frequent visits.** The customer may visit a safe deposit box on an unusually frequent basis.

- **Out-of-area customers.** Safe deposit boxes may be opened by individuals who do not reside or work in the banks service area.

- **Change in safe deposit box traffic pattern.** There may be traffic pattern changes in the safe deposit box area. For example, more people may enter or enter more frequently, or people carry bags or other containers that could conceal large amounts of cash.

- **Large amounts of cash maintained in a safe deposit box**. A customer may access the safe deposit box after completing a transaction involving a large withdrawal of cash, or may access the safe deposit box prior to making cash deposits which are just under $10,000.

- **Multiple safe deposit boxes**. A customer may rent multiple safe deposit boxes if storing large amounts of currency.

Wire Transfers

- **Wire transfers to countries widely considered "secrecy havens."** Transfers of funds to well known "secrecy havens."

- **Incoming/outgoing wire transfers with instructions to the receiving institution to pay upon proper identification**. The instructions to the receiving bank are to "pay upon proper identification." If paid for in cash, the amount may be just under $10,000 so no CTR is required. The purchase may be made with numerous official checks or other monetary instruments. The amount of the transfer may be large, or the funds may be sent to a foreign country.

- **Outgoing wire transfers requested by non-account holders.** If paid in cash, the amount may be just under $10,000 to avoid the CTR filing requirement.

Alternatively, the transfer may be paid with several official checks or other monetary instruments. The funds may be directed to a foreign country.

- **Frequent wire transfers with no apparent business reason**. A customer's frequent wire transfer activity is not justified by the nature of their business.

- **High volume of wire transfers with low account balances.** The customer requests a high volume of incoming and outgoing wire transfers but maintains low or overdrawn account balances.

- **Incoming and outgoing wires in similar dollar amounts**. There is a pattern of wire transfers of similar amounts both into and out of the customer's account, or related customer accounts, on the same day or next day. The customer may receive many small incoming wires, and then order a large outgoing wire transfer to another city or country.

- **Large wires by customers operating a cash business**. Could involve wire transfers by customers operating a mainly cash business. The customers may be depositing large amounts of currency.

- **Cash or bearer instruments used to fund wire transfers**. Use of cash or bearer instruments to fund wire transfers may indicate money laundering.

- **Unusual transaction by correspondent financial institutions.** Suspicious transactions may include: (1) wire transfer volumes that are extremely large in proportion to the asset size of the bank; (2) when the bank's business strategy and financial statements are inconsistent with a large volume of wire transfers, particularly outside the U.S.; or (3) a large volume of wire transfers of similar amounts in and out on the same or next day.

- **International funds transfer(s) which are not consistent with the customer's business**. International transfers, to or from the accounts of domestic customers, in amounts or with a frequency that is inconsistent with the nature of the customer's known legitimate business activities could indicate money laundering.

- **International transfers funded by multiple monetary instruments**. This involves the receipt of funds in the form of multiple official bank checks, traveler's checks, or personal checks that are drawn on or issued by U.S. financial institutions and made payable to the same individual or business, or related individuals or businesses, in U.S. dollar amounts that are below the BSA reporting threshold. The funds are then wired to a financial institution outside the U.S.

- **Other unusual domestic or international funds transfers.** The customer requests an outgoing wire or is the beneficiary of an incoming wire, and the instructions appear inconsistent with normal wire transfer practices. For example, the customer directs the bank to wire the funds to a foreign country and advises the bank to expect same day return of funds from sources different than the beneficiary named, thereby changing the source of the funds.

- **No change in form of currency.** Funds or proceeds of a cash deposit may be wired to another country without changing the form of currency.

<u>Other Activities Involving Customers and Bank Employees</u>

- **Questions or discussions on how to avoid reporting/recordkeeping**. This involves discussions by individuals about ways to bypass the filing of a CTR or recording the purchase of a monetary instrument.

- **Customer attempt to influence a bank employee not to file a report**. This would involve any attempt by an individual or group to threaten, bribe, or otherwise corruptly influence a bank employee to bypass the filing of a CTR, the recording of purchases of monetary instruments, or the filing of a SAR.

- **Lavish lifestyles of customers or bank employees**. Lavish lifestyles of customers or employees, which are not supported by their current salary, may indicate possible involvement in money laundering activities.

- **Short-term or no vacations.** A bank employee may be reluctant to take any vacation time or may only take short vacations (one or two days).

- **Circumvention of internal control procedures**. Overrides of internal controls, recurring exceptions, and out-of-balance conditions may indicate money laundering activities. For example, bank employees may circumvent wire transfer authorizations and approval policies, or could split wire transfers to avoid ceiling limitations.

- **Incorrect or incomplete CTRs**. Employees may frequently submit incorrect or incomplete CTRs.

Terrorist Financing Red Flags

Methods used by terrorists to generate funds can be both legal and illegal. In the U.S., it is irrelevant whether terrorist funding is obtained legally or illegally; any funds provided to support terrorist activity are considered to be laundered money. Funding from both legal and illegal sources must be laundered by the terrorist in order to obscure links between the terrorist group (or cell) and its funding sources and uses. Terrorists and their support organizations typically use the same methods that criminal groups use to launder funds. In particular, terrorists appear to favor:

- Cash smuggling, both by couriers or in bulk cash shipments;
- Structured deposits and/or withdrawals;
- Purchases of monetary instruments;
- Use of credit and/or debit cards; and
- Use of underground banking systems.

While it is not the primary function of an examiner to identify terrorist financing while examining an institution for BSA compliance, examiners and financial institution management should be cognizant of suspicious activities or unusual transactions that are common indicators of terrorist financing. Institutions are encouraged to incorporate procedures into their BSA/AML compliance programs that address notifying the proper Federal agencies when serious concerns of terrorist financing activities are encountered. At a minimum, these procedures should require the institution to contact FinCEN's Financial Institutions Hotline to report such activities.

SUSPICIOUS ACTIVITY REPORTING

Part 353 of the FDIC's Rules and Regulations requires insured state nonmember banks to report known or suspected criminal offenses to the Treasury. The SAR form to be used by financial institutions is Form TD F 90-22.47 and is available on the FinCEN website. FinCEN is the repository for these reports, but content is owned by the Federal Banking Agencies. The SAR form is used to report many types of suspected criminal violations. Details of the criminal violations can be found in the Criminal Violations section of this manual.

Suspicious Activities and Transactions Requiring SAR Filings

Among the suspicious activities required to be reported are any transactions aggregating $5,000 or more that involve potential money laundering, suspected terrorist financing activities, or violations of the BSA. However, if a financial institution insider is involved in the suspicious transaction(s), a SAR must be filed at any transaction amount. Other suspected criminal activity requires filing a SAR if the transactions aggregate $5,000 or more and a suspect can be identified. If the financial institution is unable to identify a suspect, but believes it was an actual or potential victim of a criminal violation, then a SAR must be filed for transactions aggregating $25,000 or more. Although these are the required transaction levels for filing a SAR, a financial institution may voluntarily file a SAR for suspicious transactions below these thresholds. SAR filings are not used for reporting robberies to local law enforcement, or for lost, counterfeit, or stolen securities that are reported pursuant to 17 CFR 240.17f-1.

If the suspicious transaction involves currency and exceeds $10,000, the financial institution will also need to file a CTR in addition to a SAR.

For suspected money laundering and violations of the BSA, a financial institution must file a SAR, if it knows, suspects, or has reason to suspect that:

- The transaction involves funds derived from illegal activities or is intended or conducted in order to conceal funds or assets derived from illegal activities (including without limitation, the ownership, nature, source, location, or control of such funds or assets), as part of a plan to violate or evade any Federal law or regulation or to avoid any transaction reporting requirement under Federal law;
- The transaction is designed to evade any regulation promulgated under the BSA; or
- The transaction has no business or apparent lawful purpose or is not the sort of transaction in which the particular customer would normally be expected to engage, and the financial institution knows of no reasonable explanation for the transaction after examining the available facts, including the background and possible purpose of the transaction.

Preparation of the SAR Form

The SAR form requires the financial institution to complete detailed information about the suspect(s) of the transaction, the type of suspicious activity, the dollar amount involved, along with any loss to the financial institution, and information about the reporting financial institution. Part V of the SAR form requests a narrative description of the suspect violation and transactions and is used to document what supporting information and records the financial institution retains. This section is considered very critical in terms of explaining the apparent criminal activity to law enforcement and regulatory agencies. The information provided in this section should be complete, accurate, and well-organized. This section should contain additional information on suspects, describe instruments and methods of facilitating the transaction, and provide any follow-up action taken by the financial institution. Data inserts in the form of tables or graphics are discouraged as they are not compatible with the SAR database at FinCEN. Also, attachments to a SAR form will not be stored in the database because they do not conform to the database format. Consequently, a narrative in Part V that states only "see attached" will result in no meaningful description of the transaction, rendering the record in this field insufficient.

The financial institution is also encouraged to detail a listing of documentation available that supports the SAR filing in Part V of the SAR form. This notice will provide law enforcement the awareness necessary to ensure timely access to vital information, if further investigation results from the SAR filing. All documentation supporting the SAR must be stored by the financial institution for five years and is considered property of the U.S. Government.

FinCEN has provided ongoing guidance on how to prepare SAR forms in its publication, "SAR Activity Reviews," under a section on helpful hints, tips, and suggestions on SAR filing. These publications are available at the FinCEN website. Financial institution management should be encouraged to review current and past issues as an aid in properly completing SARs.

SAR Filing Deadlines

By regulation, SAR forms are required to be filed no later than 30 calendar days after the date of initial detection of facts that may constitute a basis for filing a SAR. If no suspect was identified on the date of detection of the incident requiring the filing, a financial institution may delay filing a SAR for an additional 30 calendar days in order to identify a suspect. In no case shall reporting be delayed more than 60 days after the date of initial detection of a reportable transaction.

Customers Engaging in Ongoing Suspicious Activity

If a customer's suspicious activity continues to occur, FinCEN recommends the financial institution file an update on the activity and amounts every 90 days using the SAR form. In such instances, the financial institution should aggregate the dollar amount of previously reported activity and the dollar amount of the newer activity and put this amount in the box on the SAR requesting "total dollar amount involved in known or suspicious activity." Similarly, for the date range of suspicious activity, the financial institution should maintain the original "start" date and extend the "to" date to include the 90 day period in which the suspicious and reportable activity continued.

Failure to File SARs

If an examiner determines that a financial institution has failed to file a SAR when there is evidence to indicate a report should have been filed, the examiner should instruct the financial institution to immediately file the SAR. If the financial institution refuses, the examiner should complete the SAR and cite violations of Part 353 of the FDIC's Rules and Regulations, providing limited details of suspicious activity or the SAR in the Report of Examination. In instances involving a senior officer or director of the financial institution, examiners may prepare the SAR, rather than request the financial institution to do so in order to ensure that the SAR explains the suspicious activity accurately and completely. Each Regional Office is responsible for monitoring SARs filed within that region. Examiner-prepared SARs should be forwarded to their Regional Special Activities Case Manager to ensure timely and proper filing. Any examiner-prepared SARs and all supporting documents should be maintained in the field office files for five years.

SAR Filing Methods

SARs can be filed in paper form, by magnetic tape, or through the Patriot Act Communications System. Financial institutions may contact law enforcement and their Federal Banking Agency to notify them of the suspicious activity, and these contacts should be noted on the SAR form.

Notification to Board of Directors of SAR Filings

Section 353.3 of the FDIC's Rules and Regulations requires the financial institution's board of directors, or designated committee, be promptly notified of any SAR filed. However, if the subject of the SAR is a senior officer or member of the board of directors of the financial institution, notification to the board of directors should be handled differently in order to avoid violating Federal laws that prohibit notifying a suspect or person involved in the suspicious transaction that forms the basis of the SAR. In these situations, it is recommended that appropriate senior personnel not involved in the suspicious activity be advised of the SAR filing and this process be documented.

In cases of financial institutions that file a large volume of SARs, it is not necessary that the board of directors, or designated committee thereof, review each and every SAR document. It is acceptable for the BSA officer to prepare an internal tracking report that briefly discusses all of the SARs filed for a particular month. As long as this tracking report is meaningful in content, then the institution will still be meeting the requirements of Part 353 of the FDIC's Rules and Regulations. Such a report would identify the following information for each SAR filed:

- Customer's name and any additional suspects;
- Social Security Number or TIN;
- Account number (if a customer);
- The date range of suspicious activity;
- The dollar amount of suspicious activity;
- Very brief synopsis of reported activity (for example, "cash deposit structuring" or "wire transfer activity inconsistent with business/occupation"); and
- Indication of whether it is a first-time filing or repeat filing on the customer/suspects.

Such a tracking report promotes efficiency in review of multiple SAR filings. Nevertheless, there are still some SARs that the board of directors, or designated committee thereof, should review individually. Such "significant SARs" would include those that involve insiders (notwithstanding the guidance above regarding the handling of SARs involving board members and senior management), suspicious activity above an internally determined dollar threshold, those involving significant check kiting activity, etc. Financial institutions are encouraged to develop their own parameters for defining "significant SARs" necessitating full reviews; such guidance needs to be written and formalized within board approved BSA policies and procedures.

Safe Harbor for Institutions on SAR Filings

A financial institution that files a SAR is accorded safe harbor from civil liability for filing reports of suspected or known criminal violations and suspicious activities with appropriate authorities. Any financial institution that is subpoenaed or otherwise requested to disclose information contained in a SAR or the fact that a SAR was filed to others shall decline to produce the SAR or provide any information or statements that would disclose that a SAR has been prepared or filed. This prohibition does not preclude disclosure of facts that are the basis of the SAR, as long as the disclosure does not state or imply that a SAR has been filed on the underlying information.

Recently, the safe harbor protections were reiterated and expanded. Section 351 of the USA PATRIOT Act, amended Section 5318(g)(3) of 31 USC and included directors, officers, employees, and agents of the financial institutions who participate in preparing and reporting of SARs under safe harbor protections. Section 355 of the USA PATRIOT Act, implemented at Section 18(w) of the FDI Act, established a means by which financial institutions can share factual information of suspected involvement in criminal activity with each other in connection with references for employment. To comply, employment references must be written and the disclosure made without malicious intent. The financial institution still may not disclose that a SAR was filed. The sharing of employment information is voluntary and should be done under adequate procedures, which may include review by the institution's legal counsel to assess potential for claims of malicious intent.

Examination Guidance

Examiners should ensure that the financial institution has procedures in place to identify and report suspicious activity for all of the financial institution's departments and activities. The guidance may be contained in several policies and procedures; however, it may be advisable for the financial institution to centrally manage the reporting of suspicious activities to ensure that transactions are being reported, when appropriate. A single point of contact can also expedite law enforcement contacts and requests to review specific SARs and their supporting documentation.

As part of its BSA and anti-money laundering programs, the financial institution's policies should detail procedures for complying with suspicious activity reporting requirements. These procedures should define reportable suspicious activity. Financial institutions are encouraged to elaborate and clarify definitions using examples and discussion of the criminal violations. Parameters to filter transactions and review for customer suspicious activity should also be established. Typically, the criteria will be used to identify exceptions to expected customer and transaction activity patterns and identify high-risk customers, whose accounts and transactions should be subject to enhanced scrutiny. Procedures to facilitate accurate and timely filing of SARs, as well as to ensure proper maintenance of supporting documentation, should also be prescribed. Procedures to document decisions not to file a SAR should also be established. Reporting requirements, including reporting SAR filings to senior management and institution directors should be defined. Any additional actions, such as closer monitoring or closing of an involved account(s) that the financial institution may wish to take should be defined in the policy. Many institutions are concerned about facilitating money laundering by continuing to process these suspicious transactions. As there is no requirement to close an account, the institution should assess each situation and provide corresponding guidance on this area in its policy. If the financial institution does plan to close an account that is under investigation by law enforcement, then the institution should notify law enforcement of its intent to close the account.

SAR Database

If examiners need specific SAR filing information, they should contact their Regional SACM or other designees. These specially designated individuals have access to the FinCEN computer system and the database containing records of SAR filings. The database contains information from SARs filed by all federally insured financial institutions. The database is maintained according to the numbered reporting fields in the SAR form, so information can be searched, for example, by suspect, type of violation, or location.

Under current guidance, examiners should obtain a listing or copies of the SARs filed in the current and previous two years by a financial institution for pre-examination planning purposes. Additional searches may be requested as needed, such as to identify whether a SAR has been filed for suspicious activity discovered during the examination, or to obtain information about additional SAR filings on a particular suspect or group of transactions.

For additional guidance on obtaining SAR data, refer to the detailed instructions provided within the "Currency and Banking Retrieval System" discussion within the "Financial Crimes Enforcement Network Reporting and Recordkeeping Requirements" section of this chapter.

OFFICE OF FOREIGN ASSETS CONTROL

The Treasury's Office of Foreign Assets Control administers laws that impose economic and trade sanctions based on foreign policy and national security objectives. Sanctions have been established against various entities and individuals such as targeted foreign countries, terrorists, international narcotics traffickers, and those engaging in activities relating to the proliferation of weapons of mass destruction. Collectively, such individuals and companies are called Specially Designated Nationals (SDNs) and Blocked Persons.

OFAC acts under Presidential wartime and national emergency powers, in addition to authority granted by specific legislation. OFAC has powers to impose controls on transactions and to freeze foreign assets under U.S. jurisdiction. Sanctions can be specific to the interests of the U.S.; however, many sanctions are based on United Nations and other international mandates. Sanctions can include one or more of the following:

- Blocking of assets,
- Trade embargoes,
- Prohibition on unlicensed trade and/or financial transactions,
- Travel bans, and
- Other financial and commercial prohibitions.

A complete list of countries and other specially-designated targets that are currently subject to U.S. sanctions and a detailed description of each order can be found on the Treasury website.

OFAC Applicability

OFAC regulations apply to all U.S. persons and entities, including financial institutions. As such, all U.S. financial institutions, their branches and agencies, international banking facilities, and domestic and overseas branches, offices, and subsidiaries must comply with OFAC sanctions.

Blocking of Assets, Accounts, and Transactions

OFAC regulations require financial institutions to block accounts and other assets and prohibit unlicensed trade and financial transactions with specified countries. Assets and accounts must be blocked when that property is located in the U.S., or is held by, possessed by, or under the control of U.S. persons or entities. The definition of assets and property can include anything of direct, indirect, present, future, and contingent value. Since this definition is so broad, it can affect many types of products and services provided by financial institutions.

OFAC regulations also direct that prohibited accounts of and transactions with SDNs and Blocked Persons need to be blocked or rejected. Generally, U.S. financial institutions must block or freeze funds that are remitted by or on behalf of a blocked individual or entity, are remitted to or through a blocked entity, or are remitted in connection with a transaction in which a blocked entity has an interest. For example, a financial institution cannot send a wire transfer to a blocked entity; once a payment order has been received from a customer, those funds must be placed in an account on the blocked entity's behalf. The interest rate must be a commercially reasonable rate (i.e., at a rate currently offered to other depositors with similar deposit size and terms). Customers cannot cancel or amend payment orders on blocked funds after the U.S.

financial institution has received the order or the funds in question. Once these funds are blocked, they may be released only by specific authorization from the Treasury. Full guidelines for releasing blocked funds are available on the OFAC website. Essentially, either the financial institution or customer files an application with OFAC to obtain a license or authorization to release the blocked funds.

Rejected transactions are those that are to be stopped because the underlying action is prohibited and cannot be processed per the sanctions program. Rejected transactions are to be returned to the sending institution. Transactions include, but are not limited to, the following:

- Cash deposits;
- Personal, official, and traveler's checks;
- Drafts;
- Loans;
- Obligations;
- Letters of credit;
- Credit cards;
- Warehouse receipts;
- Bills of sale;
- Evidences of title;
- Negotiable instruments, such as money orders;
- Trade acceptances;
- Wire transfers;
- Contracts;
- Trust assets; and
- Investments.

OFAC Reporting Requirements

OFAC imposes reporting requirements for blocked property and blocked or rejected transactions. OFAC does not take control of blocked or rejected funds, but it does require financial institutions to report all blocked property to OFAC annually by September 30th. Additionally, financial institutions must notify OFAC of blocked or rejected transactions within 10 days of their occurrence.

When an institution identifies an entity that is an exact match, or has many similarities to a subject listed on the SDN and Blocked Persons List, the institution should contact OFAC Compliance at 1-800-540-6322 for verification. Unless a transaction involves an exact match, it is recommended that the institution contact OFAC Compliance before blocking assets.

Issuance of OFAC Lists

OFAC frequently publishes updates to its list of SDNs and Blocked Persons. This list identifies individuals and companies owned or controlled by, or acting for or on behalf of, targeted countries. It also includes those individuals, groups, and entities, such as terrorists and narcotics traffickers designated under programs that are not country-specific. OFAC adds and removes names as necessary and appropriate and posts those updates to its website. The Special Activities Section in Washington D.C. notifies FDIC-supervised institutions that updates to the SDN and Blocked Persons List are available through Financial Institution Letters.

Maintaining an updated SDN and Blocked Persons list is essential to an institution's compliance with OFAC regulations. It is important to remember that outstanding sanctions can and do change and names of individuals and entities are added to the list frequently. Financial institutions should establish procedures to ensure that its screening information is up-to-date to prevent accepting, processing, or facilitating illicit financial transactions and the potential civil liability that may result.

Financial Institution Responsibilities – OFAC Programs and Monitoring Systems

Financial institutions are subject to the prohibitions and reporting required by OFAC regulations; however, there are not any regulatory program requirements for compliance. Neither OFAC nor Federal financial institution regulators have established laws or regulations dictating what banking records must be screened for matches to the OFAC list, or how frequently reviews should be performed. A violation of law occurs only when the institution conducts a blocked or rejected transaction, regardless of whether the financial institution is aware of it. Additionally, institutions that fail to block and report a transfer (which is subsequently blocked by another bank) may be subject to adverse publicity, fines, and even criminal penalties.

OFAC has the authority to assess CMPs for any sanction violation, and these penalties can be severe. Over the past several years, OFAC has had to impose millions of dollars in CMPs involving U.S. financial institutions. The majority of these fines resulted from institution's failure to block illicit transfers when there was a reference to a targeted country or SDN. While the maximum penalties are established by law, OFAC will consider the Federal banking regulator's most recent assessment of the financial institution's OFAC compliance program as one of the mitigating factors for determining any penalty. In addition, OFAC can pursue criminal penalties if there is any evidence of criminal intent on the part of the financial institution or its employees. Criminal penalties provide for imprisonment up to 30 years and fines ranging up to $10 million.

Furthermore, financial institutions are not permitted to transfer responsibility for OFAC compliance to correspondent banks or a contracted third party, such as a data processing service provider. Each financial institution is responsible for every transaction occurring by or through its systems. If a sanctioned transaction transverses several U.S. financial institutions, all of these institutions will be subject to the same civil or criminal action, with the exception of the financial institution that blocked or rejected the transaction, as appropriate.

Examination Considerations

Financial institutions should establish and maintain effective OFAC programs and screening capabilities in order to facilitate safe and sound banking practices. It is not the examiner's primary duty to identify unreported accounts or transactions within an institution. Rather, examination procedures should focus on evaluating the adequacy of an institution's overall OFAC compliance program and procedures, including the systems and controls in place to reasonably assure accounts and transactions are blocked and rejected.

In reviewing an institution's OFAC compliance program, examiners should evaluate the operational risks the financial institution is willing to accept and determine if this exposure is reasonable in comparison with the business type, department or product, customer base, and cost of an effective screening program for that particular institution, based on its risk profile.

The FDIC strongly recommends that each financial institution adopt a risk-focused, written OFAC program designed to ensure compliance with OFAC regulations. An effective OFAC program should include the following:

- Written policies and procedures for screening transactions and new customers to identify possible OFAC matches;
- Qualified individual to monitor compliance and oversee blocked funds;
- OFAC risk-assessment for various products and departments within the financial institution;
- Guidelines and internal controls to ensure the periodic screening of all existing customer accounts;
- Procedures for obtaining and maintaining up-to-date OFAC lists of blocked countries, entities, and individuals;
- Methods for conveying timely OFAC updates throughout the financial institution, including offshore locations and subsidiaries;
- Procedures for handling and reporting prohibited OFAC transactions;
- Guidance for SAR filings on OFAC matches, if appropriate, such as when criminal intent or terrorist activity is involved;
- Internal review or audit of the OFAC processes in each affected department; and
- Training for all appropriate employees, including those in offshore locations and subsidiaries.

Departmental and product risk assessments are fundamental to a sound OFAC compliance program. These assessments allow institution management to ensure appropriate focus on high-risk areas, such as correspondent banking activities and electronic funds transfers. An effective program will filter as many transactions as possible through OFAC's SDN and Blocked Persons List, whether they are completed manually or through the use of a third party software program. However, when evaluating an institution's compliance program, examiners should consider matters such as the size and complexity of the institution. Adequate compliance procedures can and should be targeted to transactions that pose the greatest risk to an institution. Some transactions may be difficult to capture within a risk-focused compliance program. For example, a customer could write a personal check to a blocked entity; however, the only way the financial institution that the check is drawn upon could block those funds would be if it reviewed the payee on each personal check, assuming the information is provided and legible. Under current banking practices, this would be costly and time consuming. Most financial institutions do not have procedures for interdicting these transactions, and, yet, if such a transaction were to be processed by a U.S. financial institution, it is a violation of OFAC regulations and could result in CMPs against the bank.

However, if a financial institution only screens its wire transfers through the OFAC SDN and Blocked Persons List and never screens its customer database, that is a much higher and, likely, unacceptable risk for the financial institution to assume in relation to the time and expense to perform such a review. Particular risk areas that should be screened by all financial institutions include:

- Incoming and outgoing electronic transactions, such as ACH;
- Funds transfers, including message or instruction fields;
- Monetary instrument sales; and

- Account beneficiaries, signors, powers of attorney, and beneficial owners.

As mentioned previously, account and transaction screening may be done manually, or by utilizing computer software available from the Treasury website or other third party vendors. In fact, many institutions have outsourced this function. If automated, OFAC offers the SDN list in a delimited file format file that can be imported into some software programs. Commercial vendors also offer several OFAC screening software packages with various capabilities and costs. If an institution utilizes an automated system to screen accounts and transactions, examiners should ensure that the institution's policies and procedures address the following:

- OFAC updates are timely;
- OFAC verification can be and is completed in a reasonable time;
- Screening is completed by all of bank departments and related organizations; and
- Process is reasonable in relation to the institution's risk profile.

Wholly-owned securities and insurance subsidiaries of financial institutions must also adopt an OFAC compliance program tailored to meet industry specific needs. The OFAC website provides additional reference material to these industries concerning compliance program content and procedures.

OFAC maintains current information and FAQs on its website. For any questions, OFAC encourages financial institutions to contact its Compliance Hotline at 800-540-6322 (7:30am-6:00pm, weekdays).

EXAMPLES OF PROPER CITATION OF APPARENT VIOLATIONS OF BSA-RELATED REGULATIONS IN THE REPORT OF EXAMINATION

The situations depicted in the examples below are intended to provide further clarification on when and how to cite apparent violations of the BSA and implementing regulations, within the context of findings that are typical for BSA reviews conducted during regular Safety & Soundness examinations. As is often the case, deficiencies identified within an institution's BSA compliance policies and procedures may lead to the citation of one or more apparent violations. The identification of numerous and/or severe deficiencies may indicate an ineffective and inadequate program. When an institution's BSA compliance program is considered inadequate, an apparent violation of Part 326.8(b)(1) of the FDIC's Rules and Regulations should also be cited.

Example 1

An examiner is conducting a BSA review at Urania Bank, a $100 million dollar financial institution in El Paso, Texas. The examiner identifies a systemic violation because the financial institution has not filed CTRs on cash purchases of monetary instruments. This is an apparent violation of 31 CFR 103.22(b)(1). The examiner also identifies a complete failure to scrub the institution's database against 314(a) Requests. This is an apparent violation of 31 CFR 103.100(b)(2). In addition, the examiner identifies numerous incomplete CTRs in apparent violation of 31 CFR 103.27(d). Because of the internal control inadequacies, the examiner also cites an apparent violation of Section 326.8(c)(1). The examiner further determines that the problems are sufficiently serious, warranting the citation of an apparent violation of Section 326.8(b)(1) for failure to develop and provide for an adequate BSA program. After doing additional research, the examiner determines that an apparent violation of Section 326.8(c)(2) should also be cited for inadequate independent testing that should have identified the ongoing weaknesses found by the examiner. Furthermore, the examiner decides that an apparent violation of Section 326.8(c)(4) should be cited for inadequate training. Employees are given cursory BSA training each year; however, no training exists for appropriate identification of cash activity and adequate CTR filings. The examiner also determines that an apparent violation of Section 326.8(c)(3) is appropriate because the BSA officer at Urania Bank comes in only two days per week. This is clearly inadequate for a financial institution of this size and complexity, as exhibited by the systemic BSA problems. In addition to fully addressing these deficiencies in the Violations and Risk Management sections of the Report of Examination, the Examiner-In-Charge fully details the findings, weaknesses, and management responses on the Examiner Comments and Conclusions pages.

Example 2

Examiners at Delirium Thrift, a $500 million financial institution in Southern California, begin the BSA review by requesting the wire transfer log for incoming and outgoing transactions. Information being obtained by the institution for the outgoing wire transfers is identified as inadequate. Consequently, the examiners cite an apparent violation of 31 CFR 103.33(g)(1). Additional research reveals that deficiencies in the wire log information are attributed to several branch locations that are failing to provide sufficient information to the wire transfer department. Because the deficiencies are isolated to transactions originating in a few locations, examiners determine that the deficiencies are not systemic and the overall program remains effective. However, because it is evident in interviews with several branch employees that their training in this area has been lacking, examiners also cite an apparent violation of Section 326.8(c)(4) and request that the institution implement a comprehensive training program that encompasses all of its service locations.

Example 3

Examiners at the independent BSA examination of Bullwinkle Bank and Trust, Moose-Bow, Iowa, a $30 million financial institution, were provided no written BSA policies after several requests. However, actual internal practices for BSA compliance were found to be fully satisfactory for the size and BSA risk-level of the financial institution. Given the low risk profile of the institution, including a nominal volume of reportable transactions being processed by the institution, the BSA/AML procedures in place are sufficient for the institution. Therefore, examiners cite only an apparent violation of Section 326.8(b)(1) for failure to develop an adequate *written* BSA compliance program that is approved by the financial institution's board of directors.

Example 4

Appropriately following pre-examination scoping requirements, examiners obtain information from their Regional SACM or other designees on previous SAR filings relating to money laundering. Upon arrival at Mission Achievement Bank, Agana, Guam, a $250 million financial institution with overseas branches, examiners determine that several of the accounts upon which money laundering SARs had been previously filed are still open and evidencing ongoing money laundering activity. However, the financial institution has failed to file subsequent SARs on this continued activity in these accounts and/or the parties involved. Consequently, the examiner appropriately cites apparent violations of Section 353.3(a) of the FDIC Rules and Regulations for failure to file SARs on this ongoing activity. Further analysis identifies that the failure to appropriately monitor for suspicious or unusual transactions in its high-risk accounts and subsequently file SARs is a systemic problem at the financial institution. Because of the institution-wide problem, the examiner cites an apparent violation of Section 326.8(c)(1) for inadequate internal controls. Furthermore, after consultation with the Regional SACM, the examiner concludes that the institution's overall BSA program is inadequate because of the failures to identify and report suspicious activities and, therefore, cites an apparent violation of Section 326.8(b)(1).

The examples below provide examiner guidance for preparing written comments for apparent violations of the BSA and implementing regulations. In general, write-ups should fully detail the nature and severity of the infraction(s). These comments intentionally omit the management responses that should accompany all apparent violation write-ups.

Part 326.8(b)(1) of the FDIC Rules and Regulations

Part 326.8(b)(1) requires each bank to "develop and provide for the continued administration of a program reasonably designed to assure and monitor compliance with recordkeeping and reporting requirements" of the Bank Secrecy Act, or 31 CFR 103. The regulation further states that "the compliance program shall be written, approved by the bank's board of directors, and noted in the minutes."

The Board and the senior management team have not adequately established and maintained appropriate procedures reasonably designed to assure and monitor the financial institution's compliance with the requirements of the BSA and related regulations. This assessment is evidenced by the weak internal controls, policies, and procedures as identified at this examination. Furthermore, the Board and senior management team have not made a reasonable effort to assure and monitor compliance with recordkeeping and reporting requirements of the BSA. As a result, apparent violations of other sections of Part 326.8 of the FDIC Rules and Regulations and 31 CFR 103 of the U.S. Treasury Recordkeeping Regulations have been cited.

Part 326.8(b)(2) of the FDIC Rules and Regulations

Part 326.8(b)(2) states that each bank must have a customer identification program to be implemented as part of the BSA compliance program.

Management has not provided for an adequate customer identification program. Current policy requirements do not meet the minimum provisions for a customer identification program, as detailed in 31 CFR 103. Current policies and practices require no documentation for new account openings on the Internet with the exception of a "verification e-mail" sent out confirming that the signer wants to open the account. Signature cards are mailed off-site to the Internet customer, who signs them and mails them back without any evidence of third-party verification, such as notary seal. Based on the risk of these types of accounts, this methodology for verification is clearly inadequate to meet regulatory requirements and sound customer due diligence.

Part 326.8(c)(1) of the FDIC Rules and Regulations

Part 326.8(c)(1) states, in part, that the compliance program shall, at a minimum, provide for a system of internal controls to assure ongoing compliance.

Management has not provided for an adequate system of internal controls to assure ongoing compliance. Examiners identified the following internal control deficiencies:

- Incomplete BSA and AML policies for a bank with a high-risk profile.
- Insufficient identification systems for CTR reporting.
- Late CTR filings.
- Insufficient reporting mechanisms for identification of structured transactions and other suspicious activity.
- Weak oversight over high-risk customers.
- Insufficient customer identification program and customer due diligence.

Due to the financial institution's high-risk profile, management should go beyond minimum CIP requirements and do a sufficient level of due diligence that provides for a satisfactory evaluation of the customer. Management must provide for adequate reporting mechanisms to identify large cash transactions as well as suspicious activity. Timely completion and review of appropriate reports, in conjunction with a sufficient level of due diligence, should allow for the accurate and timely reporting of CTRs and SARs.

Part 326.8(c)(2) of the FDIC Rules and Regulations

Part 326.8(c)(2) states that the compliance program shall provide for independent testing for compliance to be conducted by an outside party or bank personnel who have no BSA responsibility or oversight.

The financial institution's BSA policies provide for independent testing. However, the financial institution has not received an independent review for over three years. An annual review of the BSA program should be completed by a qualified independent party. This review should incorporate all of the high-risk areas of the institution, including cash-intensive accounts and transactions, sales and purchases of monetary instruments; customer exemption list; electronic funds transfer activities, and compliance with customer identification procedures.

Part 326.8(c)(3) of the FDIC Rules and Regulations

Part 326.8(c)(3) states that the compliance program shall designate an individual or individuals responsible for coordinating and monitoring day-to-day compliance.

The board of directors has named Head Teller Ben Bison as the BSA officer. While Mr. Bison has a basic understanding of CTR filing, he does not have any training on detecting and reporting suspicious activity. Furthermore, Ben Bison does not have policy-making authority over the BSA function. Management needs to appoint someone with policy-making authority as the institution's BSA Officer.

Part 326.8(c)(4) of the FDIC Rules and Regulations

Part 326.8(c)(4) states that the compliance program shall provide training for appropriate personnel.

Example 1:

While BSA training programs are adequate, management has trained less than half of the appropriate operational personnel during the last calendar year. Management must ensure that all appropriate personnel, including the board of directors and officers, receive adequate BSA training a minimum of once per year and ongoing for those whose duties require constant awareness of the BSA requirements.

Example 2:

BSA training needs improvement. While regular BSA training sessions are developed and conducted for branch operations personnel, the training programs do not address internal BSA policies and, more importantly, BSA and anti-money laundering regulations. Management must ensure that comprehensive BSA training is provided to all directors, officers, and appropriate operational personnel. Training should be provided at least annually, and must be ongoing for those whose duties require constant awareness of BSA requirements. The training must be commensurate with the institution's BSA risk-profile and provide specific employee guidance on detecting unusual or suspicious transactions beyond the detection of cash structuring transactions.

Part 353.3 of the FDIC Rules and Regulations and 31 C.F.R. 103.18

Part 353.3(a) and 31 C.F.R. 103.18 state, in part, that Suspicious Activity Reports (SARs) should be filed when:

- Insider abuse is involved in any amount;

- Transactions aggregating $5,000 or more when the suspect can be identified;
- Transactions aggregating $25,000 or more when the suspect can not be identified; and
- Transactions aggregating $5,000 or more that involve money laundering or violations of the BSA… if the bank knows, suspects, or has reason to suspect that:
  - The transaction involves funds derived from illegal activities,
  - The transaction is designed to evade BSA reporting requirements, or
  - The transaction has no business or apparent lawful purpose or is not the sort of transaction in which the particular customer would normally be expected to engage, and the bank knows of no reasonable explanation for the transaction after examining the available facts, including the background and possible purpose of the transaction.

Management failed to file SARs on several different deposit account customers, all of which appeared to be structuring cash deposits to avoid the filing of CTRs. These transactions all appeared on large cash transaction reports reviewed by management; however, no one in the institution researched the transactions or filed SARs on the incidents. Management must file SARs on the following customer transactions and appropriately review suspicious activity and file necessary SARs going forward.

Account Number	Dates	Total Cash Deposited
123333	02/20/xx-02/28/xx	$50,000
134445	03/02/xx-03/15/xx	$32,300
448832	01/05/xx-03/10/xx	$163,500
878877	03/10/xx-03/27/xx	$201,000

Part 353.3(b) of the FDIC Rules and Regulations and 31 C.F.R. 103.18(b)(3)

Part 353.3(b) of the FDIC Rules and Regulations and 31 C.F.R. 103.18(b)(3) state that a bank shall file a suspicious activity report (SAR) no later than 30 calendar days after the date of initial detection of facts that may constitute a basis for filing a SAR. In no case shall reporting be delayed more than 60 calendar days after the date of initial detection.

Management and the board have failed to file several hundred SARs within 30 calendar days of the initial detection of the suspicious activity. The BSA officer failed to file any SARs for the time period of June through August 20XX. This information was verified through use of the FinCEN database, which showed than no SARs had been filed during that time period. In addition, SARs filed from February through May of 20XX were filed between 65 days and 82 days of the initial detection of the activity. Management must ensure that suspicious activity reports are not only identified, but also filed in a timely manner.

Part 353.3(f) of the FDIC Rules and Regulations

Part 353.3(f) of the FDIC Rules and Regulations states that bank management must promptly notify its board of directors, or a committee thereof, of any report filed pursuant to Part 353 (Suspicious Activity Reports).

Management has not properly informed the board of directors of SARs filed to report suspicious activities. The management team has provided the board with erroneous reports showing that the bank has filed SARs, when, in fact, the management team never did file such SARs. Board and committee minutes clearly indicate a reliance on these reports as accurate.

31 C.F.R. 103.22(c)(2)

This section of the Financial Recordkeeping Regulations requires the bank to treat multiple transactions totaling over $10,000 as a single transaction.

Management's large cash aggregation reports include only those cash transactions above $9,000. Because of this weakness in the reporting system's set-up, the report failed to pick up transactions below $9,000 from multiple accounts with one owner. The following transactions were identified which should have been aggregated and a CTR filed. Management needs to alter or improve their system in order to identify such transactions.

Customer Name Account #	Date	Amount
Mini Meat Market		
122222222	12/12/xx	$8,000
122233333	12/12/xx	$4,000
122222222	12/16/xx	$6,000
122233333	12/16/xx	$5,000
Claire's Club Sandwiches a/k/a Claire's Catering		
15555555	12/22/xx	$4,000
17777777	12/22/xx	$7,000
17777788	12/22/xx	$3,000

31 C.F.R. 103.22(d)(6)(i)

This section of the Financial Recordkeeping regulation states that a bank must document monitoring of exempt person transactions. Management must review exempt accounts at least one time per year and must document appropriate monitoring and review of each exempt account.

Management has exempted three customers, but has failed to document monitoring of their accounts. Management has stated that they did monitor the account transactions and no suspicious activity appears evident; however, management must retain appropriate documentation for all account monitoring of exempt customers. Such monitoring documentation could include, but is not limited to:

- Reviews of exempt customers cash transactions,
- Review of monthly statements and monthly activity,
- Interview notes with account owners or visitation notes from reviewing the place of business,
- Documenting changes of ownership, or
- Documenting changes in amount, timing, or type of transaction activity.

31 C.F.R. 103.27(a)

This section of the Financial Recordkeeping regulation requires the financial institution to retain all Currency Transaction Reports for five years.

Management failed to keep copies of all of the CTRs filed during the past five years. Management can locate CTRs filed for the past two years but has not consistently retained CTR copies for the three years preceding. Management needs to make sure that its record-keeping systems allow for the retention and retrieval of all CTRs filed for the previous five year time period.

31 C.F.R. 103.27(d)

This section of the Financial Recordkeeping regulation requires the financial institution to include all appropriate information required in the CTR.

Management has consistently failed to obtain information on the individual conducting the transaction unless that person is also the account owner. This information is required in the CTR and must be completed. Since this is a systemic failure, management needs to ensure proper training is provided to tellers and other key employees to ensure that this problem is corrected.

31 C.F.R. 103.121(b)(2)(i)(A)(4)(ii)

This section of the Financial Recordkeeping regulation states that the financial institution must obtain a tax identification number or number and country of issuance of any government-issued documentation.

The financial institution's policies and programs require that all employees obtain minimum customer identification information; however, accounts in the Vermont Street Branch have not been following minimum account opening standards. Over half of the accounts opened at the Vermont Street Branch since October 1, 2003, when this regulation came into effect, have been opened without tax identification numbers or similar personal identification number for non-U.S. citizens. Management must ensure that BSA policies and regulations are followed throughout the institution and verify through BSA officer reviews and independent reviews that requirements are being met.

INTRODUCTION

The early detection of apparent fraud and insider abuse is an essential element in limiting the risk to the FDIC's deposit insurance funds and uninsured depositors. Although it is not possible to detect all instances of apparent fraud and insider abuse, potential problems can often be uncovered when certain warning signs are evident. It is essential for examiners to be alert for irregular or unusual activity and to fully investigate the circumstances surrounding the activity. Examiners should not restrict concern to internal crimes, but should also be alert to any attempts by outsiders to defraud financial institutions.

This section is organized by separate subject areas with each providing a summary of potential problems, a listing of warning signs of possible fraud and insider abuse, and suggested action for investigation. The lists are not all-inclusive but rather cover only those areas in which fraud and insider abuse occur most frequently. This section is designed to help alert examiners to possible fraudulent activity and insider abuse. It is intended to serve as a reference source during examinations and should be used as a supplement to standard examination procedures on an "as-needed" basis.

Any important situations should be commented on in the Report of Examination. Appropriate comments should be included in the Examination Conclusions and Comments schedule and in any other report pages as applicable.

Note the restrictions on disclosing irregular transactions in examination reports. This is more fully explained in the Report of Examination Instructions.

Any apparent criminal activity should be investigated thoroughly and reported on the Interagency Criminal Referral Form. The procedures for reporting apparent criminal violations are included in the Criminal Violations Section, Part IV.

SUBJECT AREAS

Included under each of the following subject areas is a summary of potential problems, a listing of warning signs of potential fraud and insider abuse and suggested action for investigation.

1. Corporate Culture/Ethics
2. Insider Transactions
3. Loan Participations
4. Real Estate Lending
5. Secured Lending
6. Third Party Obligations
7. Lending to Buy Tax Shelter Investments
8. Linked Financing/Brokered Deposits
9. Credit Cards and ATM Transactions
10. Advance Fee Schemes
11. Offshore Transactions
12. Wire Transfers
13. Money Laundering
14. Securities Trading Activities
15. Miscellaneous

CORPORATE CULTURE/ETHICS

Potential Problems

Complete dominance of an institution's policies and administration by one or a few directors may lead to inept management at lower levels. Absence of a written code of conduct may make it difficult to discipline directors, officers or employees who may be involved in questionable activities and may cause problems for directors, officers, employees and agents under the Bank Bribery Statute (18 U.S.C. 215). The code of conduct should identify allowable nonbank activities and acceptable gifts or gratuities received in the normal course of business.

Warning Signs

1. Absence of a code of ethics.
2. Absence of a clear policy restricting or requiring disclosure of conflicts of interest.
3. Absence of a policy restricting gifts and gratuities.
4. Lack of oversight by the institution's board of directors, particularly outside directors.

5. Absence of planning, training, hiring and organizational policies.

6. Absence of clearly defined authorities and lack of definition of the responsibilities that accompany the authorities.

7. Lack of independence of management in acting on recommended corrections.

8. CEO controls internal and outside auditors.

9. Lax control and review of expense accounts.

Suggested Action

Review the institution's code of conduct. Determine if there is a policy covering conflicts of interest and if prohibited practices are clearly stated along with the consequences for failure to refrain from these practices. Determine whether all insider interests are accurately reported to the institution's board of directors. Closely review the minutes of the board of directors' meetings and note the reporting of insider interests and the dominance of any director(s) in discussion of policy matters and administration. Also note the discussion of insider transactions and see if there are any directors who frequently or consistently vote against insider transactions in general or against those of one or more insiders in particular. Attempt to determine the reason for the dissent. If directors, officers and employees are required to report gifts and gratuities from present or potential customers, review the report to see if the gifts or gratuities conform to the institution's guidelines.

INSIDER TRANSACTIONS

Potential Problems

Insider fraud has accounted for over one-half of all bank fraud and embezzlement cases closed by the FBI during the past several years. Insiders are in a position of trust and can abuse that trust for their own personal benefit. Insider abuses include failure to disclose their interests that borrow from the institution or otherwise have business dealings with the institution; diverting assets and income for their own use; misuse of position by approving questionable transactions for relatives, friends and/or business associates; abuse of expense accounts; acceptance of bribes and gratuities; and other questionable dealings related to their positions at the institution. Insider abuse undermines confidence in institutions and often leads to failure.

Warning Signs

1. Insider lending personal funds to customers or borrowing from customers.

2. Insider involvement in silent trusts or partnerships and/or shell corporations.

3. Insider appears to receive special favors from institution customers or shows unusual favoritism toward certain institution customers.

4. Insider purchases assets from the institution, directly or indirectly, and there is no evidence of independent appraisal of the assets.

5. Insider has apparent reciprocal lending arrangements with insiders of other institutions and his/her institution has correspondent relationships with those institutions.

6. Insider is involved in a business that arranges its financing through the institution.

7. Insider "perks" include use of expensive institution-owned automobiles, boats, airplanes, housing, etc., where the institution's earnings do not appear to support such extravagance.

8. Insider heavily indebted and debt service appears to require most, if not all, of the insider's salary.

9. Insider financial statements show large or unusual fluctuations. Net worth cannot be reconciled from disclosed sources of income.

10. Insider is financing large purchases (home, auto, etc.) through private, nonbanking sources that may have a business relationship with the institution.

11. Insider financial statement reflects heavy concentration of high-risk investments and speculative ventures.

12. Insider sells personal assets to third party and the institution provides financing without benefit of an independent appraisal.

13. Insiders or their interests frequently appear on transaction suspense item listings or on computer-generated past due loan lists, but do not appear on the "updated" version presented to the board of directors or to examiners.

14. Insider "unofficially" guarantees loans and/or loan participations.

15. Insider is responsible for clearing up audit exceptions on loan balance confirmations.

16. Insider "forgets" to process credit entry for official bank checks causing the account to be out-of-balance because checks are sometimes paid (debited) before the credit is posted, sometimes several days later.

17. Insider conducts a cash transaction over $10,000 but "forgets" to have the institution file a Currency Transaction Report or asks an employee to "structure" the transaction to avoid filing a Currency Transaction Report with the Internal Revenue Service.

18. Insider's stock in the institution is pledged to secure loans obtained from sources other than financial institutions. If true, what is the purpose of the loan and are payments current?

19. Insider conducts personal business from the institution using equipment, supplies, employees, etc., and/or spends most of their time out of the institution on business unrelated to the institution.

20. Insider has substance abuse problems or is known to associate with people who have these problems.

21. Insider is known to associate with "high rollers".

22. Insider suggests that institution change servicers or vendors even though there appears to be no problem with the current servicers or vendors.

23. Insider abruptly suggests changes in outside auditors or legal counsel.

24. Insider loans increase dramatically at about the same time as the institution is recapitalized.

25. Insider's major assets are parcels of real estate that appear to increase in value at a rate that is not consistent with market conditions.

26. Insider sells his stock to an Employee Stock Option Plan (ESOP), sometimes arranging for the ESOP to obtain a loan to purchase the stock.

27. Insider's interests have a direct business relationship with the institution and compensation for services is not commensurate with the level of services provided.

28. Insider agrees to buy fixed assets from the institution with the understanding that the institution will repurchase the fixed assets at some future date.

29. Insider receives incentive pay or "bonuses" based on volume of loans generated.

30. Insider buys a home from a builder whose development project is financed by the institution.

31. Insider is involved in "churning" of the institution's securities portfolio.

32. Insider arranges sale of EDP equipment at book value in connection with the conversion to a new data processing servicer. Also check "side" deals.

33. Insider authorizes ORE related expenses such as landscaping, remodeling, etc., when such expenses do not appear justified. (May be making improvements or repairs to personal residence.)

34. Insider makes frequent trips at the institution's expense to areas where the institution has no business relationships.

35. Insider will not allow employees to talk to examiners.

36. Insider keeps an unusual number of customer files in his/her office.

37. Insider is making payments on other borrowers' loans.

38. Insider's loan is being paid by someone else.

39. Insider receives commissions on credit life insurance premiums and those commissions are not properly adjusted in cases where the insurance company gives rebates for the borrower's prepayment of the loan or gives refunds to borrowers for premium overcharges.

40. Insider sells some of his/her personal stock of the institution to borrowers (as a condition for approving loan) and buys more stock from the institution at about the same time that the institution is under pressure to increase capital.

41. Insider purchases investment securities for his personal portfolio through the institution but

"forgets" to reimburse the institution until a few days or weeks later, and then only if the investment has increased in value. In spite of the increase in value, the insider only pays the original purchase price to the institution.

42. Insider's accounts at the institution are frequently overdrawn. Deposits to cover overdrafts come from loans or some undisclosed source.

43. Insider maintains total control over the institution and does not allow other officers and employees to make independent decisions.

44. Insider has past due loans at other financial institutions.

45. Insider maintains signed, blank notes in personal or customer loan files.

46. Insider is rumored to have financial problems due to divorce, business failure, gambling losses, etc.

47. Insider maintains several personal accounts outside of his/her own institution.

48. Insider frequently takes loan papers out of the institution for customer signatures; personally handles the disbursement of the loan proceeds; routinely cashes checks for customer loan proceeds; and insists on personally handling certain past due accounts as a "special favor" to certain customers.

49. Insider insists that different audit firms audit different divisions or departments. (Hopes there will be no comparison of findings between firms.)

50. Insider insists that different departments be audited at different times. (Makes it easier to hide fraudulent inter-departmental transactions.)

Suggested Action

Review all insider transactions to see if they comply with policy and applicable state and federal regulations. Follow up on any exceptions. Any nonconforming transactions should be discussed with the institution's board of directors. Apparent fraudulent activities should be referred to the proper authorities.

LOAN PARTICIPATIONS

Potential Problems

Loan participations can lead to substantial losses if not documented properly and if not subjected to the same credit standards and reviews as direct loans. Participations purchased as an accommodation to affiliated institutions often do not receive the same scrutiny as those purchased from non-affiliated institutions. Informal repurchase agreements between participating institutions may be used to circumvent legal lending limitations and could subject institutions to substantial undisclosed contingent liabilities. Participations may also be used to disguise delinquencies and avoid adverse classifications.

Warning Signs

1. Excessive participation of loans between closely related institutions, correspondent institutions and branches or departments of the lending institution.

2. Absence of any formal participation agreement.

3. Poor or incomplete loan documentation.

4. Investing in out-of-territory participations.

5. Reliance on third party guaranties.

6. Large paydown or payoff of previously classified loans.

7. Some indication that there may be informal repurchase agreements on some participations.

8. Lack of independent credit analysis.

9. Volume of loan participations is high in relation to the size of the institution's own loan portfolio.

10. Evidence of lapping of loan participations. For example, the sale of a loan participation equal or greater than, and at or about the same time as, a participation that has matured or is about to mature.

11. Disputes between participating institutions over documentation, payments, or any other aspect of the loan participation transaction.

12. Formal participation agreements are missing; therefore, responsibilities and rights of all participating institutions may be unclear.

13. Participations between affiliated institutions may be "placed" without the purchasing institution having the benefit of reviewing normal credit information,

particularly where there is dominant ownership and a "rubber stamp" board of directors.

14. Payments that are not distributed to each participant according to the participation agreement may indicate preferential treatment; or where the participants are affiliated, it may indicate an attempt to disguise the delinquent status of the loans in the weaker institutions.

15. Informal guaranties by insiders may be one method of disguising insider transactions.

16. There is some indication that the credit information contained in the selling institution's files is not the same as the credit information in the purchasing institution's files.

17. Be aware of reciprocal arrangements in the sale/purchase of participations. For example, Institution A sells a 100% participation in a loan to an insider of the selling institution to Institution B which, in turn sells a 100% participation in a loan to one of their insiders to Institution A.

18. There are a number of outstanding items in correspondent accounts just prior to or during an examination or audit which relate to participations purchased or sold.

19. There is some indication that payments on participations purchased are being made by the selling institution without reimbursement from the borrower.

Suggested Action

Where possible, determine the current status of participations at each participating institution. Make special note of any disputes between participating institutions and follow up. Review any debits or credits related to participations posted to the correspondent institution accounts just prior to or during the examination. Follow up on any exceptions. Attempt to determine if the participation has been adversely classified by examiners at any participating institution. Look for any indication of any informal repurchase agreements.

REAL ESTATE LENDING

Potential Problems

Real estate lending abuses have been given a lot of publicity due to the problems encountered by financial institutions that have suffered substantial losses from problem real estate loans. These problems have not been confined to any particular area of the country. Many of the problems revolve around inflated appraisals, land flips (interparty transactions), fraudulent sales contracts, forged title documents, misapplication of loan proceeds, financing of nonexistent properties, loans in the name of trustees, holding companies and offshore companies to disguise the true identity of the actual borrowers and fraudulent loan applications from purchasers, including false income statements, false employment verifications, false credit reports and false financial statements. In many cases, important documentation is missing or is intentionally deficient in an attempt to conceal material facts.

Warning Signs

1. An unusually large number of loans in the same development are exactly equal to the institution's maximum loan-to-value (LTV) ratio for real estate mortgages.

2. The institution has an unusually high percentage of "No Doc" loans. (A "No Doc" loan is one in which extensive documentation of income, credit history, deposits, etc., is not required because of the size of the downpayment, usually 25% or more. Theoretically, the value of the collateral will protect the lender.)

3. Borrower has never owned a home before and does not appear to have the financial ability to support the size of the downpayment made.

4. Property securing loan has changed ownership frequently in a short period of time. Related entities may be involved.

5. Insured value of improvements is considerably less than appraised value.

6. Appraiser is a heavy borrower at the institution.

7. Appraisal fee is based on a percentage of appraised value.

8. Borrower furnishes his/her own appraisal which is a photocopy of an appraisal signed by a reputable appraiser.

9. Use of "comparables" which are not comparable.

10. Appraisal is based on an estimated future value.

11. All comparables are new houses in the same development that were built by the same builder and appraised by the same appraiser.

12. An unusual number of "purchasers" are from out of the area or out of state.

13. Credit history, employment, etc., are not independently verified by the lender.

14. Large number of applicants have income from sources that cannot be verified, such as self-employment.

15. The value of the home the applicant desires to purchase is not in line with the applicant's income. For example, the applicant makes $90,000 per year and only wants to purchase a $90,000 home.

16. The applicant's credit history is incomplete. For example, the applicant is 45 years old, but credit history only dates back five years.

17. The institution's normal procedure is to accept photocopies of important documents rather than to make their own copies of the originals.

18. If copies of income tax returns are provided, columns are uneven and/or do not balance.

19. Appraiser is from out of the area and not likely to be familiar with local property values.

20. A close relationship exists between builder, broker, appraiser and lender.

21. Construction draws are made without visual inspections.

22. All "comparables" are from properties appraised by the same appraiser.

23. Generally, housing sales are slow, but this development seems unusually active in sales.

24. There seems to be an unusual number of foreclosures on 90% to 95% loans with Private Mortgage Insurance on homes in the same development built by the same builder. (Sometimes it is cheaper for the builder to arrange for a straw buyer to get the 95% loan and default than it is to market the home if the market is sluggish.)

25. Applications received through the same broker have numerous similarities.

26. Sales contracts have numerous crossed out and changed figures for sales price and downpayment.

27. Appraiser for the project owns property in the project.

28. Lending officer buys a home in a project financed by the institution.

29. Assessed value for tax purposes is not in line with appraised value.

30. The project is reportedly fully occupied, but the parking lot always appears to be nearly empty.

31. The parking lot is full, but the project appears empty. Nobody is around in the parking lot, pool, etc.

32. After a long period of inactivity, sales suddenly become brisk.

33. Sales contract is drawn up to fit the lender's LTV requirements. For example, the buyer wants an $80,000 home but has no down payment. The lender only lends 80% of appraised value or selling price. Contract is drawn up to show a selling price of $100,000 instead of the actual selling price of $80,000.

34. Builder claims a large number of presold units not yet under construction while many finished units remain unsold.

35. The borrower's interest in the property is not logical given the distance between the property and his/her place of employment and the supply of comparable housing near his/her employer. For example, employment of the prospective borrower/purchaser is 100 miles from the location of the property, while comparable housing is readily available within 10 miles of employment.

36. Applicant's stated income is not commensurate with his/her stated employment and/or years of experience.

37. Applicant's financial statement shows numerous assets that are self evaluated and cannot be readily verified through independent sources.

38. Applicant claims to own partial interests in many assets but not 100% of any asset, making verification difficult.

39. Appraised value of property is contingent upon the curing of some property defect such as drainage problems.

40. The applicant's financial statement reflects ownership of valuable items, such as jewelry and art work, but no insurance is carried on these items.

41. Applicant's tax return shows substantial interest deductions, but the financial statement shows little debt. For example, the borrower's tax return shows substantial mortgage interest deductions, but the self-prepared financial statement shows no mortgage or a very small mortgage.

42. Appraised value of a condominium complex is arrived at by using the asking price for one of the more desirable units and multiplying that by the total number of units.

43. Loans are unusual considering the size of the institution and the level of expertise of its lending officers.

44. There is a heavy concentration of loans to a single project or to individuals related to the project.

45. There is a heavy concentration of loans to local borrowers with the same or similar real estate collateral which is located outside the institution's trade area.

46. There are many loans in the names of trustees, holding companies, and/or offshore companies but the names of the individuals involved are not disclosed in the institution's files.

47. A loan is approved contingent upon an appraised value of at least a certain amount and the appraised value is exactly that amount.

48. Independent reviews of outside appraisals are never conducted.

49. The institution routinely accepts mortgages or other loans through brokers but makes no attempt to determine the financial condition of the broker or to obtain any references or other background information.

50. Borrower claims substantial income but his/her only credit experience has been with finance companies.

51. Borrower claims to own substantial assets, reportedly has an excellent credit history and above average income, but is being charged many points and a higher than average interest rate which is indicative of high risk loans.

52. The institution allows borrowers to assign mortgages as collateral without routinely performing the same analysis of the mortgage and mortgagor as they would perform if the institution were mortgagee.

53. Asset Swaps - Sale of other real estate or other distressed assets to a broker at an inflated price in return for favorable terms and conditions on a new loan to a borrower introduced to the institution by the broker. The new loan is usually secured by property of questionable value and the borrower is in weak financial condition. Borrower and collateral are often outside the institution's trade area.

Suggested Action

Review all real estate files and request any missing documents. Review appraisals to attempt to determine whether any land flips have been involved. Compare appraised value to other stated values such as assessed value or insured value. Attempt to identify any pattern or practice which appears to be suspicious such as a large number of borrowers having the same employer, a large number of properties appraised by the same appraiser, a large number of loans presented by the same broker, a large number of out-of-territory borrowers, etc. If possible, visit construction sites to see if activity is as represented.

SECURED LENDING

Potential Problems

Financial institutions are often lulled into a false sense of security when they believe that they have adequate collateral for their loans; however, many institutions fail to properly record their liens and/or fail to physically verify the existence of their collateral. In many cases, there are no independent appraisals to support collateral value. Out-of-territory collateral may be difficult to verify and monitor. Where fraud is suspected, it is often difficult to prove in cases where institutions have failed to follow generally accepted procedures for documenting collateral.

Warning Signs

1. Lack of independent appraisals of collateral.
2. Significant out-of-territory lending.
3. Loans with unusual terms or conditions.
4. Poor or incomplete documentation used to intentionally conceal material facts.
5. Loans that are unusual considering the size of the institution and the level of expertise of its lending officers.
6. Heavy concentration of loans secured by the same or similar types of collateral.
7. Financing of 100% of the value of any collateral that is subject to rapid depreciation or wide fluctuation in market value.
8. Appraisals which appear to be made to cover the borrower's loan request rather than to reflect the true value of the collateral.
9. Appraisal fee based on amount of loan or on appraised value of collateral may encourage inflated appraisals.
10. Review of records indicates numerous related party purchases and sales of the collateral which could be used to inflate the collateral price far beyond actual market value.
11. Loans in the names of trustees, holding companies, and offshore companies may disguise the identity of actual borrowers.
12. Assigned notes and mortgages are accepted as collateral without verifying all underlying documentation and conducting normal credit analysis on the obligor.

Suggested Action

Review collateral inspection records to determine if there are any exceptions. Review appraisals for similar types of collateral and reconcile any differences. Determine whether in-house appraisals are based on physical inspection of the collateral. If not, why not? Be sure that adequate collateral margins are required at the inception of loans and monitored throughout the term of the loans.

THIRD PARTY OBLIGATIONS

Potential Problems

A guaranty is only as good as the guarantor and a guaranty without adequate documentation to support its value to the institution may be worthless. A guaranty that is separate from the note may contain restrictions that could render it worthless unless the restrictions are closely followed and a guaranty signed in blank may be legally unenforceable if contested. A false third party obligation may be created for the sole purpose of obtaining a loan from the institution. It may have no actual value. This is particularly true where offshore "shell" institutions are involved.

Warning Signs

1. Documentation on guaranties is incomplete.
2. Loans are secured by obligations of offshore institutions.
3. Lack of credit information on third party guarantor.
4. Financial statements reflect concentrations of closely held companies or businesses that lack audited financial statements to support their value.
5. A guaranty signed in blank may be used indiscriminately by some dishonest individuals to cover weak loans. Guaranties signed in blank may also be legally unenforceable if contested.
6. Guaranties that are separate from the notes may contain restrictions that could render them worthless unless the restrictions are closely followed.
7. Third party obligor is not informed of the assignment of the obligation to an institution; this may allow payments to be diverted to some use other than payment of the loan.

8. Guaranties from insurance companies or letters of credit from insurance companies to guaranty payment are accepted without an evaluation of the financial soundness of the guarantors and their ability to honor the guaranties or letters of credit if necessary.

9. Guaranties or letters of credit from insurance companies are not directly verified with the issuer.

10. The institution's audit procedures do not include a request for acknowledgement of guaranties by guarantors.

11. Corporate guaranties are used, but there is no information in the institution's files to support the authority of the corporations to make the guaranties or to indicate that they are still in force.

12. The institution purchases substandard consumer contracts from a third party relying on recourse to the seller without performing proper analysis of seller's financial condition.

13. The institution purchases substandard consumer contracts for automobiles, home improvements, etc., while relying on some type of insurance to cover delinquencies, skips, etc., without verifying the financial condition of the insurer.

Suggested Action

All guaranties should be reviewed to determine that all documentation is complete and that each guarantor is financially sound and reputable. Corporate guaranties and letters of credit from insurance companies and financial institutions should be verified directly with the issuer. If a loan is collateralized by an obligation of an offshore bank, determine if the lender has attempted to verify the existence, reputation and financial stability of the offshore bank. Guaranties signed in blank should be reviewed to determine their validity.

LENDING TO BUY TAX SHELTER INVESTMENTS

Potential Problems

Be wary of deals where there is no economic purpose except to generate tax write-offs. If the Internal Revenue Service (IRS) successfully challenges the tax benefits claimed from the tax shelter, the investor would have to pay not only additional income tax on the amounts disallowed but also interest and possible penalties. Should this occur, investors might walk away from their loans, and institutions holding the loans would suffer losses.

Warning Signs

1. Block loans to individuals to buy tax shelters arranged by a tax shelter promoter.

2. Shelters which promise tax deductions that would not appear to withstand the scrutiny of the IRS.

3. Specific use of the invested funds cannot be ascertained.

4. Loan payments are to be made by a servicing company.

5. Investments reflect no economic purpose except to generate tax write-offs.

6. Financial "no cash" deals where transactions are structured to avoid any actual cash flow. For example, a long-term CD is matched against a loan payable from the proceeds of the CD at its maturity. Interest accumulates on the CD in an amount equal to or greater than the compounded interest owed on the corresponding loan. The depositor/borrower never provides or receives any cash but still gets the tax write-off.

Suggested Action

Try to determine if the tax shelter is legitimate. Section 465 of the Internal Revenue Code states that an investor can only use losses available from such at risk activity to the extent that the taxpayer is actually economically at risk in connection with the activity.

LINKED FINANCING /BROKERED DEPOSITS

Potential Problems

Linked financing and brokered deposit transactions have contributed to the failure of several banks and savings associations. Offers of large deposits in return for favorable treatment on loans to out-of-area borrowers or to other borrowers previously unknown to the institution should be handled with caution. Where the brokered deposits are not pledged to secure the associated loans, the institution is exposed to substantial risk since it must refund the deposits regardless of the collectability of the loans.

Warning Signs

1. Short-term volatile deposits are used to fund long-term loans of questionable credit quality.

2. A generous point spread exists between the loan interest rate and the interest rate on deposits, which are usually below prevailing market rates.

3. Out-of-territory lending to previously unknown borrowers.

4. Large dollar deposits are offered in consideration for favorable treatment on loan requests, but deposits are not pledged as collateral for the loans.

5. Brokered deposit transactions where the broker's fees are paid from the proceeds of related loans.

6. Institution is presented with a large loan request that cannot be funded without the use of brokered deposits.

7. An unsolicited offer to purchase the institution comes at about the same time as brokered deposits and related loans are processed.

8. Long term discounted certificates of deposit pledged or matched at face value and not actual book value and structured to repay the loan automatically.

Suggested Action

Loans and other transactions associated or connected with brokered deposits should be carefully reviewed. Special attention should be given to transactions where the broker's fee is paid out of loan proceeds or fees for other related transactions instead of being paid directly by the institution as a cost of obtaining the funds.

CREDIT CARDS AND ATM TRANSACTIONS

Potential Problems

Poor control by the issuing institution over unissued cards, PINs, returned mail, credit limit increases and name and address changes can contribute to credit card and ATM card fraud. Credit card merchant accounts can be used to defraud the institution, particularly where the institution does not exercise care in screening prospective accounts. If not handled properly, credit card programs secured by deposit accounts can create substantial liability to the institution for inadequate or improper disclosures of fees and interest charges to customers and can create losses where credit limits are not adequately monitored and/or controlled. Delay in payments to merchants and payments from cardholders could signal the beginning of problems with a third party servicer (generally an outside marketing firm).

Warning Signs

1. Lack of separation of duties between the card issuing function and issuance of personal identification number ("PIN").

2. Poor control of unissued cards and PINs.

3. Poor control of returned mail.

4. Customer complaints.

5. Poor control of credit limit increases.

6. Poor control of name and address changes.

7. Frequent malfunction of payment authorization system.

8. Unusual delays in receipt of cards and PINs by the customers.

9. The institution does not limit amount of cash that a customer can extract from an ATM in a given day.

10. Evidence that customer credit card purchases have been intentionally structured by a merchant to keep individual amounts below the "floor limit" to avoid the need for transaction approval.

11. Credit card merchant accounts are opened without obtaining any background information on the merchant.

12. Credit card merchant account activity reflects an increase in the number and size of chargebacks.

13. The institution's credit card merchant is depositing sales drafts made payable to a business or businesses other than the business named on the account.

14. Credit card merchant frequently requests the wire transfer of funds from the merchant account to other institutions in other parts of the country or to offshore institutions almost immediately after deposits are made.

15. Merchant is engaged in telemarketing activities and is the subject of frequent customer complaints.

16. The institution contracts with third party servicer to process credit card customer and merchant transactions without verifying the financial stability and reputation of the servicer.

17. The institution contracts with a third party to establish and market a secured credit card program without verifying the financial stability and reputation of the third party and without determining the institution's potential liability for participation in the program.

18. Credit card merchant account deposits appear to exceed the level of customer activity observed at the merchant's place of business.

19. Merchant has access to EDC (electronic data capture) equipment but frequently inputs credit card account numbers manually. Be especially alert if manually keyed transactions exceed 10% of total transactions.

20. Merchant has a sudden or unexplained increase in the level of authorization requests from a particular merchant location.

Suggested Action

Review customer complaints, no matter how insignificant they may appear to be, and review the institution's follow-up procedures. Be sure proper controls are in place at all points throughout the card issuing and transaction processing functions. Review possible causes of frequent malfunctions of the payment authorization system and follow-up on remedial actions taken by the institution. Monitor the level of authorization requests to spot potential problems before sales drafts are deposited. Conduct on-site inspections of merchant's operations. Review contracts and correspondence between the institution and Visa, MasterCard, etc. Review contracts with third party servicers, secured credit card programs and marketing agencies to determine possible exposure to liability.

ADVANCE FEE SCHEMES

Potential Problems

Advance fee schemes have been around for many years. They usually involve offers of sizable funds available for loans at below market rates, with the funds supposedly coming from some foreign interests who are seeking a safe haven in the United States. The targets are usually individuals or businesses experiencing financial difficulties. The goal of the perpetrator is to collect a fee in advance since the rest of the transaction is a sham and will never be consummated.

Although Institutions have been victimized by advance fee schemes, they are seldom the primary targets. However, institutions may be unwittingly used to lend false credibility to an advance fee scheme. Evidence of association with a reputable United States financial institution is critical to the success of the scheme. Institutions that act as agent, custodian, or in some other legal capacity face potential liability: (1) They have been sued by the perpetrators of the scheme for nonperformance under agency or escrow agreements, (2) They could be charged criminally for aiding and abetting a fraud, or (3) They may be civilly liable to the victims of the fraud.

Warning Signs

1. A person having no previous relationship with the institution suddenly appears and offers fantastic opportunities for the institution and/or its customers.

2. Broker claims to be part of a major financial organization, but this claim cannot be verified.

3. Broker claims to have access to huge sums of money from a secret, undisclosable or unverifiable source.

4. Broker becomes irritated if the institution suggests that references be checked.

5. Broker makes frequent references to such terms as "ICC Form 254, 290 or 322" and frequently uses the terms "emission rate", "prime bank notes", "tranches", "letters of commitment", "bank acceptances", "arbitrage", "hedge contracts" or "escrow agreements".

6. Broker initially requests an advance fee for his services but often "reluctantly" agrees to defer the fee until settlement of the transaction.

7. As the deadline for settlement nears, the broker urgently requests an advance on his fee to cover expenses such as travel, documentation, communication costs, etc.

8. Broker states that funds will be forthcoming from some offshore bank in the Caribbean or South Pacific.

9. Attempts to verify the broker's references are unsuccessful.

10. Broker's references include telephone numbers which are answered by machines and addresses which are mail drops, hotel rooms, etc.

11. Broker proposes a self-liquidating loan where earnings from a deposit or other investment will be such that they will pay the principal and interest of the loan with no additional funds needed from the borrower.

12. Broker conducts most of the negotiations by telephone or telex and appears to resist any meeting with the institution's counsel.

13. Broker repeatedly delays the settlement of the deal citing numerous "technical" problems.

14. The deal frequently falls through at the last minute while the broker searches for another source of funds.

15. Broker asks institution to serve as a transfer bank, middleman or agent in the transfer of funds between a sending institution and a receiving institution.

16. Broker who originally presents the deal may be known to the institution but other persons involved may be unknown to the institution and may have questionable backgrounds.

17. Broker asks for the institution's telex numbers and frequently, a long, instructional telex from the lender's agent is received by the institution.

18. The receiving institution may be asked to send a number of letters, contracts, or telex messages to the lender's agent or the lender's institution.

19. Broker expresses a great deal of urgency in completing the transaction so that the loan will not be lost.

20. Broker offers funds that the borrower can invest in U. S. Treasury Notes or similar instruments at a 4 or 5 point spread which will help the borrower to cover part of the fees, but offers only flimsy excuses as to why the lender does not directly invest in these instruments.

21. Broker does not allow borrower or institution any direct contact with the proposed lender, often citing confidentiality requirements by the lender or some sensitive political situation in the lender's home country.

22. Broker often requests that the borrower's institution issue a standby letter of credit to the foreign lender to guarantee payment.

23. Broker is often a name dropper, but the people named are either deceased or impossible to contact for reference because of political reasons.

Suggested Actions

The key to avoiding direct losses and/or potential legal liability in an advance fee scheme is to "know the customer" and carry out an extensive due diligence review. Each proposal involving any offer of large sums of money from previously unknown sources should be thoroughly investigated. No commitments should be made until all references are directly verified through some reputable and reliable source. Until references are verified, telex and written communications concerning the transactions should be avoided. Fees should not be paid until funds are verified and physically transferred. Suspicious transactions should be immediately reported to the FDIC and to the FBI. Remember, if the deal sounds too good to be true, it probably is.

OFFSHORE TRANSACTIONS

Potential Problems

Although there are legitimate and reputable institutions operating offshore offices, many are only "shell" institutions with little or no capitalization, no actual main office, no fixed asset investment, no actual staff and few other characteristics of a legitimate institution. Licenses for many offshore financial institutions are issued upon receipt of relatively nominal fees and minimal background verifications. The names of these offshore "shell" institutions are often similar to those of major legitimate financial institutions which are listed in international banking directories. There have been many instances of fraud involving obligations of offshore institutions, including certificates of deposit, letters of credit, drafts, commitments, etc. In some cases, these obligations have been purchased for a fraction of their face value for the sole purpose of defrauding legitimate institutions and other businesses.

Offshore companies, including financial institutions, are frequently established for the purpose of hiding the true identity of the principals, laundering money, inflating financial statements and issuing false documents to secure loans. Loans to offshore companies and loans secured by obligations of offshore institutions must be viewed with extreme caution.

Warning Signs

1. Loans made on the strength of a borrower's financial statement when the statement reflects major investments in and income from businesses incorporated in bank secrecy haven countries such as Panama, Cayman Islands, Netherlands Antilles, Montserrat and others.
2. Loans to companies domiciled in bank secrecy haven countries.
3. Loans secured by obligations of offshore institutions.
4. Transactions involving an offshore "shell" institution whose name may be very similar to the name of a major legitimate institution.
5. Frequent wire transfers of funds to and from bank secrecy haven countries such as Panama, Cayman Islands, Netherlands Antilles, Montserrat and others.
6. Offers of multi-million dollar deposits at below market rates from a confidential source to be sent from an offshore institution or somehow guaranteed by an offshore institution through a letter, telex, or other "official" communication.
7. Offshore companies are used to disguise the true identity of borrowers or guarantors.
8. No independent verification of the financial strength of the offshore institution is available from any source.
9. In order to make an offshore bank transaction appear legitimate, innocent third parties are brought into the scheme, unaware of its fraudulent nature.

Suggested Action

Offshore transactions should be closely examined to determine the legitimacy of the entities involved. Suspicious wire transfers to and from offshore institutions should be reviewed to determine the source and disposition of the funds. Obligations issued by questionable offshore institutions should not be accepted at face value unless the value can be substantiated through independent sources.

WIRE TRANSFERS

Potential Problems

Wire transfer fraud is often possible because of a breakdown in internal controls and/or system security measures at the financial institution. Transactions may be introduced by unauthorized persons who have obtained the proper procedures from an unsuspecting employee. Transactions may be altered in processing and posted to the wrong account, posted in the wrong amount or posted to the correct beneficiary but wrong account. Wire transfers are a popular form of laundering money, providing an easy way of sending funds to and from bank secrecy haven countries.

Warning Signs

1. Lack of separation between authority to initiate a wire transfer and authority to approve a wire transfer.
2. Indications of frequent overrides of established approval authority and other internal controls.
3. Intentional circumvention of approval authority by splitting transactions.
4. Wire transfers to and from bank secrecy haven countries.
5. Frequent or large wire transfers for persons who have no account relationship with the institution.
6. Large or frequent wire transfers against uncollected funds.

7. Frequent requests for immediate wire transfer of funds from a credit card merchant account to institutions in other parts of the U. S., offshore institutions or foreign institutions.

8. Frequent wire transfers from accounts with numerous cash deposits of just under $10,000 each.

9. Frequent errors in payment by authorized system officials.

10. Lack of security of the wire transfer system safeguards such as the password and other details of wire transfer transactions.

11. Unconfirmed wire transfer requests initiated by telephone.

12. Incoming wire transfers in which the account name and account number do not match.

13. Wire transfer or payment request that does not conform to established procedures.

14. Absence of written funds transfer agreements between the institution and its customers.

15. Large international funds transfer to or from the accounts of domestic customers in amounts and of a frequency that are not consistent with the nature of the customer's known business activities.

16. Receipt of funds in the form of multiple cashier's checks, money orders, traveler's checks, bank checks or personal checks that are drawn on or issued by U. S. financial institutions and made payable to the same individual or business, in U. S. dollar amounts that are below the $10,000 Bank Secrecy Act reporting threshold and which are then wire transferred to a financial institution outside the U. S.

17. The deposit of funds into several accounts and then aggregated into one account followed by the wire transfer of those funds from that account outside of the U. S. when such action is not consistent with the known business of the customer.

18. Any other unusual international funds transfer requests wherein the arrangements requested appear to be inconsistent with normal funds transfer practices, e.g., where the customer directs the institution to wire transfer funds to a foreign country and advises the institution to expect same day return of funds from sources different from the beneficiaries initially named, thereby changing the source of the funds.

19. A pattern of wire transfers of similar amounts both in and out of the customer's account on the same day or next day.

20. Wire transfers by customers operating a cash business, i.e., customers depositing large amounts of currency.

21. Wire transfer volume is extremely large in proportion to the asset size of the institution.

22. The institution's business strategy and financial statements are inconsistent with large volumes of wire transfers, particularly outside the United States.

Suggested Action

Review wire transfer procedures for possible circumvention of internal controls and system security measures. Follow-up on any exceptions. Verify source and disposition of suspicious wire transfers. Review accounts with frequent wire transfers to determine if the activity appears legitimate.

MONEY LAUNDERING

Potential Problems

An institution may be liable for civil or criminal penalties for willful participation in a money laundering scheme. The length of time involved in a money laundering investigation and the surrounding publicity can be disrupting and costly to an institution even if no formal charges are filed and no fines are levied. A money launderer usually needs the assistance of someone within the institution to whom he is often willing to pay a substantial fee. With the employee's assistance, money launderers are often able to hide their activities for an extended period of time.

Warning Signs

1. Increase in cash shipments that is not accompanied by a corresponding increase in number of accounts.

2. Cash on hand frequently exceeds limits established in security program and/or blanket bond coverage.

3. Large volume of cashier's checks, money orders, traveler's checks, etc., sold for cash to noncustomers

in amounts ranging from several hundred to just under $10,000 each.

4. Large volume of wire transfers to and from offshore institutions.

5. Large volume of wire transfers for noncustomers.

6. Accounts which have a large number of small deposits and a small number of large checks with the balances of the accounts remaining relatively low and constant. The accounts have many of the same characteristics as accounts used for check kiting.

7. A large volume of deposits to several different accounts with frequent transfer of major portions of the balances to a single account at the same institution or at another institution.

8. Loans to offshore companies and loans secured by obligations of offshore institutions.

9. Large volume of cashier's checks, money orders and/or wire transfers deposited to an account where the nature of the account holder's business would not appear to justify such activity.

10. Large volume of cash deposits from a business that is not normally cash intensive, such as a wholesaler.

11. Cash deposits to a correspondent account by any means other than through an armored carrier.

12. Large turnover in large bills that would appear uncharacteristic for the institution's location.

13. Cash shipments which appear large in comparison to the dollar volume of currency transaction reports filed.

14. Dollar limits on the list of customers exempt from currency transaction reporting requirements which appear unreasonably high considering the type and location of the businesses. No information is in the institution's files to support the limits.

15. Currency Transaction Reports, when filed, are often incorrect or lack important information.

16. List of exempted customers appears unusually long.

17. Customer expresses some urgent need to be included on the institution's list of customers exempt from currency transaction reporting requirements.

18. Customer requests information on how to avoid the filing of currency transaction reports on cash transactions involving amounts over $10,000.

19. Upon being informed of the currency transaction reporting requirements, customer withdraws all or part of the transaction to avoid the filing of the CTR.

20. Customer frequently conducts cash transactions in amounts just under $10,000 each.

21. Customer refuses to provide information required to complete a CTR.

22. Corporate customer makes frequent large cash deposits and maintains high balances but does not avail itself of other services such as loans, letters of credit, payroll services, etc.

23. Customer almost never comes to the institution but has numerous couriers making deposits to the account.

24. A large increase in small denomination bills and a corresponding decrease in large denomination bills with no corresponding CTR filings.

25. Customers who open accounts providing minimal or fictitious information or information which is difficult or expensive for the institution to verify.

26. Customers who decline to provide information that normal customers would provide to make them eligible for credit or other banking services that normal customers would regard as valuable.

27. Customers who appear to have accounts with several institutions within the same locality, especially when there is a regular consolidation of balances in the accounts and transfer of funds out of the accounts by wire transfer, or other means, to offshore institutions or to large domestic institutions.

28. Customers whose deposits frequently contain counterfeit bills or bills which appear musty or extremely dirty.

29. Customers who have deposit accounts at the institution but frequently purchase cashier's checks, money orders, etc., with large amounts of cash.

30. Retail customer which deposits a large volume of checks but seldom, if ever, requests currency for its daily operations.

31. Retail business has dramatically different patterns of cash deposits than other similar businesses in the same general location.

32. Exempted customer frequently requests increases in exemption limits.

33. Substantial increase in cash deposits of any business without any apparent cause.

34. Substantial increase in cash deposits by professional customers using client accounts or in-house company accounts such as trust accounts, escrow accounts, etc.

35. Customers who make or receive large transfers of funds to or from countries associated with production, processing and marketing of narcotics.

36. Size and frequency of cash deposits increases rapidly without any corresponding increase in non-cash deposits.

37. Size and frequency of cash deposits is not consistent with observed activity at the customer's place of business.

38. Customer makes large and frequent cash deposits but checks or other debits against the account are not consistent with the customer's stated line of business. For example, customer claims to be in the retail jewelry business, but checks are mostly to individuals and/or firms not normally associated with the jewelry business.

39. Customer frequently deposits large amounts of currency that is wrapped in currency straps that have been stamped by other financial institutions.

40. Customer frequently deposits strapped currency or currency wrapped in rubber bands that is disorganized and does not balance when counted.

41. Customer is often observed entering the safety deposit box area just prior to making cash deposits just under $10,000.

Suggested Action

Review results of the institution's independent testing for compliance with the Bank Secrecy Act. Perform Bank Secrecy Act examination procedures. Request verification of Currency Transaction Reports filed by the institution. Review all transactions involving offshore institutions to see if they appear to represent legitimate business activities.

SECURITIES TRADING ACTIVITIES

Potential Problems

Speculative securities trading activities may result in unsafe and unsound banking practices. Some bond salesman have made extensive use of the telephone to employ high pressure sales techniques, sometimes accompanied by oral guarantees which purport to limit an institution's exposure. Situations have been reported where an institution's board of directors and/or senior management have not monitored or controlled these practices and, in effect, have relinquished the management of their institution's investment portfolio to a broker.

Warning Signs

1. Management lacks the expertise needed to fully understand the ramifications of proposals made by brokers and/or they perceive an unrealistic opportunity to enhance income.

2. Investments bear no reasonable relationship to the institution's size or its capital accounts.

3. Overreliance is placed on the purported safety of the securities since they involve U. S. Government issues.

4. Little or no attention is given to "interest rate risk" prior to the transaction taking place.

5. Delayed settlements over unreasonable time periods sometimes allow management to make imprudent purchases and avoid booking the transaction on a timely basis.

6. The institution engages in reverse repurchase agreements with brokers which allows institutions to erroneously defer recognition of losses.

7. Securities held for short-term trading are not appropriately identified and segregated from those that are held primarily as a source of investment income.

8. Trading account securities are not revalued periodically and are not reported consistently at market value or the lower of cost or market value.

Suggested Action

Review the institution's investment policy to see if the board of directors has implemented prudent limits and comprehensive controls to suit their particular circumstances. Review the institution's files to determine if the institution has satisfied itself that it is dealing with a reputable and financially stable dealer. Ensure that management has sufficient expertise to analyze each transaction independently of the broker's sales pitch and recommendations.

MISCELLANEOUS

Potential Problems

Lack of proper supervision and lack of effective internal controls makes an institution especially vulnerable to fraud and insider abuse. Customer complaints, even seemingly insignificant ones, may be an indication of much greater problems.

Warning Signs

1. Lack of supervision of lending activities by officers of the institution.
2. Lack of lending policies or failure to enforce existing policies.
3. Lack of code of conduct or failure to enforce existing code.
4. Dominant figure allowed to exert influence without restraint.
5. Lack of separation of duties.
6. Lack of accountability.
7. Lack of written policies and/or internal controls.
8. Circumvention of established policies and/or controls.
9. Lack of independent members of management and/or Board.
10. Entering into transactions where the institution lacks expertise.
11. Excessive growth through low quality loans.
12. Unwarranted concentrations.
13. Volatile sources of funding such as short term deposits from out of area brokers.
14. Too much emphasis on earnings at the expense of safety and soundness.
15. Compromising credit policies.
16. High rate - high risk investments.
17. Underwriting criteria allows high risk loans.
18. Lack of documentation or poor documentation.
19. Lack of adequate credit analysis.
20. Failure to properly obtain and evaluate credit data, collateral, etc.
21. Failure to properly analyze and verify financial statement data.
22. Too much emphasis on character and collateral and not enough emphasis on credit.
23. Lack of balance in loan portfolio.
24. Poor loan administration after credit is granted.
25. Unresolved exceptions or frequently recurring exceptions on exception reports.
26. Out-of-balance conditions.
27. Purpose of loan is not recorded.
28. Proceeds of loan are used for a purpose other than the purpose recorded.
29. Lax policies on payment of checks against uncollected funds.
30. The institution is defendant in a number of lawsuits alleging improper handling of transactions.

Suggested Action

Out-of-balance conditions should be given proper attention and not merely charged off if their amount is small. Be alert to rumors and gossip inside and outside the institution because in many cases, embezzlers and perpetrators of other frauds are betrayed by jealous peers or subordinates. Review any loans that do not appear to conform to the written loan policy. Determine the circumstances under which they were approved and who approved them. Each attempt to circumvent existing policies, controls and/or regulations should be investigated. Be alert to any overrides or attempted overrides of internal controls and determine who is responsible and the reason.

INTRODUCTION

Criminal conduct and fraudulent acts undermine public confidence in the financial system and contribute to financial institution failures. Confidence is especially eroded when offenses involve bank insiders. When failures occur, the FDIC deposit insurance fund can suffer significant losses.

If allegations or evidence of wrongdoing comes to the FDIC's attention, a prompt response is warranted. The scope of a response varies based on the severity and specificity of allegations and the reliability of corroborating evidence. Examiner discretion, sound judgment, and regional office coordination are needed to appropriately respond to indications of improper conduct or fraudulent acts.

The primary responsibility for preventing, detecting, and reporting fraud and insider abuse rests with a bank's board of directors and senior management. Early detection and reporting of suspicious activities is in a bank's best interest as it can reduce liabilities resulting from operational errors and may limit or prevent monetary losses. The board must establish appropriate internal controls and effective audit programs to fulfill their legal and fiduciary duties. Controls and safeguards should address internal and external offenses and include procedures for identifying and reporting suspicious activities. Financial institutions must report questionable actions using a Suspicious Activity Report (SAR).

←

SUSPICIOUS ACTIVITY REPORTS

Part 353 of FDIC Rules and Regulations and CFR[1] Title 31, Chapter X, § 1020.320 of the Financial Crimes Enforcement Network (FinCEN) regulations require insured nonmember banks and state chartered savings associations to report suspicious activities to FinCEN, a bureau of the U.S. Department of the Treasury. The primary purpose of the reporting requirement is to ensure investigators and prosecutors are provided relevant information in an orderly and timely fashion. Financial institutions must report suspicious activities on electronically filed SARs, which allow law enforcement and regulatory agencies to more efficiently assess and respond to questionable actions.

[1] The U.S. Code of Federal Regulations (CFR) is the codification by subject matter of the general and permanent laws of the United States. It is divided by broad subjects into 50 titles and published by the Office of the Law Revision Counsel of the U.S. House of Representatives.

Filing Suspicious Activity Reports

A financial institution is required to file an SAR when it detects a known or suspected criminal violation of federal law, a suspicious transaction related to potential money laundering, or a violation of the Bank Secrecy Act (BSA). Banks should file SARs with appropriate federal law enforcement agencies and the Department of the Treasury in accordance with the report's instructions. Generally, completed SARs should be transmitted to FinCEN in the following circumstances:

- Insider abuse[2] involving any amount when the financial institution believes it is either an actual or potential victim of a committed or attempted criminal transaction and the financial institution has identified a director, officer, employee, agent, or other institution-affiliated party as having committed or aided in the commission of the criminal act;
- Transactions aggregating $5,000 or more in funds or other assets when a suspect can be identified and the financial institution believes it is either an actual or potential victim of a committed or attempted criminal transaction;
- Transactions aggregating $25,000 or more in funds or other assets regardless of potential suspects and the financial institution believes it is either an actual or potential victim of a committed or attempted criminal transaction; or
- Transactions aggregating $5,000 or more that involve potential money laundering or violations of the BSA.

Note: Financial institutions are not required to file an SAR for a robbery or burglary committed or attempted that is appropriately reported to law enforcement authorities.

Reporting Timeframes

Financial institutions are required to file SARs no later than 30 calendar days after the date of the initial detection of facts that constitute the basis for filing an SAR. An institution may delay filing an SAR for an additional 30 calendar days to identify a suspect. However, in no case should institutions delay reporting more than 60 calendar days after the date of initial detection of a reportable transaction. Further, in situations involving violations that require immediate attention, such as ongoing money

[2] Insider abuse may involve known or suspected criminal violations of federal law committed by an insider against a bank customer involving a transaction or transactions facilitated by or through the bank.

laundering activities, the financial institution should immediately notify an appropriate law enforcement authority by telephone in addition to promptly filing an SAR. Refer to Part 353 and CFR Title 31, Chapter X, § 1020.320(b) for additional details.

Record Retention

Financial institutions must maintain a copy of any SAR filed and the original, or business record equivalent, of any supporting documentation for a period of five years from the date of filing. Supporting documentation identified and maintained by the financial institution as such, will be deemed to have been filed with the SAR. The financial institution must make all supporting documentation available upon request to FinCEN, appropriate law enforcement agencies, and state or federal regulatory authorities that examine the bank for compliance with the BSA.

Board Reporting

Management is required by Part 353 to promptly notify its board of directors, or a committee thereof, of any SAR filed. In addition, the board should record such notification in its minutes.

Confidentiality

Suspicious activity reports are confidential. Any institution subpoenaed or otherwise asked to disclose an SAR or related information shall decline to produce the SAR or provide any information indicating an SAR was prepared or filed. Institutions should notify their FDIC regional office of any such requests.

Additionally, neither the financial institution, nor its current or former directors, officers, employees, agents, or contractors may notify any person involved in a transaction that an SAR was filed or disclose any information that would reveal the existence of an SAR.

Safe Harbor Provision

In general, financial institutions and their directors, officers, employees, and agents are protected from civil liability for filing SARs and for failing to provide notice of such filings to individuals named in the SARs. Refer to CFR Title 31, § 5318(g) for additional information.

←

THE ROLE OF EXAMINERS

Examiners should consider the adequacy of internal controls at each examination and remain alert for suspicious or unusual activities during each functional review. If examiners identify or become aware of questionable conduct or transactions, they should discretely investigate their concerns and discuss the issues with the examiner-in-charge and field or regional office personnel. Examiners should securely retain documentation of transactions, discussions with management (or other bank personnel) and any other pertinent information relating to their investigations. Explanations by bank personnel that appear unreasonable should not be accepted without being fully investigated; however, information that supports management's explanations should be clearly documented.

If material concerns remain after examiners complete their initial investigations, they must immediately notify field and regional office personnel. This is paramount when board members or senior managers are suspected of wrongdoing, or when losses attributable to the activity imperils the institution's continued operation.

Examiners must consult with the supervisory regional office before informing the institution's board of directors or anyone associated with the institution of the suspicious activity. Generally, (after consulting with the regional office) apparent criminal violations that are detected by examiners should be brought to management's attention. However, the examiner should only present facts and must not make any statements or insinuations regarding possible conclusions as to particular individuals.

Generally, examiners should discuss the requirements of Part 353 with bank officials. However, it may be inappropriate to notify the board of directors or management when senior financial institution officials are implicated in the suspicious activity, or if the examiner has reason to believe that an official might flee, warn the target, destroy evidence, or otherwise jeopardize an investigation.

Further, if the financial institution fails to file an SAR, examiners should report the financial institution's decision to the regional office. The regional office should then determine whether a SAR should be filed.

Under certain circumstances, examiners may need to collect information supporting an SAR and submit it directly to the regional office. These situations generally occur when the financial institution is unable to file an SAR without alerting the subject, unwilling to file an SAR on an insider, or unwilling to file an SAR when the activity may imperil the institution's continued operation. If the regional office agrees with the examiner's assessment, an SAR may be filed by regional office staff.

The fact that an SAR has been filed does not prevent the examiner from making a more detailed written report. If necessary, the examiner may need to gather facts to support corrective actions, which may include recommendations for removal and prohibition.

Notification Prohibition

Pursuant to Title 31, U.S.C. 5318(g)(2)(A), no current or former officer or employee of, or contractor for, federal, state, local or territorial government who has knowledge that an SAR was filed, may disclose that fact to any person involved in the transaction, except in fulfilling official duties.

←

INTERAGENCY COOPERATION

The FDIC, other federal banking regulators, and various other agencies have agreed to cooperate and exchange information when necessary to address suspicious activity affecting insured financial institutions.

Communication and Points of Contact

Procedures have been formalized for interactions between RMS and the Office of Inspector General - Office of Investigations (OIG) with respect to investigations involving operating institutions. If an examiner or other RMS staff member is contacted directly by law enforcement, they must report the contact through the appropriate channels to the RMS deputy regional director or designee, who will notify the OIG and the Legal Division. Furthermore, the transfer of FDIC documents or records requested by law enforcement must comply with 12 C.F.R. § 309.6 (Disclosure of Exempt Records). The OIG and the Legal Division will coordinate the transfer of such documents and records. The OIG may oversee the investigation and coordinate interviews of appropriate RMS employees or the review of documents. No RMS employee should communicate directly with law enforcement, without prior approval of regional management and the Legal Division. However, permission is not required when disclosure is made solely to the FDIC Office of Inspector General - Office of Investigations. Refer to the Right to Financial Privacy Act for more information.

Referrals to the Department of Justice (DOJ)

The referral of suspicious activity to the DOJ or various U.S. Attorney Offices does not restrict the FDIC from continuing its own research into the same activity. However, the FDIC may cease or suspend such activity if requested to do so by the DOJ due to an ongoing criminal investigation or prosecution. In all cases, the FDIC should keep the DOJ or U.S. Attorney informed of the progress of any parallel civil investigation with a view toward reaching a cooperative solution. Such cooperation might lead to a demand for restitution and stipulation to a prohibition from future banking employment being included in a criminal plea agreement or pre-trial diversion arrangement.

←

ASSISTANCE TO LAW ENFORCEMENT

Examiners may be asked to provide expertise to law enforcement agents investigating suspicious activity or prosecuting a criminal case. Requests are usually made in connection with bank fraud or money laundering cases, and the assistance is often needed for the following reasons:

- To interpret subpoenaed documents obtained from the financial institution;
- To explain the flow or processing of documents;
- To determine whether acquired documents are relied upon by FDIC examiners, other regulators, auditors, or managers to formulate business decisions or opinions as to the condition of the financial institution;
- To provide information concerning banking policies or general banking practices; or
- To provide specific assistance, such as testifying at a trial or before a federal grand jury.

Examiners should cooperate to the fullest extent possible in honoring reasonable requests for assistance, and the regional office should supply examiners with specific guidance governing each assignment. A written agreement may be necessary for long-term assignments, and the following guidelines apply to most requests for examiner assistance:

- The request for assistance must be for a legitimate law enforcement purpose within the jurisdiction of the requesting agency;
- The information requested, or that which the examiner has been asked to review, must be relevant to a legitimate law enforcement inquiry;
- The suspicious activity should involve an FDIC-insured institution, its directors, officers, employees, agents or customers;
- Any known, potential respondents (employees, officers, directors, or other IAPs) resulting from an investigation should be identified in addition to naming the institution itself;
- Compliance with all applicable provisions of the Right to Financial Privacy Act covering disclosures of

information derived from financial institution customer records must be assured; and

- The examiner should be instructed that while assisting the law enforcement authorities, he or she will be acting solely as a representative of the law enforcement authority, will not represent the FDIC in any way, and should not assert or exercise any authority as an FDIC examiner.

Parallel Proceedings

Although administrative and criminal investigations may occur concurrently, they must remain separate, independent investigations. Maintaining independence is critical when conducting coordinated investigations. While a coordination of activities between investigations is acceptable, a lack of independence may result in the suppression of evidence and/or the dismissal of an indictment. Therefore, examiners should not accompany law enforcement agents onto a financial institution's premises in order to collect records as it may create the appearance of a lack of independence between separate investigations.

←

FEDERAL GRAND JURY SUBPOENAS

A federal, grand jury subpoena is an investigatory tool used to build the prosecution's case without compromising the privacy of investigation targets or prematurely revealing their investigatory directions. Rule 6(e) of the Federal Rules of Criminal Procedure requires that grand jury proceedings be kept secret to the fullest extent practicable. Grand jury secrecy is maintained principally:

- To encourage witnesses to come forward and to testify freely and confidentially;
- To minimize the risks that prospective defendants will flee or use corrupt means to thwart investigations and escape punishment;
- To safeguard the grand jurors and proceedings from extraneous pressures and influences;
- To avoid unnecessary disclosures that may make individuals appear guilty of misconduct without their being afforded opportunity to challenge the allegations; and
- To prevent information given under compulsion and for purposes of public justice from being used for insubstantial purposes, such as gossip, to the detriment of the criminal justice system.

Rule 6(e)(3)(A)(iii) allows grand jury matters to be disclosed to government attorneys and banking regulators for enforcing civil forfeiture and civil banking laws pursuant to 18 U.S.C. 3322. However, 18 U.S.C. 3322 requires that a person to whom a matter has been disclosed shall not use such matter other than for the purposes for which such disclosure was authorized. The term "banking law violation" means a violation of, or a conspiracy to violate, sections 215, 656, 657, 1005, 1006, 1007, 1014, 1344, 1956 or 1957 of Title 18; as well as any violation of section 1341 or 1343 affecting a financial institution; or any provision of subchapter II of Chapter 53 or Title 31.

FDIC management must make a determination as to allowing appropriate and sufficient RMS and legal staff access to grand jury information. Nevertheless, possession of grand jury documents or testimony requires great care in order to comply with the secrecy requirements of Rule 6(e) of the Federal Rules of Criminal Procedure.

The FDIC's General Counsel has the delegated authority to authorize an examiner to appear and testify before the grand jury or at a criminal trial. The examiner may be directed to contact the prosecutor or investigator either before or after a grand jury subpoena is issued to assist in identifying and gathering documents pertinent to the investigation. The examiner will be provided with appropriate counsel before testifying.

←

SAFEGUARDING EVIDENCE

Copies of the SAR and all supporting evidentiary documents should be segregated and stored in the regional office to ensure that the documents are readily retrievable and can be provided to law enforcement officials if needed.

Examiners should consult the regional office regarding necessary documentation. Generally, copies of documents must be made during the examination. The copies should be initialed and dated by the examiner in case the originals are misplaced or destroyed.

In addition to electronically copied documents, the examiner should document the flow of funds, approvals, and employees responsible for handling each transaction. Flow charts or similar methods may be appropriate for documenting complex transactions.

The following questions provide examples of the line of inquiry an examiner may follow in deciding how to review and document a particular circumstance:

- What is the financial institution's policy for handling this type of transaction?
- Was there deviation from the policy?
- Who was authorized to make this transaction?

- Who handled this transaction?
- Who had knowledge?
- Who benefited ultimately from the transaction?
- What knowledge did the financial institution's directors have?
- What was the credit quality at the time of making a loan and what it is now?
- Was the documentation adequate at inception?
- Was collateral value adequate at inception?
- Are there presently any credit or legal problems?
- Is the financial institution facing possible risk or damage other than financial loss?

←

BONDING COMPANY NOTIFICATION

The FDIC and financial institution management have a mutual interest in ensuring that all of a financial institution's employees are protected by a fidelity bond. When a financial institution files an SAR involving an employee, it normally is required to notify its fidelity insurer of the subject activity. However, a financial institution may not provide a copy of the SAR to the insurer.

The notification requirement is usually included in the terms of the insurance contract and is not dependent upon the filing of a claim against the insurance coverage. The standard financial institutions bond contains a termination clause that automatically cancels coverage of any employee as soon as there is knowledge of any dishonest or fraudulent act on the part of such employee. The insurer need not give notice of such termination; in fact, the decision of the insurer may be made at a subsequent date. In the rare case in which a financial institution official has knowledge of a suspicious act on the part of an employee, yet wishes to continue to employ that person, management should obtain either an assurance in writing from the insurer's main office (agents generally are not so empowered) that such person is still covered under the bond, or obtain a new bond covering that person. Refer to the Manual Section 4.4, Fidelity and Other Indemnity Protection for additional information.

If an examiner becomes aware that an employee has or will be reported to the fidelity bond company for suspicious acts (whether coverage is terminated or not), the examiner should contact the regional office. The regional office and examiner should consider whether to commence an investigation of the employee's acts to determine if removal and prohibition or other administrative action under section 8 is warranted.

←

OTHER MATTERS

Examiners that receive information about alleged misconduct by a financial institution, its officers, employees, or directors may be asked to protect the informant's identity. When this happens, the examiner should advise the informant that the FDIC will try to protect the identity of the informant. However, prior to receiving the information, the examiner should advise the informant of the following facts:

- Mere inquiry into the situation may allow the institution's management or employees to deduce the informant's identity;
- The information may be referred to another agency, such as the Department of Justice, which may request the informant's identity to continue or complete an investigation; and
- If the information becomes the basis for a criminal prosecution, the court may order disclosure of the informant's identity to the defendant.

←

CRIMINAL STATUTES

United States Code Title 18 is applicable to many criminal or fraudulent acts relating to financial institutions. Several sections of Title 18 and other pertinent Titles that an examiner might encounter are described below.

Title 18 - Crimes and Criminal Procedure
Part I › Chapter 1 › § 2
Aiding and Abetting

Whoever aids, abets, counsels, commands, induces, or procures the commission of a federal offense is punishable as a principal.

18 U.S.C. § 4 - Misprision of Felony

This statute applies to a person who has knowledge of the actual commission of a felony but conceals the knowledge and does not report that knowledge to a judge or other person in civil or military authority. A financial institution that fails to report an offense of which it is aware can be charged with violating this section.

18 U.S.C. § 20 - Financial Institution Defined

The definition of financial institution was expanded under the Fraud Enforcement and Recovery Act (FERA) of 2009 to include a mortgage lending business or any person or entity that makes in whole or part, a federally related mortgage loan as defined in the Real Estate Settlement Procedures Act (RESPA) of 1974. Under § 27, a mortgage lending business is defined to include an organization which finances or refinances any debt secured by an interest in real estate, including private mortgage companies and any subsidiaries, and whose activities affect interstate or foreign commerce. Prior to the amendment, only FDIC or NCUA insured institutions, Federal Home Loan Banks, Farm Credit System, uninsured foreign banks, and Federal Reserve member banks were considered financial institutions.

Chapter 11 - Bribery, Graft, and Conflicts of Interest

18 U.S.C. § 201 - Bribery of Public Officials

This statute bans the offering or soliciting of bribes to or by federal officials, elected representatives, jurors or witnesses in official proceedings with the intent to influence an official act, or to influence the public official to commit, aid in committing, collude in, or allow any fraud; or to induce the public official to omit to do any act in violation of his lawful duty.

18 U.S.C. § 215 - Bank Bribery

Anyone who corruptly gives, offers, or promises anything of value with the intent to influence or reward an officer, director, employee, agent, or attorney of a financial institution in connection with any business or transaction, or any financial institution official who corruptly solicits or demands such things of value, would violate this statute.

Financial institutions are encouraged to prohibit insiders from self-dealing or otherwise trading on their positions at the financial institution; or accepting from one doing or seeking to do business with the financial institution, a business opportunity not generally available to the public. In this regard, the financial institution's code of conduct or policies should require that its officials disclose all potential conflicts of interest, including those in which they have been inadvertently placed due to either business or personal relationships with customers, suppliers, business associates, or competitors of the financial institution.

It should be noted that this section does not apply to bona fide salary, wages, fees, or other compensation paid, or expenses paid or reimbursed, in the usual course of business.

Chapter 19 - Conspiracy

18 U.S.C. § 371 - Conspiracy to Defraud

This statute covers a conspiracy of two or more persons to commit a federal offense or to defraud the United States or any agency thereof. This statute has been cited when two or more persons willfully ignored the notice requirements of the Change in Bank Control Act.

Chapter 25 - Counterfeiting and Forgery

18 U.S.C. § 471 - Counterfeiting and Forgery (Counterfeit Deterrence Act of 1992)

This statute applies to persons who falsely make, forge, counterfeit, or alter any obligation or other security of the United States with intent to defraud.

18 U.S.C. § 472 - Counterfeiting and Forgery

This statute applies to persons who intentionally defraud, pass, utter, publish, or sell the items contained in § 471 above. It also includes those persons who attempt to do so, or those who keep in their possession or conceal any such items.

18 U.S.C § 500 - Counterfeiting and Forgery - Money Orders

This statute applies to persons who intentionally defraud, falsely make, forge, counterfeit, engrave, or print any order in imitation of, or purporting to be, a blank money order. It also applies to those who receive or possess any such money order with the intent to convert it for their own use or gain, knowing that it had been embezzled, stolen, or converted.

Chapter 31 - Embezzlement and Theft

18 U.S.C. § 656 - Theft, Embezzlement, and Misapplication by Bank Officer or Employee

This statute prohibits the willful theft, embezzlement, or misapplication of financial institution funds by an officer, director, agent, or employee of a financial institution with the intent to injure or defraud the financial institution. For example:

- Loans granted by a financial institution officer to fictitious borrowers,
- Loans granted based on inadequate or valueless collateral if the loan officer benefited personally or acted in reckless disregard of the institution's interests, and
- Brokered loans where deposits are provided for a fee to fund a loan that is worthless from its inception.

18 U.S.C. § 657 - Theft, Embezzlement, and Misapplication of Funds

This statute requires that any officer, agent, or employee of, or connected in any capacity with the FDIC, et al., who embezzles, abstracts, purloins or willfully misapplies any moneys, funds, credits, securities, or other things of value belonging to an insured institution will be fined or imprisoned.

18 U.S.C. § 658 - Property Mortgaged or Pledged to Farm Credit Agencies

This statute applies to persons who intentionally defraud, knowingly conceal, remove, dispose of, or convert to their own use, or to that of another, any property mortgaged or pledged to, or held by, the Farm Credit agencies.

18 U.S.C. § 664 - Theft or Embezzlement from Employee Benefit Plans

This statute applies to persons who intentionally embezzle, steal, or unlawfully and willfully abstract or convert to their own use or to the use of another, any of the monies, funds, securities, premiums, credits, property, or other assets of any employee welfare benefit plan or employee pension benefit plan, or of any fund connected therewith.

18 U.S.C. § 667 - Theft of Livestock

This statute applies to those who market $10,000 or more in livestock, in interstate or foreign commerce, with the intent to deprive another of a right to the property or a benefit of the property or to appropriate the property to his or another's use.

Chapter 33 - Emblems, Insignia, and Names

18 U.S.C. § 709 - False Advertising or Misuse of FDIC Name

This statute covers false advertising or representations, misuse or unauthorized use of words such as national, reserve, federal deposit, or deposit insurance, or misuse of names such as FDIC, to convey the impression of federal agency affiliation.

Chapter 47 - Fraud and False Statements

18 U.S.C. § 1001 - False Statements or Entries

This statute generally covers oral or written false statements that are knowingly or willingly made, or concealment of a material fact, for the purpose of influencing a determination of any federal department or agency. It is not necessary to show that the governmental body was actually influenced thereby.

18 U.S.C. § 1005 - Bank Entries, Reports, and Transactions

This statute covers false entries and reports or statements, including material omissions, made by an officer, director, agent, or employee of an insured bank with intent to injure or defraud the bank, or to deceive the FDIC or other individuals or companies. This section also prohibits any such person from issuing or putting forth in circulation any notes of the bank or making, drawing, issuing, or assigning any certificate of deposit, draft, order, bill of exchange, acceptance, note, debenture, bond or other obligation, or mortgage, judgment or decree. The crime may be committed personally or by direction (e.g., an officer directing the making of false entries).

Examples:

- Actions taken by an officer or employee to conceal delinquencies or to disguise potential lending limit violations
- Recording securities transactions at other than market value to hide losses

18 U.S.C. § 1007 - Federal Deposit Insurance Corporation Transactions

This statute covers false statements made for the purpose of influencing an action of the FDIC in any way. This includes willfully over-valuing any security for the purpose of obtaining, extending, or renewing a loan and statements made to induce the payment of an insured deposit, the purchase of assets, or the payment of any claim by the FDIC. To establish a violation of this statute, it is not necessary to prove loss or damage to the FDIC caused by the falsification. Violations of this section occur when false statements are made to the FDIC in connection with an application for deposit insurance, notice to acquire control of an insured state nonmember bank, or other processes in which FDIC is required to take action. False or misleading statements made to an FDIC examiner during an examination are also covered.

18 U.S.C. § 1010 - Department of Housing and Urban Development (HUD) Transactions

This statute prohibits for the purpose of obtaining any loan or advance of credit from any person, partnership, association, or corporation with the intent that such loan or advance of credit will be offered to or accepted by HUD for insurance, or for the purpose of obtaining any extension or renewal of any loan, advance of credit, or mortgage insured by HUD, or the acceptance, release, or substitution of any security on such a loan, or for the purpose of influencing in any way the action of HUD, by making, passing, uttering, or publishing any statement, knowing the same to be false, or altering, forging, or counterfeiting any instrument, paper, or document, or uttering, publishing, or passing as true any instrument, paper, or document, knowing it to have been altered, forged, or counterfeited, or willfully overvaluing any security, asset, or income, will be fined and/or imprisoned.

18 U.S.C. § 1014 - False Statements on a Loan or Credit Application

This statute covers any false statements or reports made knowingly on a loan or credit application to an insured bank or to an entity that makes in whole or part, federally related mortgage loans as defined in RESPA of 1974. Such statements or reports must have been capable of influencing the financial institution's credit decision. Actual damage or reliance on such information is not an essential element of the offense.

The statute applies to the following:

- Applications,
- Advances,
- Discounts,
- Purchases,
- Purchase agreements,
- Repurchase agreements,
- Commitments,
- Credit renewals,
- Extensions or Deferments.

The statute applies to willful omissions as well as affirmative false statements. Obsolete information in the original loan application is not covered unless the applicant reaffirms the information in connection with a renewal request.

18 U.S.C. § 1028 - Fraud and Related Activity in Connection with Identification Documents, Authentication Features, and Information

This statute applies to persons who knowingly and without lawful authority produce or transfer an identification document, authentication feature, or a false identification document. This statute also applies to persons who knowingly possess with intent to use or transfer unlawfully five or more identification documents. Further, the statute applies to those who knowingly and unlawfully transfer, possess, or use a means of identification of another person with the intent to commit, or to aid or abet, or in connection with any unlawful activity that constitutes a violation of federal law, or a felony under any applicable state or local law. Finally, this statute covers trafficking in false or actual authentication features for use in false identification documents.

Identification document is defined as a document made or issued by or under the authority of the U.S. government, state or local government, or by a foreign government.

Means of identification is defined as any name or number that may be used, alone or in conjunction with any other information, to identify a specific individual, including:

- Any name,
- Social security number,
- Date of birth,
- Official state or government issued driver's license or identification number,
- Alien registration number,
- Government passport number,
- Employer or taxpayer identification number,
- Unique biometric data (fingerprints, voice, retina or iris image),
- Unique electronic identification number, address, or routing code, or
- Telecommunication identifying information or access device.

18 U.S.C. § 1028A - Aggravated Identity Theft

Persons who during and in relation to §1341, §1343, or §1344, knowingly transfer, possess, or use, without lawful authority, a means of identification of another person, will in addition to punishment for the conviction of §1341, §1343, or §1344, will be sentenced to a term of two years.

18 U.S.C. § 1029 - Fraud and Related Activity in Connection with Access Devices

This statute applies to persons who knowingly and with the intent to defraud, produces, uses, or traffics in one or more counterfeit access devices, **or** during any one-year period, obtains anything of value using an unauthorized access device with an aggregate value of $1,000 or more.

The statute also specifically prohibits whoever knowingly and with intent to defraud:

- Possesses 15 or more devices which are either counterfeit or unauthorized [§1029(a)(3)];
- Produces, traffics in, or has control, custody, or possession of device-making equipment [§1029 (a)(4)];
- Effects transactions with 1 or more access devices issued to another person(s) to receive payment or other

value of $1,000 or more over a 1-year period [§1029(a)(6)] ; or
- Uses, produces, traffics in, has control, custody, or possession of a modified or altered instrument to obtain unauthorized use of telecommunications services, [§1029(a)(7) and (9)] among other factors.

Further, soliciting a person for the purpose of offering an access device, or selling information or an application to obtain an access device is covered, as is causing or arranging for another person to present a credit card for payment evidences or records of transactions made by an access device[§1029(e)(7)] .

The term access device is defined as:

- Any card,
- Plate,
- Code,
- Account number,
- Electronic serial number,
- Mobile identification number,
- Personal identification number,
- Other telecommunications service, equipment, or instrument identifier, or
- Other means of account access that can be used, alone or in conjunction with another access device, to obtain money, goods, services, or any other thing of value, or that can be used to initiate a transfer of funds (other than solely by paper instrument).

18 U.S.C. § 1030 - Computer Fraud

This statute applies to persons who knowingly access a computer without authorization [§1030(a)(1)], or exceed authorized access levels; or who, having accessed a computer with authorization [§1030(a)(2)], but use it for unauthorized purposes [§1030(a)(2)(A)] (e.g., obtaining information contained in records of a financial institution or card issuer, or a file of a consumer reporting agency). This statute also applies to trafficking in any password or similar information through which a computer may be accessed without authorization [§1030(a)(6)] if such trafficking affects interstate or foreign commerce or if the computer is used by or for the U.S. government. Further, the statute covers those who have the intent to extort money or other thing of value by transmitting any interstate or foreign communication containing a threat to cause damage to a protected computer; threat to obtain information from a protected computer without authorization, or in excess of authorization, or to impair the confidentiality of information obtained from a protected computer; or, demand or request for money or other thing of value in relation to damage to a protected computer, where such damage was caused to facilitate the extortion [§1030(a)(7)]. Finally, whoever conspires to commit or attempts to commit an aforementioned offense is also covered by this statute [§1030(b)].

§ 1030(a)(2) applies to the observation or reading of the data and does not require the copying or transporting of the data. In addition, the provision does not require larcenous intent.

Other applicable provisions include the following:

- §1030(a)(4) - Prohibits computer intrusion
- §1030(a)(5) - Concerns damage or destruction of a financial institution's property

18 U.S.C. § 1032 - Concealment of Assets from FDIC

This statute applies to persons who knowingly conceal or endeavor to conceal an asset or property from the FDIC acting as conservator or receiver. This statute also covers impeding the FDIC as conservator or receiver, or placing assets or property beyond the reach of FDIC as conservator or receiver.

18 U.S.C. § 1037 - Fraud and Related Activity in Connection with Electronic Mail also known as the "Can-Spam Act of 2003"

This statute applies to those who, in or affecting interstate or foreign commerce, knowingly access a financial institution's computer without authorization and intentionally initiate the transmission of multiple commercial electronic mail messages from or through such computer; use a financial institution's computer to relay or retransmit multiple commercial electronic mail messages with the intent to deceive or mislead recipients, or any internet access service as to the origin of such messages; materially falsify header information in multiple commercial electronic mail messages and intentionally initiate the transmission of such messages; register, using information that materially falsify the identity of the actual registrant, for five or more electronic mail accounts or online user accounts or two or more domain names, and intentionally initiate the transmission of multiple commercial electronic mail messages from any combination of such accounts or domain names; or falsely represent oneself to be the registrant or the legitimate successor in interest to the registrant of five or more internet protocol addresses and intentionally initiate the transmission of multiple commercial electronic mail messages from such address, or conspires to do so.

Chapter 63 - Mail Fraud and Other Fraud Offenses

18 U.S.C. § 1341 - Frauds and Swindles, also known as the Mail Fraud Statute

This statute covers the use of the mail by sending or receiving items in furtherance of a fraudulent scheme. Note that the statute applies to items sent or received through the U.S. Postal Service and through "any private or commercial interstate carrier." In recent years, this statute has been used to prosecute the perpetrators of check kiting, advance fee, and mortgage fraud schemes where checks or other documents were sent or received through U.S. mail or interstate carriers. Use of the mail after a scheme to defraud has been completed is not an offense under this statute. See also §1349 Attempt and Conspiracy.

18 U.S.C. § 1342 - Fictitious Name or Address

This statute covers the use of a false, assumed, or fictitious name, address, or title for the furtherance of a fraudulent scheme or devise mentioned in § 1341.

18 U.S.C. § 1343 - Fraud by Wire, Radio, and Television also known as the Wire Fraud Statute

This statute applies to a scheme or an artifice to defraud or to obtain property or money through use of wire, radio, or television transmissions in interstate commerce. Recently, in addition to the prosecution of wire and Automated Clearing House transaction fraud cases, this statute has been used to prosecute cases in which commercial and mortgage loan proceeds were wired between states. This statute is also used to prosecute computer-related crimes. See also §1349 Attempt and Conspiracy.

18 U.S.C. § 1344 - Bank Fraud

The statute covers the use of a scheme or artifice to defraud an insured institution or to obtain, through misrepresentations, any of the monies, funds, credits, assets, securities, or other property owned by, or under the control of, the institution. The intent to defraud must be shown, although the scheme does not have to be successful.

Examples:

- Check kiting.
- Diverting loan proceeds for purposes other than stated, including repayment of other debt.
- Out-of-trust in floor plan lending.

18 U.S.C. § 1349 - Attempt and Conspiracy

Any person who attempts or conspires to commit any offense under this chapter will be subject to the same penalties as those prescribed for the offense, the commission of which was the object of the attempt or conspiracy. The conspiracy part of this statute is used frequently in the indictment of individuals.

Chapter 73 - Obstruction of Justice

18 U.S.C. § 1517 - Obstructing Examination of a Financial Institution

This statute applies to persons who corruptly obstruct or attempt to obstruct any examination of financial institution by an agency of the United States with jurisdiction to conduct an examination. The FDIC has agreed to report any such offense to the FDIC Office of the Inspector General (OIG).

18 U.S.C. § 1519 - Destruction, Alteration, or Falsification of Records in Federal Investigations and Bankruptcy

This statute applies to any person who knowingly alters, destroys, mutilates, conceals, covers up, falsifies, or makes a false entry in any record, document, or tangible object with the intent to impede, obstruct, or influence the investigation or proper administration of any matter within the jurisdiction of any department or agency of the U.S. or any case filed under title 11, or, in relation to or contemplation of any such matter or case.

Chapter 83 - Postal Service

18 U.S.C. § 1708 - Theft or Receipt of Stolen Mail

This statute applies to persons who steal, take, or abstract, or by fraud or deception obtain, or attempt to obtain, from or out of any mail, post office, or station thereof, letter box, mail receptacle, or any mail route or other authorized depository. This statute also covers those who buy, receive or conceal, or unlawfully has in his possession, any item stolen, taken, embezzled, or abstracted.

Chapter 95 - Racketeering

18 U.S.C. § 1952 - Interstate and Foreign Travel or Transportation in Aid of Racketeering Enterprises

This statute is being used in a manner similar to that of the Foreign Corrupt Practices Act. See 15 U.S.C. § 78dd on the following page. The "Travel Act" applies to those who travel in interstate or foreign commerce or use the mail or any facility in interstate or foreign commerce with the intent to distribute the proceeds of any unlawful activity or commit any crime of violence to further any unlawful activity or otherwise promote, manage, establish, carry on, or facilitate the promotion, management, establishment, or carrying on, of any unlawful activity.

Unlawful activity is defined in the statute as any business enterprise involving gambling, liquor which lacks the federal excise tax, narcotics or controlled substances; or, extortion, bribery, or arson in violation of state laws.

18 U.S.C. § 1956 - Laundering of Monetary Instruments

This statute makes it illegal to conduct or attempt to conduct a financial transaction knowing that the property involved in the transaction represents the proceeds of some form of unlawful activity with the intent to promote the carrying on of specified unlawful activity; with the intent to engage in conduct constituting a violation of § 7201 (attempt to evade or defeat tax) or 7206 (false tax returns) of the Internal Revenue Code or knowing that the transaction is designed in whole or part to conceal or disguise the nature, location, source, ownership, or control of the proceeds of the specified unlawful activity or to avoid a state or federal transaction reporting requirement.

The statute also makes it illegal to transport or attempt to transport internationally a monetary instrument or funds with the intent to promote the carrying on of specified unlawful activity or knowing that the monetary instrument or funds constitute the proceeds of some form of illegal activity and knowing that the transportation is designed in whole or part to conceal the nature, location, source, ownership or control of the proceeds, or to avoid a transaction reporting requirement under state or federal law.

18 U.S.C. § 1957 - Engaging in Monetary Transactions in Property Derived from Specified Unlawful Activity

This statute makes it illegal to engage or attempt to engage in a monetary transaction in property constituting, or derived from, proceeds obtained from a criminal offense knowing that it is criminally derived property and has a value of over $10,000.

Chapter 103 - Robbery and Burglary

18 U.S.C. § 2113 - Bank Robbery and Incidental Crimes

In addition to covering theft of bank property by force, violence, or intimidation, this section also covers the entry or attempted entry of a bank building with intent to commit any felony affecting any bank and in violation of any statute of the United States, or any larceny.

Chapter 113 - Stolen Property

18 U.S.C. § 2314 - Transportation of Stolen Goods, Securities, Moneys, Fraudulent State Tax Stamps, or Articles Used in Counterfeiting

This statute applies to persons who transport, transmit, or transfer in interstate or foreign commerce, any goods, wares, merchandise, securities, or money in the amount of $5,000 or more, knowing that the transferred assets were stolen, converted, or taken by fraud. This statute covers falsely made, forged, altered, or counterfeited securities or tax stamps and the device(s) used to make such securities, tax stamps, or traveler checks bearing a forged countersignature. This section does not apply to falsely made, forged, altered, counterfeited obligation or security issued by the U.S. government, or that of any foreign government. This statute may be used in the prosecution of reverse mortgage fraud schemes.

18 U.S.C. § 2315 - Sale or Receipt of Stolen Goods, Securities, Moneys, of Fraudulent State Tax Stamps

This statute prohibits receipt, possession, concealment, storage, bartering selling, or disposing of goods, wares, securities, moneys in the amount of $5,000 or more, or pledges or accepts as security for a loan any collateral of $500 or more, which have crossed state or U.S. borders after being stolen, unlawfully converted, or taken, knowing the same to have occurred.

18 U.S.C. Title 15 - Commerce and Trade
Chapter 2B - Securities Exchanges

15 U.S.C. §§ 78dd and 78ff - Foreign Corrupt Practices Act (FCPA) of 1977

The FCPA is actually part of the Securities Exchange Act of 1934 and has two main provisions: the anti-bribery provisions; and the books, records, and internal control provisions. The anti-bribery provisions of §78dd-1 are applicable to issuers; §78dd-2 is applicable to domestic concerns, which are defined as a U.S. resident or citizen or any entity such as a partnership or corporation having its principal place of business in the U.S. and being organized under state (or comparable, such as territory) laws; and §78dd-3 is applicable to persons other than issuers or domestic concerns. § 78ff covers the penalties associated with violations of §78dd.

In general, the provisions make it unlawful for any person or entity to corruptly use the mail or other means of interstate commerce to further an offer, payment, or promise to pay any money, offer, or gift, etc., to any foreign official in violation of the lawful duty of such official in order to assist the issuer in obtaining or retaining business. See also, 18 U.S. C. 1952 Interstate and Foreign Travel or Transportation in Aid of Racketeering Enterprises

31 U.S.C. Chapter 53

- Subchapter II - Monetary Transactions
- Subchapter III - Money Laundering

Refer to the FFIEC Bank Secrecy Act/Anti-Money Laundering Examination Manual for discussion.

42 U.S.C., Chapter 8A, Subchapter III, § 1490s - Enforcement Provisions, (a) Equity Skimming

Whoever, as an owner, agent, employee, or manager, or is otherwise in custody, control, or possession of property that is security for a loan made or guaranteed, willfully uses, or authorizes the use, of any part of the rents, assets, proceeds, income, or other funds derived from such property, for any purpose other than to meet actual, reasonable, and necessary expenses of the property shall be fined or imprisoned.

SIGNIFICANT CIVIL STATUTES

Title 31 - Money and Finance

31 U.S.C. §3729-3733 False Claims Act (FCA)

This civil statute allows for triple damages for the amount that the government paid for false claims submitted. This statute covers many areas unrelated to financial institutions; however, it is currently being used against those who misrepresented the terms and quality of the loans insured by FHA. The statute was amended by the Fraud Enforcement and Recovery Act of 2009, the Dodd-Frank Act, and other acts. FCA lawsuits may be brought by individuals working for financial institutions who file claims on behalf of the government; the U.S. government may or may not join such lawsuits. As a civil action, either the individual or the U.S. government must prove each false claim to the standard of preponderance of evidence. The FCA has a 10-year statute of limitations.

The following are the four major liability clauses within §3729:

- §3729(a)(1)(A) Any person who knowingly presents or causes to be presented, a false or fraudulent claim for payment or approval by or to the U.S. government.
- §3729(a)(1)(B) Any person who knowingly makes, uses, or causes to be made or used, a false record or statement material to get a false or fraudulent claim paid or approved by the U. S. government. Both this provision and §3729(a) (1)(A) are required to pursue claims under the Act.
- §3729(a)(1)(C) involves conspiracy to commit a violation of §§3729(a)(1)(A) - (G). The conspiracy applies in getting a false claim paid as in §3729(a)(1)(A) or conspiring to underpay the government as in §3729(a)(1)(G).
- §3729(a)(1)(G) Any person who knowingly makes, uses, or causes to be made or used, a false record or statement material to an obligation to pay or transmit money or property to the government, or knowingly conceals or knowingly and improperly avoids or decreases an obligation to pay or transmit money or property to the government is liable under the FCA.

Under the FERA amendment, material is now defined as having a natural tendency to influence, or be capable of influencing, the payment or receipt of money or property.

§3731 - False Claims Procedures
§3732 - False Claims Jurisdictions
§3730 - Civil Investigative Demands

INTRODUCTION

This section of the Manual of Examination Policies provides a broad perspective of international banking. It begins by addressing the concept of country risk, which is the primary risk associated with international banking activities. The section then discusses common international banking products and services such as foreign loans, investments, placements,[1] currency exchange, and funds management.

Within the discussion on foreign loans, significant attention is given to trade finance, which is an important, yet declining, segment of U.S. banks' international credit exposures. Due to increased globalization of international markets and competition from non-bank intermediaries, U.S. banks have become less involved in trade finance and more involved in direct loans to foreign banks, participations in syndicated credit facilities, and loans to individuals and foreign businesses.

This section also discusses the international banking operations of foreign banks in the U.S., the operational structures established by U.S. banks in order to conduct banking activities in foreign jurisdictions, and parallel-owned banking organizations (PBOs). A PBO exists where there is common control or ownership of domestic and foreign banks outside of a traditional bank holding company structure (similar to chain banks). The PBO structure results in a global financial organization that may not be subject to comprehensive, consolidated supervision standards and could present unique supervisory concerns.

Finally, this section discusses supervisory methods and examination guidance relating to the supervision of foreign banking organizations (FBOs) and provides references to applicable laws and regulations. The section concludes with a glossary of international banking terms.

Overview of International Bank Activities

While the number of U.S. banks involved in international finance is relatively small in comparison to the overall number of U.S. banks, many large institutions have notable cross-border exposure and significant international activities. Moreover, in certain markets, a considerable number of smaller banks continue to allocate significant resources to international banking.

Many international banking activities parallel those conducted in domestic banking operations. For example, in both international and domestic markets, a bank may extend credit, issue and confirm letters of credit, maintain cash and collection items, maintain correspondent bank accounts, accept and place deposits, and borrow funds. Other activities are more closely associated with international banking, such as creating acceptances and trading foreign currencies.

The most important element of international banking not found in domestic banking is country risk, which involves the political, economic, and social conditions of countries where a bank has exposure. Examiners must consider country risk when evaluating a bank's international operations.

Despite similarities between domestic and international activities, banks often conduct international operations in a separate division or department. Large banks typically operate an independent international division, which may include a network of foreign branches, subsidiaries, and affiliates. Smaller banks, or banks with limited international activity, often use a separate section that works with a network of foreign correspondent banks or representative offices. In either case, international activity is usually operated by separate management and staff using distinct accounting systems and internal controls.

Given the risks introduced by doing business in a foreign country, particularly in emerging markets, examiners must review and understand international activities when assessing a bank's overall condition. Furthermore, examiners should coordinate international reviews with Bank Secrecy Act (BSA), Anti-Money Laundering (AML), and Office of Foreign Assets Control (OFAC) reviews.

Examination Objectives

The objectives of examining international activities are largely the same as those of examining domestic activities. However, the specialized nature of international banking may require modification of some examination activities due to different accounting procedures, documentation requirements, or laws and regulations. For example, access to information at foreign branches varies according to foreign laws governing such access and the FDIC's relationships with foreign supervisors.

The examination of international activities is usually conducted concurrently with the risk management examination. The scope of the examination and staffing requirements should be established during pre-examination planning. Prior examination reports will usually indicate the existence of an international department, identify foreign branches or subsidiaries, and discuss the type and volume of international activities. Reviewing regulatory reports that the bank may be required to file, such as

[1] Interest-bearing time deposits held in foreign banks or overseas branches of U.S. banks.

Federal Financial Institutions Examination Council (FFIEC) 009 and 009a Country Exposure Reports or Treasury International Capital (TIC) Form B Reports, can also assist examiners determine a bank's level of country exposure. Other resources include recent Reports of Condition and Income (Call Reports) and Uniform Bank Performance Reports.

Examiners can usually examine international activities at a bank's main domestic office or other centralized location. Part 347 of the FDIC Rules and Regulations governs minimum recordkeeping standards at state nonmember banks that operate foreign branches or meet certain investment or control levels. These standards require banks to maintain certain information concerning offshore activities at their head office. This requirement generally enables a centralized review of asset quality, funding operations, contingent liabilities, and internal controls.

In some cases, on-site examinations of foreign branches (branches in the foreign country) may be necessary because of inadequate information at the main domestic office or the existence of unusual branch activities. Examiners should determine the availability and quality of information maintained at the main office during the pre-examination process to gain a general understanding of any unusual branch activities before considering a foreign branch examination. If the information at the centralized location appears inadequate or unusual branch activities are identified, it may be appropriate to conduct a pre-examination visitation or begin the domestic examination before commencing the foreign branch examination in order to obtain additional information.

Note: Examiners must consult with field and regional management before commencing a foreign branch examination. The consultation should include a discussion of the protocol governing notification of the foreign supervisor prior to commencement of the visitation or examination.

←

COUNTRY RISK MANAGEMENT

Most facets of international banking are exposed to country risk. To address country risk, the federal regulatory agencies jointly issued a statement titled *Sound Country Risk Management Practices*, (March 2002 Statement). Examiners should assess a bank's conformance with the risk management standards detailed in the March 2002 Statement and summarize the results of their assessment in the Report of Examination (ROE) on the Analysis of the Country Exposure Management System page.

The remainder of this section describes various country risk concepts and risk management processes and describes how the federal agencies evaluate transfer risk (an aspect of country risk). The foundation for the discussion that follows is the March 2002 Statement and the Guide to the Interagency Country Exposure Review Committee (ICERC Guide). Examiners should refer to these documents for further information.

Concept of Country Risk

In addition to the risks present in their domestic operations, institutions engaged in international activities are exposed to country risk. Country risk involves the possibility that economic, social, or political conditions and events in a foreign country will adversely affect an institution's financial interests, such as defaults by obligors in a foreign country. Country risk also includes the possibility of nationalization of private assets, government repudiation of external indebtedness, exchange controls, or significant currency devaluations.

Country risk has a pervasive effect on international activities and should be explicitly considered when assessing the risk of all exposures (including off-balance sheet items) to public- and private-sector foreign-domiciled counterparties. The risk associated with even the strongest foreign counterparties will increase if, for example, political or macroeconomic conditions cause the exchange rate to depreciate and the cost of servicing external debt to rise.

The March 2002 Statement recognizes that country risk is not limited to an institution's exposure to foreign-domiciled counterparties. In some situations, the performance of domestic counterparties may also be adversely affected by conditions in foreign countries. When appropriate, examiners should consider country risk factors when assessing the creditworthiness of domestic counterparties.

Country risk is not limited solely to credit transactions. Changing policies or conditions in a foreign country may also affect matters such as investments in foreign subsidiaries, servicing agreements, or outsourcing arrangements with foreign entities, including those associated with the bank through its holding company.

Country Risk Management System

Country risk management systems should be commensurate with the type, volume, and complexity of the institution's international activities, and examiners should consider these factors when assessing country risk management systems and practices. As more fully described in the March 2002 Statement, sound country risk management systems should include:

- Effective oversight by the board of directors,
- Adequate risk management policies and procedures,
- Accurate systems for reporting country exposures,
- Effective processes for analyzing country risk,
- Forward-looking country risk rating systems,
- Country exposure limits,
- Regular monitoring of country conditions,
- Periodic stress testing of foreign exposures, and
- Adequate internal controls and audit function.

The March 2002 Statement indicates that to effectively control risk associated with international activities, institutions must have a risk management system that focuses on the concept of country risk. A program that is limited to an assessment of transfer risk, and especially one that solely relies on transfer risk designations assigned by the ICERC, ignores other important facets of country risk and would not be appropriate. Transfer risk and the ICERC program are discussed in subsequent subsections.

Policies and Procedures

Management is responsible for developing and implementing sound, well-defined policies and procedures for managing country risk. Management should also ensure that country risk management policies and practices are clearly communicated to applicable offices and staff. At a minimum, policies and procedures should:

- Articulate a strategy for conducting international activities;
- Specify appropriate products, services, and affiliates (e.g., banks, branches, affiliates, joint ventures, etc.);
- Identify allowed and disallowed activities;
- Describe major risks in applicable countries or regions;
- Establish risk tolerance limits;
- Develop standards and criteria for analyzing and rating country risk;
- Delineate clear lines of responsibility and accountability for country risk management decisions;
- Require periodic reporting of country risk exposures and policy exceptions to senior management and the board; and
- Ensure compliance with regulatory guidance and reporting requirements.

Rating Country Risk

Countries often experience political and economic shocks, and institutions with international activities must appropriately manage country risk. Critical risk mitigation components include effective country risk monitoring, accurate risk ratings, and timely implementation of exit strategies.

When collecting data to examine country risk, useful sources of qualitative information may include market data from the bank's internal country studies or representative office; officer visits to the home country, central bank, or correspondent bank; and external credit-rating-agency information. For instance, foreign/local currency ceiling ratings for the sovereign country, foreign/local currency deposit ratings for banks, and bank financial-strength ratings can be effectively employed as part of a country risk management program. Management should have a clear understanding of the assumptions and analysis that rating agencies use to develop external ratings if they consider the information when assigning internal ratings.

The causes of sovereign defaults can be broadly grouped into the following categories:

- Banking crises,
- Chronic economic stagnation,
- High debt burden, and
- Institutional or political factors.

In general, country risk ratings should encompass qualitative and quantitative analysis and reflect an estimate of the likelihood of adverse events. Qualitative analysis does not require sophisticated modeling and may simply involve a careful, general analysis of key indicators. When quantitative models are used, management should apply sound modeling practices typically employed elsewhere (e.g., credit and interest rate risk modeling).

Quantitative factors to consider include gross domestic product (GDP) growth, GDP per capita, inflation and unemployment rates, bond yields, government and private sector debt levels, current account deficits, short- and long-term external debt, credit default swap prices, and foreign exchange/international reserves. Statistics regarding these items are often available through multilateral agencies or official national sources. While the availability of data has substantially improved, examiners should be aware that in certain less-developed countries, data may be unavailable, infrequently reported, or unreliable, and qualitative in-country analysis may be significantly more reliable.

Although a country risk rating should be assigned to all foreign countries, it may be helpful to vary rating methodologies between emerging and non-emerging market countries (or other similar delineations). Also, in certain high-export countries, such as countries heavily dependent on oil exports, it may be useful to monitor specific market factors to more effectively evaluate risks.

Additionally, depending on the size and complexity of certain exposures, it may be appropriate for management to consider institution-specific factors when assigning internal ratings. For example, management should consider the legal and governance framework of the institution's activities in the foreign country, the type and mix of exposures, reliance on in- or out-of-country funding sources, and the economic outlook for specific industries. Additionally, management should consider potential risk mitigants, including the ability to effectively manage foreign exposures through in-country personnel.

It is common for banks to adjust or qualify country risk ratings based on the level and type of exposure of the counterparty. For example, trade-related and banking-sector exposures may receive better risk ratings than other categories of exposure. The importance of trade and banking transactions to a country's economy often results in preferential treatment by foreign governments for repayment. However, management should closely monitor signals from foreign governments when conditions deteriorate to ensure expectations of support are still warranted.

Finally, while country risk rating and monitoring systems can affect general and specific risk management decisions, the information provided should be an integral part of the strategic decision making process as it relates to foreign operations. Ultimately, the information provided should stimulate discussion, assessment, and potential action at the senior management and board levels.

Country Exposure Concentrations

The federal banking agencies recognize that concentration limits and diversification are useful ways to moderate country risk. Diversification is especially relevant to international lending because the assessment of country risk can involve major uncertainties. Diversification provides some protection against a dramatic change in the economic or political environments of a particular country or region.

As part of their country risk management process, internationally active institutions should adopt a system of country exposure limits. Because the limit setting process often involves divergent interests within the institution (such as senior management, country managers, and the country risk committee), country risk limits will usually require the balancing of several considerations, including:

- The overall strategy guiding the institution's international activities,
- The country's risk rating,
- The institution's risk appetite,
- The perceived business opportunities in the country, and
- The desire to support the international business needs of domestic customers.

The March 2002 Statement notes that concentrations of exposures to individual countries that exceed 25 percent of Tier 1 Capital plus the ALLL are considered significant. In the case of troubled countries, lower exposure levels may be considered significant and should be carefully monitored. Refer to the ROE Instructions for preparing ROE commentary and the concentrations schedule.

Sovereign crises are often not limited to just one country. Surrounding regions and industries are typically affected as well, and the March 2002 Statement advises banks to consider limiting exposures on a broader (e.g., regional) basis. Examiners should identify exposures to broader country groupings in the ROE when bank or market analyses identify links or risks between countries where the bank is exposed (e.g., Central America or the Caribbean).

Risk Mitigation - Exit Strategies

Effective risk mitigation requires the development of board-approved policies regarding exit strategies (a.k.a., action plans). Action plans should define trigger points that indicate portfolio exposure in a given country may have escalated beyond an acceptable threshold and should be reduced or eliminated. The substance of an exit strategy should be commensurate with an institution's level of exposure. Items for consideration include how a bank will reduce risk to:

- Aggregate country exposures;
- Asset classes (e.g., loans, Eurobonds, medium-term notes, commercial paper, etc.);
- Issuers (sovereign, financial, private sectors, etc.);
- Product types and concentrations (trade transactions, pre-export finance, foreign-deposit concentrations, derivatives, off-balance sheet items, etc.); and
- Tenor (generally, tenor should be reduced when country risk is increasing).

Management should use quantitative and qualitative data to define, substantiate, and initiate action plans. Related policies should include procedures for estimating risk levels and reporting material exposures. The policies should also incorporate risk-reduction strategies stemming from contagion risk (the likelihood that economic problems in one country, region, or market will affect another).

Some institutions have increased the use of credit derivatives to reduce country risk. When complex financial products are used, management should consider all relevant issues, such as counterparty, credit, and correlation risks.

Transfer Risk

Transfer risk is an important part of country risk. Transfer risk reflects the possibility that an asset cannot be serviced in the currency of payment because the obligor's country lacks the necessary foreign exchange or has put restraints on its availability.

In general, transfer risk is relevant whenever a bank extends credit across international borders and the extension of credit is denominated in a currency other than the obligor's country of residence. In these situations, an obligor must, in the absence of an ability to obtain and retain foreign currency outside the country of residence, obtain the foreign currency from domestic sources. When a country is beset by economic, political, or social turmoil leading to a domestic shortage of foreign currencies, the obligor could default on its external obligations because it is unable to obtain foreign currency at a reasonable price.

Although a country risk management program must be based on the broadly defined concept of country risk, the federal banking agencies consider transfer risk when assigning classifications, designating cross-border exposures, and determining minimum transfer risk reserve requirements on cross-border exposures.

Interagency Country Exposure Review Committee (ICERC)

The ICERC consists of representatives from all federal banking agencies that are jointly responsible for providing uniform transfer risk designations. Transfer risk designations serve as a starting point for adverse classifications of all cross-border exposures. Aided by tools such as balance-of-payment statistics and internal studies of country conditions, the ICERC makes decisions on the extent of transfer risk in countries where U.S. bank exposure meets the committee's review criteria.

When a country is experiencing political, social, or economic conditions leading towards an interruption in debt servicing by obligors within the country, or when an interruption in payments appears imminent, credits within the country are adversely classified using the designations of *Substandard*, *Value Impaired*, or *Loss*. When an adverse classification is assigned, the committee prepares a standard narrative on the country to be used in the ROE. The criteria for reporting transfer risk classifications and designations established during an examination are discussed in the ROE instructions.

For sovereign exposures, ICERC's designation is the only applicable rating. However, if they are carried on the institution's books as an investment, securities issued by a sovereign entity are also subject to the interagency Uniform Agreement on the Classification of Assets and Appraisal of Securities Held by Banks and Thrifts. If a rating is different under the two systems, the examiner should assign the more severe of the two ratings. For private sector exposures, the applicable rating is the more severe of either the ICERC-assigned transfer risk rating for the country or the examiner-assigned credit risk rating (including ratings assigned as a result of the Shared National Credit Program). Further discussion of the application of transfer risk ratings can be found in the ICERC Guide.

Contingent liabilities subject to transfer risk (including commercial and standby letters of credit as well as unfunded loan commitments) that will result in a concomitant increase in bank assets if the contingencies convert into an actual liability (Category I contingent liabilities) should also be considered for special comment or classification, as applicable. Contingent liabilities extended for classification should be classified according to the type and tenor of the bank asset that would result from conversion of the contingency into an actual liability. For example, commercial import/export letters of credit would be accorded the same classification as trade transactions, while commitments to fund long-term project loans would be accorded the same classification as long-term loans. In cases where type or tenor is not easily discernible and the exposure is accorded a split classification, the more severe classification should prevail.

Transfer Risk Reserve Requirements

The International Lending Supervision Act of 1983 (ILSA) directs federal banking agencies to require banks to establish and maintain a special reserve when the value of international loans has been impaired. The ILSA requires that the special reserves be established through a charge against current income and segregated from both the ALLL and capital. A bank must establish a special reserve when an appropriate federal banking agency determines that a bank's assets have been impaired by a protracted inability of borrowers in a foreign country to make payments on their external indebtedness. Factors indicating such impairment include:

- A failure by such public or private borrowers to make full interest payments on external indebtedness,

- A failure to comply with the terms of any restructured indebtedness,
- A failure by the foreign country to comply with any International Monetary Fund (IMF) or other suitable adjustment program, or
- No definite prospects exist for the orderly restoration of debt service.

The federal banking agencies refer to this special reserve as the Allocated Transfer Risk Reserve (ATRR). The ATRR requirements are established on an interagency basis through the ICERC program. When applicable, ICERC assigns ATRR requirements to country exposures classified as Value Impaired. Banks also have the option of taking a charge-off in lieu of establishing an ATRR. The ATRR is a contra-asset to the international asset and is not included as part of the ALLL nor is it included in regulatory capital. For further details on the ATRR, refer to Part 347, Subpart C, of the FDIC Rules and Regulations.

Country Risk Exposure Report

One of the tools examiners may use to monitor a bank's country risk exposure is the FFIEC's Country Risk Exposure Report (Form 009), which details material international exposure and must be filed quarterly by certain financial institutions. This report provides information regarding the amount, type, and location of foreign assets. The examination process should include assurances that management adheres to the reporting requirements and that such reports are accurate. Differences between a bank's method of calculating country exposure and the methods required by the Form 009 are generally acceptable; however, management should be able to reconcile any differences between the two reports, as well as explain the logic behind their internal method.

Form 009 requires reporters to disclose foreign claims (assets excluding premises, ORE, and intangibles) based on the residency of the counterparty, as well as residence of the ultimate obligor (which may be different). A central concept of Form 009 is the difference between *immediate-counterparty* and *ultimate-risk* exposure. Even though a loan may be extended to a counterparty in one country, a common feature of international lending is that the presence of credible guarantees or financial collateral shifts the ultimate repayment source (and thus the source of country risk) to a different country.

For example, if a bank lends to a Brazilian subsidiary of a German parent company, the bank must report the loan as a foreign claim to Brazil on an immediate-counterparty basis. If the German parent guarantees the loan, the bank must report a *risk-transfer*, which is an outward risk-transfer (decrease) from Brazil and a commensurate inward risk-transfer (increase) to Germany. The loan is then reported as a German claim on an ultimate-risk basis. In addition to parent-subsidiary guarantees, cash and securities collateral, insurance, and credit derivatives can all be used to risk-transfer.

Form 009 is required for every U.S.-chartered insured commercial bank or savings association that has, on a fully consolidated bank basis, total outstanding claims on residents of foreign countries exceeding $30 million in the aggregate, and has at least one of the following:

- A branch in a foreign country,
- A consolidated subsidiary in a foreign country,
- An Edge or Agreement subsidiary,
- A branch in Puerto Rico or in any U.S. territory or possession (except that a bank or savings association with its head office in Puerto Rico or any U.S. territory or possession need not report if it meets only this criterion), or
- An International Banking Facility (IBF).

Additionally, institutions that report total gross notional values of derivative contracts exceeding $10 billion on Schedule RC-L of the FFIEC 031 Call Report or FR Y-9C are also required to submit Form 009, regardless of the preceding criteria. In addition, bank regulatory authorities may specifically require a report (or any specific schedule therein) to be filed by other banking organizations that are deemed to have significant country exposures. Detailed instructions for compiling the report can be found on the FFIEC.gov website under Reports/Reporting Forms.

←

INTERNATIONAL ACTIVITIES

International banking embraces a wide spectrum of financial services and products. This sub-section describes products and services that an examiner is likely to encounter in a bank that has international activities.

International Lending

Entities that borrow funds from banks include importers, exporters, multinational corporations, foreign businesses, governments, consumers, foreign banks, and overseas branches of U.S. banks. International lending is concentrated at the largest global institutions and a number of smaller institutions in select markets, such as New York City, Miami, and San Francisco.

Interest earned from lending to foreign borrowers, both internationally and domestically, remains a major source of profit for banks that conduct international activities.

Other international activities, such as fund transfers, are necessary components of international banking and enhance a bank's ability to service correspondent relationships, but do not necessarily produce significant, if any, income after expenses.

The tendency for international loans to be larger than domestic loans promotes economies of scale by allowing banks to originate, monitor, and collect the loans more efficiently than smaller loans. However, larger credits often attract strong price competition from other global lenders, which may result in lower net interest margins.

International Lending Risks

All loans involve some degree of default risk, and credit officers must effectively assess the degree of risk in each credit extension. However, while foreign loans share many of the same risks of domestic credits, several other risks are unique to international lending.

As discussed earlier, all international activities are exposed to country risk. International lending is especially exposed, as problems that may arise in a particular country can lead to default, payment moratoriums, or forced modifications.

Additionally, the amount and mix of international credits can affect liquidity, capital, and sensitivity to market risk requirements and risk management practices. Credit and currency risks are also key risks associated with international lending.

Credit Risk refers to the potential inability of a borrower to comply with contractual credit terms. Evaluation of foreign credit risk is similar to domestic credit analysis and requires the review of appropriate information, including the amount of credit requested, loan purpose, collateral, anticipated terms, and repayment source. In addition, reviews should assess standard credit file information such as financial statements covering several years and the borrower's performance history on previous loans.

A key problem with assessing international credits is that applicable information is often less readily available and less detailed than in domestic credit files. Foreign loans are often extended in foreign currencies, and financial statements are often in a foreign language and formats that vary from country to country. Moreover, there are often barriers to acquiring such information from foreign sources. Therefore, when evaluating international loans, credit decisions are frequently based on information inferior to that available in domestic credit files.

Currency Risk reflects the possibility that variations in value of a currency will adversely affect the value of investments denominated in a foreign currency. Currency conversion exposure exists in every international credit extension, and currency risk can affect financial transactions in several ways. For borrowers, rapid depreciation in the home currency relative to the borrowing currency can significantly increase debt service requirements. For lenders, rapid appreciation or depreciation in currencies can substantially affect profit or loss depending on how the institution finances the assets. If a U.S. bank lends in a foreign currency, it must acquire that currency by either borrowing or exchanging dollars for the new currency. In the latter situation, a bank might find itself effectively financing its cross-border lending with domestic liabilities, exposing itself to currency risk. If the foreign currency assets depreciate, a bank might suffer economic or accounting losses even without a default because the foreign currency assets must be translated back into dollars for financial statement purposes. In this capacity, currency risk is a sub-set of market risk, and institutions should apply appropriate techniques to monitor and manage this risk.

U.S. banks can attempt to reduce the market risk aspect of currency risk by lending and requiring repayment in U.S. dollars, but the effectiveness of this technique is limited and may simply substitute currency risk for transfer risk (the risk that occurs when a borrower incurs a liability in a currency different from the currency in which revenues are generated).

For example, a foreign borrower might borrow dollars to use the proceeds in a foreign country because of the relative ease of obtaining loans denominated in dollars from a global institution. In this situation, the borrower may convert some or all of the proceeds into the foreign currency. Subsequently, when payments become due, the borrower will need to exchange some foreign currency for dollars. If the local currency depreciated against the dollar, the borrower may find itself unable to meet its debt service requirements.

Another situation that could arise in smaller markets is the inability to obtain sufficient currency at official exchange rates. This could occur because the exchange rate does not reflect competitive market dynamics, or because the loan being repaid is too large for the private-sector foreign exchange market of that country. Consequently, the borrower may be unduly controlled by its central bank or feel compelled to obtain currency from illicit market sources.

Forms of International Lending

Trade Finance

The most common function of international banking is the financing of trade. Generally, several types of trade credit facilities are used by banks, with the most common types being letters of credit and bankers acceptance financing. Exporters may be willing to ship goods on open account (self-financed) to credit-worthy customers in developed countries, but are often unwilling to accept the risk of shipping goods without established bank financing when dealing with an importer in a high-risk, or developing country. Other types of trade finance instruments and methods, such as discounting of trade acceptances and direct trade advances, are also covered in this section.

Letters of Credit

Letters of credit are issued in many forms depending on the type and circumstances of the underlying transaction. Historically, the use of letters of credit involved many documents and was labor intensive. However, automation has made it easier to create letters of credit, verify documents evidencing shipped goods, and collect payments. In some cases, the process has been streamlined into simple tracking of a bar code, similar to techniques employed at retail stores or shipping companies. Despite technological advances, the careful review of documents is paramount in order to protect the bank from liabilities and financial loss.

Commercial documentary letters of credit are instruments in which a bank (issuing bank) agrees to pay money on behalf of the customer (account party/buyer/ importer) to the party (beneficiary/seller/exporter) named in the instrument. The beneficiary is paid when specific documents are submitted to the issuing bank, as required by the terms of the letter of credit. Therefore, through a letter of credit, the bank substitutes its creditworthiness for that of the account party.

Issuance and negotiation by banks of documentary letters of credit are governed by the *Uniform Customs and Practice for Documentary Credits* of the International Chamber of Commerce. All letters of credit must:

- Be issued in favor of a definite beneficiary,
- Be for a fixed or determinate amount,
- Be in a form clearly stating how to make payments and under what conditions, and
- Include a definite expiration date.

The usual routing of a documentary letter of credit is from the issuing bank, through its correspondent bank in the country of the exporter, to the exporter. Basic letters that correspondent banks receive include *revocable* and *irrevocable* letters of credit.

The revocable form is generally of little use to the exporter. As the term indicates, the importer's bank can revoke its credit if requested to do so by its principals (the buyers) or a bank can amend credit terms without the specific agreement of the beneficiary. Ordinarily an exporter would request an irrevocable letter of credit. In this case, the buyer could not instruct their bank to rescind or change the letter of credit without first securing the consent of the exporter. When the exporter presents their documents exactly as described in the letter of credit to the correspondent bank, the latter will be able to secure payment from the importer's bank.

An irrevocable letter of credit constitutes a definite commitment by the issuing bank to pay upon presentation of the documents. The letter of credit may be sent directly to the exporter by the issuing bank or through a local correspondent bank of the issuer. In the latter case, the correspondent may merely *advise* the letter of credit. This means that it is acting as an agent of the importer's bank without any commitment on its part. This is evidenced by a printed clause appearing in the credits such as, "This advice is not an engagement on our part, but is simply for your guidance in preparing and presenting drafts and documents*."*

Some exporters, especially when they are not familiar with the issuing bank, require an agreement from bankers in their own country. For this purpose, the exporter will ask its local (correspondent) bank to *confirm* the irrevocable letter of credit, which requires the correspondent to obtain authorization and compensation from the issuing bank. Once confirmed, the exporter has a definite agreement from a bank in their country that it will make payment upon presentation of documents in accordance with the terms of the letter of credit, regardless of payments by the issuing bank or customer. This is evidenced by a printed clause in the agreement from the confirming bank such as, *"*We undertake that all drafts drawn and presented as specified above will be honored by us.*"* The result of this transaction is that an exporter no longer has credit risk/cross-border risk from the original customer.

Payment terms of a letter of credit usually vary from when presented (sight letter of credit) to 180 days, although special forms of letters of credit allow for other terms. Usually the letter of credit will call for drafts to be drawn on the advising (and confirming) bank. If drawn at sight, the bank will effect payment immediately, provided the terms of the credit have been met. If drawn on a time basis, the bank will accept the draft, which thereafter can be held by the exporter, or by the bank on the exporter's behalf, until maturity. Alternatively, accepted drafts can usually be discounted or sold at going market rates. (Refer to the section on Bankers Acceptances.)

The ultimate repayment of letters of credit generally depend upon the eventual sale of the goods involved, and subsequent negotiations regarding letters of credit rarely occur unless caused by document discrepancies. If discrepancies occur, banks often charge a fee to resolve identified issues. The proper handling and accuracy of the documents used to process letters of credit is of primary concern, and management should maintain appropriate internal controls to ensure transactions are accurately and timely processed.

All commercial documentary letters of credit are contingent liabilities and should be included as such in the Call Report. If the payment of a letter of credit is refinanced, or the draft is discounted, it should be included as an asset in the loan schedules of the Call Report. Management should regularly monitor the volume of letters of credit outstanding through a general ledger memorandum account or contra accounts.

Standby letters of credit are another type of instrument used to facilitate international transactions. This instrument guarantees payment to the beneficiary by the issuing bank in the event of default or nonperformance by the account party (the bank's customer). A standby letter of credit is payable against an official statement of default or nonperformance (whereas a commercial documentary letter of credit is normally payable against the presentation of documents conveying or securing title to goods, such as a bill of lading). Some of the most common purposes for standby letters of credit include:

- Standby credit for the account party's performance under a contract award. In this case, the beneficiary presents the issuing bank a draft accompanied by a statement to the effect that the contract bidder (account party) did not perform under an awarded contract. The issuing bank is obligated to pay the beneficiary and seek reimbursement from the account party (customer).
- Standby credit for the account party's borrowing or advances from another bank. This arrangement requires the issuing bank to reimburse the lending bank if the account party (customer) does not repay their loan.
- Standby credit to back commercial paper or other obligations of the bank's customers.

A standby letter of credit transaction usually involves more risk for the issuing bank than a commercial documentary letter of credit. Unless the transaction is fully secured, the issuer of this instrument generally retains nothing of value to protect it against loss, unlike a commercial documentary letter of credit that provides the bank with title to the goods being shipped. Therefore, to reduce the credit risk of standby letters of credit, the issuing bank's credit analysis should be strong and at least equivalent to that applicable to ordinary, unsecured loans.

Back-to-back letters of credit are another type of trade finance transaction that examiners may encounter in international banks. Though the term *back-to-back* does not appear on the letter of credit, this situation is similar to a confirmed letter of credit, except that two separate letters of credit are issued.

These transactions occur when a seller receives a letter of credit covering goods that must first be obtained from a third party, which in turn requires a letter of credit. In this situation, the second issuing bank looks to the first bank for reimbursement by securing the second letter of credit with the first letter of credit.

Banks are typically reluctant to issue back-to-back letters of credit, partly because more documents are involved and the likelihood of technical problems is elevated. Generally, banks issue back-to-back letters of credit only when they have recourse to an alternative source of repayment (usually the applicant's general financial resources) in addition to the first letter of credit.

Bankers Acceptances

Most letters of credit are part of ongoing transactions that evolve from letters of credit to sight or time drafts, acceptances, notes or advances. Bankers acceptances are a common method of financing international trade that was facilitated by a letter of credit. These instruments are used to finance the successive stages of transactions that move goods from a point of origin to a final destination. Bankers acceptances are fundamental methods that banks use to finance trade transactions.

Bankers acceptances are orders in the form of time drafts (a.k.a., *bill of exchange*) that have been drawn on and accepted by a banking institution (accepting bank), or its agent, to pay the holder a certain sum on or before a specified date. The drawee bank creating the acceptance is primarily liable for the instrument, while the payee, as first endorser, is secondarily liable for paying the holder. If the drawee (buyer) is other than a bank, the instrument is a trade acceptance, not a bankers acceptance.

Bankers acceptances are sometimes eligible for purchase and rediscount by Federal Reserve banks. The rules governing whether an acceptance meets eligibility requirements are important for two major reasons. First, acceptances meeting the conditions of eligibility for discount or purchase are more readily salable in the secondary market. As such, they provide a greater degree of liquidity for the accepting bank. Second, ineligible acceptances are subject to reserves (eligible acceptances are not), which increases a borrower's costs.

The creation of eligible bankers acceptances is governed by Sections 12A, 13 and 14 of the Federal Reserve Act and Federal Reserve Board (FRB) Regulation A. Bankers acceptances must meet certain criteria established in Regulation A and by the Federal Open Market Committee (FOMC) in order for the instrument to be eligible for either discount or purchase by Federal Reserve banks. Since banks' holdings of acceptances form part of their secondary reserves, it is important that the paper they buy be readily marketable by conforming to all the rules that make the acceptance eligible for discount by a Federal Reserve Bank.

Examiners that review bankers acceptances should develop a fundamental understanding of acceptances and the regulatory rules relating to eligibility. Since acceptances are negotiable and traded in the secondary market, there are applicable lending limit considerations. Lending limit rules affecting bankers acceptances in nonmember banks are controlled by state banking laws, and many states that are oriented toward international banking have adopted pertinent sections of the federal statutes. Under Section 13 of the Federal Reserve Act, acceptances eligible for discount at the Federal Reserve (subject to specific criteria) are exempt from both reserve requirements and federal lending limits. Bankers acceptances that are ineligible for discount at the Federal Reserve become an unsecured obligation of the accepting bank (for the full amount of the draft) and are subject to prevailing lending limits.

Acceptances Discounted

In a typical letter of credit transaction, a draft is presented to the bank (along with other documentation), is stamped *accepted* on its face, and is endorsed by an appropriate officer. By accepting the draft, the bank acquires an unconditional obligation to pay a specified amount of money at maturity, either to the seller or, more frequently, to the holder of the instrument.

The seller/exporter, or holder, may choose to hold the draft until maturity, but typically chooses to receive immediate payment by selling the acceptance at a discount, usually to the accepting bank itself. The acceptance then becomes what is known as an *acceptance discounted*. If the accepting bank purchases or discounts the acceptance, it may elect to hold it in its own portfolio. In this event, it is recorded as a loan to the borrower who bought the goods and must be funded like any other loan. Once the acceptance discounted is created, it appears on the bank's balance sheet statement. Its accounts for *customers' liabilities on acceptances outstanding* (asset) and *liability for acceptances executed and outstanding* (liability) are reduced and the discounted acceptance is recorded with other loans. If the accepting bank subsequently rediscounts (sells) the acceptance in the market, the acceptance should be appropriately recorded in asset and liability accounts.

Foreign Receivable Financing

Foreign receivable financing is a method of trade finance completed through direct advances against foreign collections, which the exporter pledges to the bank. The exporter may borrow from the bank up to a stated maximum percentage of the total amount of receivables lodged with the bank at any one time. Besides having a pledge on the exporter's outward collections, the bank usually retains recourse to the exporter, whose credit strength and reputation are of prime consideration. The bank also maintains control of the merchandise by ensuring the export bill of lading is *to-the-order-of* the shipper and endorsed in blank or to-the-order-of the bank. The bill of lading must not be consigned to the buyer (importer) since this would give them control over the goods.

Banks also finance foreign receivables through bankers acceptances. To obtain acceptance financing against receivables, the exporter draws two drafts. The first is a time draft drawn on the foreign buyer (importer), which, along with the necessary documents, is sent for collection in the usual manner. The second, for the same or a lesser amount and for the same tenor as the first, is drawn on the exporter's bank. The bank accepts the second draft and discounts it, crediting the net amount to the exporter's account. The bank may hold the acceptance in its loan portfolio or may sell it in the market. When payment is received from the importer on the first draft, the bank applies the proceeds to pay its own acceptance. Should the importer default, the bank has recourse to the drawer (exporter) for payment.

Government-guaranteed Trade Finance

Government-guaranteed trade finance is used by international banks to reduce the risk associated with international trade financing. Many governments have export credit agencies (ECAs) that provide subsidized credit to exporters. These entities are often independent agencies or government-authorized, private sector entities. For a fee, these agencies protect banks from commercial and political risk. Although the programs differ in cost and scope of coverage, they are all designed to encourage commercial banks to participate in export financing and mitigate concerns about transfer risk.

In the United States, the official ECA is the Export-Import Bank (Ex-Im Bank), a government chartered corporation. The Ex-Im Bank was founded in 1934 to finance and facilitate exports from the U.S. to other countries by guaranteeing repayment of loans made to foreign buyers of U.S. exports. The Ex-Im Bank offers a wide range of credit insurance policies covering the risk of nonpayment by foreign debtors. The policies, some designed specifically for financial institutions, cover certain percentages of commercial and political risks as well as interest repayment.

Other agencies that provide government-guaranteed trade financing include:

- The Overseas Private Investment Corporation, which provides project financing, investment insurance, and a variety of investor services, insuring investment projects against political risks.
- The Small Business Administration, which provides revolving lines of credit to fund the short-term needs of exporting firms.
- The Agency for International Development, which provides direct funds to emerging market countries and supports development projects.
- The Commodity Credit Corporation, which provides assistance in the production and marketing of U.S. agricultural commodities.

As with any government-guaranteed financing, familiarity with the specific conditions and requirements of each agency and program is paramount. Like domestic transactions, failure by the lender to comply with the program's conditions may allow the agency to rescind the guaranty. Documentation should be maintained for each participating transaction to show compliance with the outstanding guaranty. These documents should be scrutinized by the examiner when reviewing these credits to determine that the loan is compliant with the guaranty. Failure to comply with the terms of the guaranty may warrant adverse classification or criticism by the examiner.

Loans to Foreign Banks

Loans to foreign banks represent an important segment of international credit. Credit to foreign commercial banks may be in the form of direct loans or through deposit placements, which are discussed under a separate heading below. Often interbank loans are used to facilitate transactions by foreign counterparts that are denominated in U.S. dollars. In some instances, loans to foreign banks may be used for trade-related purposes.

Trade-related loans to foreign banks are commonly referred to as *pre-export/import financing*, and the loans usually function like a working capital line with advances requested so that the foreign bank can fund loans to its local clients. Because of improvements in global communication and payment systems, this type of lending has gained in popularity as a form of trade finance. Changes in foreign bank regulations, increased availability of financial information, and higher costs associated with letters of credit have contributed to the growth of pre-export/import financing.

The trade lines are typically unsecured and tend to have longer terms than letters of credit. Because the local clients are not directly obligated to pay the line of credit, bank underwriting and examination assessments of these lines should be based on the creditworthiness of the foreign bank.

An accurate appraisal of the foreign bank's management is the key consideration when evaluating loans to a foreign bank. Also, when granting these trade lines, U.S. banks should consider:

- The ability of the foreign bank to repay (not simply its current financial condition);
- If there is an established relationship with the foreign bank;
- Prior payment histories of the foreign bank;
- The foreign bank's standing within the market;
- The performance of comparable banks (peer group analysis);
- The foreign country and central bank's financial position and political conditions; and
- The foreign country's banking structure, supervisory programs, and method of reporting problem assets.

In some cases, the foreign bank may secure individual transactions, or an entire line, with cash collateral at the U.S. bank. Alternatively, the foreign bank may agree to maintain compensating balances at a percentage higher than the amount of its trade-related lines to mitigate the repayment risk.

Alternatively, loans may be extended directly to a foreign bank for working capital purposes or capital expenditures, but these loans are less common. The lending institution may also extend credit directly to a foreign borrower, based primarily on the foreign bank's guarantee of the loan. Such credit extensions may be for trade-related purposes, but are often accommodations to the foreign bank, with little or no contact between the lending bank and the direct borrower. This type of transaction should be considered as part of the aggregate credit extended to the foreign bank for legal lending limit purposes.

Domestic Loans

Although some loans to domestic borrowers are extended to facilitate international transactions, they are essentially underwritten as domestic loans, but handled by the international department. A typical transaction would be a loan or other form of credit to a domestic customer to finance imports of inventory shipped on open account or under a letter of credit or bankers acceptance facility. The credit would be in U.S. dollars with repayment expected from the sale of the inventory in the U.S. Since the ultimate repayment is based on the borrower's domestic, not foreign sales, the transaction is generally considered to be a domestic loan.

Loans to overseas units of domestic corporations that are guaranteed by a U.S. parent may also be encountered in international lending. These loans may be for purposes such as short-term working capital or long-term capital improvements of the foreign subsidiary. In these cases, the domestic company's guarantee generally has a significant effect on credit underwriting and approvals, but institutions should also conduct thorough country risk analysis because the borrower operates in a foreign jurisdiction and is subject to the political and legal risks associated with that particular country. Proper execution of the guaranty is also a critical factor in underwriting the credit. On the other hand, loans to foreign affiliates of U.S. corporations, not supported by a guarantee of the domestic corporation, must be considered as any other international loan to a foreign borrower and underwritten on its own merits, without consideration of the domestic parent's support.

The same principles may hold true for domestic subsidiaries of foreign corporations, or loans to domestic entities with a high level of international operations, such as import/export companies or companies that are part of an international supply chain. While these loans may be considered domestic loans by the bank because of the location of the borrowers, country risk analysis is generally required if the ultimate source of repayment is foreign. Analysis should also consider whether any form of support from the foreign parent is legally binding or subject to country risk.

Loans to Foreign Business or Individuals

Banks also lend to foreign companies, their subsidiaries, and wealthy individuals (e.g., international private banking customers). Direct loans to foreign businesses and individuals are based on the same credit principles as domestic loans. As with domestic credits, a bank must know its customer, identify the purpose of the loan, and assess the source of repayment. In evaluating these loans, the examiner must consider these factors and also consider the unique conditions related to international businesses that may influence repayment. Country risk, foreign exchange risk, and reliability of financial statements are additional factors that should be considered.

Loans to foreign customers can be granted on an unsecured basis, and are generally reserved for well-established and highly reputable customers of the lending institution. Usually compensating factors, such as large deposit balances at the lending institution, serve to mitigate the risks associated with this type of unsecured lending. These credits are sometimes granted as accommodation facilities for important customers of the bank's personal banking department.

Loans to foreign borrowers are typically not secured by foreign-based collateral given the difficulties of perfecting liens in foreign locations and jurisdictions. The loans are often directly supported by a domestic affiliate, foreign guarantor, or a foreign government, and evaluation of that support is integral to analyzing the credit.

In some cases, loans to foreign borrowers may be secured with assets located in the U.S. These loans could be for consumer purposes, such as residential real estate, or for commercial purposes, such as foreign entities borrowing to invest in commercial, U.S. real estate. The residency of the borrower determines whether these loans are international transactions for the purposes of regulatory reporting. Often, these loans have some type of foreign-based repayment source and are exposed to risks similar to cross-border loans. In these situations, they should also be included in country-exposure risk management systems.

In certain markets, consumer lending to non-resident aliens is a prevalent form of international lending. This form of lending is often handled outside of the international department because of the homogeneous nature of the credits and market-driven pricing. Because the repayment source is often foreign, the loans should be treated as international loans and assessed in a similar way as other types of domestic loans to foreign borrowers.

Loan Syndications

A bank may enter the international loan market quickly by purchasing participations through syndications. Syndication is the typical structure used by multinational banks to offer credit to entities with significant global funding requirements. Loan syndications are typically put together by international groups for borrowers requiring substantial funding, often to finance public works projects, large capital expenditures, or trade in commodities.

These participations tend to be specialized loans, which are often managed by another bank and may or may not involve existing customers. Nevertheless, participation in syndicated loan markets can offer benefits such as allowing for additional loan portfolio diversification and greater selection of loans with desirable features.

The participating bank should have sufficient financial information and documentation to adequately understand the transaction, as well as conduct analysis of the borrower, risks involved, and source of repayment. The bank's systems should be able to handle the unique operational issues of this type of lending and adequately monitor repayments. Examiners should verify that appropriate risk controls are in place and compatible with the risks applicable to this type of international lending.

When entering these markets, management should define and conform to acceptable risk limits. Often, smaller banks participating in syndicated loans may have limited input in structuring or managing the loans. For the largest institutions, certain loan terms and types are a small part of the loan portfolio, and the retained portion of any one transaction may be inconsequential. This may not be the case for smaller institutions, and all banks should exercise appropriate controls and strict monitoring and reporting systems, especially if they are new to the syndicated loan market.

Placements

Banks may maintain interest-bearing time deposits with foreign banks and overseas branches of U.S. banks, often referred as placements, interbank placements, or re-deposits. The maturity of these deposits may range from overnight to several years. Deposit placements are usually connected with foreign exchange markets and international money centers such as New York and London, and are carried in a *due from foreign banks* time account. The placements are generally made in conjunction with a pre-approved placement line that is, in essence, a line of credit.

The majority of these deposits are Eurodollar placements, with smaller amounts in other Eurocurrencies. Eurodollars and Eurocurrencies are simply dollars or foreign currencies domiciled outside the respective country of denomination. Due from bank time deposits contain the same credit and country risks as any extension of credit to a bank in a foreign country; consequently, a prudently managed bank should place deposits only with sound, well-managed banks after thoroughly investigating their creditworthiness.

Placement activity should be governed by a formal bank policy similar to that used for federal funds transactions. The policy should define acceptable terms, designate tolerable concentration levels (in relation to credit and country risks), and identify appropriate banks for placements. Lists of acceptable depositories with prescribed limits should be provided to traders and placement officers and reviewed regularly by credit officers, particularly during periods of money market uncertainty or changing economic and political conditions.

International Lending Policies

Every bank engaged in international lending should be guided by a formal, written, board-approved policy. Content will vary depending on the risk profile of the bank and the extent of its international activities, but certain factors should be addressed in almost all situations. These include basic credit standards for international lending, a statement of the bank's international lending objectives, a description of its system for credit approval, and the establishment of committee and officer lending authorities. In addition, the policy should define procedures that ensure the board of directors is regularly apprised of the size, performance, and risk profile of the international loan portfolio.

Defining geographic loan limits is one of the most significant components of an adequate international lending policy. Limits should be set according to estimates of where the bank can profitably lend (in accordance with its strategic objectives, financial capacity, and personnel resources). Maximum aggregate limits should be established for each political entity where credit is advanced, based on a comprehensive country risk analysis. Banks should also consider establishing country and credit sub-limits by transaction type. Limits should be considered for specific countries, as well as groups of countries (regions) that have close economic ties.

When evaluating international credit risk, special consideration must be given to reviewing foreign financial statements, types of borrowers, and the forms of indirect support provided by parent companies, banks, and financial institutions. Many banks analyze foreign currency statements in U.S. dollar terms (with a single conversion from the foreign currency), versus U.S. dollar equivalents at the end of each period, which could have several different conversion rates. The merits of either approach depend on the currency of repayment and a clear understanding of which approach is used. Nevertheless, lenders should review financial statements that reflect amounts in both dollars and foreign currencies and that are translated into English.

Because financial information from foreign countries is not always reliable, the bank's policies should enable it to determine borrower capacity and reputation by other means. One of the most effective methods is a program of regular visits to borrowers' countries by bank account officers and by obtaining credit references, followed by preparation of candid reports that become significant parts of credit files. When managing the accounts of international borrowers, there is generally no substitute for regular account officer visits in obtaining this type of information. It may also be prudent to send multiple officers or obtain independent assessments. Banks can also consider the Financial Sector Assessment Program, jointly established by the World Bank and the International Monetary Fund, which analyzes a country's adherence to sound financial sector principles such as the Core Principles of Banking Supervision prescribed by the Basel Committee on Banking Supervision.

Other International Activities

Investments

In addition to international loans and deposit placements, international banks may periodically allocate capital, through international capital markets, to investments such as foreign debt securities or debentures. Banks use the international capital markets to invest funds at a competitive advantage to lending. Capital market activities have increased for several reasons, including:

- Excessive loan losses incurred on emerging-market loans,
- Small spreads between the interest earned on loans and the interest expense of foreign deposits,
- Increasingly stringent risk-based regulatory capital standards, and
- Global recessions and regional financial crises.

These factors have de-emphasized banks' commitment to direct foreign lending, but countries and corporations continue to have capital needs, and banks assist them by underwriting and investing through capital market instruments. Banks are exposed to numerous risks when investing in international markets and should have appropriate risk management in place before engaging in these activities.

Foreign debentures may be issued by a foreign bank, corporation, or sovereign government. Banks with foreign offices might hold the securities of foreign government entities to meet various local laws or reserve requirements, reduce tax liability, retain sufficient asset liquidity, or as an expression of goodwill. As with domestic bond issues, the instruments will have varying durations and maturity and usually represent an unsecured obligation of the issuer.

Foreign debt securities held by U.S. banks are often denominated in U.S. dollars and are in the form of Eurobonds, Medium Term Notes, or Yankee Bonds. These instruments provide liquidity in secondary markets (during normal market conditions) and, depending on the country and circumstances of the issuer, may offer much higher yields than would otherwise be obtainable in the highly competitive trade finance market. Higher yields (over comparable U.S. Treasury instruments) are driven by a confluence of factors including credit quality, country risk (including transfer risk), inflation, monetary policy, and foreign exchange movements.

International investments may be internally reported within a bank's domestic bond portfolio, even though they are reported separately for Call Report purposes. To monitor overall country exposures properly, the instruments should also be included in the appropriate country of risk in both internal and regulatory reports.

Banks with foreign branches are permitted a broader scope of investment activities, including investment services and underwriting of debt and equity securities. International investments and permissible activities are governed by the FRB's Regulation K, which is incorporated into Part 347 of the FDIC Rules and Regulations (for state nonmember banks).As with the domestic investment portfolio, the purchase of foreign debt securities for speculation is an unsuitable investment practice. While risk management considerations are similar to those contained within the Securities section of this Manual, the foreign aspect of Eurobonds, notes, and debentures requires greater due diligence, consideration, and monitoring than would otherwise be expected of a non-complex domestic bond portfolio. Jurisdictional issues and legal systems must be considered when investing in securities issued by sovereigns, and resolving defaults and restructurings of sovereign debt can be problematic if not properly underwritten.

Private Banking

Many banks market personalized services to high net worth customers through a separate unit of the bank commonly known as the private- or personal-banking department. Private banking is an important business line for many financial institutions as it encourages wealthy individuals to develop banking relationships and can generate substantial fee income.

U.S. banks manage private banking relationships for both domestic and international customers. Private-banking departments may provide customers typical financial services, or complex assistance such as facilitating the establishment of shell companies and offshore entities (e.g., private investment companies (PIC) or international business corporations). Typical private-banking services include:

- Cash management,
- Funds transfers,
- Asset management (e.g., trust, investment advisory),
- Lending services,
- Financial planning (e.g., tax and estate planning),
- Custody services, and
- Other support as requested.

Privacy and confidentiality are important elements in international private banking, but may increase a bank's vulnerability to money laundering. Risks of money laundering or other illicit activities may be increased due to having operations in jurisdictions with weak anti-money-laundering laws, the use of shell companies or accounts with fictitious names, or the establishment of accounts in the name of a PIC or blind/numbered trust.

International *private banking accounts* are covered by the Bank Secrecy Act, USA PATRIOT Act, and other recordkeeping and reporting rules and regulations. The accounts are generally defined as an account (or any combination of accounts) maintained at a financial institution that requires a minimum aggregate deposit of funds (or other assets) of not less than $1,000,000, is established on behalf of or for the benefit of one or more non-U.S. persons who are direct or beneficial owners of the account, and is assigned to, or is administered by, in whole or part, an officer, employee, or agent of the bank acting as a liaison between a covered financial institution and the direct or beneficial owner of the account.

Typically, private banking accounts are based on minimum deposit levels and require management to implement effective due diligence, monitoring, and reporting systems. Even when the accounts do not meet the required minimum deposit criteria described above, it is expected that the relationships be subject to appropriate internal controls and due diligence under the institution's risk-based Bank Secrecy Act/Anti-Money Laundering (BSA/AML) compliance program.

Effective risk management policies, procedures, and practices help protect banks from becoming conduits for money laundering and terrorist financing, which may arise through private banking relationships. Such illicit activities can impair an institution's reputation and have significant costs due to litigation expenses, regulatory sanctions, and loss of business. Additional information relating to required due diligence and risk management of these activities is contained in the FFIEC's BSA/AML Examination Manual and other guidance.

Correspondent Banking

Financial institutions can use U.S. banking relationships to provide services to foreign banks, yet limit their overall exposure to foreign activities. Correspondents provide a range of services to banks located in other countries that do not have local offices, or whose local offices are prohibited from engaging in certain types of activities. This arrangement allows the foreign bank to offer these services more efficiently and economically. Banking services performed through a foreign correspondent bank arrangement may include:

- Cash Management,
- International Funds Transfers,
- Check Clearing,
- Pouch Activities,
- Foreign Exchange Services,
- Sweep Accounts/Overnight Investments,
- Trade Financing, and
- Payable-through accounts (PTAs).

Note: PTA activities should not be confused with traditional international correspondent banking relationships, which do not provide correspondent bank customers with direct access to their account at the U.S. bank, as would be the case in a PTA account arrangement.

Foreign correspondent banking is highly scrutinized because of concerns that some foreign financial institutions are subject to less effective regulatory guidelines than U.S. banks and therefore pose a higher risk of money laundering or other illicit activities.

Per existing regulations, a *correspondent account* is established by a bank for a foreign bank to receive deposits or make payments or other disbursements on behalf of the foreign bank, or to handle other financial transactions related to the foreign bank.

Investigations have disclosed that correspondent accounts have been used by criminals to launder funds and facilitate criminal or terrorist activities. Shell companies are sometimes used to hide the true ownership of accounts. Because of these risks, restrictions that are more stringent have been enacted within the regulatory framework to prevent the use of these accounts for illicit purposes. For instance, according to the amended regulations, a bank is prohibited from establishing, maintaining, administering, or managing a correspondent account in the U.S. for, or on behalf of, a foreign shell bank.

Additionally, a bank that maintains a correspondent account in the U.S. for a foreign bank must maintain records in the U.S. identifying the owners of each foreign bank. A bank must also identify a person who resides in the U.S. who is authorized to be an agent to accept *service of legal process*. (Service of legal process means the agent is willing to accept legal documents, such as subpoenas, on behalf of the foreign bank.)

These stringent regulatory restrictions make foreign correspondent banking an area that requires a higher degree of scrutiny than other international banking activities. Examiners should be aware of the heightened risk posed by this activity, and carefully review policies and risk management controls using the guidelines provided by the FFIEC BSA/AML Examination Manual and other examination guidance on the subject.

Deposit Accounts

Deposit gathering and retention activities of international banks arise from the exercise of other banking activities, such as:

- Receipt of wire transfers,
- Compensating or collateral balances required against credit facilities,
- Disbursement of loan proceeds,
- Payments for trade transactions, and
- Savings or cash-management balances of private banking customers.

The various types of deposit instruments used by banks are defined in applicable Federal Reserve and FDIC regulations governing demand, savings, and NOW accounts. The origin, as well as the types and amounts of deposits that international banks can accept, is dependent on the licensing agency's guidelines or applicable state restrictions, FDIC insurance status, and limitations imposed based on the type of banking office being examined. For instance, U.S. branches and agencies of foreign banks may have restrictions on accepting deposits from U.S. citizens or residents under certain conditions. Examiners should become familiar with the regulatory deposit-taking restrictions that may apply to the type of banking structure under review.

In addition, the volatility and composition of the foreign deposit structure are important elements to consider in the examination process. Foreign deposits tend to have a higher degree of volatility than domestic deposits because of strong competition for funds among banks, the needs of individual and corporate account holders to minimize idle funds, and the effects of disintermediation (the movement of deposits to other higher-yielding markets). A comprehensive deposit development and retention program, which is often included in the funds management policy, is a useful tool for mitigating this volatility.

Management should establish appropriate deposit development and retention policies that include reasonable limits on foreign deposits. When establishing the limits, management should consider prudent competition and the bank's scope of international services. Deposit policies and programs should not only be concerned with deposit growth but also address the desired characteristics of the deposit structure and provide for reporting mechanisms to monitor foreign deposits. Management of the international operations must be able to determine what percentage of the overall foreign deposit structure is centered in stable/core deposits, fluctuating/seasonal deposits, and higher-risk/volatile deposits. Management information systems should provide sufficient information to enable bank management and examiners to evaluate the effect that all material, foreign deposit accounts have on the bank's risk profile.

In addition, examiners should consider BSA/AML risks, and other regulatory/compliance risks related to certain types of deposit accounts, when analyzing the bank's foreign deposits. Deposit products and programs that exhibit elevated risk characteristics are discussed below.

Payable-through Accounts (PTAs) are used directly by customers of the correspondent bank to transact business on their own behalf. Under this arrangement, the sub-account holders of the PTA are generally non-U.S. residents or owners of businesses located outside of the United States. PTAs may be prone to higher BSA/AML compliance risk because banks holding the PTA account may not implement the same due diligence requirements on the sub-account holders that they require of domestic customers. Also, the typically high volume of transactions conducted through PTAs, coupled with inadequate oversight by the banks, may increase money-laundering risks and related criminal activities. The inability of the holding bank to identify and adequately understand the transactions of the ultimate users significantly increase risks associated with money laundering, terrorist financing, and OFAC violations.

Brokered Deposits generally represent funds the bank obtains, directly or indirectly, by or through a deposit broker or agent. Historically, internationally active banks have not relied heavily on funds obtained through deposit brokers to supplement their traditional funding sources. But, in some cases, large, out-of-area deposits are obtained because the U.S. bank is offering attractive rates.

When acquiring foreign deposits, internationally active banks often rely on the assistance of affiliated or parent institutions. International banks may also use independent agents to augment their deposit base. Agented deposits may be the product of personal relationships at a related institution abroad or initiated by foreign customers of related institutions, who are interested in the stability of U.S. insured deposits.

Fundamentally, the risks associated with foreign brokered deposits share many similarities with the risks associated with domestic brokered deposits. Examiners should consult with Capital Markets and International Banking subject matter experts as needed when evaluating foreign deposit gathering and retention activities.

Deposit Sweep programs are often offered by internationally active banks. These sweep programs exist primarily to facilitate the cash management needs of customers who might otherwise move their account to an entity offering higher yields. In sweep programs, banks use an agreement with the deposit customers (typically corporate accounts) that permits the bank to transfer, or sweep, funds, which are above a designated level, from a deposit account into an overnight investment product. The money is transferred out of a deposit account before the close of business and transferred back into the account the next morning. (Conversely, banks may also engage in deposit sweep arrangements with risk averse customers that wish to sweep funds into the bank overnight, in part to obtain deposit insurance.) Investment product examples include Eurodollar deposits, money market funds, and reverse repurchase agreements. *Note:* If a sweep is not properly executed, the depositor may become an uninsured general creditor of a foreign branch or have their funds invested in other short-term obligations and have no claim on the institution if the branch or institution fails.

Banking organizations with deposit sweep programs should have adequate policies, procedures, and internal controls to ensure sweep activities are conducted consistent with sound banking practices and in accordance with applicable laws and regulations. Policies and procedures should ensure that deposit customers participating in a sweep program are given proper disclosures and information regarding the insured status of their deposits.

Borrowings

Borrowings generated through the international department include all non-deposit liabilities. Common forms of borrowings include:

- Federal funds purchased (overnight and term);
- Bills payable to the Federal Reserve;
- Notes and trade bills rediscounted with central banks;
- Short sales from trading securities;
- Overdrafts on deposit accounts;
- Notes, acceptances, import drafts, or trade bills sold with the bank's endorsement or guarantee; and
- Notes or other obligations sold subject to repurchase agreements.

All international borrowing transactions should be treated similar to domestic transactions and be properly recorded on the general ledger and reported in Call Reports.

Note: Foreign time deposits are not borrowings and should be reflected as deposits for reporting purposes and borrowing limit calculations. However, for many banks, little difference exists between how time deposits and borrowings are used and obtained, and foreign time deposits are often viewed as borrowing vehicles.

←

FOREIGN EXCHANGE

Foreign exchange involves substituting one country's currency for another. Because international trade and investment require the exchange of currencies, the trading of one country's money for another is a necessary function in international banking.

This section provides examiners with basic information regarding foreign exchange activities. While banks of any size can engage in foreign exchange transactions on behalf of their customers, generally only the largest institutions specializing in international business or international capital markets enter into material foreign exchange transactions for their own account. When necessary, examiners reviewing complex foreign exchange activities should seek assistance from regional, Capital Markets, or Large Bank Supervision subject matter experts.

The Foreign Currency Exchange Market

Foreign exchange transactions can be conducted between any business entity, government, or individual. Financial institutions are ideal foreign exchange intermediaries due to their knowledge of financial markets and experience providing financial services. Banks are involved in a majority of worldwide, foreign exchange transactions with the volume of an activity largely dictated by customer demand.

Importers and exporters often rely on banks to facilitate their foreign currency transactions. The transactions are usually processed in the foreign currency exchange market, which has no specific location or hours of business. Instead, it is a loose collection of entities (commercial banks, central banks, brokers, and private investors) joined by near instantaneous communications links.

The foreign exchange market meets the definition given by most economists of perfect competition, as there are large numbers of buyers and sellers with equal access to price information who are trading a homogeneous product with few transportation costs. Foreign exchange is generally traded in an interbank/dealer network, or organized exchanges such as the London International Financial Futures and Options Exchange or the Chicago Mercantile Exchange.

The interbank market, which is by far the largest market, is housed in the foreign exchange departments of larger banks around the world. It is an over-the-counter (OTC) market because it has no single location or fixed listing of products. It provides opportunities for customers to buy and sell currencies in virtually any amount, for immediate or forward delivery, through contracts to exchange one currency for another at a specified exchange rate (price).

Delivery of currencies may be *spot* (short-term contracts of two business days or less) or *forward* (more than two business days). In either case, the rate of exchange may be established prior to the finalization of the transaction with all related costs calculated and often passed on to the customers. Exchange rates are based upon the amount of time required to exchange currencies. For example, the British Pound Sterling is quoted at a certain rate for immediate (spot) transactions and another rate is quoted on the same day for future (forward) transactions.

In general, exchange rates vary depending on the agreed payment date (value date) of the transaction, i.e., overnight, one week, one month, etc. Also, dealers may quote a different exchange rate for a given transaction depending on whether they are buyers or sellers of currency. This applies to both spot and forward transactions and the two rates are usually referred to as the *bid* (buy) or *offer* (sell) price. The spread between the bid and offered rates represents the dealer's profit.

The system for establishing currency prices is virtually unregulated with exchange rates determined by supply and demand. Exchange rates for most major currencies are free to float to whatever level the market is willing to support, a level that often fluctuates significantly over short periods.

Foreign Exchange Trading

As a result of modern communication systems and rapid price movements, opportunities have soared for speculative trading in the exchange markets. In addition to serving the financial needs of importers and exporters, foreign exchange markets support speculation, arbitrage, and sophisticated hedging strategies, which can create profitable opportunities for banks that have the resources and managerial capabilities to participate in the interbank markets as market makers. While the volume of foreign exchange activity varies widely among banks, transaction volumes are increasingly being driven by interbank trading for banks' own accounts. Banks trading for their own account or as a business line present complex risks.

Banks specializing in this complex and specialized field, particularly those banks that trade foreign exchange for their own account, typically maintain a foreign exchange department with qualified dealers. Banks that only execute their customers' instructions and do no business for their own account (essentially maintaining a *matched book*) generally use the services of another bank or foreign exchange intermediary to place customer transactions.

While trading in foreign exchange is usually encountered only in large global institutions, examiners should be familiar with the fundamental risks inherent in foreign exchange trading.

Foreign Exchange Risks

Trading in foreign currency or holding assets and liabilities denominated in a foreign currency entail risks that fall into five main categories: exchange rate risk, maturity gap risk, credit risk, operational risk, and country risk.

Exchange rate risk arises when a bank takes an open position in a currency. An open position occurs when a bank holds or agrees to buy more foreign currency than it plans to sell, or agrees to sell more foreign currency than it holds or plans to buy. Open positions are either long or short. When a bank buys more of a currency, either spot or forward, than it sells, it has a long position. Conversely, if more currency is sold than bought, a short position is created. Until an open position is covered by the purchase or sale of an equivalent amount of the same currency, the bank is exposed to adverse movements in exchange rates.

Banks often hedge open positions with a forward contract, thereby matching a requirement to deliver with a future contract to receive. The hedging of open positions can be very complex, sometimes using swaps or options, multiple contracts, different types of contracts, or even different currencies. It is important to remember that the level of exchange rate risk is not necessarily dependent on the volume of contracts to deliver or receive foreign currency, but rather the extent that these contracts are not hedged either individually or in aggregate.

All banks that engage in foreign exchange activity should monitor their open positions at least daily. Banks that actively trade foreign currencies should monitor intra-day open positions, closing out or matching exposures at various times during the day.

Maturity-gap risk is the foreign exchange term for interest rate risk. It arises when there are mismatches, or gaps, in a bank's total outstanding spot and forward contracts. Gaps may be present in intra-day, daily, or longer periods of uneven cash inflows or outflows. For example, a maturity spread of a bank's assets, liabilities, and future contracts may reflect a prolonged period over which large amounts of a particular currency will be received in advance of scheduled offsetting payments. The bank's earnings are therefore exposed to adverse shifts in interest rates on the funds provided by cash inflows or on the rates paid on the funds required to meet cash outflows.

In these situations, generally, the bank must hold the currency, invest it short term, sell it for delivery at the time the gap begins and repurchase it for delivery at the time the gap closes, or use a combination of the techniques. The problems of managing gaps are complex; however, banks can mitigate interest rate risks by closely monitoring positions and establishing limits on the volume of mismatches in total foreign exchange positions. Decisions to close a gap when it is created or to leave it until a later date should be based upon a thorough analysis of money market interest rates and spot and forward exchange rates.

Institutions should have firm policies on the maximum gap exposure permitted in certain currencies. The decision to close a gap when it is created, or to let it remain open for a time, will generally depend on money market interest rates as well as the difference between applicable spot and forward exchange rates (commonly known as the swap rate) or the deviations between two forward exchange rates. Estimated movement in the swap rate (primarily determined by interest rate differentials between the two countries) is the customary measure of profit potential or loss exposure during the period within which the gap exists.

Credit risk involves the ability of a bank's customer, or counterparty in a foreign exchange transaction, to meet their financial obligations. Two types of credit risk exist in foreign exchange trading. The first is that a customer might not be able to deliver the currency as promised in order to settle the contract. In this case, the potential mark-to-market profit on the transaction is at risk. The second is delivery or settlement risk. Delivery or settlement risk refers to the possibility a counterparty will take delivery of currency from the bank, but not deliver the counterpart currency. In this situation, the bank is exposed to loss of the entire transaction, not just from currency fluctuations.

To limit both risks, banks must carefully evaluate customers' creditworthiness. The credit reviews should be used to establish an overall limit for exchange contracts for each customer. In order to limit settlement risk, major dealers and third parties also participate in the CLS (Continuous Linked Settlement) system. The CLS reduces risks by facilitating foreign exchange settlements between dealer institutions on a simultaneous or daily basis.

Operational risk reflects the possibility that ineffective controls and operations for foreign exchange activities may result in unanticipated losses to the bank. Banks that engage in foreign exchange transactions must have systems and personnel capable of identifying, controlling, and reporting risks.

Banks should have systems in place to accurately record transactions, perform daily mark-to-market adjustments, reconcile currency positions daily, and assess compliance with established limits. Personnel should also ensure that all confirmations are received or sent to counterparties daily. Appropriate separations of duty are essential in managing operational risk, with the responsibilities of the traders and back-office personnel being strictly segregated. While the form of trades and trade confirmations have changed with the advent of new technology, the independence and appropriate control of these functions remains of paramount importance regardless of the extent of a bank's trading operations.

Country risk reflects potential political changes or adverse economic trends in a country. These types of events are often accompanied by changes in policies that could affect such factors as interest rates, balance of payments, foreign exchange reserves, and capital flows. The policies, whether based on economic necessity or changed attitudes, might affect the availability or transfer of currency to the bank's customers or to the bank itself, and could even affect the convertibility of that country's currency in foreign exchange markets. Exchange controls imposed by a country's central bank may limit the amount of currency that can be exchanged in any single transaction, by any given customer, or within a particular period, and the sources for covering desired currency positions may vanish. Additionally, the exchange rate for the currency may be subject to additional supply and demand influences.

Due-From Nostro Accounts

Domestic banks must be able to make and receive payments in a foreign currency in order to meet the needs of international customers. Since physical movement of currency is impractical, financial institutions maintain accounts or inventories of foreign currency in correspondent banks located in the countries where the institution and its customers conduct business. These accounts are commonly called due-from or *nostro* accounts. Conversely, *vostro* accounts are due-to accounts (demand deposits) representing foreign currency owned by a foreign bank maintained at a U.S. bank.

Close supervision of nostro accounts is required to ensure adequate balances are available to meet customers' needs while avoiding excessive idle funds or overdrawing the nostro account and incurring service charges. Transactions occur in foreign currency denominations, but deposits and withdrawals are normally recorded on a bank's ledgers in both the foreign currency and its U. S. dollar equivalent. All foreign currency transactions, except over-the-counter cash trades, are settled through nostro accounts. Therefore, the volume of activity may be substantial and must be adequately controlled.

Examination objectives are similar to those of domestic correspondent accounts with the additional problem of exchange risk. Nostro account balances are included with other general ledger accounts to determine the department's *position* in each foreign currency. Some banks do not include foreign currency in their net position reports or monthly valuations. Currencies of other countries are foreign assets held in nostro accounts and should be included in position reports.

Conversely, physical control over foreign currencies kept in cash should also be maintained and complemented with adequate accounting systems and controls. Accounting reports should include the U.S. dollar equivalent of foreign currency balances. Separate controls for cash items should be maintained in the general ledger, supported by subsidiary records that permit an evaluation of each item.

Dealing in foreign notes and coins can involve more risk than engaging in foreign currency activity through a due-from account because institutions may unknowingly accept counterfeit currency, and because the physical movement of notes and coins is expensive and time-consuming. Appropriate internal controls should be instituted to compensate for these additional risk factors.

Examination Guidance for Foreign Exchange

An examination of a bank's foreign exchange activities seeks to assess the impact of the foreign exchange activities on the financial condition of the bank. Large, global banks with extensive foreign exchange trading operations earn substantial fee income from this activity, while banks that conduct trades entirely on behalf of their customers generally do not. The nature of foreign exchange trading, wherein a single trader can commit a bank to substantial forward commitments in a short time, makes examinations of related risks and controls important for banks of any size and level of activity. At a minimum, examiners should:

- Determine the extent of foreign exchange activities,
- Identify the types of exchange contracts used by the bank,
- Consider the risks presented by each exchange activity,
- Assess the adequacy of internal controls and risk management systems, and
- Evaluate the overall impact of foreign exchange activities on earnings and capital.

Another important examination objective is to assess the quality of personnel, systems, and controls in relation to the volume of activities and complexity of transactions. When assessing foreign exchange activities and controls, examiners should consider the bank's compliance with Part 349 (Retail Foreign Exchange Transactions) of the FDIC Rules and Regulations.

Examiners should also review compliance with internal exchange limits and note any unusual concentrations or lines of credit to banks with known market problems. Examiners should obtain a current report of all outstanding foreign exchange contracts and determine if there are any contracts in excess of approved limits, other than those reported on the exceptions report. If contracts that exceed approved limits are identified by examiners or included on exception reports, examiners should assess the adequacy of management's plans to bring contract levels into conformance with approved limits.

Banks that are active in foreign exchange trading should have internal controls commensurate with their risk profile. Banks with limited foreign exchange activity and low-risk profiles (e.g., most state nonmember institutions) may not need the sophisticated monitoring/reporting systems and internal controls maintained by larger institutions or that are required by minimum regulatory standards. However, it is incumbent upon management to maintain adequate systems and controls, and to demonstrate to examiners that their systems provide adequate protection for their risk profile.

STRUCTURE AND SUPERVISION

Foreign Banking Organizations (FBOs) in the U.S.

Foreign banks that conduct operations in the U.S. are known as foreign banking organizations. The FBOs have a longstanding presence in the U.S. and their operations encompass a wide variety of banking and non-banking activities. The activities of FBOs can generally be divided into four main categories: branches, agencies, foreign-owned U.S. bank subsidiaries, and representative offices.

Parallel-owned banking organizations are similar to U.S. bank subsidiaries of FBOs. The critical difference is that a PBO does not have comprehensive, consolidated supervision of all banking entities by the home country. PBOs pose unique supervisory concerns and are covered in more detail under a separate sub-heading.

Branches and Agencies of Foreign Banks

Branches and agencies of foreign banks in the U.S. are extensions of a foreign bank, much like a domestic branch of a U.S. bank. All U.S. branches of foreign banks are required to be licensed at either the state or federal level and are subject to separate insolvency laws. The International Banking Act (IBA) of 1978 established uniform federal requirements for U.S. branches of foreign banks. The main principle of the IBA is one of non-discrimination or *national treatment*, which eliminates the advantages and disadvantages that foreign branches previously faced compared to domestic branches.

U.S. branches of foreign banks may perform all banking functions permissible in the U.S., including accepting deposits and extending loans (unlike a representative office); however, the deposits may not be insured by the FDIC. The Foreign Bank Supervision Enhancement Act of 1991 (FBSEA)[2] effectively prohibits the FDIC from granting deposit insurance to U.S. branches of foreign banks except for those that were insured prior to FBSEA's enactment.

Agencies, similar to branches, may be licensed under state[3] or federal law, but, unlike a branch, an agency may not accept deposits. Agencies are permitted to have occasional credit balances under certain conditions. Such credit balances must be incidental to, or arise from the exercise of other lawful banking powers. Credit balances must be for a specific purpose and should be withdrawn within a reasonable period of time after the specific purpose has been accomplished. These balances are not to be solicited from the general public or used to pay for routine operating expenses in the U.S.

[2] The FBSEA was enacted in 1991 to improve the degree of supervision of foreign banks operating in the U.S. As a result, the Interagency Program for Supervising the U.S. Operations of Foreign Banking Organizations (the FBO Supervision Program) was established and applied to all FBOs that have a presence in the U.S.

[3] Twenty-six states and the District of Columbia currently authorize the establishment of agencies by foreign banks.

Edge and Agreement Corporations

Edge and Agreement corporations are subsidiaries of financial institutions organized for the purpose of engaging solely in certain international financial and investment activities. There are two types of Edge corporations - *banking* (which accepts deposits) and *investment* (which are essentially holding companies for foreign investments).

Agreement corporations are similar to Edge corporations, except that they are chartered under state law rather than by the FRB. Both Edge and Agreement corporations may be located anywhere in the U.S., can establish branches in the U.S. or overseas, and are permitted to engage in a broad range of banking activities, provided that the transactions are international in nature or directly related to international transactions. Operations of Edge and Agreement corporations are governed by Section 211.6 of the FRB's Regulation K.

Although the operations of Edge and Agreement corporations are governed by Regulation K, the entities are not members of the Federal Reserve System. The FDIC does not insure their deposits, but the entities are required to maintain reserves against deposits. They are also required to maintain capital adequate to support their operations.

Representative and Commercial Lending Offices

Representative offices are usually an organization's first form of entry into a foreign market because of lower operating costs. Representative offices are established under state law with the prior approval of the FRB. These offices have limited presence, as they are mainly a marketing facility for their foreign parent. Unlike branches, they cannot provide traditional banking services, such as accepting deposits or lending funds. Commercial lending offices are similar to representative offices. They are state licensed and cannot accept deposits, but they may borrow and lend on behalf of their parent companies.

FBO Supervision and Examination Guidance

FBOs are supervised under the Interagency Program for Supervising the U.S. Operations of FBOs (FBO Program). The FBO Program is a risk-focused supervisory framework designed to focus on an organization's principal risks and its internal systems and processes for managing and controlling these risks. The FBO Program consists of four primary and interrelated components:

- Understanding the FBO,
- Assessing FBO risks and how they relate to U.S. operations,

- Planning supervisory activities in the U.S., and
- Determining the overall condition of its U.S. operations.

The FBO program is designed to coordinate the regulatory efforts of both domestic and foreign supervisors and to promote a consolidated, comprehensive supervisory approach to analyzing an organization's overall condition.

While the examination of the U.S. bank subsidiary of an FBO is similar to the examination of a domestic institution, the FBO program enables the examiner to understand the FBO's U.S. operations in the context of the entire banking organization. In order to streamline FBO supervision, enhance cooperation, and reduce regulatory costs, the federal regulatory agencies have entered into examination coordination agreements with state banking agencies that protect the confidentiality of information shared by all participants. The information is shared through a secure software platform. When planning the examination of an FBO, the examiner should contact their region's International subject matter expert (SME) and review available information. These parties may have access to more recent information that should be considered in the overall assessment of the FBO.

As part of its oversight responsibility, the FRB coordinates the examinations of FBOs with other federal agencies and with various state banking authorities. FBO oversight requires that the parent company be evaluated through a strength-of-support assessment (SOSA). The purpose of the SOSA is to determine the parent company's ability to support its U.S. operations and the FBO's overall risk profile, as well as to develop an examination strategy and frequency that is commensurate with the risk profile.

As part of the SOSA process, regulatory agencies gain a better understanding of the FBO by also reviewing its home country financial system, supervisory practices, and accounting standards. An assessment of these components result in a combined assessment of an FBO's banking activities in the U.S., which is shared with the FBO's home country supervisors in order to enhance their consolidated supervisory programs.

The Core Principles[4] of the Basel Committee on Banking Supervision (BCBS) recommends that cross-border banking groups be supervised on a consolidated basis. The consolidated approach helps ensure banks within the group are adequately capitalized, risks are managed on a group-wide basis, and contagion risks within a banking group are adequately mitigated. An important principle within this framework is one of the *home-host relationship*, which considers the relationship between the home supervisor where the FBO is headquartered, and the host supervisor where the foreign operations are conducted, e.g., the U.S. branch of an FBO.

The U.S. Banking Agencies' emphasis on consolidated, comprehensive supervision programs have served as the benchmark for many current and evolving international standards for the consolidated supervision of financial groups. Key concepts that have been part of the Agencies' approach to consolidated supervision for many years are reflected in the BCBS Minimum Standards for Internationally Active Banks, capital accords, and Core Principles for Effective Banking Supervision. The concepts are now used by the International Monetary Fund and the World Bank in connection with their assessments of countries' bank supervisory regimes. Refer to the Glossary for additional information on the BCBS.

Insured Branches

Much like the Uniform Financial Institutions Rating System (a.k.a., CAMELS), ratings assigned to domestic banks, branches, and agencies of foreign banks are assigned a ROCA rating. The ROCA rating is a confidential management information and supervisory tool designed to assess the condition of a branch and to identify significant concerns in a systematic, consistent fashion.

The ROCA rating system rates four areas:

- **R**isk Management,
- **O**perational Controls,
- **C**ompliance, and
- **A**sset Quality.

Similar to CAMELS, each ROCA component rating is based on a scale of 1 through 5 in ascending order of supervisory concern, with the risk management component generally considered to be the most important factor. A single component rating (called a *Combined U.S. Operations Rating*) between 1 and 5 is assigned for Operational Controls on a combined basis with the FBO. Unlike CAMELS, ROCA does not rate capital, earnings, or liquidity, as these areas are difficult to separately evaluate at a branch. And, while liquidity is not a separate rating, examiners should be aware of supervisory concerns regarding the nature and tenor of borrowings that could put depositors at risk.

Examination findings must be addressed in a Summary of Condition Letter to senior management. The letter should highlight overall strengths and supervisory weaknesses in the FBO's combined U.S. operations, and be shared with the foreign bank's home country supervisor.

[4] Basel Committee on Banking Supervision-Core Principles for Effective Banking Supervision, September 2012.

Because there are so few FDIC-supervised branches, the FDIC does not maintain a specific examination program in this area. Therefore, examiners may refer to the International Banking Examination Documentation module or other regulatory examination manuals for additional guidance.

FBO Reporting Requirements

The regulatory agencies rely on the timely and accurate filing of regulatory reports by domestic and foreign financial institutions to monitor FBO financial trends. Data collected from regulatory reports facilitate the early identification of problem situations. Some of the reports required for submission by foreign branches and agencies include:

- The Report of Assets and Liabilities of U.S. Branches and Agencies of Foreign Banks (FFIEC Form 002);
- Report of Assets and Liabilities of Non-U.S. Branches that are Managed or Controlled by a U.S. Branch or Agency of a Foreign (Non-U.S.) (FFIEC Form 002s);
- Country Exposure Report for U.S. Branches and Agencies of Foreign Banks (FFIEC Form 019);
- Foreign Branch Report of Condition/Abbreviated Foreign Branch Report of Condition (FFIEC Forms 030/030s); and
- Report of Transaction Accounts, Other Deposits, and Vault Cash (Federal Reserve 2900).

In addition to the reporting requirements for branches and agencies, additional reporting requirements for FBOs include:

- Annual Report of Foreign Banking Organizations (Federal Reserve Form FY-7),
- Financial Statements of U.S. Nonbank Subsidiaries Held by FBOs (Federal Reserve Form Y-7N/Y-7NS),
- The Capital and Asset Report for FBOs (Federal Reserve Form Y-7Q), and
- Changes in Organizational Structure (Federal Reserve Form Y-10).

Parallel-Owned Banking Organization (PBO)

Parallel-owned banking organizations are another form of foreign bank ownership in the U.S. A PBO exists when a U.S. depository institution[5] and a foreign bank[6] are controlled, either directly or indirectly, by an individual, family, or group of persons[7] with close business dealings, or that are otherwise acting in concert. PBOs do not include structures in a recognized financial group[8] subject to comprehensive consolidated supervision via the FBO Supervision Program.

PBOs are not included in the FBO Supervision Program because the parent organization is not a foreign bank or holding company. PBOs present unique challenges to the supervisory process. One key challenge involves assessing risks at PBOs where control is vested in individuals or companies located in a foreign country where U.S. regulatory agencies are unable to obtain reliable, organization-wide information.

Supervisory Control Definition

Identifying a PBO is difficult because control based on common ownership, management, or decision-making authority, often is not clear. The lack of a globally accepted and easily understood definition of control complicates the identification of PBOs. A supervisory definition of presumed control is derived from applying the criteria in the April 2002 Joint Agency Statement on PBOs. The statement indicates, in part, that the U.S. banking agencies consider whether an individual, family, or group of persons acting in concert *control*[9] a depository institution if the individual, family, or group of persons controls 10 percent or more of any class of the voting shares of the bank. In general, 10 percent ownership of voting shares typically results in a rebuttable presumption of control, whereas 25 percent ownership is not rebuttable.

The presence of certain other characteristics may indicate that a PBO relationship exists. These criteria may include situations where the individual, family, or group of persons acting in concert:

- Constitutes a quorum or a significant presence on the board of directors of both the U.S. depository institution and the foreign bank;

[5] References to *U.S. depository institution* represent all banks and savings associations insured by the FDIC.

[6] References to *foreign bank* include a holding company of the foreign bank and any foreign or U.S. non-bank affiliates of the foreign bank.

[7] The term *persons* includes both business entities and natural persons, which may or may not be U.S. citizens.

[8] The term *recognized financial group* refers a structure in which a bank is a subsidiary of another bank, or an entity that is controlled by a company subject to the Bank Holding Company Act or the Savings and Loan Holding Company Act.

[9] A variety of presumptions and technical rules apply to determinations of control. See 12 CFR 5.50, 225.41, 303.82, 391.43.

- Controls, in any manner, the election of a majority of the directors of both the U.S. depository institution and the foreign bank;
- Constitutes a quorum or a significant portion of the executive management of both the U.S. depository institution and the foreign bank;
- Exercises a controlling influence over the policies and/or management of both the U.S. depository institution and the foreign bank;
- Engages in an unusually high level of reciprocal correspondent banking activities or other transactions or facilities between the U.S. depository institution and the foreign bank;
- Requires the U.S. depository institution to adopt particular/unique policies or strategies similar to those of the foreign bank, such as common or joint marketing campaigns, cross-selling of products, sharing customer information, or linked web sites;
- Obtains financing to purchase the stock of either the U.S. depository institution or the foreign bank from, or arranged through, the foreign bank, especially if the shares of the U.S. depository institution are collateral for the stock-purchase loan;
- Names the U.S. depository institution in a similar fashion to that of the foreign bank; or
- Presents any other factor(s) or attribute(s) that indicate that a PBO relationship exists.

While the presence of any single condition listed above may not demonstrate that an individual, family, or group controls the U.S. depository institution and foreign bank, the existence of multiple conditions may indicate that a PBO relationship exists.

An individual, family, or group of persons acting in concert can rebut both the objective and subjective criteria considered in reaching this conclusion. Therefore, examiners must weigh each factor in relation to all of the other available information in determining whether a PBO relationship does or does not exist, especially when evaluating control relationships that are rebuttable.

PBO versus Affiliate Relationships

An individual, family, or group acting in concert may exercise sufficient control to meet the supervisory definition of presumed control for establishing that a PBO exists; however, they may not meet the criteria to be considered affiliates, as specified in Section 23A of the Federal Reserve Act. Thus, the entities that comprise a PBO may or may not be affiliates. In instances where a PBO relationship exists, but an affiliate relationship does not exist, the transactions between the U.S. bank and the foreign bank may not be subject to the Federal Reserve Act (FRA). However, non-affiliated PBOs cannot be disregarded because such relationships can pose the same or greater risks than those from affiliated PBOs.

The FRA provides a definition of control that serves as a legal basis for determining if an affiliate relationship exists between a U.S. bank and a foreign institution. Section 23A(b)(1)(C) defines an affiliate of a U.S. bank to include any company that is controlled directly or indirectly by shareholders who also directly or indirectly control the bank. In general, Section 23A(b)(3)(A) defines control as:

1. Owning, controlling, or having the power to vote 25 percent or more of any class of voting securities of the U.S. bank;
2. Controlling in any manner, the election of a majority of the directors of the U.S. bank; or
3. Receiving a determination from the FRB that the shareholder or company exercises a controlling influence over the management or policies of a U.S. bank.

Based on this definition, if an individual, family, or group of persons acting in concert collectively has the power to vote 25 percent or more of any class of stock of a U.S. bank and a foreign bank, then a PBO and an affiliate relationship exist. All transactions between the affiliated entities would be subject to the restrictions in the FRA. In addition, the affiliated entities in a PBO cannot take advantage of the sister bank exemption, as it requires ownership by a holding company.

For example, Mr. Smith owns 51 percent of a U.S. depository institution and 30 percent of a foreign bank. This scenario reflects that these two entities are both PBOs and affiliates, and subject to the restrictions in the FRA. If Mr. Smith owned/controlled 12 percent of each institution's outstanding stock, then the two entities would not be affiliated per the FRA, but a PBO may still exist.

If the beneficial owner's stock ownership or voting rights are less than 25 percent, but the criteria in item (2) is met, or the beneficial owner(s) constitute a majority of the boards at both the U.S. bank and the foreign bank, then a PBO and an affiliate relationship exist and the FRA is applicable.

For example, Mr. Jones, Mr. Smith, and Mr. Williams each own 12 percent of a U.S. depository institution. Each person also owns 10 percent of a foreign bank. The minutes of the shareholders meeting of both the U.S. and the foreign bank reflect that these three individuals constitute a quorum of each institution's board. This scenario reveals that these two entities are both PBOs and affiliates subject to the restrictions in the FRA. If these three individuals did not represent a quorum of each institution's board, then the two entities may not be affiliated per the FRA, but a PBO would still exist.

Lastly, if the FRB determines that the shareholder/company exercises a controlling influence over the management or policies of the bank, as stated in Item (3) above, then a PBO and an affiliate relationship exist and the FRA applies.

It is important to note that transactions between the U.S. bank and any person, where the proceeds of the transaction are used for the benefit of, or are transferred to, an affiliated entity, is considered a covered transaction for purposes of Section 23A(a)(2). In situations where regulations do not apply to transactions between a U.S. bank and a foreign affiliate, examiners should still review material transactions for reasonableness and identify any questionable practices.

PBO versus Related Interests of Insiders

An individual, family, or group acting in concert may exercise sufficient control to meet the preceding supervisory definition of presumed control for establishing that a PBO exists; but, they may not meet the criteria to be considered affiliates as specified by FRB Regulation O.[10] Regulation O restricts extensions of credit to the related interests of executive officers, directors, and principal shareholders, collectively known as bank insiders. Related interests are companies controlled by one or more bank insiders, or a political or campaign committee that is controlled by one or more bank insiders or the funds or services of which will benefit bank insiders.

Congress made virtually all of these restrictions applicable to state nonmember banks in Section 18 of the Federal Deposit Insurance Act (FDI Act).[11] Thus, extensions of credit from a state nonmember bank to a domestic or foreign company commonly controlled, as defined by Regulation O, by a bank insider are generally subject to the limitations in Regulation O.

Regulation O defines control as directly or indirectly:

1. Owning, controlling, or having the power to vote 25 percent or more of any class of voting securities of the company or bank;
2. Controlling in any manner the election of a majority of the directors of the company or bank; or
3. Having the power to exercise a controlling influence over the management or policies of the company or bank.

Note that the first two items are very similar to those on the previous page from the FRA. The third item is different. Also, these criteria are not as expansive as the preceding supervisory definitions of control.

If an individual, family, or group of persons acting in concert collectively has the power to vote 25 percent or more of any class of stock of both the U.S. depository institution and the foreign bank, then the same situation exists as under Item (1) of the FRA control definition and all transactions with related interests would be subject to Regulation O.

If the beneficial owner's stock ownership/voting rights are less than 25 percent, the next criteria must be reviewed. Item (2) considers whether the beneficial owner(s) controlled the election of a majority of the directors. For example, Mr. Jones, his son, and his brother each own 20 percent of a U.S. depository institution. Each individual also owns 10 percent of a foreign bank. Minutes of the shareholder meetings of both the U.S. and the foreign bank reflect that these three individuals nominated the candidates for each institution's Board and voted their shares in a block. This scenario reveals that these two entities are PBOs and subject to the restrictions of Regulation O. If these three individuals had voted their shares independently or in a different manner from each other, then it would indicate that these two entities are not subject to Regulation O, but a PBO does exist.

If neither the beneficial owner(s)'s stock ownership/voting rights percentage nor control of the board's election thresholds are met, then Item (3) must be reviewed. Regulation O also states that a person is presumed to have control, including the power to exercise a controlling influence over the management or policies of a company or bank, if the person:

- Is an executive officer or director of the company or bank; and directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank; or
- Directly or indirectly owns, controls, or has the power to vote more than 10 percent of any class of voting securities of the company or bank; and no other person owns, controls, or has the power to vote a greater percentage of that class of voting securities.

Ascertaining whether an individual, family, or group acting in concert exercises a controlling influence over the management or policies of the bank is difficult. If the criteria in either item (a) or item (b) above are met, then a

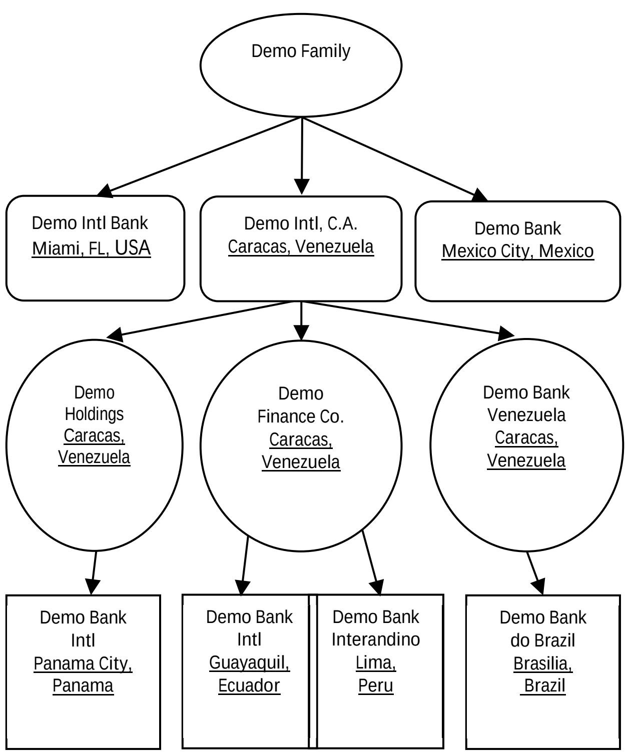
[10] 12 CFR Part 215.
[11] See generally 12 CFR § 337.4, which implements Section 18(j)(2) of the FDI Act (12 U.S.C. § 1828(j)(2).

PBO exists and all transactions with related interests would be subject to the restrictions of Regulation O.

An individual, family, or group acting in concert may exercise sufficient control to meet the supervisory definition of presumed control for establishing that a PBO exists; but not meet the level of control required by Regulation O. In these instances, the transactions between the U.S. bank and the bank insiders' related interests would not be subject to the restrictions of Regulation O. In situations where these types of transactions are not subject to Regulation O, examiners should still review material transactions for reasonableness and identify any questionable practices.

Business Structure of PBOs

A PBO can have a simple or complex organizational structure. A simple PBO business structure consists of an individual who directly controls both a U.S. depository institution and a foreign bank. A complex organizational structure may include multiple domestic and foreign shareholders working in concert, who individually do not have direct control of the U.S. and the foreign bank, but collectively exercise a controlling influence throughout the PBO. The following illustration is an example of a complex PBO structure.



The existence of cross-border organizations compounds the difficulty of supervisory oversight because foreign organizations are often not as transparent as U.S. companies, and U.S. bank supervisors may be unable to effectively evaluate their ownership structure or conduct on-site evaluations of the foreign entities.

Complex PBOs also could be part of privately held multi-national conglomerates that service a particular business sector or geographic region. These privately held PBOs often are the most challenging to understand because public information on their ownership structure, operations, and affiliations is generally difficult to obtain. Conversely, PBOs can be part of large multi-national conglomerates that are publicly traded but do not provide financial services as a main enterprise activity. In these structures, information on ownership, operations, and affiliations is generally easier to obtain.

Supervisory Risks

An examiner's main priority, and frequently greatest challenge, is to gain a comprehensive understanding of a PBO's structure and risk profile. The organizations are complex and often involve cross-border, multi-tiered companies that can be difficult to analyze. Therefore, initial discussions with management are important elements in determining whether the bank is part of a PBO.

The fundamental risk posed by PBOs is that they may act in a de facto organizational structure that, because it is not formalized, is not subject to comprehensive consolidated supervision.

PBOs present supervisory risks similar to those arising from a chain banking organization (CBO) with the added dimension that part of the chain is in a foreign country or multiple foreign countries. From a regulatory perspective, the risks presented by PBOs may be greater than the risks presented by domestic CBOs because a portion of the PBO structure is subject to the laws and jurisdiction of one or more foreign countries.

The lack of a globally accepted supervisory approach to evaluate risk on an organization-wide basis makes it more difficult to obtain information from foreign regulatory agencies. Additionally, coordinated examinations of the U.S. depository institution and the foreign bank may not be a viable option. Therefore, relationships between the U.S. depository institution and the foreign bank may be difficult to understand and monitor.

PBOs may foster other management and supervisory risks. In 2002, the U.S. bank regulatory agencies issued the Joint Agency Statement on PBOs to assist banks in identifying these entities and managing the risks that PBOs present. Examiners should refer to this guidance when examining PBOs.

In all instances where a PBO relationship exists, examiners should complete the Parallel-Owned Banking Organizations report page; refer to the ROE Instructions for additional guidance.

U.S. Banking Activities Abroad

U.S. banks conduct international banking activities abroad through overseas branches, representative offices, subsidiaries, Edge and Agreement corporations, IBFs, export trading companies (ETCs), consortium banks, offshore branches, and correspondent banking. These structures enable the U.S. banking organizations to serve the needs of their customers in the U.S. and abroad and to compete with foreign banks in the U.S. and foreign markets. The choice of structure is often driven by market opportunity vis-à-vis the laws of the host country, or by tax considerations. U.S. banks' investments in subsidiaries around the world are frequently held in investment Edge corporations that are often managed at the banks' headquarters.

International strategies and vehicles for market entry differ among the numerous types of U.S. banks and are influenced by the banks' structure, strategy and, scale of operations. The largest U.S. banks (money-center and multinational banks) are most likely to utilize the full range of vehicles available to conduct international operations. These banks typically have an extensive network of branches, subsidiaries, and representative offices abroad, and they often maintain correspondent relationships around the world. In the U.S., these banks may have a banking Edge corporation subsidiary located in a major city with branches in other key U.S. locations.

Regional banks in the U.S. that engage in international activities generally have a more limited structure, strategy, and scale of operations. While larger banks can offer international services through their own operations worldwide, banks with limited or no international structure are not precluded from these activities. Smaller banks generally serve their customers' global needs through correspondent banking relationships.

Offshore U.S. Branches

As international trade and foreign exchange trading increased in the 1960s, most major U.S. banks actively expanded their worldwide network to capitalize on this growth. Some banks established full-service branches in important business centers. Many other banks, that could not justify the cost of such branches, established offshore or *shell* branch operations. Many smaller regional banks established offshore branches to obtain a low-cost entry into the Eurodollar market to finance international trade and fund a growing portfolio of purchased international loans.

An offshore, or shell, branch is an overseas branch established for a special purpose, often to take advantage of a favorable tax or regulatory environment in a foreign country. Many of these branches are banking vehicles for booking Eurodollar deposits and loans originated through the home office. These branches generally are no more than a post office box number with few or no personnel. The administration of the branch's assets and liabilities is maintained at either the head office or a designated branch or agency in the U.S. The offshore office is governed by the laws and regulations of its home country and the host country from which it operates.

The passage of the USA PATRIOT Act of 2001 gave the U.S. government expanded authority to combat money laundering, with a particular emphasis on activities conducted through shell banking operations. As such, there have been recent efforts by the international community for offshore banking centers to improve supervision, transparency, disclosure, and cooperation with other bank regulators. For more details, refer to the Bank Secrecy Act, Anti-Money Laundering and Office of Foreign Assets Control sections of this Manual.

International Banking Facilities (IBF)

An IBF is a set of asset and liability accounts, segregated on the books and records of the establishing entity, which reflect international transactions. An IBF is established in accordance with the terms of FRB Regulation D after appropriate notification to the FRB. The establishing entity may be a U.S. depository institution, a U.S. office of an Edge or Agreement Corporation, or a U.S. branch or agency of a foreign bank established pursuant to FRB Regulation D.

An IBF is permitted to hold only certain assets and liabilities. In general, IBF accounts are limited to residents of foreign countries, residents of Puerto Rico and U.S. territories and possessions, other IBFs, and U.S. and non-U.S. offices of the establishing entity. An IBF is an attractive tool for banks because its deposits are not subject to reserve requirements or deposit insurance premiums since they are not FDIC insured. This provides a lower cost of funds and facilitates banking activities. An IBF may also serve to diversify the bank's liability mix and prove less volatile to changes in interest rates.

←
LAWS AND REGULATIONS

Several laws and regulations govern international activities of banks. Some are discussed briefly in this section; however, examiners should be familiar with the entire body of laws and regulations that deal with international banking. These can be found in the various examination resource tools available within the FDIC's online library and training materials.

Part 347-International Banking

Part 347 of the FDIC Rules and Regulations specifically covers international banking activities of state nonmember banks; its provisions are similar to FRB Regulation K, which is applicable to state-member banks, as well as Edge and Agreement corporations of state nonmember banks.

Subpart A of Part 347 (and corresponding sections of Part 303) implements Sections 18(d) and 18(l) of the FDI Act and outlines the application process by which state nonmember banks may be given permission to operate foreign branches or invest in foreign banks or other financial entities. The powers or permissible activities of overseas branches are defined by the regulations and, generally, these branches are allowed a wider range of financial activity than is permitted domestically. The regulations also establish minimum standards for accounting and internal controls in foreign branches or subsidiaries. In certain circumstances, state nonmember bank applicants may be granted expedited processing of their applications.

Subpart B of Part 347 implements Sections 6, 7, and 15 of the International Banking Act of 1978 and governs FDIC-insured branch operations of FBOs. This subpart establishes asset pledging and maintenance requirements for insured branches of foreign banks. Subpart B also provides for examinations of these branches and establishes minimum recordkeeping requirements.

Subpart C of Part 347 implements the provisions of the International Lending Supervision Act of 1983 (ILSA). This section deals with the establishment of an Allocated Transfer Risk Reserve (ATRR) and the accounting and reporting of international loans and assets. As with other loan fees, Part 347 requires banks to follow generally accepted accounting principles (GAAP) for the amortization of fees on international loans.

Part 349-Retail Foreign Exchange Transactions

On July 12, 2011, the FDIC adopted rules regarding state nonmember banks' involvement with retail foreign exchange transactions, defined by the regulation as foreign exchange transactions other than traditional spot and forward contracts. Retail foreign exchange transactions include *rolling-spot* transactions, which are spot transactions that are not settled within two days (they are instead perpetually renewed). Retail customers do not include eligible customer participants (such as other financial institutions) as defined by the Commodity Exchange Act. The regulation has requirements in six different areas: disclosure, recordkeeping, capital and margin, reporting, business conduct, and documentation. The regulation does not apply to retail foreign exchange activity conducted between foreign branches of state nonmember banks and non-U.S. customers.

Dodd-Frank Act

On July 21, 2010, the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) was signed into federal law. Specific to international banking, Sections 165 and 166 of the Dodd-Frank Act affect the oversight of FBOs. Under Section 165(d), *systemically important financial institutions* (SIFIs) and bank holding companies over $50 billion in worldwide assets must create a detailed plan for rapid and orderly resolution (living will) in the event of material financial distress or failure. In the case of FBOs, worldwide assets are used to determine the applicability of planning requirements, but the actual plans must cover only assets in the U.S. Plans must be credible and are to be reviewed jointly by the Federal Reserve and the FDIC. Part 381 of the FDIC Rules and Regulations implements section 165(d) of the Dodd-Frank Act for the purpose of establishing rules and requirements regarding the submission and content of a resolution plan for FBOs, as well as procedures for its review by the FDIC.

The FDIC monitors FBOs to better understand their U.S. operations and to assess their resolution plans in order to facilitate rapid and orderly resolutions in the event of material financial distress or failure.

Regulation YY - Enhanced Prudential Standards

Capital Stress Tests

Foreign banking organizations with total consolidated assets between $10 and $50 billion are required to conduct internal capital stress tests. Annually, the FBO's home-country supervisor must directly conduct a capital stress test or review an internal company-run stress test. If the FBO does not meet the stress-testing requirement, it must conduct a stress test of its U.S. subsidiaries, as well as maintain eligible assets of not less than 105 percent of the total liabilities (asset maintenance) in its U.S. branches and agencies.

A publicly traded FBO of this size is also required to maintain a committee of its global board of directors (either on a standalone basis or as part of its enterprise-wide risk committee) to oversee the risk management policies of its combined U.S. operations. At least one member should have experience identifying, assessing, and managing risk exposures of large, complex firms.

Increased Requirements

Regulation YY has increased requirements for FBOs with assets greater than $50 billion. These FBOs must certify that they meet, on a consolidated basis, the capital adequacy standards established by their home-country supervisor that are consistent with the regulatory capital framework published by the Basel Committee on Banking Supervision. If an FBO's home-country supervisor has not established capital standards consistent with the Basel framework, the FBO must demonstrate that it would meet or exceed the Basel capital standards at the consolidated level if it were subject to them. In addition, these FBOs must maintain a U.S. risk committee that approves and periodically reviews the risk management policies of the combined U.S. operations of the FBO and oversees the risk management framework of the combined U.S. operations of the FBO.

All FBOs of this size must report the results of an internal liquidity stress test for either the consolidated operations of the FBO or the combined U.S. operations of the FBO on an annual basis to the Federal Reserve. The stress tests must be conducted consistent with the Basel Committee principles for liquidity risk management and must incorporate 30-day, 90-day, and one-year stress-test horizons. An FBO that fails to comply with this requirement must limit, on a daily basis, the net aggregate amount owed by its non-U.S. affiliates to the combined U.S. operations to 25 percent or less of the third party liabilities of its combined U.S. operations.

Regulation YY also implements more stringent requirements for FBOs with combined U.S. Assets of $50 billion or more, including more intensive risk committee and liquidity requirements. Companies with U.S. non-branch assets of $50 billion or more are subject to the intermediate holding company requirement in Section 252.153 of Regulation YY. This section requires these FBOs to establish an intermediate holding company organized in the U.S. to hold all ownership interests in any U.S. subsidiary.

Regulation K - International Banking Operations

As explained above, Regulation K is similar to Part 347, but has been revised periodically to implement new laws and amendments and to keep pace with developments in supervisory and regulatory policy. In its last major revision, October 2001, the FRB streamlined application requirements for foreign banks seeking to expand operations in the U.S. and procedures for U.S. banking organizations to branch into foreign countries. Changes were also made to provisions governing: permissible foreign activities of U.S. banking organizations, including securities and investment activities; investments by U.S. banking organizations under the general consent procedures; and the qualification of FBOs for exemption from the nonbanking prohibitions of the Bank Holding Company Act. Lastly, changes were implemented authorizing a bank, with prior Federal Reserve approval, to invest up to 20 percent of capital and surplus in Edge corporations.

Joint Agency Statement on PBOs

The Joint Agency Statement on Parallel-Owned Banking Organizations discusses the characteristics of PBOs, reviews potential risks associated with these banking organizations, and sets forth the supervisory approach of the Office of the Comptroller of the Currency (OCC), Board of Governors of the Federal Reserve System, and the FDIC to monitor those risks. It also provides information on the applications process for proposals involving PBOs.

USA PATRIOT Act

In 2001, Congress enacted the Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism (USA PATRIOT) Act, which contains several provisions designed to deter and combat the financing of terrorism and international money laundering. This law substantially increases anti-money laundering responsibilities of financial institutions, including U.S. bank subsidiaries of FBOs and U.S. branches and agencies of FBOs.

Financial Crimes Enforcement Network (FinCEN) and Office of Foreign Assets Control (OFAC)

The FinCEN issues advisories to inform banks and other financial institutions operating in the U.S. of the risks of money laundering and financing of terrorism associated with jurisdictions identified by the Financial Action Task Force, as having deficiencies in their anti-money laundering practices. A listing of FinCEN advisories can be found on FinCEN's website at www.fincen.gov.

Similarly, the OFAC administers and enforces economic and trade sanctions based on U.S. foreign policy and national security goals against targeted foreign countries and regimes; terrorists; international narcotics traffickers; those engaged in activities related to the proliferation of weapons of mass destruction; and other threats to the national security, foreign policy, or economy of the U.S. Banks are expected to closely scrutinize transactions with these individuals and countries.

Refer to RMS Manual, Section 8.1, Bank Secrecy Act for additional details regarding the specific laws that would be cited for infractions/non-compliance with FinCEN or OFAC regulations.

Foreign Corrupt Practices Act

Public disclosure of improper payments made by U.S. companies to foreign officials led Congress to enact the Foreign Corrupt Practices Act of 1977 (the Act). The Act is designed to prevent the use of corporate assets for corrupt purposes and applies to all U.S. companies, including banks, bank holding companies, and Edge Corporations.

The Act applies to all state nonmember insured banks, among other U.S. corporations, but does not apply directly to foreign subsidiaries. However, Congress has made it clear that any U.S. corporation that engages in bribery of foreign officials indirectly through any other person or entity, including a foreign subsidiary, would itself be liable under the Act. Since 1998, the Act also applies to foreign firms and persons who take any act in furtherance of corrupt payments while in the U.S.

All violations of the Act are criminal in nature and should be reported following the procedures for reporting apparent criminal violations. Violations of the Act may also result in civil fines and, in the case of private actions under the Racketeer Influenced and Corrupt Organizations (RICO) Act, treble damages. For more information, refer to the Internal Routine and Controls section of this Manual.

←

GLOSSARY

Acceptance – A time draft (bill of exchange or usance draft) drawn by one party and acknowledged by a second party. The drawee, known as the *acceptor*, stamps or writes the word *accepted* on the face of the draft and, above their signature, the place and date of payment. Once the draft is accepted, it carries an unconditional obligation on the part of the acceptor to pay the drawer the amount of the draft on the date specified. A *bank acceptance* is a draft drawn on and accepted by a bank. A *trade acceptance* is a draft drawn by the seller of goods on the buyer, and accepted by the buyer.

Account-dealing – Foreign-exchange dealing that involves settlement from bank to bank in the due from accounts. No third party (bank) is involved.

Account Party – The party, usually the buyer, who instructs the bank to open a letter of credit and on whose behalf the bank agrees to make payment.

Ad Valorem – A term meaning *according to value*, used for assessing customs duties that are fixed as a percentage of the value stated on an invoice.

American Depository Receipt (ADR) – ADRs are depository receipts for shares of stock in a foreign company held in safekeeping by a U.S. bank. The ADRs are purchased and sold through listed exchanges.

Advance Against Documents – An advance made on the security of the documents covering a shipment.

After Sight – When a draft bears this name, the time to maturity begins at its presentation or acceptance.

Agent Bank – The bank that leads and documents a syndicated loan.

Allocated Transfer-risk Reserve (ATRR) – A special reserve established and maintained for specified international assets pursuant to the International Lending Supervision Act of 1983 to cover country risk. At least annually, the OCC, FRB, and FDIC determine which international assets are subject to transfer risk, the amount of ATRR for the special assets, and whether an ATRR previously established for specified assets may be reduced.

Anticipation – A deposit of funds to meet the payment of an acceptance prior to the maturity date. Should be applied to reduce customer's liability on acceptances.

Amortizing Swap – A transaction in which the notional value of the agreement declines over time.

Arbitrage – Simultaneous buying and selling of foreign currencies, or securities and commodities, to realize profits from discrepancies between exchange rates prevailing at the same time in different markets, between forward margins for different maturities, or between interest rates prevailing at the same time in different markets or currencies.

Article IV – To facilitate the exchange of goods, services, and capital between countries, members of the IMF (International Monetary Fund) signed the Articles of Agreement. Article IV identifies members' obligations regarding exchange arrangements. To promote stable exchange rates, members agree to foster orderly economic growth with reasonable price stability, to promote economic and financial conditions that do not tend to create erratic disruptions, to avoid exchange rate or international monetary system manipulation, and to follow exchange rates compatible with these goals. Under Article IV, an IMF member country notifies the IMF of its exchange arrangement. The member country has three exchange rate options. First, the country can select an exchange rate in terms of special drawing rights, gold, or some other denominator. Second, the member, by cooperative arrangement, can peg the value of their currency to the currency of another member. Typically, the country will pick its major trading partner's currency. Third, the country can select another exchange arrangement of the member's choice. The member country must notify the IMF of its selected exchange arrangement. Article IV also allows the IMF to conduct surveillance of the member country's exchange rate policies and to offer suggestions for improvement under principles of guidance. Members agree to provide the information necessary to the IMF to conduct this surveillance.

Article IV Consultations – Under the Articles of Agreement, the IMF holds discussions with member countries at least once per year. The IMF typically sends a team of experts to collect various financial and economic information. The IMF staff then discusses its findings with the member country and prepares a consultation report for the IMF's Executive Board. The Article IV Consultation report is returned to the member country and certain aspects of these reports are made publicly available on the IMF's website.

At Sight – A term indicating that a negotiable instrument is payable upon presentation or demand.

Authority to Pay – An advice from a buyer, sent by their bank to the seller's bank, authorizing the seller's bank to pay the seller's (exporter's) drafts up to a fixed amount. The seller has no protection against cancellation or modification of the instrument until the issuing bank pays the drafts drawn on it, in which case the seller is no longer liable to its bank. These instruments are usually not confirmed by the seller's U.S. bank.

Authority to Purchase – Similar to an authority to pay, except that drafts under an authority to purchase are drawn directly on the buyer. The correspondent bank purchases them with or without recourse against the drawer and, as in the case of the authority to pay, they are usually not confirmed by a U.S. bank. This type of transaction is unique to Far Eastern trade.

Baker Plan – Proposed in 1985, this initiative encouraged banks, the International Monetary Fund, and the World Bank to jointly increase lending to less developed countries that were having difficulty servicing their debt, provided the countries undertook prudent measures to increase productive growth.

Balance of Payments – The relationship between money flowing into and out of a country for a given period of time. Directly affected by the country's foreign trade position, capital inflows and outflows, remittances into and out of the country, grants and aid, and tourism. A deficit balance occurs when outflows exceed inflows with the converse situation reflecting a balance of payments surplus.

Balance of Trade – The difference between a country's total imports and total exports for a given period of time. A favorable balance of trade exists when exports exceed imports. An unfavorable trade balance is reflected when imports exceed exports.

Band – The maximum range that a currency may fluctuate from its parity with another currency or group of currencies by official agreement.

Bank for International Settlements (BIS) – Established in 1930 in Basel, Switzerland, the BIS is the oldest functioning international financial organization. It provides a forum for frequent consultation among central bankers on a wide range of issues. The BIS board consists of representatives from the G-10 countries.

Basel Capital Accords – An agreement among the central banks of leading industrialized countries, including those of Western Europe, Canada, the U.S., and Japan, to impose common capital requirements on their internationally active banks.

Basel Committee on Bank Supervision (BCBS) – The Committee was established by the central bank Governors of the G-10 countries in 1975. Its members include senior representatives from banking supervisory authorities and the central banks of Belgium, Canada, France, Germany, Italy, Japan, Luxemburg, the Netherlands, Spain, Sweden, Switzerland, the United Kingdom, the U.S., and other countries. The Committee usually meets at the BIS in Basel, where its permanent Secretariat is located.

The BCBS provides a forum for regular cooperation on banking supervisory matters. Its objective is to enhance understanding of key supervisory issues and improve the quality of banking supervision worldwide. Its mandate is to strengthen the regulation, supervision and practices of banks worldwide with the purpose of enhancing financial stability.

The Committee has developed international regulatory capital standards through a number of capital accords and related publications that have collectively been in effect since 1988. In June 2010, the Committee published a comprehensive reform package known as Basel III (or the Third Basel Accord), which is a global, voluntary and comprehensive set of reform measures designed to improve regulation, supervision and risk management within the banking sector. BASEL III aims to establish a global regulatory standard on bank capital adequacy, stress testing, and liquidity risk.

Beneficiary – The person or company in whose favor a letter of credit is opened or a draft is drawn. In a documentary letter of credit or acceptance, beneficiary may also be referred to as exporter or seller of goods.

Bid-ask Spread – The difference between a bid and the ask price, for example, the difference between 0.4210 and 0.4215 would be a spread of 0.0005 or 5 points.

Bid Price – A buyer's quote for the purchase of a trading unit from a prospective seller.

Bid Rate – The price at which the quoting party is prepared to purchase a currency or accept a deposit. If the bid rate is accepted by the party to whom it was quoted, then that party will sell currency or place or lend money at that price. The opposite transaction takes place at the offer rate.

Bilateral Trade – Commerce between two countries, usually in accordance with specific agreements on amounts of commodities to be traded during a specific period of time. Balances due are remitted directly between the two nations.

Bill of Exchange – An instrument by which the drawer orders another party (the drawee) to pay a certain sum to a third party (the payee) at a definite future time. The terms *bill of exchange* and *draft* are generally used interchangeably.

Bill of Lading – A receipt issued by a carrier to a shipper for merchandise delivered to the carrier for transportation from one point to another. A bill of lading serves as a receipt for the goods, a document of title, and a contract between the carrier and the shipper, covering the delivery of the merchandise to a certain point or to a designated person. It is issued in two primary forms: an *order bill of lading*, which provides for the delivery of goods to a named person or to their order (designee) but only on proper endorsement and surrender of a bill of lading to the carrier or its agents; and a *straight bill of lading*, which provides for delivery of the goods to the person designated by the bill of lading and no other.

Blocked Currency – A currency that is prohibited by law from being converted into another foreign currency.

Blocked Exchange – Exchange that cannot be freely converted into other currencies.

Brady Plan – Proposed in 1989 and named after then U.S. Treasury Secretary Nicholas Brady, the Brady Plan sought to reduce the debt-service requirements of various developing countries and to provide new loans (Brady bonds) to service existing obligations.

Break-even Exchange Rate – The particular spot exchange rate that must prevail at the maturity of a deposit or debt in a foreign currency, which has not been covered in the forward market, so that there will be no advantage to any party from interest rate differentials.

Buyer's Option Contract – When the buyer has the right to settle a forward contract at their option any time within a specified period.

Buying Rates – Rates at which foreign exchange dealers will buy a foreign currency from other dealers in the market and at which potential sellers are able to sell foreign exchange to those dealers.

Capital Controls – Governmental restrictions on the acquisition of foreign assets or foreign liabilities by domestic citizens or restrictions on the acquisitions of domestic assets or domestic liabilities by foreign citizens.

Capital Flight – A transfer of investors' funds from one country to another because of political or economic concerns about the safety of their capital.

Central Bank Intervention – Direct action by a central bank to increase or decrease the supply of its currency to stabilize prices in the spot or forward market or move them in a desired direction to achieve broader economic objectives (e.g., weaken currency to a given point in order to boost export activity). On occasion, the announcement of an intention to intervene might achieve the desired results.

Certificate of Inspection – A document often required for shipment of perishable goods in which certification is made as to the good condition of the merchandise immediately before shipment.

Certificate of Manufacture – A statement, sometimes notarized, by a producer who is usually also the seller of merchandise that manufacture has been completed and that goods are at the disposal of the buyer.

Certificate of Origin – A document issued by the exporter certifying the place of origin of the merchandise to be exported. The information contained in this document is needed primarily to comply with tariff laws that may extend more favorable treatment for products from certain countries.

Chain – A method of calculating cross rates. For example, if a foreign-exchange trader knows the exchange rate for euros against U.S. dollars and for Mexican pesos against U.S. dollars, the *chain* makes possible the calculation of the cross rates for euros against Mexican pesos.

Charter Party – A contract, expressed in writing on a special form, between the owner of a vessel and the one (the charterer) desiring to employ the vessel setting forth the terms of the arrangement such as freight rate and ports involved in the trip.

Clean Bill of Lading – A bill of lading in which the described merchandise has been received in *apparent good order and condition* and without qualification.

Clean Collection – A collection in which a draft or other demand for payment is presented without additional attached documentation.

Clean Draft – A sight or time draft to which no other documents such as shipping documents, bills of lading, or insurance certificates are attached. This is to be distinguished from a documentary draft.

Clean Risk at Liquidation – A type of credit risk that occurs when exchange contracts mature. There may be a brief interval (usually no more than a few hours) during which one of the parties to the contract has fulfilled its obligations, but the other party has not. During this period, the first party is subject to a 100 percent credit risk, on the chance that, in the interval, an event may prevent the second party from fulfilling its obligations under the contract.

Clearinghouse – A subdivision of an exchange or an independent corporation through which all trades must be confirmed, matched, and settled daily until offset.

Clearinghouse Funds – Funds used in settlement of a transaction that are available for use or that become good funds after one business day.

Closing a Commitment – Allowing a covered foreign-exchange position to expire on maturity or reversing it before maturity by a swap operation.

Combined Transport Document – A through bill of lading that applies to more than one mode of transport.

Commodity Credit Corporation – An agency of the U.S. Department of Agriculture that promotes the export of U.S. surplus agricultural commodities. It provides the necessary financial services to carry forward the public price-support activities, including government lending, purchasing, selling, storing, transporting, and subsidizing certain agricultural commodities.

Consortium Banks – A group of banks forming a joint alliance to enter a new market, in order to reduce the capital requirements and risks involved in new ventures. While they were popular in the 1970s, they have since fallen into disfavor.

Consular Documents – Bills of lading, certificates of origin, or special forms of invoice that carry the official signature of the consul of the country of destination.

Consular Invoice – Detailed statement regarding the character of goods shipped which is duly certified by the consul at the port of shipment. Required by certain countries, including the U.S., its principal function is to record accurately the types of goods and their quantity, grade and value for import duty, balance of payments, and other statistical purposes.

Convertibility – Freedom to exchange a currency, under certain circumstances, without government restrictions or controls.

Core Principles for Effective Bank Supervision (also known as the Core Principles Methodology) – A summary of 25 principles for prudential regulation and supervision prepared by the Basel Committee on Banking Supervision. This document benchmarks the best practices for effective bank supervision. Countries are expected to use the Core Principles Methodology to assess their current bank supervisory environments to identify weaknesses that need to be addressed. The IMF utilizes the Core Principles Methodology when assessing bank regulation and supervision during its Article IV surveillance.

Cost, Insurance, and Freight. (**C.I.F.)** – A price quotation under which the seller defrays all expenses involved in the delivery of goods.

Counterpart Funds – Local currencies deposited in a special account by recipient governments that represent grant aid extended by another government. Those funds, while remaining the property of the recipient government, can generally be used only by agreement of the donor government.

Countertrade – A system of trade, like bartering, when goods or services are accepted in lieu of payment in currency for the purchase of goods or services. Such trade schemes are attractive in developing countries to promote reciprocal trade in a nation's local products as a precondition for consummating an international transaction. Countertrade was popular in East-West dealings during the Cold War and in defense and aerospace contracts. Countertrade may also be useful where foreign exchange is limited or unavailable. The quality and marketability of the goods traded can be a real concern. Other risks involved in countertrade include government intervention, cancellation of contract, and seller insolvency.

Country Exposure – A measurement of the volume of assets and off-balance sheet items considered to be subject to the risk of a given country. This measurement is based, in part, on identifying the country of domicile of the entity ultimately responsible for the credit risk of a particular transaction.

Country Risk – Refers to the spectrum of risks arising from the economic, social, and political environment of a given foreign country, which could have favorable or adverse consequences for foreigners' debt and/or equity investments in that country.

Cover – The execution of an offsetting foreign exchange trade to close or eliminate an open exposure.

Covered Interest Arbitrage – The process of taking advantage of a disparity between the net accessible interest differential between two currencies and the forward exchange premium or discount on the two currencies against each other.

Crawling Peg System – An exchange rate system in which the exchange rate is adjusted every few weeks, usually to reflect prevailing inflation rates.

Credit Risk – The possibility that the buyer or seller of a foreign exchange or some other traded instrument may be unable to meet their obligation at maturity.

Cross-border Exposure – The risk that arises when an office of a bank, regardless of its location or currency, extends credit to a borrower that is located outside the booking unit's national border.

Cross-currency Risk – The risk associated with maintaining exchange positions in two foreign currencies as the result of one transaction. For example, if a U.S. operator borrows Swiss francs at 5 percent and invests the proceeds in British pounds at 12 percent, the cross-currency risk is the chance that the pounds will depreciate in values against the Swiss francs to such an extent that there will be a loss on the transactions in spite of the favorable interest-rate differential.

Cross Rate – The ratio between the exchange rate of two foreign currencies in terms of a third currency.

Current Account – Those items in the balance of payments involving imports and exports of goods and services as well as unilateral transfers. Includes trade, travel, military spending and other short-term financial flows. Short- and long-term capital flows are excluded, as they are included in the capital account balance. A surplus or deficit in the current account is commonly referred to as a trade deficit or surplus.

Customs Union – An agreement between two or more countries in which they arrange to abolish tariffs and other import restrictions on each other's goods and to establish a common tariff for the imports of all other countries.

Date Draft – A draft drawn to mature on a fixed date, irrespective of acceptance.

Demand Draft – Draft payable immediately upon presentation to the drawee. Also called a *sight* or *presentation* draft.

Depth of the Market – The amount of currency that can be traded in the market at a given time without causing a price fluctuation. Thin markets are usually characterized by wide spreads and substantial price fluctuations during a short period of time. Strong markets tend to be characterized by relatively narrow spreads of stable prices.

Devaluation – An official act wherein the official parity of a country's currency is adjusted downward to the dollar, gold, special drawing rights, or a currency. After devaluation, there are more devalued currency units relative to the dollar, gold, special drawing rights, or other currency.

Direct Quote – The method of quoting fixed units of foreign exchange in variable numbers of the local currency unit. Also called a *fixed* or *certain* quotation.

Dirty Float – A floating exchange-rate system in which some government intervention still takes place. A government may announce that it will let its currency float, that is, it will let the currency's value be determined by the forces of supply and demand in the market. But, the government may secretly allow its central bank to intervene in the exchange market to avoid too much appreciation or depreciation of the currency.

Discount – In foreign exchange, the amount by which the forward exchange rate of one currency against another currency is less than the spot exchange rate between the two currencies. If a dealer quotes $2.40 and $2.45 (bid and asked) for sterling and the discounts for six months forward are .0300 and .0275, the forward quotes would be adjusted to $2.3700 and $2.4225. This discount usually represents differences between interest rates in the U.S. and Britain. In periods of crisis, the discount for a currency can represent market anticipation of a lower price.

Documentary Credit – A commercial letter of credit providing for payment by a bank to the named beneficiary, who is usually the seller of the merchandise, against delivery of documents specified in the credit.

Documentary Draft – A draft with documents attached delivered to the drawee when it accepts or pays the draft, and which ordinarily controls title to the merchandise.

Documents – Shipping and other papers attached to foreign drafts, consisting of ocean bills of lading, marine insurance certificates, and commercial invoices. Certificates of origin and consular invoices may also be required.

Documents Against Acceptance (D/A) – Instructions given by an exporter to a bank that the documents attached to a draft for collection are deliverable to the drawee only against their acceptance of the draft.

Documents Against Payment (D/P) – Instructions given by an exporter to their bank that the documents attached to a draft for collection are deliverable to the drawee only against their payment of the draft.

Dollar Exchange Acceptance – Time draft drawn by central banks in specific foreign countries and accepted by banks in the U.S. for the purpose of furnishing foreign exchange. These instruments do not arise from specific commercial transactions, rather they are designed to alleviate shortages of dollar exchange for certain countries specified in a list published by the Federal Reserve System. It is anticipated that the acceptance will be liquidated subsequently from dollar funds acquired by the central bank. Limits are placed on initial maturity of drafts (three months). Member banks may not accept drafts in an amount exceeding 50 percent of paid-in and unimpaired capital and surplus.

Domicile – Place where a draft or acceptance is made payable.

Draft – A draft is an order in writing signed by one party (the drawer) requesting a second party (the drawee) to make payment in lawful money at a determinable future time to a third party (the payee). Drafts occasionally may be written to be non-negotiable, in that they will not meet all the requirements of the Uniform Negotiable Instruments Act. Drafts generally arise from a commercial transaction, whereby the seller makes an agreement with a buyer in advance for the transfer of goods. It may be accompanied by a bill of lading, which the bank will surrender to the buyer upon payment of the draft. The buyer may then claim the goods at the office of the carrier who transported them to the buyer's place of business. Drafts may be classified as to time element, such as sight or presentation drafts. A time draft is presented at sight, accepted, and then paid on the agreed upon date which may be 30, 60, 90 days or longer after presentation and acceptance.

Drawee – The addressee of a draft, that is, the person on whom the draft is drawn.

Drawer – The issuer or signer of a draft.

Eligible Acceptance – A bankers acceptance that meets Federal Reserve requirements related to its financing purpose and term.

Embargo – A partial or total prohibition on trade initiated by the government of one country against another for political or economic reasons.

Eurobank – A bank that regularly accepts foreign currency denominated deposits and makes foreign currency loans.

Eurobond – A medium or long-term debenture underwritten by an international syndicate that is denominated in a currency other than that of the country of origin. Usually, a bond issued by a non-European entity (Sovereign, large multinational company, or bank) for sale in Europe. Instrument may also be called a global bond.

Eurocurrency – Currency deposited in banks outside the home country.

Eurodollars – Dollar deposit claims on U.S. banks that are deposited in banks located outside the U.S., including foreign branches of U.S. banks. These claims, in turn, may be redeposited with banks or lent to companies, individuals, or governments outside the U.S.

Eurodollar Bond – A Eurobond denominated in U.S. dollars.

European Central Bank (ECB) – The ECB is the central bank for the Euro. Collectively, the ECB and member national central banks (NCBs) constitute the Eurosystem. The main function of the Eurosystem is to maintain price stability while supporting the general economic practices of the EU members. Together the ECB and NCBs conduct monetary policy, foreign exchange operations, and maintain the EU payment systems for the Eurozone. The ECB is headed by the Governing Council (composed of the Executive Board and the governors of each of the NCBs).

Exchange Contracts – Documents issued by foreign exchange dealers, by banks dealing in foreign exchange, and by foreign exchange brokers confirming foreign exchange transactions.

Exchange Control or Restrictions – Limits on free dealings in foreign exchange or of free transfers of funds into other currencies and other countries.

Exchange Control Risk – The possibility of defaults on obligations by the imposition of exchange control or restrictions.

Exchange Rates – The price of a currency in terms of another.

Exchange Reserves – The total amount of foreign assets (generally currencies) held by a country's central bank.

Exchange Risk – The risk of market fluctuation of an asset or liability denominated in a foreign currency, such as the ownership of a currency (spot or forward) or trade accounts payable in foreign currency.

Export Credit Insurance – A system to insure the collection of credits extended by exporters against various contingencies. In some countries, only non-commercial risks can be insured.

Export-Import Bank of the U.S. (Ex-Im Bank) – Established in 1934 as an independent federal agency, the Ex-Im Bank provides intermediate and long-term nonrecourse financing for U.S. exports when such facilities are not available from commercial banks. Ex-Im Bank guarantees working capital and other loans for U.S. exporters. Ex-Im Bank also offers other programs such as export credit insurance.

Export Management Company – A domestic firm that provides marketing, distributing, and other international business services for exporters in overseas markets through established networks or contacts in the targeted country.

Export Trading Company (ETC) – A company organized under the Export Trading Company Act of 1982 that facilitates U.S. exports. An ETC may be an affiliate of a bank holding company. ETCs offer a wide range of export-related services such as consulting, international market research, advertising, marketing, insurance, transportation, freight forwarding, and warehousing. This is not an actively used vehicle. Subpart C of Regulation K provides guidance and restrictions for these companies.

External Debt – Total debt owed to creditors outside the country, including both private and public sector debt. In some emerging market countries, this debt may be issued under foreign law (American or English) and payable in foreign currencies.

Financial Stability Board – Established by the G-20 countries to coordinate the development of financial regulatory policies between international standard setters, multilateral organizations, and members' national authorities for financial regulation.

Fixed Exchange Rate System – A system in which the exchange rate of a country's currency is tied to one major currency, such as the U.S. dollar.

Fixed Rate of Exchange – A rate of exchange set by a foreign government relative to the dollar, gold, another currency, or perhaps special drawing rights. It remains in effect as long as that government is willing and/or able to buy or sell exchange at the set rates.

Flexible Rate of Exchange – A rate of exchange subject to relatively frequent changes. It is determined by market forces but subject to various floors or ceilings relative to the dollar, gold, special drawing rights, or another currency when the rate fluctuates beyond certain parameters.

Floating Exchange Rate System – A system in which the values of the currencies of various countries relative to each other are established by supply and demand forces in the market without government intervention.

Floating Rate – A rate of exchange that is determined completely by market forces with no floor or ceiling in relation to the dollar, gold, special drawing rights or any other currency.

Force Majeure – A standard insurance clause in a marine contract that relieves the parties from nonfulfillment of their obligations due to circumstances beyond their control such as earthquakes, floods, or war.

Foreign Bonds – Bonds issued by nonresidents but underwritten primarily by banks registered in the country where the issue is made.

Foreign Deposits – Those deposits that are payable at a financial institution outside the jurisdiction of the U.S. government and in the currency of the country in which the depository is located. See also Nostro Account.

Foreign Draft – An official bank order drawn on a foreign correspondent bank to pay on demand to a designated payee a specific sum of foreign money or U.S. dollars at the drawee's buying rate.

Foreign Exchange – The trading or exchange of a foreign currency in relation to another currency.

Foreign Exchange Rationing – A government requirement that all holders of bills of exchange relinquish them at a stipulated rate.

Foreign Exchange Reserves – The reserves maintained by a central bank that should only include foreign currency deposits and bonds; however, in popular usage may include gold, special drawing rights, and IMF Reserve positions. This larger figure is referred to as International Reserves.

Foreign Exchange Risk – The risk associated with exposure to fluctuation in spot exchange rates.

Foreign Investment Advisory Service (FIAS) – Established in 1986, FIAS counsels developing countries on attracting foreign capital. FIAS operates under the aegis of the World Bank and its affiliates the International Finance Corporation and the Multilateral Investment Guarantee Agency.

Foreign Trade Zone – An area where goods may be received and stored without entering a country's customs jurisdiction and without paying duty. Sometimes called a *free trade zone*.

Forward Book – The aggregate of all forward contracts for a given currency or all currencies.

Forward Exchange – Foreign currency traded for settlement beyond two working or business days from today.

Forward Exchange Position – The long or short position that a dealer may have in the forward market, as compared to spot dealing.

Forward Exchange Risk – The possibility of a loss on a covered position as a result of a change in the swap margin.

Forward-Forward Dealing – The simultaneous purchase and sale of a currency for different forward dates.

Forward Premium – A phrase used to describe a currency with a forward price that is more expensive than its spot price. Also referred to as *at a forward premium*.

Forward Purchase – An outright purchase of a forward contract.

Forward Rates – The rates at which foreign exchange for future delivery are quoted, bought, and sold.

Free Alongside Ship (F.A.S.) – A term for a price quotation under which the seller delivers merchandise free of charge to the steamer's side and pays shipping-related expenses up to that destination, if necessary.

Free On Board (F.O.B.) (destination) – A term for a price quotation under which the seller undertakes at their own risk and expense to load the goods on a carrier at a specified location. Expenses subsequent thereto are for account of the buyer.

Free On Board (F.O.B.) (vessel) – A term for a price quotation under which the seller delivers the goods at their own expense on board the steamer at the location named. Subsequent risks and expenses are for account of the buyer.

Free Port – A foreign trade zone open to all traders on equal terms where merchandise may be stored duty-free pending its re-export or sale within that country.

Free Trade Area – An arrangement between two or more countries for free trade among themselves, although each nation maintains its own independent tariffs toward nonmember nations. It should not be confused with free trade zone, which is synonymous with *foreign trade zone*.

Future (or Forward) Exchange Contract – A contract usually between a bank and its customer for the purchase or sale of foreign exchange at a fixed rate with delivery at a specified future time. A future contract is due later than a spot contract, which is settled in one to ten days depending on the bank or market. Future exchange contracts are generally used by the customer to avoid the risk of fluctuations in rates of foreign exchange.

G-7 (Group of Seven) – A group of industrialized countries comprising Canada, France, Germany, Great Britain, Italy, Japan, and the U.S.

G-10 Countries – The informal term for the Group of ten countries, which consists of Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom, and the U.S. Switzerland joined in 1984, but the name remains as is. Luxembourg is an associate member.

Global Bond – A temporary debt certificate issued by a Eurobond borrower, representing the borrower's total indebtedness. The global bond will subsequently be replaced by individual bearer bonds.

Global Line – A bank-established aggregate limit that sets the maximum exposure the bank is willing to have to any one customer on a worldwide basis.

Guidance Line – An authorization, unknown to the customer, or a line of credit. If communicated to the customer, the guidance line becomes an advised line of credit commitment.

Hawalas – Informal exchangers and money transmitters commonly used in Arab and other Islamic countries and in India. The system relies on dealings with a trusted party who has financial connections with another individual in another country. Because of the discreteness and informality of the dealings between the parties, hawalas represent a high risk for money laundering. Furthermore, terrorists have used these networks to transfer funds around the world.

Heavily Indebted Poor Countries (HIPCs) – A designation by the IMF to identify nations targeted that need to reduce external debt to more sustainable levels. To determine sustainability, the net value of a country's debt burden is divided into its export earnings. An HIPC is identified as a nation that has a debt to export ratio one and one-half times the amount considered by the IMF to be sustainable. Under this debt reduction initiative for these poor developing countries, the IMF, the World Bank and other multilateral organizations will get together with all of the creditors of these HIPCs. The creditor group then develops a plan to reduce the HIPC's debt to a more sustainable level. To qualify for HIPC assistance, the country must have adopted a Poverty Reduction Strategy Paper and made progress in initiating this strategy for one year. Then the HIPC must adopt adjustment and reform programs supported by the IMF and the World Bank. The IMF and World Bank will conduct periodic debt sustainability analysis to determine ongoing qualification for assistance. As of March 2015, the IMF identified 39 countries as HIPCs.

Interagency Country Exposure Review Committee (ICERC) – A nine-member joint committee of three federal regulatory agencies established to administer the country risk supervision program. ICERC determines the creditworthiness of individual countries and the proper Allocated Transfer Risk Reserve to be used by U.S. banks in mitigating cross-border exposure within a specific country.

International Banking Act of 1978 (IBA) – The principal legislation pertaining to the activities of foreign banks in the U.S. It established a regulatory framework for foreign banks operating in the U.S.

International Banking Facility – A set of asset and liability accounts segregated on the books and records of a depository institution, U.S. branch or agency or a foreign bank, or an Edge Act or agreement corporation. IBF activities are essentially limited to accepting deposits from and extending credit to foreign residents (including banks), other IBFs, and the institutions establishing the IBF. IBFs are not required to maintain reserves against their time deposits or loans. IBFs may receive certain tax advantages from individual states.

International Monetary Fund (IMF) – A specialized agency of the United Nations. It encourages monetary cooperation, establishes international standards for a currency exchange policy, promotes stable foreign exchange rates among member nations, and makes short-term advances and standby credits to members experiencing temporary payments difficulties. In some cases, the IMF advances money subject to conditions that must be met by the borrowing country. Its resources come mainly from subscriptions of members.

International Money Market of the Chicago Mercantile Exchange (IMM) – The IMM is one of the world's largest markets for foreign currency and Eurodollar futures trading.

Intervention – The actions of a central bank designed to influence the foreign exchange rate of its currency. The bank can use its exchange reserves to buy its currency if it is under too much downward pressure or to sell its currency if it is under too much upward pressure.

Intra-country Foreign Currency Position – The risk that exists whenever a subsidiary or a branch lends, invests, places, or extends credit to entities that are located within the same country as the booking unit, but in a currency different from that of the country where the borrower and booking unit are located.

Intra-day Position – The size of spot or forward positions allowed for a dealer during the business day, which may be larger than that allowed for the end of the day. Also called *daylight* limits.

Latin American Integration Association (**LAIA)** – The purpose of the LAIA is to reduce tariff barriers between member countries. The member countries are Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela. LAIA is also known under ALADI (its Spanish Acronym).

Letters of Credit-Advised – An export letter of credit issued by a bank that requests another bank to advise the beneficiary that the credit has been opened in its favor. This occurs when the issuing bank does not have an office in the country of the beneficiary and uses the facilities of the advising bank. The advising bank is potentially liable only for its own error in making the notification.

Letters of Credit (Back-to-Back) – A letter of credit issued on the strength (or *backing*) of another letter of credit, involving a related transaction and nearly identical terms. For example, ABC company in the U.S. is designated as the beneficiary of an irrevocable letter of credit confirmed by a U.S. bank to supply XYZ company in Bolivia, whose bank issued the letter of credit, with goods to be purchased from a third company. The third company, however, will not fill ABC's order unless it receives prepayment for the goods either through cash or through some other type of financing. If ABC is unable to prepay in cash, it will request its bank to issue a letter of credit in favor of the third company. If ABC's bank agrees, the domestic credit is then *backed* by the foreign letter of credit and a back-to-back letter of credit transaction exists.

Letter of Credit (Cash) – A letter addressed from one bank to one or more correspondent banks making available to the party named in the letter a fixed sum of money up to a future specific date. The sum indicated in the letter is equal to an amount deposited in the issuing bank by the party before the letter is issued.

Letter of Credit (Commercial) – A letter of credit addressed by a bank, on behalf of a buyer of merchandise, to a seller authorizing the seller to draw drafts up to a stipulated amount under specified terms and undertaking conditionally or unconditionally to provide payment for drafts drawn.

Letter of Credit (Confirmed) – A letter of credit issued by the local bank of the importer and to which a bank, usually in the country of the exporter, has added its commitment to honor drafts and documents presented in accordance with the terms of the credit. Thus, the beneficiary has the unconditional assurance that, if the issuing bank refuses to honor the draft against the credit, the confirming bank will pay (or accept) it. In many instances, the seller (exporter) may ask that the letter of credit be confirmed by another bank when the seller is not familiar with the foreign issuing bank or as a precaution against unfavorable exchange regulations, foreign currency shortages, political upheavals, or other situations.

Letter of Credit (Deferred Payment) – A letter of credit under which the seller's draft specifies that the draft is payable at a later date, for example, 90 days after the bill-of-lading date or 90 days after presentation of the documents.

Letter of Credit (Export) – A letter of credit opened by a bank, arising from the financing of exports from a country. The issuing bank may request another bank to confirm or advise the credit to the beneficiary. If confirmed, the credit becomes a confirmed letter of credit, and, if advised, it becomes an advised (unconfirmed) letter of credit.

Letter of Credit (Green Clause) – Similar to the red clause letter of credit below, except that advance payment is made, generally upon presentation of warehouse receipts evidencing storage of the goods.

Letter of Credit (Guarantee) – A letter of credit guaranteed by the customer (applicant) and often backed by collateral security. In domestic banks, the payment of drafts drawn under this credit is frequently labeled in the general ledger asset account *Customer Liability – Drafts Paid under Guaranteed L/C.*

Letter of Credit (Import) – A letter of credit issued by a bank on behalf of a customer who is importing merchandise into a country. Issuance of an import letter of credit carries a definite commitment by the bank to honor the beneficiary's drawings under the credit.

Letter of Credit (Irrevocable) – A letter of credit that cannot be modified or revoked without the customer's consent or that cannot be modified or revoked without the beneficiary's consent.

Letter of Credit (**Negotiation)** – A letter of credit requiring negotiation (usually in the locality of the beneficiary) on or before the expiration date. The engagement clause to honor drafts is in favor of the drawers, endorsers, or bona fide holders.

Letter of Credit (Nontransferable) – A letter of credit that the beneficiary is not allowed to transfer, in whole or part, to any party.

Letter of Credit (Red Clause) – A clause permitting the beneficiary to obtain payment in advance of shipment so that the seller may procure the goods to be shipped.

Letter of Credit (Reimbursement) – A letter of credit issued by one bank and payable at a second bank that, in turn, draws on a third bank for reimbursement of the second bank's payment to the beneficiary. Those credits are generally expressed in a currency other than that of the buyer (issuing bank) or the seller, and, because of wide acceptability, many are settled in the U.S. through yet another bank as the reimbursing agent. Upon issuance, the correspondent sends the reimbursing bank an authorization to honor drawings presented by the negotiating bank.

Letter of Credit (Revocable) – A letter of credit that can be modified or revoked by the issuing bank up until the time payment is made.

Letter of Credit (**Revolving)** – A letter of credit issued for a specific amount that renews itself for the same amount over a given period. Usually, the unused renewable portion of the credit is cumulative as long as drafts are drawn before the expiration of the credit.

Letter of Credit (Standby) – A letter of credit or similar arrangement that represents an obligation to the beneficiary on the part of the issuer to repay money borrowed by or advanced to or for the account party, make payment on account of any indebtedness undertaken by the account party, or make payment on account of any default by the account party in the performance of an obligation.

Letter of Credit (Straight) – A credit requiring presentation on or before the expiration date at the office of the paying bank. The engagement clause to honor drafts is in favor of the beneficiary only.

Letter of Credit (Telegraphic Transfer Clause) – A clause in which the issuing bank agrees to pay the invoice amount to the order of the negotiating bank upon receipt of an authenticated cablegram from the latter confirming that the required documents have been received and are being forwarded.

Letter of Credit (Transferable) – A credit under which the beneficiary has the right to give instructions to the bank called upon to effect payment or acceptance to make the credit available in whole or in part to one or more third parties (second beneficiaries). The credit may be transferred only upon the express authority of the issuing bank and provided that it is expressly designated as transferable. It may be transferred in whole or in part, but may only be transferred once.

Letter of Credit (Traveler's) – A letter of credit addressed to the issuing bank's correspondents, authorizing them to negotiate drafts drawn by the beneficiary named in the credit upon proper identification. The customer is furnished with a list of the bank's correspondents. Payments are endorsed on the reverse side of the letter of credit by the correspondent banks when they negotiate the drafts. This type of letter of credit is usually prepaid by the customer.

Letter of Credit (Usance) – A letter of credit that calls for the payment against time drafts, or drafts calling for payment at some specified date in the future. Usance letters of credit allow buyers a grace period of a specified number of days, usually not longer than six months.

Local Currency Exposure – The amount of assets and off-balance sheet items that are denominated in the local currency of that country.

Lock-up – The term used to refer to procedures followed in a Eurobond issue to prevent the sale of securities to U.S. investors during the period of initial distribution.

London Interbank Offered Rate (LIBOR) – Key rate in international bank lending. LIBOR is an average of the interest rates that major international banks charge each other to borrow U.S. dollars in the London money market. Like the U.S. Treasury the CD indexes, LIBOR tends to move and adjust quite rapidly to changes in interest rates.

London International Financial Futures Exchange (LIFFE) – A London exchange where foreign currency and Eurodollar futures, as well as foreign currency options, are traded.

Long Position – An excess of assets (and/or forward purchase contracts) over liabilities (and/or forward sales contracts) in the same currency. A dealer's position when net purchases and sales result in a net-purchased position.

Loro Accounts – An account that a bank in one country maintains for a bank in another country. It usually holds foreign currency on behalf of the owner-bank's customers.

Maquiladoras – A program where imports are shipped duty and license free to Mexican firms for assembly and then exported back to the U.S.

Marine Insurance – Insurance for losses arising from specified marine casualties. Marine insurance is more extensive than other types, because it may provide for losses arising from fire, piracy, wreckage, and injuries sustained at sea.

Matched – A forward purchase is matched when it is offset by a forward sale for the same date, or vice versa. As a practical necessity, when setting limits for unmatched positions, a bank may consider a contract matched if the covering contract falls within the same week or semi-monthly period.

Maturity Date – The settlement date or delivery date for a forward contract.

Mercosur – The Mercosur was created by Argentina, Brazil, Paraguay and Uruguay in March 1991 with the signing of the Treaty of Asuncion. It originally was set up with the ambitious goal of creating a common market/customs union between the participating countries based on various forms of economic cooperation that had been taking place between Argentina and Brazil since 1986. The Treaty of Ouro Preto of 1994 added much to the institutional structure of Mercosur and initiated a new phase in the relationship between the countries, when they decided to start to implement/realize a common market. A transition phase was set to begin in 1995 and to last until 2006 with a view to constituting the common market. In 1996, association agreements were signed with Chile and Bolivia establishing free trade areas with these countries based on a *4 plus 1* formula. During this period, Mercosur also created a common mechanism for political consultations, which was formalized in 1998, in which the four countries plus Bolivia and Chile all participate as full members of the so-called *Political Mercosur*.

Multi-currency Line – A line of credit giving the borrower the option of using any readily available major currency.

Multilateral Exchange Contract – An exchange contract involving two foreign currencies against each other, for example, a contract for U.S. dollars against British pounds made in London. Also called an arbitrage exchange contract.

Nationalization – A process where a nation's central government assumes ownership and operation of private enterprises within its territory.

Net Accessible Interest Differential – The difference between the interest rates that can actually be obtained on two currencies. This difference is usually the basis of the swap rate between the two currencies and, in most cases, is derived from external interest rates rather than domestic ones. These external rates or Euro-rates are free from reserve requirements, which would increase the interest rate, and from exchange controls, which would limit access to the money.

Net Exchange Position – An imbalance between all the assets and purchases of a currency, and all the liabilities and sales of that currency.

Net Position – A bank has a position in a foreign currency when its assets, including future contracts to sell, in that currency are not equal. An excess of assets over liabilities is called a net *long* position and liabilities in excess of assets result in a net *short* position. A long net position in a currency that is depreciating results in a loss because, with each day, that position (asset) is convertible into fewer units of local currency. A short position in a currency that is appreciating represents a loss because, with each day, satisfaction of that position (liability) costs more units of local currency.

Netting Arrangement – Arrangement by two counterparties to examine all contracts settling in the same currency on the same day and to agree to exchange only the net currency amounts. Also applies to the net market values of several contracts.

Non-tariff Trade Barriers – Barriers other than tariffs that tend to restrict trade. For example, setting higher inspection standards for imports than for domestically produced items, giving preference to domestic companies in bidding on contracts, import substitution programs, import licensing requirements, additional product labeling requirements, export subsidizing, inadequate protection of intellectual property rights, or limitations on services.

North American Free Trade Agreement (NAFTA) – A free trade area consisting of Canada, Mexico, and the U.S. The goal is to reduce trade barriers between the member countries thereby creating jobs and economic prosperity for the citizens of all three countries.

Nostro Accounts – Demand accounts of banks with their correspondents in foreign countries in the currency of that country. These accounts are used to make and receive payments in foreign currencies for a bank's customers and to settle maturing foreign exchange contracts. Also called *due from foreign bank - demand accounts*, *our balances with them*, or *due from balances*.

Ocean Bill of Lading – A document signed by the captain, agents, or owners of a vessel furnishing written evidence for the conveyance and delivery of merchandise sent by sea. It is both a receipt for merchandise and a contract to deliver it as freight.

Odd Dates – Deals within the market are usually for spot, one month, two months, three months or six months forward. Other dates are odd dates, and prices for them are frequently adjusted with more than a mathematical difference. Hence, most market deals are for regular dates, although commercial deals for odd dates are common.

Offer Rate – The price at which a quoting party is prepared to sell or lend currency. This is the same price at which the party to whom the rate is quoted will buy or borrow if it desires to do business with the quoting party. The opposite transactions take place at the bid rate.

Official Rate – The rate established by a country at which it permits conversion of its currency into that of other countries.

Offshore Branch – Banking organization designed to take advantage of favorable regulatory or tax environments in another country. Many of these operations are shell branches with no physical presence.

Offshore Dollars – Same as Eurodollars, but encompassing the deposits held in banks and branches anywhere outside of the U.S., including Europe.

Open Contracts – The difference between long positions and short positions in a foreign currency or between the total of long and short positions in all foreign currencies. Open spot or open forward positions that have not been covered with offsetting transactions.

Open Market Operations – Purchases or sales of securities or other assets by a central bank on the open market.

Open Position Limit – A limit placed on the size of the open position in each currency to manage off-balance sheet items.

Order Bill of Lading – A bill of lading, usually drawn to the order of the shipper that can be negotiated like any other negotiable instrument.

Order Notify Bill of Lading – A bill of lading usually drawn to the order of the shipper or a bank with the additional clause that the consignee is to be notified upon arrival of the merchandise. The mention of the consignee's name does not confer title to the merchandise.

Organization for Economic Cooperation and Development (OECD) – An organization of 34 countries that fosters democracy and free market development throughout the world. The OECD also researches issues having international implications. The OECD publishes its research findings and international statistics on various countries at its website at http://www.oecd.org. The OECD also benchmarks best practices on economic, social, and governance issues. The OECD supports other international groups such as the FATF that have similar goals.

Outright – Forward exchange bought and sold independently from a simultaneous sale or purchase spot exchange.

Outright Forward Rate – A forward exchange rate that is expressed in terms of the actual price of one currency against another, rather than, as is customary, by the swap rate. The outright forward rate can be calculated by adding the swap premium to the spot rate or by subtracting the swap discount from the spot rate.

Override Limit – The total amount of money measured in terms of a bank's domestic currency that the bank is willing to commit to all foreign exchange net positions.

Parallel Banking Organizations – A PBO exists when a U.S. depository institution and a foreign bank are controlled, either directly or indirectly, by an individual, family, or group of persons with close business dealings, or that are otherwise acting in concert.

Parity – A term derived from par, meaning the equivalent price for a certain currency or security relative to another currency or security, or relative to another market for the currency or security after making adjustments for exchange rates, loss of interest, and other factors.

Parity Grid – The system of fixed bilateral par values in the European Monetary System. The central banks of the countries whose currencies are involved in an exchange rate are supposed to intervene in the foreign exchange market to maintain market rates within a set range defined by an upper and lower band around the par value.

Par Value – The official parity value of a currency relative to the dollar, gold, special drawing rights, or another currency.

Payable Through Accounts – Accounts used directly by customers of a correspondent bank to transact business on their own behalf.

Placement Memorandum – A document in a syndicated Eurocredit that sets out details of the proposed loan and gives information about the borrower.

Political Risk – Political changes or trends often accompanied by shifts in economic policy that may affect the availability of foreign exchange to finance private and public external obligations. The banker must understand the subtleties of current exchange procedures and restrictions as well as the possibilities of war, revolution, or expropriation in each country with which the bank transacts business, regardless of the actual currencies involved.

Position – A situation created through foreign exchange contracts or money market contracts in which changes in exchange rates or interest rates could create profits or losses for the operator.

Position Book – A detailed, ongoing record of an institution's dealings in a particular foreign currency or money market instrument. Also known as position sheet.

Position Limits – The maximum net debit or credit foreign currency balance either during the day (daylight limits) or at close of business (overnight limits) as stipulated by bank management.

Premium – The adjustment to a spot price that is made in arriving at a quote for future delivery. If a dealer were to quote $2.00 and $2.05 (bid and asked) for sterling and the premiums for six months forward are .0275 and .0300, the forward quotes would be adjusted to $2.0275 and $2.0800. The premium usually represents differences in interest rates for comparable instruments in two countries. In periods of crisis for a currency, the premium may represent the market anticipation of a higher price.

Price Quotation System – A method of giving exchange rates in which a certain specified amount of a foreign currency (1 or 100, usually) is stated as the corresponding amount in local currency.

Privatization – The selling of a government owned business (power, gas, communications) to the public. Governments privatize businesses to raise money for fiscal operations or to improve the efficiency of a firm.

Quota – A government-imposed restriction on the quantity of a specific imported good.

Rate Risk – In the exchange market, the chance that the spot rate may rise when the trader has a net oversold position (a short position), or that the spot rate may go down when the operator has a net overbought position (a long position).

Reciprocal Rate – The price of one currency in terms of a second currency, when the price of the second currency is given in terms of the first.

Representative Office – A facility established in the U.S. or foreign markets by a foreign bank to sell its services and assist clients. In the U.S., these offices cannot accept deposits or make loans.

Reserve Account – Those items in the balance of payments that measure changes in the central bank's holdings of foreign assets (such as gold, convertible securities, or special drawing rights).

Reserve Currency – A foreign currency held by a central bank (or exchange authority) for the purposes of exchange intervention or the settlement of intergovernmental claims.

Revaluation – An official act wherein the official parity of a currency is adjusted relative to the dollar, gold, special drawing rights, or another currency, resulting in less revalued units relative to those currencies. Also, the periodic computations of the current values (reevaluations) of ledger accounts and unmatured, future purchase and sales contracts.

Rollover – The process of extending a maturing forward foreign exchange contract.

Sanctions – A coercive governmental action that restricts trade with a specific country (e.g., embargo) for a political purpose rather than for an economic need.

Seller's Option Contract – When the seller has the right to settle a forward contract at their option anytime within a specified period.

Shell Branch – See *Offshore Branch*.

Short Position – An excess of liabilities (and/or forward sale contracts) over assets (and/or forward purchase contracts) in the same currency. A dealer's position when the net of purchases and sales leaves the trader in a net-sold or oversold position.

Sight Draft – A draft payable upon presentation to the drawee or within a brief period thereafter known as *days of grace*.

Society for Worldwide Interbank Financial Telecommunications (SWIFT) – A telecommunications network established by major financial institutions to facilitate messages among SWIFT participants. These messages typically result in a monetary transaction between institutions. The network is based in Brussels.

Soft Currency – A currency that is not freely convertible into other currencies.

Soft Loans – Loans with exceptionally lenient repayment terms, such as low interest, extended amortization, or the right to repay in the currency of the borrower.

Sole of Exchange – A phrase appearing on a draft to indicate that no duplicate is being presented.

Sovereign Risk – The risk that the government of a country may interfere with the repayment of debt.

Space Arbitrage – The buying of a foreign currency in one market and selling it for a profit in another market.

Special Drawing Rights – International paper money created and distributed to governments by the IMF in quantities dictated by special agreements among its member countries. The value of special drawing rights is determined by the weighted value of a *basket* of major currencies.

Spot Contract – A foreign exchange contract traded in the interbank market in which the value date is two business days from the trade date.

Spot Exchange (or Spot Currency) – Foreign exchange purchased or sold for immediate delivery and paid for on the day of delivery. Immediate delivery is usually considered delivery in one or two business days after the conclusion of the transaction. Many U.S. banks consider transactions maturing in as many as ten business days as spot exchange. Their reasons vary but are generally to facilitate reevaluation accounting policies and to initiate final confirmation and settlement verification procedures on future contracts nearing maturity.

Spot Transaction – A transaction for spot exchange or currency.

Spread – The difference between the bid rate and the offer rate in an exchange rate quotation or an interest quotation. This difference is not identical with the profit margin because traders seldom buy and sell at their bid and offer rates at the same time.

Square Exchange Position – To make the inflows of a given currency equal to the outflows of that currency for all maturity dates. This produces a square exchange position in that currency.

Sterilization – Intervention in the foreign exchange market by a central bank in which the change in the monetary base caused by the foreign exchange intervention is offset by open market operations involving domestic assets.

Stale Bill of Lading – A bill of lading that has not been presented under a letter of credit to the issuing bank within a reasonable time after its date, thus precluding its arrival at the port of discharge by the time the ship carrying the related shipment has arrived.

Straight Bill of Lading – A bill of lading drawn directly to the consignee and therefore not negotiable.

Swap – The combination of a spot purchase or sale against a forward sale or purchase of one currency in exchange for another; merely trading one currency (lending) for another currency (borrowing) for that period of time between which the spot exchange is made and the forward contract matures.

Swap Arrangement (Reciprocal) – A bilateral agreement between the central banks enabling each party to initiate swap transactions up to an agreed limit to gain temporary possession of the other party's currency.

Swap Cost or Profit – In a swap transaction, the cost or profit related to the temporary movement of currency into another currency and back again. That exchange cost or profit must then be applied to the rate of interest earned on the loan or investment for which the exchange was used. Furthermore, the true trading profits or losses generated by the foreign exchange trader cannot be determined if swap profits or costs are charged to the exchange function rather than being allocated to the department whose loans or investments the swap actually funded.

Swap and Deposit – A combination of swap transactions that enable the borrower to have use of both currencies for the duration of the transaction.

Swap Position – A situation where the scheduled inflows of a given currency are equal to the scheduled outflows, but the maturities of those flows are purposely mismatched. The expectation in a swap position is that the swap rate will change and that the gap can be closed at a profit.

Swap Rate – The difference between the spot exchange rate of a given currency and its forward exchange rate.

Swap Swap – A swap transaction involving one forward maturity date against another forward maturity date.

Swaption – An option on a swap. It gives the buyer the right, but not the obligation, to enter into an interest-rate swap at a future time period.

Telegraphic Transfer (TT) Rate – The basic rate at which banks buy and sell foreign exchange. Buying rates for mail transfers, foreign currency drafts, traveler's checks, and similar instruments are all based on the TT rate. The TT rate may be slightly less favorable than other rates because of the time required for collection.

Telex – Direct communication between two banks or companies and organizations via satellite or underwater cable.

Terms of Trade – Relative price levels of goods exported and imported by a country.

Test Key – A code used in transferring funds by cable or telephone so that the recipient may authenticate the message. For example, a test key may consist of a series of numbers, including a fixed number for each correspondent bank; a number for the type of currency, a number for the total amount; and, possibly, numbers for the day of the month and day of the week. A single number code indicates whether the total amount is in thousands, hundreds, tens, or digits. To arrive at a test number, the indicated numbers are totaled, and the total amount usually precedes the text of the message.

Third Country Bills – Bankers acceptances issued by banks in one country that finance the transport or storage of goods traded between two other countries.

Through Bill of Lading – A bill of lading used when several carriers are used to transport merchandise, for example, from a train to a vessel or vice versa.

Tied Loan – A loan made by a governmental agency that requires the borrower to spend the proceeds in the lender's country.

Time Draft – A draft drawn to mature at a fixed time after presentation or acceptance.

Tomorrow Next – The simultaneous purchase and sale of a currency for receipt and payment on the next and second business day, respectively, or vice versa.

Tradable Amount – The minimum amount accepted by a foreign exchange broker for the interbank market, for example, 100,000 Canadian dollars or 50,000 pounds sterling.

Trade Acceptance – A draft drawn by the seller (drawer) on the buyer (drawee) and accepted by the buyer. Also called a trade bill, customer acceptance, and two-name trade paper.

Trade Accounts – Those parts of the balance of payments that reflect money spent abroad by the citizens of a country on goods and services and the money spent by foreigners in the given country for goods and services.

Trader's Ticket or Dealer's Slip – The handwritten record of a foreign exchange trade and/or placing and taking of deposits that is written by the dealer who executed the transaction.

Trading Position Worksheet – A record of incomplete transactions in a particular currency.

Tranche – A term sometimes used when referring to the number of drawings of funds by a borrower under a term loan.

Transfer Risk – The risk arising when a borrower incurs a liability in a currency that is not the currency in which revenues are generated. The borrower may not be able to convert its local currency to service an international loan if foreign exchange is not generated.

Trust Receipt – Used extensively in letter of credit financing, this is a document or receipt in which the buyer promises to hold the property received in the name of the releasing bank, although the bank retains title to the goods. The merchant is called the trustee and the bank the entruster. Trust receipts are used primarily to allow an importer to take possession of the goods for resale before paying the issuing bank.

Two-way Quotation – A simultaneous quotation of foreign exchange buying and selling rates implying the willingness of the bank to deal either way.

Two-way Rate – An exchange rate or an interest rate quotation that contains both a bid rate and an offer rate. The size of the spread between the two rates indicates the relative quality of the quotation.

Unclean Bill of Lading – A bill of lading across the face of which exceptions to the receipt of goods ''in apparent good order'' are noted. Examples of exceptions include burst bales, rusted goods, and smashed cases.

Undervalued – Decline in the spot rate below purchasing power parities, so that goods of one country are cheaper than in another country. In relation to foreign exchange, *undervalued* means that forward premiums are narrower or forward discounts are wider than the interest parities between the two financial centers.

Uniform Customs and Practices for Documentary Credits – Sets of rules governing documentary letters of credit formulated by the International Chamber of Commerce. Includes general provisions, definitions, forms, responsibilities, documents, and the transfer of documentary letters of credit.

Unmatched – A forward purchase is unmatched when a forward sale for the same date has not been executed or vice versa.

Usance – The period of time between presentation of a draft and its maturity.

Value Date – The date on which foreign exchange bought and sold must be delivered and on which the price for them in local currency must be paid.

Value-impaired – A category assigned by ICERC that indicates a country has protracted debt problems.

Value Today – An arrangement by which spot exchange must be delivered and paid for on the day of the transaction instead of two business days later.

Value Tomorrow – An arrangement by which spot exchange must be delivered and paid for on the business day following the transaction instead of two business days later.

Volume Quotation System – A method of giving exchange rates in which a certain specified amount of local currency (usually 1 or 100) is stated as the corresponding amount in foreign currency.

Vostro Account – A demand account maintained for a bank by a correspondent bank in a foreign country. The nostro account of one bank is the vostro account of the other bank. See also nostro account.

Warehouse Receipt – An instrument that acknowledges the deposit of goods or commodities in the warehouse that issues the receipt. These receipts may be negotiable or non-negotiable. A negotiable warehouse receipt is made to the *bearer*, and a non-negotiable warehouse receipt specifies precisely to whom the goods shall be delivered. There are several alternatives for releasing goods held under warehouse receipts: (1) the delivery of goods may be allowed only against cash payment or substitution of similar collateral; (2) some or all of the goods may be released against a trust receipt without payment; or (3) a warehouseman may release a stipulated quantity of goods without a specific delivery order. Banks will accept a warehouse receipt as collateral for a loan only if the issuer of a receipt is a bonded warehouseman. The bank must have protected assurances for the authenticity of the receipt and the fact that the commodities pledged are fully available as listed on the warehouse receipt.

Within-line Facility – Subfacilities of the line of credit that establish parameters, terms, and conditions of various other facilities available for specific additional purposes or transactions. The aggregate sum of all outstanding amounts under within-line facilities must not exceed the total of the overall line of credit.

World Bank – An international financial organization whose purpose is to aid the development of productive facilities in member countries, particularly in developing countries. The chief source of funds is capital contributions made by member countries, which vary with the financial strength of the country. Another funding source is the sale of long-term bonds.

Yankee Bond – A U.S. dollar-denominated foreign bond issued in the U.S. market.

Effective October 1, 1998, the FDIC made substantial revisions to Part 303 of the FDIC's Rules and Regulations, which governs the filing and processing of various applications. One of the most significant features of this revised regulation is that of expedited processing that is now available for "eligible depository institutions."

Eligible depository institutions are defined in the regulation as those which meet the following criteria:

- Received a composite rating of 1 or 2 under the Uniform Financial Institutions Rating System (UFIRS) as a result of its most recent federal or state examination.
- Received a satisfactory or better Community Reinvestment Act (CRA) rating from its primary federal regulator at its most recent examination, if subject to CRA
- Received a compliance rating of 1 or 2 from its primary federal regulator at its most recent examination
- Is well-capitalized as defined in the appropriate capital regulation and guidance of the institution's primary federal regulator; and
- Is not subject to a cease and desist order, consent order, prompt corrective action directive, written agreement, memorandum of understanding, or other administrative agreement with its primary federal regulator or chartering authority.

APPLICATIONS FOR DEPOSIT INSURANCE

Introduction

The granting of deposit insurance confers a valuable status on an applicant institution; its denial, on the other hand, may have seriously adverse competitive consequences, and, in the case of a new institution, may effectively preclude entrance into the banking/thrift business. Obviously, the role of the FDIC, in acting upon such applications, involves important responsibilities and the exercise of sound discretion in the public interest.

Sections 5 and 6 of the Federal Deposit Insurance Act specifically deal with deposit insurance. Under Section 5, the FDIC must determine as a threshold matter that an applicant is a "depository institution which is engaged in the business of receiving deposits other than trust funds. If an institution does not satisfy that threshold requirement as codified under Part 303 of the FDIC Rules and Regulations. Additionally, Section 5 states that before approving an application, consideration shall be given to the factors enumerated in Section 6. Those factors are: the financial history and condition of the bank, the adequacy of its capital structure, its future earnings prospects, the general character of its management, the risk presented to the insurance fund, the convenience and needs of the community to be served, and whether or not its corporate powers are consistent with the purposes of the Act.

Subpart B of Part 303 of the FDIC's Rules and Regulations implements the basic statutory provisions and governs the administrative processing of applications for deposit insurance. For those filings subject to a public notice requirement, any person may inspect or request a copy of the non-confidential portions of a filing (the public file) until 180 days following the final disposition of the filing.

Rights of Applicants

An applicant has a statutory right to apply for deposit insurance and to obtain full consideration of its application by the FDIC in light of all relevant facts and without prejudice. If all of the seven statutory factors are resolved favorably, the applicant is entitled to receive deposit insurance coverage. In the event an application is disapproved, an applicant has a right to be informed by the FDIC of the reasons for disapproval.

Obligations of the FDIC

Under applicable law, the FDIC is obligated to consider the seven factors enumerated in Section 6 of the FDI Act in connection with every application for deposit insurance. As a measure of protection against unwarranted and unjustified risks, a full and thorough examination or investigation of each application is conducted. The FDIC has formulated certain guidelines for admission, which are designed to ease administrative problems, aid in preventing arbitrary judgment, and assist in assuring uniform and fair treatment to all applicants. These guidelines must, however, be administered in a manner consistent with the spirit of the Act, and the maintenance of a competitive and free enterprise banking/thrift system. Although applicants are largely required to satisfy criteria under each of the seven statutory factors, in a newly organized institution the FDIC views management and capital adequacy as the most important. The FDIC believes active competition between banks, thrifts and other financial institutions, when conducted within applicable law and in a safe and sound manner, is in the public interest.

Examiner's Responsibility

Whether the applicant is a proposed or newly organized institution or an existing institution, a formal application for deposit insurance coverage must be filed with the FDIC. A copy of the formal application will be made available to an examiner for use in the investigation. Although the application contains data on each of the seven factors enumerated under Section 6 of the Act, reports of investigation are not to be limited to material supplied by the applicant. Reports should be factual as to necessary information and represent the independent and unbiased findings of the examiner. The examiner should in no way indicate to an applicant the probable nature of his recommendations or discuss the applicant's chance of gaining admission to the insurance system unless specifically authorized to do so by the Regional Director. Considerable reliance is placed upon impartial reports by examiners in connection with admission procedures.

The report should detail the relevant facts and data pertinent to each of the seven statutory factors, and under a separate topical heading, an opinion as to whether the FDIC's criteria under each of the statutory factors have been met. A negative opinion on one or more of the statutory factors must be fully explained and supported and, where possible, it should be indicated whether and how the situation may be corrected. The report should also include a general recommendation relative to admission and, if appropriate, a list of conditions which should be imposed. As a rule, the FDIC requires applicants to satisfy all criteria under each of the seven statutory factors. In some cases, however, minor deficiencies in certain factors may be excused when they are more than balanced by conspicuous merits in others.

The seven factors enumerated in Section 6 of the FDI Act which are the criteria used by the FDIC to determine eligibility for deposit insurance are discussed below. The FDIC's admission criteria for proposed or newly organized institutions and existing institutions are generally the same; however, pertinent aspects specifically applicable to admission of existing institutions are covered later in this Section.

Statutory Factors, Proposed or Newly Organized Institutions

Financial History and Condition - Proposed and newly organized institutions have no financial history to serve as a basis for determining qualification for deposit insurance. Some consideration may be given to the history of other institutions presently and formerly operating in the area of the applicant, if pertinent. The ability of the proponents to provide financial support to the new institution should be evaluated under this factor. Past institution failures in a community should not be a prominent consideration in acting upon the application of a new institution. New institution applications are to be judged as far as possible upon their own merits relative to capital, management, and the other factors enumerated in Section 6 of the Act.

The investigation report should include a pro forma statement of the proposed institution for the first three years of operation. The asset and liability projections and composition should be reasonable in relation to the proposed market. Major assets with which the proposed institution intends to begin business, should be fairly valued and supported with appraisals.

Fixed assets are of primary concern in analyzing the asset condition of a proposed or newly organized financial institution. The applicant’s aggregate direct and indirect fixed asset investment, must be reasonable in relation to its projected earnings capacity, capital and other pertinent matters of consideration. Significant assets should be described in detail. For example, the following elements are pertinent to an adequate description and evaluation of applicant's realty interests: the original cost of the premises at time of construction with a breakdown between land and building, original cost to applicant, date of construction, reasonableness of purchase price, from whom purchased, insurance to be carried, assessed value, prospective or immediate repairs or alterations, estimated useful life of the building as of the beginning of business, outstanding liens, tax status, completeness of title papers, desirability of the location, and prospective annual income and expenses if the building is to be other than a one-purpose structure.

The relationship between the applicant's total investment in fixed assets and capital structure should receive comment.

If the leasing of premises is contemplated either through a real estate subsidiary of the proposed institution or otherwise, the terms of the lease are to be outlined in some detail, including a description and estimated cost of any leasehold improvements. In such cases, the lease agreement should contain a termination clause, acceptable to the FDIC. Lease transactions shall be reported in accordance with Financial Accounting Standards Board Statement 13 (Accounting for Leases). Applicants are cautioned against purchasing any fixed assets or entering into any noncancelable construction contracts, leases, or other binding arrangements related to the proposal unless and until the FDIC approves the application.

Any financial arrangement or transaction involving the applicant, its organizers, directors, officers, 10% or more shareholders, or their associates (insiders) should be avoided. If there are any such arrangements or transactions, it must be determined that they are fair and on substantially the same terms as those prevailing at the time for comparable transactions with noninsiders and must not involve more than normal risk or present unfavorable features. Full disclosure of any arrangements with insiders must be made to all proposed directors and prospective shareholders.

An evaluation and comment should be made as to whether the new institution will provide procedures, security devices, and safeguards which will at least be equivalent to the minimum requirements of the Bank Protection Act of 1968 and Part 326 of the Rules and Regulations of the FDIC. In addition, if the new institution plans to utilize electronic data processing services for some or all of its accounting functions, proponents should be apprised of the need to furnish notification in the form prescribed in Part 304.

In applications anticipating the use of temporary quarters pending construction or renovation of permanent facilities, details should be provided regarding the location of the site in relation to the permanent location, the exact address, the rental arrangement, the leasehold improvements, and estimated nonrecoverable costs upon abandonment.

Considerations required by the National Historic Preservation Act and the National Environmental Policy Act of 1969 must also be favorably resolved and the applicant is generally requested to submit data in this regard for evaluation.

Applicants often employ professional assistance, such as attorneys, economic researchers, and other specialists to assist in the preparation and filing of an application for deposit insurance coverage. The revised Statement of Policy on "Applications for Deposit Insurance" was adopted by the Board of Directors of the FDIC effective October 1, 1998, requires that legal fees and all other organizational expenses be reasonable and fully supportable. Expenses for professional or other services rendered by insiders will receive special review for any indication of self-dealing to the detriment of the institution and its other shareholders. The FDIC expects full disclosure to all directors and shareholders of any arrangement with an insider. In no case will a deposit insurance application be approved where the payment of a fee, in whole or in part is contingent upon any act or forbearance by the FDIC or by any other state or federal agency.

Adequacy of the Capital Structure – Normally, the initial capital of a proposed depository institution should be sufficient to provide a Tier 1 capital to assets leverage ratio (as defined in the appropriate capital regulation of the institution's primary federal regulator) of not less than 8.0% throughout the first three years of operation. Initial capital should normally be in excess of $2 million net of any pre-opening expenses that will be charged to the institution's capital after it commences business. In addition, the depository institution must maintain an adequate allowance for loan and lease losses.

If the applicant is being established as a wholly owned subsidiary of an eligible holding company (as defined in Part 303), the FDIC will consider the financial resources of the parent organization as a factor in assessing the adequacy of the proposed initial capital injection. In such cases, the appropriate regional director (DOS) may find favorably with respect to the adequacy of capital factor when the initial capital injection is sufficient to provide for a Tier 1 leverage capital ratio of at least 8% at the end of the first year of operation, based on a realistic business plan, or the initial capital injection meets the $2 million minimum capital standard set forth in the FDIC Statement of Policy on Applications for Deposit Insurance, or any minimum standards established by the chartering authority, whichever is greater. The holding company shall also provide a written commitment to maintain the proposed institution's Tier 1 leverage capital ratio at not less than 8% throughout the first three years of operation.

The adequacy of the capital structure of a newly organized financial institution is closely related to its risk appetite, deposit volume, fixed asset investment, and the anticipated future growth in liabilities. Deposit projections made by the applicant must, therefore, be fully supported and documented. Projections should be based on established growth patterns in the specific market, and initial capitalization should be provided accordingly. Special purpose depository institutions (such as credit card banks) should provide projections based on the type of business to be conducted and the potential for growth of that business.

In most cases, the first three years of operation is a reasonable time frame for measuring deposit growth in newly organized institutions. Accordingly, in assessing the adequacy of initial capital as related to prospective deposit volume, the examiner should develop a reasonable estimate of the deposit volume a new financial institution may generate in each of the first three years of operation, which may differ considerably from the estimates provided in the proponents' application, feasibility study, or economic survey. It is not unusual to find that the proponents' deposit projections and feasibility study are influenced by the proposed capital structure. The proponents' deposit projections may also be out-of-date or not fully supportable due to lack of adequate information and documentation. The best sources of information to assist in formulating reasonable estimates are local economic indicators, population data, deposit and loan growth in other financial institutions in the area, comments and observations of

depository institution managers in the area, the competitive impact of other financial institutions, and the ability of the proponents to generate business in the trade area. In the final analysis, the estimated deposit volume for a new institution's third year of operation is highly significant because it serves the dual purpose of measuring earnings capability as well as capital adequacy after projecting a reasonable operating period.
The number of shares of stock and its par value as of the commencement of business should be scheduled. The per share price of the stock should be stated, and, in cases where an additional amount per share is assessed to cover organizational and preopening expenses, that amount should also be identified. The components of the beginning capital structure can then be allocated to capital stock, surplus, other segregations, and the organizational expense fund. It should be ascertained whether or not the State or Office of Thrift Supervision statutory minimum capital requirements are met and how evidence will be provided to the FDIC that capital funds are fully paid in prior to opening for business. If it appears the proposed capital structure will not meet the FDIC's criteria, the investigation report should reflect fully the extent of and reasons for the inadequacy and recommend to the FDIC an amount which would be acceptable. Should the attitude of the proponents be receptive to a request for supplying additional capital, it should be so indicated.

All stock of a particular class in the initial offering should be sold at the same price, and have the same voting rights. Proposals which allow the insiders to acquire a separate class of stock with greater voting rights are generally unacceptable. Insiders should not be offered stock at a price more favorable than the price for other subscribers. Price disparities provide insiders with a means to gain control disproportionate to their investments.

When securities are sold to the public, the disclosure of all material facts is essential. The FDIC's Statement of Policy regarding use of Offering Circulars in connection with Public Distribution of Bank Securities (dated September 5, 1996) provides additional guidance. A copy of the offering circular prepared by the applicant, the stock solicitation material, and the subscription agreement should be submitted to the FDIC when they become available.

Future Earnings Prospects - Allowing a new institution to commence operations without some indication that it can be operated profitably not only creates a potentially unsatisfactory situation, but could also have a detrimental effect on other competing financial institutions. Usually the operations of a new institution are not profitable for at least the first year. Estimates of operating income and expenses for the first three years of operation should be made using, among other things, the projections of loan and deposit volume made in connection with the "Adequacy of the Capital Structure" factor.

In determining future earnings prospects, the probable income from loans and discounts, bonds and securities, service charges and commissions, and other sources of income must be estimated. Assistance in this task may be obtained from evaluating the applicant's projections, the demand for loans in the area and types thereof, the probable nature of the institution's investment policy, the amount of time and demand deposits likely to be acquired, the probable competitive reaction from existing depository institutions, the economic conditions in the community, the possibility of future development or retrogression in the area, the apparent moneymaking ability of the institution's management, and the FDIC's statistical data for depository institutions operating in the same general area. In addition, estimates must be made for expenses such as salaries and other employee benefits, interest, occupancy and equipment outlays, electronic data processing service costs, and other current operating expenses. Assistance in making these projections may generally be obtained from the same sources used in projecting the various income categories. A review and comparison of original projections and actual data for other recently organized operating financial institutions in the same or comparable areas may be of assistance in projecting earnings and expense data. Applicants need to demonstrate through realistic and supportable estimates that, within a reasonable period (normally three years); the earnings will be sufficient to provide an adequate profit.

The report of investigation should pinpoint any marked divergence between the examiner's findings and those presented in the application and the reasons for such variances. Comment should also be made on the proponents' plans for payment of cash dividends, bonuses, directors' fees, retainer fees, etc, and the accounting system to be used. During the first three years, dividends shall be paid only from net operating income after tax and not until an appropriate allowance for loan and lease losses has been established and overall capital is adequate. In regard to accounting systems, the FDIC requires use of the accrual method from the outset of operations.

As indicated previously, this portion of the investigation report is, by reason of Part 303 of the FDIC's Rules and Regulations, available for public inspection.

General Character of the Management - The quality of an institution's management is vital and perhaps the single most important element in determining the applicant's acceptability for deposit insurance. To satisfy the FDIC's criteria under this factor, the evidence must support a management rating which in an operating institution would be tantamount to a rating of "2" or better. In most instances, the management of a proposed or newly organized institution will not have an operating record as a functioning unit to assist in forming a judgment; therefore, the management rating essentially becomes a question of directly evaluating the individual directors and officers and then making a composite overall rating premised upon the individual analyses.

In general, the individual directors and officers will be evaluated largely on the basis of the following:

- Financial institution and other business experience;
- Duties and responsibilities in the proposed depository institution;
- Personal and professional financial responsibility;
- Reputation for honesty and integrity; and
- Familiarity with the economy, financial needs, and general character of the community in which the depository institution will operate.

The report of investigation should, therefore, contain a schedule giving the name, address, approximate age, total liabilities, and net worth of each director and officer. In addition, for each proposed member of the management team comments should be included that detail present occupation or profession and past banking, thrift, business, farming, or other experience; including observations as to how successful the individuals have been in their present and past activities and whether they have been asked to resign from a position or positions held or have been associated with serious business failures or debt compromises. As a rule of thumb, success of the majority of an applicant's management in their present business endeavors is some evidence of their ability to manage successfully the affairs of the proposed institution.

In addition, all firms, companies, corporations, and organizations in which a given director or officer is substantially interested should be indicated. If the facts denote that the institution is being organized primarily to finance the businesses or personal interests of certain officers and directors, particularly when the assets related thereto are likely to be of dubious quality, the relevant facts should be fully covered.

Duties and responsibilities as well as the title of each proposed officer and director should be outlined. If the proposed duties and responsibilities are regarded as beyond the capabilities of a particular officer or some other distribution of duties and responsibilities among officers would be more effective than that contemplated, the opinions and reasons therefore should be indicated.

Net worth figures on each director and officer will be available from financial reports filed with the application. In listing net worth figures in the report of investigation, an opinion as to the validity of the figures and any pertinent information relating to sizable liabilities may be made.

Stock holdings of each director and officer are to be indicated. Successful operation of a financial institution requires a real interest in its welfare as well as a willingness to devote a substantial amount of time to its affairs. When directors and officers have a significant financial investment, genuine and continuing interest is more likely.

Section 19 of the FDI Act prohibits, without the prior written consent of the FDIC, a person convicted of criminal offense involving dishonesty, breach of trust, money laundering, or who has entered into a pretrial diversion or similar program in connection with a prosecution for such offense, from becoming or continuing as an institution-affiliated party, owning or controlling, directly or indirectly an insured institution, or otherwise participating, directly or indirectly, in the conduct of the affairs of an insured depository institution. If an employee, officer, or director is involved in a criminal conviction, or fidelity insurance has been denied with respect to any employee, officer, or director, a thorough investigation of the circumstances should be conducted. If the facts of the investigation dictate, the institution may be required to file an application pursuant to Section 19 of the FDI Act.

Length of residence in the community or trade area of the proposed institution and degree of familiarity with the major activities of the locale should be indicated with respect to each director and officer.

The above information should be particularly complete with respect to individuals who are likely to dominate the policies and operations of the institution. In addition, comparable information should be included on any shareholder (other than a proposed director or officer) who is subscribing to 10% or more of the aggregate par value of stock to be issued. Examiners should also include in their report any information that may come to their attention concerning possible changes that may be made in the institution's management after commencement of operations. In addition, the FDIC has found that on occasion, subsequent to approval of an application for deposit insurance and prior to the actual opening of a proposed new institution, changes have occurred in the management or ownership. In order to monitor such changes, the FDIC requires that the prospective incorporators advise the Regional Director in writing if changes in the directorate, active management, or in the ownership of stock of 10% or more of the total are made prior to opening. When conducting investigations, this notification should be stressed in any discussions with the proponents.

Certain other information relative to the sale and purchase of the proposed institution's stock and the exercise of voting rights may also reflect on the general quality and character of management. While these matters may also relate to the "Adequacy of Capital Structure" factor, on balance they are more appropriately treated herein. Stock financing arrangements by proposed officers, directors and 10% shareholders of their investments in stock of the proposed depository institution will be carefully reviewed. Such financing will be considered acceptable only if the party financing the stock can demonstrate the ability to service the debt without reliance on dividends or other forms of compensation from the applicant. When stock financing arrangements are anticipated, information should be submitted with the application demonstrating that adequate alternative independent sources of debt serving are available. Direct or indirect financing by proposed officers, directors and 10% shareholders of more than 75% of the purchase price of the stock subscribed by any individual, or more than 50% of the purchase price of the aggregates stock subscribed by the proposed officers, directors and 10% shareholders as a group, will require supporting justification in the application regarding the reason that the financing arrangements should be considered acceptable. If the proposed financing arrangements are not considered appropriate, the FDIC may find unfavorably on the adequacy of the capital structure.

It should be determined whether any commissions are to be paid in connection with the sale of the stock and confirmed that no loans representing applicant stock purchases will be refinanced by the institution. Any evidence that the institution is being organized on a promotional basis should also be covered. Ownership control by several individuals or groups of shareholders as well as any contemplated or existing buy-sell, voting trust, or proxy agreements between various individuals or other entities, such as holding companies, should also receive comment and copies of any such agreements obtained from the applicant or proponents involved.

Stock Benefit Plans – Stock benefit plans, including stock options, stock warrants and other similar stock based compensation plans will be reviewed by the FDIC and must be fully disclosed to all potential subscribers. Participants in stock benefit plans may include incorporators, directors and officers. A description of any such plans proposed must be included in the application submitted to the appropriate regional director. The structure of stock benefit plans should encourage the continued involvement of the participants and serve as an incentive for the successful operation of the institution. Stock benefit plans should contain no feature that would encourage speculative or high-risk activities or serve as an obstacle to or otherwise impede the sale of additional stock to the general public. The following are the factors to use to evaluate stock benefit plans:

- The duration of rights granted should be limited and in no event should the exercise period exceed ten years;
- Rights granted should encourage the recipient to remain involved in the proposed depository institution
- Rights granted should not be transferable by the participant;
- The exercise price of stock rights shall not be less than the fair market value of the stock at the time that the rights are granted;
- Rights under the plan must be exercised or expire within a reasonable time after termination as an active officer, employee or director; and
- Stock benefit plans should contain a provision allowing the institution’s primary federal regulator to direct the institution to require plan participants to exercise or forfeit their stock rights if the institution’s capital falls below the minimum requirements, as determined by its state or primary federal regulator.

Stock benefit plans provided to directors and officers will be reviewed as part of the total compensation package offered to such individuals.
Stock benefit plans provided to incorporators will also be closely scrutinized. In reviewing such plans, the FDIC will consider the individual’s time, expertise, financial commitment and continuing involvement in the management of the proposed institution. The FDIC will also consider the amount and basis of any cash payments which will be made to the incorporator for services rendered or as a return on funds placed at risk. Plans to compensate incorporators that provide for more than one option or warrant for each share subscribed will generally be considered excessive. It is further expected that incorporators granted options or warrants at or near this level will actively participate in the management of the depository institution as an executive officer or director. On a case-by-case basis, the FDIC may not object to additional options being granted to an incorporator who will also be a senior executive officer.

The FDIC recognizes that there will be limited instances where individuals who substantially contribute to organization of a new depository institution do not intend to serve as an active officer or director after the institution opens for business. The FDIC will generally not object to awarding warrants or options to incorporators who agree to accept shares of stock in lieu of cash payment for funds placed at risk or for professional services rendered. In such instances, the FDIC defines funds placed at risk to include seed money actually paid into the organizational fund and the value of professional services rendered as the market value of legal, accounting and other professional services rendered. Generally, warrants or options for organizers who will not participate in the management of the institution will be considered excessive if the amount of options or warrants to be granted exceeds the number of shares of stock at risk and/or for professional services rendered. The granting of options to incorporators who guarantee loans to finance an institution's organization generally would not be objectionable, but options granted should be limited so that the market value of the stock subject to option does not exceed the amount of the loan guarantees (although guarantees exceeding the amount drawn or expected to be drawn will not be considered.) When continuing service is not contemplated, the FDIC will not require vesting or restrictions on transferability, but will review the duration of the rights, exercise price and exercise or forfeiture clauses in the same manner as discussed above.

In evaluating benefit and compensation plans for insiders, the FDIC will look to the substance of the proposal. Those proposals that are determined to be substantially stock based plans will be evaluated on the above stock benefit plan criteria. Stock appreciation rights and similar plans that include a cash payment to the recipient based directly on the market value of the depository institution's stock are unacceptable.

If the proposal involves the formation of a de novo holding company and a stock benefit plan is being proposed at the holding company level, that stock benefit plan will be reviewed by the FDIC in the same manner as a plan involving stock issued by the proposed depository institution.

Proponents should be made aware of the prohibition against interlocking management relations applicable to depository institutions (banks, savings and loan associations, mutual savings banks, and credit unions) and depository holding companies (banks, and savings and loan holding companies) contained in Title 11 of FIRIRCA and Part 348 of the FDIC's Rules and Regulations. The FDIC adheres to a fixed policy requiring that all applicants provide at least a five-member board of directors, even though the State law may, in some cases, permit a lesser number.

On the basis of the facts and considerations detailed in the report of investigation, examiners should state, and factually support to the greatest extent possible, their conclusions as to the management rating. A notation as to the type and amount of the insurance (fidelity, burglary, robbery, etc.) to be carried by the institution should be included in the report under the management heading. With respect to fidelity coverage, the FDIC's position is that applicants should subscribe to and maintain adequate coverage and have in force at all times a $1 million excess bank employee dishonesty bond, if primary blanket bond coverage is less than $1 million.

Applicants are expected to develop appropriate written investment, loan, funds management and liquidity policies. Establishment of an acceptable audit program is required for proposed depository institutions. Applicants are expected to commit the depository institution to obtain an audit by an independent public accountant for at least the first three years of operation.

An applicant bank or an applicant branch of a foreign bank that expects to operate an international loan department or conduct international lending and investment activities is expected to address country risk and related concentrations of credit with respect to these activities in their written policies. These factors should be segregated from other lending and investment risk criteria and addressed separately in the policies. Policy coverage should not be limited to just loans, but should also encompass securities, deposit balances, acceptances, and other activities that are expected to be included in the bank's or branch's operations. If an applicant does not intend to engage in such activity, they should specifically so state.

Risk Presented to the Insurance Fund - This factor is to be broadly interpreted and may be the most relevant in the unusual circumstance where none of the other factors is clearly identifiable as unfavorable. For example, "risk to the fund" might be resolved unfavorably and the application denied based on the applicant's unsound business plan even though all the other factors might be favorably resolved. The FDIC expects that an applicant will submit a business plan commensurate with the capabilities of its management and the financial commitment of the incorporators. Any significant deviation from the business plan within the first three years of operation must be reported by the insured depository institution to the primary federal regulator before consummation of the change. An applicant's business plan should demonstrate the following:

- Adequate policies, procedures, and management expertise to operate the proposed depository institution in a safe and sound manner;
- Ability to achieve a reasonable market share;
- Reasonable earnings prospects;
- Ability to attract and maintain adequate capital; and

- Responsiveness to community needs.

Operating plans that rely on high risk lending, a special purpose market, significant funding from other sources other than core deposits, or that otherwise diverge from conventional bank related financial services will require specific documentation as to the suitability of the proposed activities for an insured institution. Similarly, additional documentation of plans is required where markets to be entered are intensely competitive or economic conditions are marginal. Like a recommendation based on any other factor, an unfavorable finding based on "risk to the fund" must be clearly articulated.

Convenience and Needs of the Community to be Served - Generally, there is a presumptive indication of need if the directors or organizers of the applicant are a responsible group of persons willing and able to supply a substantial and adequate amount of money to back up their judgment, and if the management of the proposed institution is competent, honest, and familiar with the problems of the area to be served. However, consideration should be given to the adequacy of existing depository institution facilities in the community and in nearby rival communities, for a financial institution is unlikely to fulfill a need if it is unable to command sufficient volume to maintain profitable operations. In this connection, the Examiner should endeavor to ascertain whether or not the services rendered by existing depository institutions are satisfactory, and whether or not such institutions are meeting the legitimate credit needs of the community.

It should be noted that the provisions of the Community Reinvestment Act are especially relevant in evaluating this statutory factor.

In considering the question of need, it is important that the examiner not adopt the viewpoint of depository institutions located in the community, to the exclusion of other, equally persuasive viewpoints. As in the other lines of business, existing financial institutions may regard any new institutions as unnecessary and a potentially "harmful competitor". An unbiased conclusion in this connection requires impartial consideration of the opinions of the organizers of the applicant as well as those of the management of existing institutions. In addition, it is sometimes necessary to solicit the views of representative business and professional persons in the community, together with those of citizens of more modest means. The results of canvasses and surveys of local individual or business persons should be set forth in the report in order to assist in evaluating support for the proposed institution, the adequacy of present depository institution facilities, whether the legitimate banking needs of the community are being met, whether and to what extent the new facility would be used, and the knowledge these persons have of the proponents. In the final analysis, the value of any information so obtained will depend largely on the examiner's ability to discriminate between those views which proceed from intelligent and rational consideration of the real needs of the community and those which are mainly inspired by a false sense of community pride or selfish personal interest.

A clear definition of the proposed institution's trade area is essential in determining convenience and needs. A brief description of the general area in which the proposed institution is to be situated and its location in relation to other prominent nearby communities, developments, or other important landmarks should be initially presented. The primary trade area as described in the application should then be discussed along with an opinion as to the validity of the applicant's definition of the trade area. In some instances, the applicant may artificially draw its trade area boundaries so as to exclude factors which would be unfavorable to the proposal (nearby depository institutions, depressed areas, etc.) and include others which would increase the attractiveness of the proposed location (significant residential or commercial developments, highly concentrated population area, etc.). Any differences between the examiner's conception of the trade area and that of the proponents should be discussed fully in the report together with a description of the trade area as the examiner perceives it. Once the trade area has been defined, information regarding the following should be set forth.

The principal industrial, trade, or agricultural activity should be described and, if considered relevant, annual values of principal products indicated. The presence and source of large payrolls in the area may also be an important consideration. The number and value of residential and commercial building permits can often be of considerable value in determining the vitality of the area. Figures regarding retail sales from public sources or trade organizations are useful; however, if they are not available, it may be possible to obtain some estimates of volume in the course of conducting a survey of the locale's business establishments. Information regarding medical facilities and other professional services can be a useful indicator of the self- sufficiency of the community or trade area. Statistical information on governmental units such as; assessed valuations, tax levies, bonded indebtedness, and tax delinquencies, and data on the educational environment of the area are also valuable indicators. Reports of investigation should not, however, be filled with pages of statistics unless the figures are relevant.

Demographic figures within the trade area as well as the general surrounding areas are significant determinants in considering convenience and needs. While population as of the date of investigation is important, data which establishes population trends as well as projections for the future should be presented. In some cases it is difficult to obtain accurate population data for a particular trade area, as statistics combine portions of several census tracts. In some instances, data showing the number of household units in the area may be a more appropriate basis for assessing reasonable population estimates.

The examiner should assess the competitive dynamics of the proposed market and how the institution will compete for market share. Officials of area depository institutions should be contacted during the investigation and given an opportunity to express their attitudes on the proposal. Any formal objections to the proposal should be investigated and comments relative to discussions with the objector(s) set forth in the investigation report. The probable competitive effects of a new institution proposal should be fully weighed by the examiner. While the number of depository institutions operating in the city or area to be served is important in determining whether the addition of a new institution may result in an overbanked condition, consideration should also be given to possible procompetitive consequences flowing from the new institution proposal, such as increased customer services and banking options to residents of the area. Therefore, it is necessary to furnish complete factual data with respect to the probable impact of the proposal on existing financial institutions in the community.

The extent of new or proposed residential, commercial, and industrial development and construction is a significant secondary consideration in resolving the convenience and needs factor. Plans for the development of shopping centers, apartment complexes and other residential subdivisions, factories, or other major facilities near the proposed site should, therefore, receive comment. In certain instances, inclusion of maps may be desirable to clarify comments, showing location of competing depository institutions or branches, important buildings, offices, shopping centers, industrial parks, and the like in relation to the office site. As in the case of the "Future Earnings Prospects' factor, this portion of the investigation report is also available for public inspection under Part 303 of the FDIC's Rules and Regulations.

Consistency of Corporate Powers – Generally, the FDIC will presume that a proposed national bank's or federal savings association's corporate powers are consistent with the purposes of the Act. Pursuant to section 24 of the Act, no insured state bank may engage as principal in any type of activity that is not permissible for a national bank unless the FDIC has determined that the activity would pose no significant risk to the appropriate deposit insurance fund and the state bank is, and continues to be, in compliance with applicable capital standards prescribed by its primary federal regulator. Similarly, section 28 of the Act provides that a state chartered savings association may not engage in any type of activity that is not permissible for a federal savings association, unless the FDIC has determined that the activity would pose no significant risk to the affected deposit insurance fund and the savings association is and continues to be, in compliance with the capital standards for the association. Since the applicant will have agreed in its application not to exercise nonbanking powers whether granted by charter or statute, the examiner need only refer to this previously obtained agreement. Additional comments may be included if the terms of the agreement are not generally understood by the applicant or if they regard the agreement as being incomplete or amendment to the Articles of Association or Charter is necessary or desirable.

Miscellaneous - The existence of any conflicting applications to establish depository facilities in the immediate area should be indicated and receive appropriate comment in the examiner's report of investigation. If operation of a trust department is contemplated, applicant must also file with the FDIC the appropriate form covering "Application for Consent to Exercise Trust Powers". This form will provide much of the information necessary for the completion of the report of investigation with respect to this phase of the applicant's operations. If the proposed trust functions will materially affect the examiner's findings in making a recommendation on anyone of the seven factors contained in Section 6 of the Federal Deposit Insurance Act, it may be advisable to analyze the prospects for the operation of the commercial and trust departments under separate subheadings for any factor so affected.

If any of the documents essential for full consideration of the application have not been submitted to the FDIC, the proponents should be instructed to transmit such documents at the earliest practical date and a notation to that effect included in the report.

Statutory Factors, Existing Institutions

As indicated previously, the FDIC's admission criteria for proposed or newly organized institutions and for existing institutions are generally the same. Consequently, principles previously discussed in this section of the Manual are not repeated herein. Prior to processing applications for existing institutions for deposit insurance coverage, examiners should familiarize themselves not only with the following provisions but also those set forth under "Statutory Factors, Proposed or Newly Organized Institutions". In the case of an existing institution, the FDIC will conduct an examination of the ongoing institution or its predecessor institution and a report prepared on the regular printed FDIC form, with appropriate notation on the cover indicating the special purpose of the examination. Under Examiner's Comments and Conclusions of the Supervisory Section of the Report of Examination, the examiner is required to discuss separately each of the seven statutory factors.

Financial History and Condition - While the financial history of an operating institution is usually reflected in its present condition, the basic cause or causes for an institution's condition, whether satisfactory or unsatisfactory, should be analyzed and the reasons therefor ascertained. Accordingly, where the financial history of an operating institution has not been successful or is questionable, the FDIC generally requires reasonable assurance that the cause or causes of any past difficulties of a serious nature have in large measure either been overcome or ceased to exist.

Date of primary organization should be indicated. Another important feature in the financial history of an existing institution is its past attitude on the prompt recognition and current charge-off of losses and the administration of dividend policies. In addition, mergers, consolidations, recapitalizations, reorganizations, liability assumptions, deposit waivers, deposit deferments, and similar events, which are not recent, should be covered in the Report of Examination, but in less detail.

With respect to an operating institution's financial condition, the FDIC customarily requires that the general quality of its net assets be satisfactory and on a par with that of peer institutions. In appraising the value and quality of an applicant operating institution's assets, the same appraisal and classification procedures and criteria are to be followed as in regular FDIC examinations. The "Items Subject to Adverse Classification" as well as the "Items Listed for Special Mention" pages in the Report of Examination as well as the "Summary Analysis of Examination Report" (SAER) should include data on the quality of an institution's net assets. This information should be summarized in the "Examination Conclusions and Findings" under an appropriate caption. General comments on asset condition and problems should also be included, as well as a summary of "Violations of Laws and Regulations", contingent liabilities, existing litigation against the institution, dividend and remuneration policies, and other matters which could affect the institution's condition.

Adequacy of the Capital Structure - An existing institution applying for deposit insurance should have sufficient capital to support the volume, type, and character of its business, provide for losses, and meet the reasonable credit needs of the community which it serves. The process of determining the adequacy of an institution's existing capital as well as that after three years of operation (considering estimated deposit growth) begins with a qualitative evaluation of critical variables that directly bear on the institution's overall financial condition. These variables as well as all the principles set forth in the FDIC Statement of Policy on Capital (Appendix B to Part 325), are applicable here. The Statement, setting forth various levels for adjusted equity capital, only provides a benchmark for evaluating capital adequacy. Although it establishes uniform standards for capital levels among depository institutions regardless of size, the ratios set forth therein are, however, only starting points since such ratios are not in themselves determinative and must be integrated with all other relevant factors such as character of management, quality of assets, and so on. In the final analysis, each case must be judged on its own merits. It should be recognized that various State banking departments may impose more stringent capital requirements than those set forth in the FDIC Statement of Policy on Capital.

The Report of Examination should include some of the data necessary for determining whether the applicant's capital is adequate. The data should also be summarized and augmented in the Examiner's Conclusions and Recommendations of the Supervisory Section under the caption "Adequacy of Capital Structure". If for any reason a substantial increase in deposits is anticipated, or any plans of the applicant with respect to the institution's capital structure are contemplated, or if the proponents appear receptive to a request for supplying additional capital, it should be so indicated in the Report of Examination. It is desirable to include under this caption, or as a supplemental page to the Report of Examination, a complete or reasonably complete list of all shareholders, their holdings, and related interests.

Future Earnings Prospects - The earnings capability of an existing institution is reflected in its earnings record. Ordinarily, an operating institution's earnings record should indicate ability to pay all operating expenses with a safe margin for the absorption of losses and for the payment of reasonable dividends. For comparative purposes, current earnings ratios may be obtained from various data prepared by the FDIC. If earnings have not been sufficient, areas where income may be improved or expenses reduced should be noted. The principles described in the Earnings Section of this Manual are applicable here. The income and expense figures reflected in the Report of Examination are book figures. If the examiner regards these figures as incorrect or misleading because of improper accounting for unearned discounts, failure to charge off losses, failure to properly depreciate fixed assets, or similar deviations from accepted practices, the matter should be fully discussed in the presentation of earnings data in the Supervisory Section. The examiner should also comment on the effect deposit insurance coverage might have on the institution's income and expenses in the future.

General Character of Management - In the case of an existing institution, management may be evaluated both from the standpoint of the institution's condition and the vantage point of management's past performance as reflected in the books and records of the institution, previous Reports of Examination and correspondence from other regulators, and internal records, such as committee and board of directors' minutes. A management rating of "2" or better is necessary to satisfy the requirements of this statutory factor. The rating of management is discussed in the Management Supervision, Administration and Control Section of this Manual.

Complete information on management will be included in the report. In addition, a summary discussion of important aspects of this information, together with information on director and officer indebtedness to the institution, should be included under this caption in the "Examiner's Conclusions and Recommendations" of the Supervisory Section. If management is not regarded as warranting a rating of "2" or better, it should be indicated what changes are believed essential to warrant such a rating. Fidelity insurance on active officers and employees and other indemnity protection should receive comment to the extent necessary under this captioned statutory factor.

Risk Presented to the Insurance Fund - Analysis of this factor is the same as previously described for proposed new institutions.

Convenience and Needs of the Community - The FDIC's criteria under this statutory factor are closely related to those outlined with respect to the "Future Earnings Prospects" factor. A going institution which is being successfully and profitably operated, and which has a recognized place and established customer relationships in its community, is for self-evident reasons convenient to and fulfilling the needs of the community it serves. An institution may, however, have had inferior earnings in the past and nevertheless qualify under this statutory factor. Any pertinent information with respect to local economic conditions, population trends, or unusual circumstances which have affected or may affect the community and the applicant should be commented on under this caption. It should be noted that the provisions of the Community Reinvestment Act are relevant in evaluating this statutory factor.

Consistency of Corporate Powers - Nonbanking powers and certain saving associations activities, other than trust powers, are regarded by the FDIC as inconsistent with the purposes of the Act. In some states, institutions have been granted the right under their charters or by statute to engage in certain nonbanking activities. Section 24 of the Act limits the powers of insured state banks and section 28 of the Act limits the powers of state chartered savings associations. If the institution is exercising any powers not authorized under the applicable statute, the application should contain an agreement and plan for eliminating the activity as soon as possible, or a separate application should be submitted seeking the FDIC’s consent to continue the activity.

Miscellaneous - If the applicant operates a trust department, an examination will be conducted and a Report of Examination compiled. The examiner should consider the condition and the prospects of the trust department in developing the conclusion for each factor enumerated under Section 6 of the Act. Should trust department operations be of sufficient influence in the final determination of the examiner's findings on any of the factors, it may be advisable to analyze the commercial and the trust operations under appropriate subheadings. The examiner should indicate the number of tellers' windows at which insured deposits will be received. If any of the documents essential for full consideration of the application have not been submitted to the FDIC, the proponents should be instructed to transmit such documents at the earliest practical date and a notation to that effect included in the report.

Examiners should indicate in their reports the sources of information on significant points covered in their comments. During the examination, the examiner should review reports of examination of other supervisory authorities and correspondence from these authorities.

Deposit Insurance Applications from Proposed Publicly Owned Depository Institutions

An application for deposit insurance from a depository institution which would be owned or controlled by a domestic governmental entity (such as, for example, a state, county or a municipality) will be reviewed very closely. The FDIC is of the opinion that due to their public ownership, such depository institutions present unique supervisory concerns that do not exist with privately owned depository institutions. For example, because of the ultimate control by the political process, such institutions could raise special concerns relating to management stability, their business purpose, and their ability and willingness to raise capital. On the other hand, such institutions may be particularly likely to meet the convenience and need of their local community, particularly if the local community is currently un- or under- served by depository institutions.

APPLICATIONS TO ESTABLISH A BRANCH OR TO MOVE MAIN OFFICE OR BRANCH

Provisions of Law

Under the provisions of Section 18(d) of the Federal Deposit Insurance Act (the "Act"), no State nonmember insured bank may establish and operate any new branch, or change the location of any existing branch, or move its main office, unless it obtains the prior written consent of the FDIC. The factors to be considered in granting or withholding such consent are those enumerated in Section 6 of the Act. Also included in Section 18(d) of the Act, no state nonmember insured bank shall establish or operate any foreign branch, except with the prior written consent of the FDIC. There are further restrictions detailed below concerning either establishment or relocation of branches in states other than the applicant's home state. Subpart C of Part 303 of the FDIC's Rules and Regulations governs the administrative handling of applications to establish a branch or to relocate an office.

Filing Procedures for Branch Applications

In applying to establish a branch or to relocate an existing office, State nonmember insured banks must file an application in letter form with the FDIC. A complete letter application shall include:
(1) a statement of intent to establish a branch or to relocate the main office or a branch;
(2) the exact location of the proposed site including the street address; and
(3) details concerning any involvement in the proposal by an insider of the bank;
(4) a statement on the impact of the proposal on the human environment, including information on compliance with the provisions of the NEPA (National Environmental Protection Act);
(5) a statement as to whether or not the site is eligible for inclusion in the National Register of Historic Places for purposes of complying with the applicable portions of NHPA (National Historic Preservation Act);
(6) comments on any changes in services to be offered, the community to be served, or any other effect the proposal may have on the applicant's compliance with the Community Reinvestment Act;
(7) a copy of each newspaper publication required; and
(8) when an application is submitted to relocate the main office of the applicant from one state to another, a statement of the applicant's intent regarding retention of branches in the state where the main office exists prior to relocation.

Expedited processing per Part 303 is available for eligible depository institutions. For those applications which are not processed pursuant to the expedited procedures, preliminary consideration will be given in the Regional Office to applications to determine whether an examination of the applicant bank should be ordered. In all cases, however, a Summary of Investigation Form for Branch Applications will be completed. Please refer to the Case Managers Procedures Manual for additional processing and filing information.

Interstate Banking Branch Applications

For applications to establish a de novo branch that is not in the applicant's home state and in which the applicant does not already maintain a branch, the application must comply with the state's filing requirements. The FDIC needs to determine that the applicant is adequately capitalized as of the date of the filing and will continue to be adequately capitalized and adequately managed upon consummation of the transaction; and confirmation that the host state has a law permitting state "opt-in" elections to enable interstate branching, pursuant to the Riegle-Neal Interstate Banking and Branching Efficiency Act of 1994.

For applications where the applicant already has one or more existing branches in a state other than the applicant's home state, a determination needs to be made that the application has not failed the host state's credit needs test and that it is reasonably helping to meet the credit needs of the communities which the branches serve.

Other Considerations for Branch Applications

As in the case of applications for deposit insurance, the provisions of the Community Reinvestment Act, the National Historic Preservation Act, and the National Environmental Policy Act of 1969, must be favorably resolved.

APPLICATIONS FOR CONSENT TO EXERCISE TRUST POWERS

Introduction

1. FDIC Section 333

The FDIC does not grant trust powers, but only gives its consent to exercise such powers as granted by state authorities. Section 333.2 of the FDIC's Rules and Regulations prohibits an insured state nonmember bank from changing the general character of its business without the FDIC's prior written consent. The test to determine when a change in character of business has occurred is left to the discretion of the FDIC. For trust powers, this normally occurs when a fiduciary relationship is created under the laws of the governing state authority. Therefore, it is general policy that unless a bank is exempted through the circumstances described in the Background section below, it must file a formal application with the FDIC to obtain prior written consent before it may exercise trust powers. It should also be noted that the statute applies only to banks. Separately chartered and capitalized uninsured trust company subsidiaries of banks need not apply for FDIC consent to exercise trust powers.

2. Background

In 1958 the FDIC articulated its basis for requiring consent to exercise trust powers (refer to page C-41 of the FDIC Trust Examination Manual), and established conditions for grandfathering consent. Banks granted trust powers by state statute or charter prior to December 1, 1950, regardless of whether or not such powers have ever been exercised, are not required to file an application with the FDIC for consent to exercise trust powers. Such consent is grandfathered with the approval for Federal deposit insurance.

Banks approved for Federal deposit insurance after December 1, 1950, are required to file an application to exercise trust powers, unless such filing was made simultaneously with the application for Federal deposit insurance.

3. Applications for Consent

Part 303 of the FDIC's Rules and Regulations governs the administrative handling of applications for consent to exercise trust powers. Application procedures are set forth in both Part 303 and the Case Managers Procedures Manual. Banks eligible for expedited processing under Part 303 (as defined therein) may file an abbreviated application. Application forms for both expedited and non-expedited processing are available at Regional Offices. Applications are reviewed in the context of the financial institution's ability to satisfactorily perform trust activities. In reviewing any such application, the statutory factors set forth in Section 6 of the Federal Deposit Insurance Act are also considered. Other factors which examiners should be aware of include:

a. Statement of Principles of Trust Department Management

The FDIC's "Statement of Principles of Trust Department Management" outlines minimum requirements for the sound operation of a trust department. Before final approval of any application for consent to exercise trust powers may be given, the applicant's board of directors is required to adopt the minimum requirements set forth in the "Statement".

b. Management Adequacy

To approve any application for consent to exercise trust powers, it must be concluded that management of the contemplated trust operation is capable. By adopting the "Statement of Principles of Trust Department Management", the applicant bank resolves to provide sufficient staff and facilities to meet minimum standards of competency in trust matters. Applications submitted for consent to exercise full trust powers by banks having inexperienced trust management, or management which is considered incapable of administering trust activities other than routine matters, should not be approved. Such applications should not be accepted for processing, but returned to the bank for resubmission at a later time. Where limited powers will suffice, the bank should be encouraged to amend its application for specified limited powers. Otherwise, the board of directors should be requested to seek qualified trust management if it wishes to obtain consent to exercise full trust powers. Nevertheless, Regional Directors may, when warranted, approve an application conditioned on the bank's hiring of qualified trust management which is acceptable to the FDIC.

c. Limited Trust Powers

Banks will sometimes be granted limited trust powers, usually confined to a few specific functions such as agent for employee benefit accounts, guardian of the property of minors, or capacities not requiring extensive expertise. In processing an application for consent to exercise limited trust powers, applicants should be required to specify the exact functions to be performed. At
examinations of banks having limited trust powers, the examiner should determine that only authorized activities are being performed.

d. Unauthorized Trust Activities

Commercial banks may be found performing fiduciary services without having obtained full or limited trust powers, or the FDIC’s consent to exercise such powers. In these cases, the examiner should determine what services are being performed, and review all written customer agreements. If a bank is acting in any capacity requiring trust powers, the examiner should:

(1) cite a violation of state law for performing fiduciary services without trust powers (if applicable);
(2) cite a violation of FDIC Section 333.2 for changing the character of its business without the FDIC's prior written consent;
(3) advise management:
(a) it must discontinue accepting any additional appointments;
(b) it should (upon advice of counsel) discontinue performing fiduciary services, if it can do so without jeopardizing its accounts or incurring additional liability upon itself;
(c) that it must apply to its state authority for trust powers (if applicable); and
(d) that it must also apply to the FDIC for consent to exercise the powers.

If a bank is acting in an agency capacity, the examiner should make a determination of the bank's duties and responsibilities.

Particular attention should be given to the degree of discretionary authority exercised. It should also be determined whether the bank is required to manage the assets, or to simply hold them subject to customer direction. If the bank's duties are those which require trust powers, the examiner should follow the procedures outlined in the preceding paragraph. Applications for consent to exercise trust powers subsequent to the discovery of unauthorized activities do not merit expedited processing. Such applications warrant consideration for approval subject to prior written conditions with management.

e. "Customer Service" versus "Fiduciary Activity"

It is not unusual for a bank to hold securities, notes, mortgages, or similar instruments in a "Customer Collections" department, collecting income and remitting it to customers. This could be considered a normal banking function not requiring trust powers. However, there have been instances where banks have entered into arrangements to make investment recommendations, buy and sell securities on their own authority, vote proxies, and otherwise deal with securities in the manner of a fiduciary. Banks have also entered into discretionary arrangements to execute repurchase agreements, or make other short-term investments using demand deposit accounts to settle transactions. Some escrow departments may hold, manage, rent, or otherwise administer real property in a manner, which reaches beyond conventional escrow relationships. All these activities constitute discretionary agencies typically requiring trust powers. Normally, the most important determining factor is the degree of discretionary authority exercised over funds and assets, with resulting exposure to contingent liabilities. Questionable cases should be submitted by the examiner to the Regional Office for determination.

f. Additional Information

Whether or not additional information is necessary to approve or recommend denial of an application for consent to exercise trust powers, is generally left to the discretion of the Regional Director. Additional information may be obtained by correspondence, telephone, or personal visit. Matters, which may be relevant in considering applications which, are not eligible for expedited processing include:

(1) Competition - If the lack of sufficient trust services in the trade area is of importance in determining a recommendation, competitive information should be secured from the Annual Report of Trust Assets of area banks.

(2) Trust Business Development - The size and scope of the proposed operation may be influenced considerably by the extent to which the applicant plans to use advertising, personal solicitation, and other public relations activities.

(3) Amount and Kind of Property and Potential Volume of Business - The sources of such data will vary. Any information as to trade area demographics, and the types of assets or property by which it is principally represented would, in some instances, prove beneficial.

(4) Deposit Structure - If collateral benefits to the bank, such as a substantial volume of new deposits in the banking department, are anticipated from the establishment of trust services, the bank may be required to provide full details. Caution is suggested in allowing too much weight in consideration for claims of collateral benefits, as these are often short-lived while the obligations of the trust services continue.

(5) Fixed Assets - If establishment of the trust department results in a significant increase in an already heavy fixed asset investment, full details should be requested.

(6) Deposit Insurance - As noted in FDIC Section 330.12, depending on the institution's Prompt Corrective Action capital category, pass-through deposit insurance may not be available on deposits of retirement and

employee benefit plans. This applies to deposits, which may obviously be made in the bank without regard to whether it has trust powers.

However, the likelihood of such deposits being made increases when banks acquire trust powers. The applicability of this section to applicants seeking consent should be ascertained. To the extent that deposits of such plans exist in the bank, or are contemplated, and pass-through deposit insurance is not available, care should be taken to ensure that procedures in both Parts 325 (Capital Maintenance) and 330 (Deposit Insurance Coverage) are being followed, and that corrective plans are in place.

C. CORPORATE STRUCTURE AND ORGANIZATION OF FIDUCIARY ACTIVITIES

1. General

The offering of trust services has long been regarded as an ancillary customer service, primarily the dominion of banks. However, toward the end of the twentieth century a number of forces have combined, with the result that fiduciary services are a dynamic and sought-after product line with significant profit potential. In the U. S., population trends have been a significant factor as the large post-World War II "baby boom" generation matures and accumulates wealth. The large size and consumer influence of this group has created much emphasis on wealth management and transfer. While this has presented trust service providers with more opportunity, it has also attracted competition from banking and non-banking industries. New delivery systems, new products, advances in technology, and consolidation within the financial industry, have all contributed to changes in how banks offer trust services. To properly evaluate these delivery systems the examiner needs an understanding of both the legal and functional organization of the bank's trust services.

The trust department, as a separate and visually distinct department of the bank, remains the most prevalent method for banks to deliver fiduciary services. However, the recent trend toward consolidation within the financial services sector has led to diverse restructuring and merger activity. In some instances, banks previously lacking trust product lines may have acquired them through mergers. In other cases, the "trust" line of business may have been purchased or sold by a bank. In some cases, trust services being provided by several individual banks owned by the same holding company may have been consolidated within one bank, or within a separately chartered trust company. In still other instances, a bank may have contracted with an unrelated outside party, to provide such services on-premises. Or conversely, the bank under examination may provide such services to other banks. In all cases, the examiner should seek to understand the organization, and review the structure of the delivery system for legality, reasonableness, and adequacy of compensation to the bank.

CHANGE IN BANK CONTROL ACT

Introduction

The Change in Bank Control Act of 1978, Title VI of the Financial Institutions Regulatory and Interest Rate Control Act of 1978, amended Section 7(j) of the Federal Deposit Insurance Act. The amendments gave Federal banking agencies authority to disapprove changes in control of insured banks and bank holding companies. The appropriate agencies for changes in control are: the FDIC for insured nonmember banks, The Board of Governors of the Federal Reserve System for member banks and bank holding companies, the Comptroller of the Currency for national banks, and the Director of the Office of Thrift Supervision for savings associations and savings and loan holding companies. Previous reporting requirements relating to loans by banks secured by stock of other banks and management changes occurring after a change in control were retained with some modification and these requirements were extended to bank holding companies and loans secured by bank holding company stock. The FDIC's objectives in its administration of the Change in Bank Control Act are to enhance and maintain public confidence in the banking system by preventing identifiable serious adverse effects resulting from anticompetitive combinations of interest, inadequate financial support, and unsuitable management in these institutions. The FDIC will review each notice to acquire control of an insured State nonmember bank and disapprove transactions likely to have serious harmful effects.

Provisions of Law

Section 7(j) of the FDI Act; Subpart E, Section 303.80 of the FDIC's Rules and Regulations and the FDIC Statement of Policy, "Changes in Control in Nonmember Banks," set forth in detail all necessary requisites and instructions.

Procedures

Any person (broadly defined) seeking to acquire control (power to vote 25% or more of any class of voting securities) of any insured bank or bank holding company, is required to provide sixty days prior written notice to the appropriate agency. A person means an individual or a corporation, partnership, trust, association, joint venture, pool, syndicate, sole proprietorship, unincorporated organization, or any other form of entity. A Notice of Acquisition of Control form is required to be filed with the appropriate Regional Office, accompanied by a completed and signed Financial Report and Biographical Information form for each of the acquiring parties to the extent known. Certain newspaper publication requirements are also required as indicated in Part 303.

The FDIC reviews the information reported in a Notice to assess any anticompetitive or monopolistic effects of the proposed acquisition, to determine if the financial condition of any acquiring person is such as might jeopardize the financial stability of the bank or prejudice the interests of the depositors of the bank, and to determine whether the competence, experience, or integrity of any inquiring person, or any of the proposed management personnel, indicates that it would not be in the interest of the depositors of the bank, or in the interests of the public, to permit such person to control the bank.

While processing and handling of Notices may parallel the procedures related to applications for deposit insurance, new branches, relocations, etc., at least one fundamental difference is present. In the case of statutory applications, the burden of making a case in support of a proposal falls on the applicant; in considering Notices, the FDIC exercises a veto, with a burden of sustaining a disapproval falling on the FDIC. Accordingly, in evaluating Notices, the FDIC need not find favorably on the various factors; the absence of unfavorable findings approximates tacit approval.

Regional Directors are delegated, with certain exceptions, authority to issue a written notice of the FDIC's intent not to disapprove an acquisition of control. Authority to disapprove has been delegated to the Director and Deputy Director (DOS) and where confirmed in writing by the Director to an associate director. If written views of the State authority recommend disapproval, or if an acquiring party discloses a conviction or a plea of no contest to a criminal charge involving dishonesty or breach of trust, the Regional Director makes a recommendation to Washington based on the findings under the factors.

The factors considered in evaluating Notices and the basis for disapproval are, in brief: whether the proposed acquisition of control would result in a monopoly; whether the effect the proposed acquisition of control in any section of the country may be substantially to lessen competition or to tend to create a monopoly, or would in any other manner be in restraint of trade; the financial condition of the acquiring party and its potential impact on the financial stability of the bank or prejudice the interests of depositors; the competence, experience or integrity of any acquiring person or proposed management; if any acquiring party neglects, fails, or refuses to furnish all the information required by the FDIC; or the effect on the Bank Insurance Fund or Savings Association Insurance Fund is adverse.

A transaction triggering the notice requirements may not result in the acquiring party actually gaining effective control of an institution. For example, a person acquiring 25% of voting control would not gain effective control if there were an existing shareholder with 50% of voting control. Nonetheless, the transaction triggers the notice requirement and a Notice should be evaluated as if it were an actual change in effective control. After once complying, further acquisitions by the same person in the same bank do not require filing of notices. An acquiring party who continuously remains within the definition of control needs to file only one notice per bank to be in compliance.

Certain types of transactions are exempt from prior notice requirements, such as those subject to Section 3 of the Bank Holding Company Act, Section 10 of the Home Owner's Loan Act, or Section 18 of the FDI Act, since they are covered by existing regulatory approval procedures. Accordingly, changes in control due to acquisitions by bank holding companies and those resulting from mergers, consolidations, or other similar transactions are not covered. Acquisition of shares of foreign banks are exempt, however, foreign banks with insured domestic branches are subject to the after-the-fact reporting requirements. Transactions resulting in voting control of 10% or more of any class of voting securities of banks whose securities are subject to the regulation requirements of Part 335 of the FDIC's Rules and Regulations are presumed to be acquisitions of control as are similar transactions of unregistered banks resulting in 10% or more control whereby the acquiring party would become the largest shareholder. These latter two are rebuttable presumptions of control. In addition, the following types of transactions are also exempt: a foreclosure of a debt previously contracted in good faith; testate or intestate successions; a bona fide gift; and; a transaction described in Section 2(a)(5) or 3(a)(5)(A) or (B) of the Bank Holding Company Act by a person there described.

Persons acquiring control by exempt transactions while not required to give prior notice, are required to provide after-the-fact information on the transaction and other information regarding changes in management or policies of the bank. Personal financial and biographical information may be requested subsequent to changes in control of these types at the discretion of the Regional Director. Affected banks are required to report changes or replacement of chief executive officers or directors occurring within twelve months after change in control, including a statement of the past and current business and professional affiliations of the new chief executive officer or director.

Section 7(j) of the FDI Act also requires the chief executive officer of an insured bank that makes a loan secured or to be secured by 25% or more of the voting stock of another insured bank to report the facts to the appropriate regulatory agency. No report need be made where the stock is that of a newly organized bank prior to its opening. Through the definition of insured bank, the reporting requirement is extended to include loans secured by bank holding company stock.

Effective enforcement of Section 7(j) of the FDI Act requires examiners to review stockholder ledgers and records and review correspondence files to determine whether any nonexempt stock transactions have occurred which would constitute an acquisition of control, whether prior notice has been provided to the FDIC where required, and, if bank management has complied with the after-the-fact reporting requirements relating to bank stock loan reports and changes or replacement of the chief executive or directors. Review of stockholder records must be conducted with particular attention to the statutory definition of control, including the presumptions of control established in Part 303 of the FDIC's Rules and Regulations. All substantial change in ownership transactions between examinations should be reviewed, however, a relatively small transaction may trigger the notice requirements and the statutory definition of control does not necessarily imply effective control. Examiners should also be alert to the formation of voting trusts, assignments of proxies of duration beyond the customary annual meeting solicitations, and other similar arrangements which effectively transfer voting control and which may require prior notice. The statute and implementing regulations do not elaborate on what constitutes a group acting in concert. A series of transactions which are individually insignificant, but significant when aggregated, may indicate a subterfuge, particularly if the individuals or entities involved have other business or professional relationships. Consultation with the Regional Office would appear prudent should such a situation of this type be encountered.

Apparent violations regarding acquisitions consummated without filing of a prior notice should be communicated to the Regional Office by telephone and reported in the Supervisory Section of the Report of Examination. Apparent violations for failure to comply with the after-the-fact reporting requirements should be detailed in the open section of the report under Violations of Laws and Regulations since civil money penalties may be invoked (refer to the Civil Money Penalties Section of this Manual).

APPLICATIONS FOR RETIREMENT OF CAPITAL

Introduction

Refer to the current FDIC Statement of Policy on Capital in the Capital Section of this Manual. Section 303.241 of the FDIC Rules and Regulations contains the procedures to be followed when an institution seeks the FDIC's prior approval to reduce the amount or retire any part of its common or preferred stock, or to retire any part of its capital notes or debentures.

There is concern that approval of a request to retire subordinated notes by a bank which is in danger of failure may in effect be granting preferred creditor status to the note holder. Consequently, unless a bank is in a condition which indicates it might fail within a reasonable time, the Regional Director should exercise delegated authority and approve the request.

Applicants should submit a letter application containing the following: type and amount of the proposed change to the capital structure and the reason for the change; a schedule detailing the present and proposed capital structure; the time period that the proposal will encompass; if the proposal involves a series of transactions affecting Tier 1 capital components which will be consummated in twelve months or less, the application shall certify that the insured depository institution will maintain itself as a well-capitalized institution as defined in Part 325 of the FDIC Rules and Regulations, both before and after each of the proposed transactions; if the proposal involves the repurchase of capital instruments, the amount of the repurchase price and the basis for establishing the fair market value of the repurchase price; a statement that the proposal will be available to all holders of a particular class of outstanding capital instruments on an equal basis, and if not, the details of any restrictions; and the date that the applicant's board of directors approved the proposal. Expedited processing is available for eligible depository institutions as defined in Part 303.

Adequacy of the remaining capital is the chief factor considered in acting upon applications for capital retirement or reduction. In granting or withholding consent, the FDIC must consider the six statutory factors: the financial history and condition of the bank; the adequacy of its capital structure; its future earnings prospects; the general character of its management; the convenience and needs of the community to be served and whether or not its corporate powers are consistent with the purposes of the FDI Act.

Section 18(i) of the FDI Act deals specifically with the subject of capital retirement. The FDIC's Legal Division has ruled that the provisions of this section also apply to capital retirements or reductions relative to the following: retirements or reductions which are part of another proposal for which a current application has been filed for FDIC approval; conversion of capital notes or debentures to an equivalent amount of common stock or preferred stock; conversion of preferred stock to an equivalent amount of common stock; and repurchase and retention by a bank of its own capital as part of a stock option plan.

Capital Notes and Debentures

Insured State nonmember banks customarily seek the FDIC's consent to retire subordinated notes or debentures at the time of proposed issuance of such obligations. The Legal Division is of the opinion that where a replacement of capital issues is clearly of a formalistic nature only, without an effective reduction in the amount of the bank's capital and with no change to the governing terms and conditions of the instruments themselves, the replacement should not be deemed to come within Section 18(i)(1) of the FDI Act.

All new subordinated note and debenture agreements must contain a statement to the effect that the prior consent of the FDIC is required before any portion of the debt can be retired. The purpose of including the statement is to assure that all parties involved, including future holders of the notes, are aware of the requirements of Section 18(i)(1). Where periodic mandatory payments are required, the agreement and the notes may include the additional statement that these particular mandatory payments have already been consented to by the FDIC, if such advance consent has, in fact, been given.

APPLICATIONS FOR MERGERS

Introduction

It is the policy of the FDIC to preserve the soundness of the banking system and promote market structures conducive to competition. A proposed merger, consolidation, and purchase of assets and assumption of liabilities are all hereafter referred to collectively as "mergers."

Provisions of Law

Section 18(c) of the FDI Act (the "Act"), popularly known as the Bank Merger Act, provides that, except with the prior written approval of the FDIC, no insured depository institution may merge with any other insured depository institution, if the acquiring, assuming or resulting institution is to be a nonmember insured bank. The section also requires approval before an insured depository institution may merge with a noninsured bank or institution. The section contains special provisions for interstate merger transactions. These are subject to section 44 of the FDI Act. In addition, the FDIC will consider in evaluating merger applications the requirements of the Community Reinvestment Act. The factors to be considered in granting or withholding approval are those enumerated in Section 18(c) of the "Act". Subpart D of Part 303 of the FDIC Rules and Regulations governs the administrative handling of "merger" applications.

Paragraph (4) of Section 18(c) of the "Act" provides that, before acting on an application, the FDIC must request reports on the competitive factors involved from the Attorney General, the Comptroller of the Currency and the Board of Governors of the Federal Reserve System. These reports must ordinarily be furnished within 30 days, and the applicant will, if it so requests, be given an opportunity to submit comments to the FDIC respecting the contents of the competitive factor reports.

Paragraph (5) of Section 18(c) prohibits the FDIC from approving anticompetitive mergers. To establish that any anticompetitive effect is clearly outweighed in the public interest, the proponents must show that probable effect of the transaction in meeting convenience and needs is likely to benefit all seekers of banking services in the areas of competitive impact, rather than merely those who seek, for example, large loan and trust services, and that the expected benefit cannot reasonably be achieved through other, less anticompetitive means. The statute also requires the FDIC to consider in every case the financial and managerial resources, future prospects of the existing and proposed institutions, as well as the convenience and needs of the community to be served.

Under Section 8(q) of the "Act," whenever the liabilities of an insured depository institution are assumed by another insured depository institution; the insured status of the institution whose liabilities are assumed terminates on the date of receipt by the FDIC of satisfactory evidence of the assumptions, and separate insurance of all assumed deposits terminates at the end of six months from the date the assumption takes effect or, in the case of any time deposit, the earliest maturity after the sixth-month period.

Branch closings in connection with a merger transaction are subject to the notice requirements of Section 42 of the FDI Act, including requirements of notification to customers.

Statement of Policy - Bank Merger Transactions

The FDIC Statement of Policy on Bank Merger Transactions was revised effective October 1, 1998. The FDIC is prohibited by law from approving any merger that would tend to create or result in a monopoly, or which would further a combination, conspiracy or attempt to monopolize the business of banking in any part of the United States. Similarly, the FDIC may not approve a transaction whose effect in any section of the country may be to lessen competition substantially, or which in any other manner would be in restraint of trade. The FDIC may, however, approve any such transaction if it finds that the anticompetitive effects of the proposed transaction are clearly outweighed in the public interest by its probable effect in meeting the convenience and needs of the community to be served, for example, where approval of the merger may prevent the probable failure of one of the banks involved. In every case, the FDIC must also consider the financial and management resources and future prospects of the existing and proposed institutions, and the convenience and needs of the community to be served.

In evaluating the various factors prescribed and making the necessary judgments on proposed merger transactions, it is the intent and purpose of the FDIC to foster and maintain a safe, efficient and competitive banking system that meets the needs of all elements of the communities served. With these broad goals in mind, the FDIC will apply the specific standards listed in the Policy Statement in evaluating and deciding proposed bank merger transactions.

Procedures

Banks seeking the FDIC's consent to engage in a merger transaction must file a formal application with the FDIC on the appropriate form. The FDIC will not take final action on an application until notice of the proposed transaction is published in a newspaper or newspapers of general circulation in the appropriate community or communities, in accordance with the requirements of Section 303.65 of the FDIC's Rules and Regulations.

Section 303.64 of the FDIC Rules and Regulations provides for expedited processing to eligible applications. In evaluating a merger application, the FDIC considers the following factors: the extent of existing competition between and among the merging institutions, other depository institutions, and other providers of similar or equivalent services in the relevant product markets within the relevant geographic markets. In its analysis of the competitive effects of a proposed merger transactions, the FDIC will focus particularly on the type and extent of competition that exists and that will be eliminated, reduced or enhanced by the proposed merger transaction.

In order to determine the effect of the proposed merger on competition, it is necessary to identify the relevant geographic market. The delineation of such market can seldom be precise, but realistic limits should be established so the effect of the merger upon competition can be properly analyzed. The FDIC recognizes that different banking services may have different relevant geographic markets. However, the market should not be drawn so expansively as to cause the competitive effect of the merger to seem insignificant. Conversely, the market should not be drawn so narrowly as to place competitors in entirely different markets. After the relevant geographic market has been identified, the competitive effect of the proposed merger can be analyzed. A merger not having a substantially adverse competitive effect may nevertheless be disapproved if, after considering the banking factors, the FDIC concludes that the resultant bank will have inadequate capital, unsatisfactory management, or poor earnings prospects. Refer to the policy statement for further competitive effects analytical explanation.

In addition to the competitive analysis, the FDIC will consider prudential factors. These include the existing institutions overall condition, including capital, management and earnings. Apart from competitive considerations, the FDIC normally will not approve a proposed merger transaction where the resulting institution would fail to meet existing capital standards, continue with weak or unsatisfactory management, or whose earnings prospects, both in terms of quantity and quality are weak, suspect or doubtful. In assessing capital adequacy and earnings prospects, particular attention will be paid to the adequacy of the allowance for loan and lease losses. In evaluating management, the FDIC will rely to a great extent on the supervisory histories of the institutions involved and of the executive officers and directors that are proposed for the resultant institution.

The Convenience and Needs factor is also evaluated. Under this factor, the FDIC will consider the extent to which the proposed merger transaction is likely to benefit the general public through higher lending limits, new or expanded services, reduced prices, increased convenience in utilizing the services and facilities of the resulting institution, or other means. The FDIC, as required by the Community Reinvestment Act, will also note and consider each institution's CRA performance evaluation record. An unsatisfactory record may form the basis for denial or conditional approval of an application.

The commitment to pay or payment of unreasonable or excessive fees and other expenses incident to an application reflects adversely upon the management of the applicant institution. The FDIC will closely review expenses for professional or other services rendered by present or prospective board members, major shareholders or other insiders for any indication of self-dealing to the detriment of the institution. As a matter of practice, the FDIC expects full disclosure to all directors and shareholders of any arrangement with an insider. In no case will the FDIC approve an application where the payment of a fee, in whole or part, is contingent upon any act or forbearance by the FDIC or by any other federal or state agency or official.

Where banking offices are to be closed in connection with the proposed merger transaction, the FDIC will review the merging institution's conformance to any applicable requirements of section 42 of the FDI Act concerning notice of branch closing as reflected in the interagency Policy Statement Concerning Branch Closing Notices and Policies. Although the appropriate application must be filed with the FDIC and statutory factors are considered in the case of "interim" (mergers or other transactions involving an existing bank and a newly chartered bank or corporation for the purpose of corporate reorganization) and other corporate reorganizations (transactions involving banks controlled by the same holding company or transactions involving banks or their subsidiaries), these types of transactions normally do not have any effect on competition or otherwise have significance under relevant statutory standards set forth in Section 18(c) of the FDI Act. The guidelines set forth above for "mergers" have only general applicability and may have no applicability depending on the specific circumstances involved in individual transactions.

APPLICATIONS BY UNDERCAPITALIZED DEPOSITORY INSTITUTIONS FOR A WAIVER TO ACCEPT, RENEW OR ROLLOVER BROKERED DEPOSITS

Provisions of Law

Section 224 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 added Section 29 to the FDI Act, prohibiting the acceptance, renewal or rollover of brokered deposits by any undercapitalized insured depository institution (bank or savings association) except on specific application to and waiver of the prohibition by the FDIC.

Section 337.6 of the FDIC's Rules and Regulations provides guidance and detail on when an institution is considered undercapitalized, when certain deposits are considered "brokered" for purposes of the prohibition, and the circumstances under which a waiver from the prohibition may be obtained. Section 303.243 contains the procedures to follow to file with the FDIC for a brokered deposit waiver. Expedited processing of these filings is extended to eligible depository institutions with the caveat that for purposes of this filing, eligible depository institutions may be adequately capitalized, according to the definition found in Section 325.103 of the FDIC's Rules and Regulations, rather than well-capitalized as is required for other filings.

The regulation takes a broad view of when an institution is considered undercapitalized and a narrow view of the circumstances under which a waiver may be obtained with the result and expectation that such institutions will not accept new brokered deposits and over some reasonable time frame all undercapitalized depository institutions utilizing brokered deposits will have to either meet applicable capital standards or eliminate brokered deposits from their books.

Procedures

Undercapitalized insured depository institutions may file waiver applications under section 337.6 with the Regional Office where they are headquartered. Institutions may apply for a waiver in letter form or on an optional application form. Applications should contain: the time period for which the waiver is requested, a statement of the policy governing the use of brokered deposits in the institution's overall funding and liquidity management program; the volume, rates and maturities of the brokered deposits held currently and anticipated during the waiver period sought, including any internal limits placed on the terms, solicitation and use of brokered deposits; how brokered deposits are costed and compared to other funding alternatives and how they are used in the institution's lending and investment activities, including a detailed discussion of asset growth plans; procedures and practices used to solicit brokered deposits, including an identification of the principal sources of such deposits; management systems overseeing the solicitation, acceptance and use of brokered deposits; a recent consolidated financial statement with balance sheet and income statements; and the reasons the institution believes its acceptance, renewal or rollover of brokered deposits would pose no undue risk.

Authority is delegated to Regional Directors or Deputy Regional Directors to approve or deny brokered deposit waiver applications. Based upon a preliminary review, any delegate may grant a temporary waiver for a short period in order to facilitate the orderly processing of a filing for a waiver. A waiver should be for a fixed period, generally no longer than two years, and may be revoked by the FDIC at any time by written notice to the institution.

POLICY STATEMENT ON ENCOURAGEMENT AND PRESERVATION OF MINORITY OWNERSHIP OF FINANCIAL INSTITUTIONS

Introduction

In recognition of the unique status of minority-owned depository institutions in the financial system, it is the policy of the DOS to proactively preserve minority ownership of financial institutions and to encourage minority participation in the management of financial institutions. This policy is intended to be consistent with the FDIC's broader mission of preserving the soundness of the banking system and promoting fair market structures conducive to competition and community service.

For the purposes of this policy statement, the term minority-owned institution means an FDIC-insured depository institution where more than 50% of the voting stock is owned or controlled by minority individuals or organizations, or in the case of a mutual depository institution, the majority of the Board of Directors, account holders and the community which it serves are members of a minority group. The term "minority" means any Black American, Native American, Hispanic American, or Asian American.

Statutory Requirements

The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) contains several provisions relating to the preservation of minority ownership of financial institutions. These statutes provide a framework for this policy statement.

Section 13(k) of the FDI Act deals with emergency acquisitions of distressed savings associations. Section 13(k)(2)(B) addresses the acquisition of minority-controlled depository institutions by stating: "the FDIC shall seek an offer from other minority-controlled depository institutions before seeking an offer from other persons or entities.

Section 13(f)(12) of the FDI Act eliminates the $500,000,000 asset cut-off for acquisition of a distressed minority-controlled bank by an out-of-state minority-controlled depository institution or depository institution holding company.

Section 308 of FIRREA sets goals to preserve minority ownership of financial institutions. These goals are set out as:

1. Preserving the number of minority depository institutions;
2. Preserving the minority character in cases of merger or acquisition;
3. Providing technical assistance to prevent insolvency of institutions not now insolvent;
4. Promoting and encouraging creation of new depository institutions; and
5. Providing for training, technical assistance, and education programs.

Discussion

The Division of Supervision becomes involved in the creation of new minority ownership through its responsibility for acting on applications for federal deposit insurance and mergers and reviewing notices of acquisition of control. For those minority applicants who are not familiar with the required laws, procedures or forms, technical expertise and assistance should be made available through DOS Regional Offices.

One very effective method of preserving minority ownership is to maintain the health of existing minority-owned depository institutions. In this regard, DOS is committed to a program of regular examination of all banks for which it has primary supervisory responsibility. This examination program is intended to detect deteriorating trends and to work with management to correct them. Correction of any adverse trends in institutions normally is handled through regular supervisory channels. In the event that management is unable to effect correction because of a lack of resources or technical expertise, DOS will provide assistance where practical. Additionally, DOS encourages other depository institutions to be available to provide technical expertise to minority-owned institutions.

Training, education and technical assistance are available through the FDIC in such areas as call report preparation, consumer affairs and civil rights, and accounting. FDIC personnel generally are available for attendance at conferences or seminars dealing with issues of concern to minority groups.

Procedures and Related Matters

Applications - Notices of acquisition of control and applications for deposit insurance and merger from minority-owned institutions will be submitted to the appropriate regional office and processed under established procedures. Those applications which involve creation or preservation of minority ownership also will be considered in the context of the effect of the transaction on the goal of preserving minority ownership. Technical assistance in the completion of the documentation of these applications is available upon request from the regional office.

Operating Institutions in Need of Assistance - Through its normal supervision, the FDIC will be aware of institutions in need of remedial or preventative attention. Field examiners and regional office staff will make suggestions and offer assistance, which an institution is free to accept. Institutions are also urged to make their needs known to the Regional Director who will do all they can to help. To the extent possible, the FDIC will consider invitations to participate in seminars, conferences and workshops directed to minority audiences.

Request for Financial Assistance - Requests from minority groups for assistance in resolving a failing minority-owned depository institution will be considered at the same time as assistance requests or failing bank bids received from non-minority groups; however, preference generally will be given to a minority group proposal. Technical assistance in preparing these applications is available upon request.

Failing Banks - In the event a minority-owned bank deteriorates into a failing condition, a list of eligible bidders is compiled. Generally, preference will be given to qualified minority bidders located 1) in the same local market area, 2) in the same state, and 3) nationwide. Trade associations will be contacted for names of possible interested parties which may be contacted. Groups interested in becoming bidders must have appropriate clearance from other responsible regulatory agencies.

APPLICATIONS PURSUANT TO SECTION 19 OF THE FDI ACT – CRIMES INVOLVING DISHONESTY OR BREACH OF TRUST OR MONEY LAUNDERING, OR PRETRIAL DIVERSION PROGRAMS FOR SUCH OFFENSES

Provisions of Law

Section 19 of the FDI Act prohibits, without the prior written consent of the FDIC, a person convicted of any criminal offense involving dishonesty, breach of trust, money laundering, or who has agreed to enter into a pretrial diversion or similar program for such offense, from becoming or continuing as an institution-affiliated party, owning or controlling, directly or indirectly an insured depository institution, or otherwise participating, directly or indirectly, in the conduct of the affairs of an insured institution.

Section 19 imposes a duty upon the insured institution to make a reasonable inquiry regarding an applicant's history, which consists of taking steps appropriate under the circumstances, consistent with applicable law, to avoid hiring or permitting participation in its affairs by a person who has a conviction or program entry for a covered offense. The FDIC believes that, at a minimum, each insured institution should establish a screening process that provides the insured institution with information concerning any convictions or program entry pertaining to a job applicant. This would include, for example, the completion of a written employment application (although other alternatives may be appropriate) that requires a list of all convictions and program entries. The FDIC will look to the circumstances of each situation to determine whether the inquiry is reasonable.

Upon notice of a conviction or program entry, the institution should obtain forms and instructions from, and file an application with, the appropriate FDIC Regional Director. The application must be filed by an insured depository institution on behalf of a person, unless the FDIC grants a waiver of that requirement. The FDIC will consider such waivers on a case-by-case basis where the institution shows substantial good cause for granting a waiver.

The above information represents a partial summary of the requirements of Section 19. For definitions of terms and additional guidance, examiners should refer to the FDIC Statement of Policy on Section 19 of the FDI Act.

Examiner Responsibilities

Examiners should review conformance with the FDIC Statement of Policy for Section 19 of the FDI Act during examinations of institutions where risk-scoping activities indicate a material degree of risk with respect to this area. The scope or depth of these reviews should comply with the guidelines detailed in the risk-focused supervision examination modules.

APPLICATIONS PURSUANT TO PART 362 OF THE FDIC's RULES AND REGULATIONS – ACTIVITIES AND INVESTMENTS OF INSURED DEPOSITORY INSTITUIONS

Revised Part 362 and related amendments to Part 303 became effective January 1, 1999. The revised rule provides the framework for which certain state-chartered banks or their majority-owned subsidiaries may engage in activities that are not permissible for national banks or their subsidiaries. The institution's chartering authority must permit all contemplated activities.

Under Part 362, well-capitalized, state-chartered banks or their subsidiaries may engage in certain otherwise impermissible activities without seeking specific FDIC consent if the bank complies with any limits or conditions restricting those activities. Other activities require depository institutions to submit either a notice or application to the FDIC.

The notice procedure is designed to expedite the processing of requests from banks meeting various eligibility requirements. Activities to which notice processing has been extended include securities underwriting and real estate investment activities.

OTHER APPLICATIONS

Subpart F of Part 303 – Change of Director or Senior Executive Officer

Insured state nonmember banks are to give the FDIC written notice at least 30 days prior to adding or replacing any member of its board of directors, employing any person as a senior executive officer of the bank, or changing the responsibilities of any senior executive officer so that the person would assume a different senior executive officer position if:

(1) The bank is not in compliance with all minimum capital requirements applicable to the bank

(2) The bank is in troubled condition, or

(3) The FDIC determines, in connection with its review of a capital restoration plan that such notice is appropriate

Waivers to the pre-filing requirement may be applied for and granted if delay would threaten the safety or soundness of the bank or not be in the public interest. In the case of the election of a new director not proposed by management at a meeting of the shareholders, the prior 30-day notice is automatically waived provided that a complete notice is filed with the appropriate regional director within two business days after the individual's election.

Subpart I – Mutual-to-Stock Conversions

An insured state chartered mutually owned savings bank that proposes to convert from mutual to stock form shall file with the FDIC a notice of intent to convert to stock form.

At a minimum, such notice shall contain:

- The plan of conversion with specific information concerning the record date used for determining eligible depositors and the subscription offering priority;
- Certified board resolutions relating to the conversion;
- A business plan including a discussion of how the capital acquired in the conversion will be used, expected earnings for at least a three year period following the conversion and a justification for any proposed stock repurchase;
- The charter and bylaws of the converted institution
- The bylaws and operating plans of any other entities formed in connection with the conversion transaction such as a holding company or charitable foundation;
- A full appraisal report, prepared by an independent appraiser of the value of the converting institution and the pricing of the stock to be sold in the conversion transaction;
- Detailed descriptions of any proposed management or employee stock benefit plans or employment agreements and a discussion of the rationale for the level of benefits proposed;
- Indemnification agreements;
- A preliminary proxy statement and sample proxy;
- Offering circular(s);
- All contracts or agreements relating to solicitation, underwriting, market-making or listing of conversion stock and any agreements among members of a group regarding the purchase of unsubscribed shares;
- A tax opinion concerning the federal income tax consequences of the proposed conversion;
- Consent from experts to use their opinions as part of the notice; and
- An estimate of conversion-related expenses.

The FDIC shall review the notice and other materials for considerations such as: the proposed use of the proceeds, the adequacy of the disclosure materials, the participation of depositors in approving the transaction, the appropriateness of any proposed increased compensation and other remuneration to be granted to officers and directors, the adequacy and independence of the appraisal of the value of the mutual savings bank for purposes of determining the price of the shares of stock to be sold and the extent to which the proposed conversion transaction conforms with the various provisions of the mutual-to-stock conversion regulations of the Office of Thrift Supervision.

The FDIC will issue either a letter of non-objection if the FDIC determines that the proposed conversion transaction would not pose a risk to the institution's safety or soundness, or a letter of objection. In the latter case, if the FDIC determines either that the proposed conversion transaction poses a risk to the institution's safety or soundness, violates a law or regulation, or presents a breach of fiduciary duty, the objection letter would instruct the institution not to consummate the transaction until such point as the objection letter is rescinded.

Other Filings

Golden Parachute and severance plan payments – Pursuant to section 18(k) of the FDI Act and Part 359 of the FDIC Rules and Regulations, an insured depository institution or depository institution holding company may not make golden parachute payments or excess nondiscriminatory severance plan payments unless permission is obtained.

For additional information and guidance on the various applications, please also refer to:

- The Division of Supervision and Consumer Affairs **Formal and Informal Action Procedures Manual**, and
- The Division of Supervision and Consumer Protection **Case Managers Procedures Manual**.

INTRODUCTION

Regulatory agencies may use formal or informal procedures to address weak operating practices, deteriorating financial conditions, or apparent violations of laws or regulations. A memorandum of understanding (MOU) is a common informal agreement used by the FDIC to obtain a commitment from a bank's board of directors to implement corrective measures. Other informal actions include board resolutions, letter agreements, and other forms of bilateral agreements or unilateral actions. Informal actions are not public information or legally enforceable. A financial institution's failure to implement the corrective measures detailed in an informal agreement may lead to formal corrective actions.

←

MEMORANDUMS OF UNDERSTANDING

An MOU provides a structured way to correct problems at institutions that have moderate weaknesses, but have not deteriorated to a point requiring formal corrective actions. An MOU may be appropriate if examiners (after discussing examination findings with field- and regional-office personnel and the bank), determine that the board of directors and management are committed to, and capable of, implementing effective corrective measures.

An MOU may be used to address specific problems at institutions rated 1 or 2 and should, at a minimum, be considered for all institutions rated 3. An MOU may not be required at an institution rated 3 if the regional director or designee determines that the institution's financial condition improved significantly or that there are other strong mitigating circumstances. For example, a weak management team may have been replaced by a strong management team, or an acceptable action by a state authority might make an MOU unnecessary. However, the mere belief that management recognized its errors and will improve the bank's condition is generally not a sufficient reason to make an exception.

Examiners should consider recommending formal enforcement action pursuant to Section 8 of the Federal Deposit Insurance (FDI) Act for institutions rated 3 if management appears unwilling to take appropriate corrective measures, and for all composite 4- or 5-rated institutions.

Memorandum Considerations

When determining whether to seek an informal (or formal) action, examiners should consider:

- Management's attitude towards complying with laws and regulations and correcting undesirable or objectionable practices;
- Whether violations or objectionable practices were intentional, repetitive, substantive, or numerous;
- The institution's history of violations and unsatisfactory practices;
- Management's history of instituting timely remedial or corrective actions;
- Whether management already initiated corrective actions;
- Whether management established procedures to prevent future deficiencies or violations;
- The extent of harm caused, or likely to be caused, by the violations or unsatisfactory practices; and
- Any other circumstances that warrant use of an informal action.

Issuing Memorandums

Examiners considering the use of an MOU should contact their supervisory examiner, field supervisor, or regional reviewer (in accordance with regional policy) to discuss the possibility of issuing an MOU. When an institution is affiliated with a bank or holding company supervised by another federal regulatory agency, the regional reviewer should notify the agency of the proposed action. In all instances, state authorities should be notified of, and invited to join, proposed actions.

If an MOU is deemed appropriate, the examiner should draft a memorandum to the regional director recommending the MOU and detailing areas that the MOU should address. The examiner's memorandum to the regional director should include:

- A brief description of the examination findings, and
- Detailed recommendations for addressing each significant concern.

With the concurrence of the regional office, the examiner (and when appropriate, regional- or field-office representatives) should discuss the possible use of an MOU with management and the board at the exit and board meetings. Also, with regional- or field-office concurrence, the examiner should explain that the FDIC might consider implementing other actions if the MOU does not result in effective corrective actions.

Monitoring Compliance with Memorandums

Monitoring an institution's progress in achieving the goals of an outstanding MOU may involve offsite monitoring, visitations, and examinations. Examiners should reflect the adequacy of an institution's response to an MOU in the Management rating.

Examiners should include a summary of outstanding MOUs in the Examination Conclusions and Comments section of the Report of Examinations (ROE). Examiners should detail action provisions and the status of compliance with the provisions on the Compliance with Enforcement Actions page. Examiners should describe each provision and the status of compliance at the first examination after the issuance of an administrative action. At subsequent examinations, examiners may summarize provisions and only address requirements of a continuing nature and items that the institution had not complied with at the previous examination.

Examiner comments should sufficiently detail the institution's actions or inactions so readers can draw meaningful conclusions concerning the extent of compliance. Examiners should not use broad statements of opinion such as "compliance is noted," or "not in compliance." Comments should factually describe corrective efforts and indicate whether or not agreed upon time limits have expired. As part of this analysis, examiners should also determine the underlying reasons for an institution's failure to meet provisions of the MOU or improve the bank's condition over a reasonable time frame, and discuss with the Regional Office whether new or revised provisions, or a formal action, would be appropriate.

Terminating Memorandums

Outstanding MOUs should be terminated promptly when:

- The institution has substantially complied with the terms of the MOU,
- The institution's condition has improved sufficiently and the action is no longer necessary,
- A new formal or informal action is issued that addresses all areas of concern, or
- The institution is merged or closed.

Regional office personnel should coordinate the termination of an MOU with any involved state or other federal authority.

←

SECTION 39

Section 39 of the FDI Act requires federal banking agencies to prescribe various standards for insured depository institutions. Section 39 allows the FDIC to request corrective plans from financial institutions that do not meet the standards, which are set forth in Part 364 and the interagency guidelines in Appendix A and Appendix B to Part 364. The standards provide financial institutions guidelines for overseeing activities relating to risk management and daily operations. Section 39 also provides banking agencies a tool to address weak risk management practices or operating weaknesses in otherwise financially sound institutions before deficiencies lead to capital deterioration. The standards relate to issues such as:

- Internal controls, information systems, and internal audit systems;
- Loan documentation and credit underwriting;
- Interest rate exposure;
- Asset growth;
- Compensation, fees, and benefits; and
- Other operational and managerial matters.

Section 39 also provides a tool for the banking agencies to address weak risk management practices or operating weaknesses in otherwise financially sound institutions before deficiencies lead to capital deterioration.

If an institution fails to meet these standards, the FDIC may pursue informal action under Section 39 by requesting management to submit a Safety and Soundness Compliance Plan. The plan must describe the steps the institution will take to correct identified deficiencies and the time frames for completing the steps.

If an institution fails to submit a requested plan or fails to adhere to a submitted plan, the FDIC will pursue formal enforcement action. Procedures for requesting submission of a compliance plan and issuing an enforceable order pursuant to Section 39 are detailed in Subpart R to Part 308 of the FDIC Rules and Regulations.

Examiners considering whether to request a Section 39 plan should contact their case manager to discuss the appropriateness of the request. If regional management determines supervisory action pursuant to Section 39 is warranted, examiners should submit a recommendation memorandum to their regional director.

Note: Examiners and regional directors must exercise care to avoid requesting compliance plans if identified problems are correctable through standard examination practices.

INTRODUCTION

The Financial Institutions Regulatory and Interest Rate Control Act of 1978 (FIRIRCA) gave the FDIC authority to prospectively assess civil money penalties (CMPs) against both banks and individuals. The Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) significantly increased the penalties for both banks and individuals and broadened the applicability of civil money penalties. Civil money penalties may be assessed for the violation of any law or regulation, any final order or temporary order issued, any condition imposed in writing by the appropriate Federal banking agency in connection with the approval of any application, and any written agreement between a depository institution and Federal banking agency. For example, civil money penalties may be assessed in the following instances:

1. Violations involving changes in control of banks. Refer to Section 7(j) of the FDI Act, Parts 303 and 308 of the FDIC Rules and Regulations, and the Applications Section of this Manual.
2. Violations involving participation by a convicted individual in the affairs of an insured depository institution. Refer to Section 19 of the FDI Act and the Applications Section of this Manual.
3. Violations of cease-and-desist orders that have become final. Refer to Section 8(i)(2) of the FDI Act, Part 308 of the FDIC Rules and Regulations, and the Formal Administrative Actions Section of this Manual.
4. Violations of Section 23A of the Federal Reserve Act (loans to affiliates). Refer to Section 18(j)(1) and 18(j)(3) of the FDI Act, Part 308 of the FDIC Rules and Regulations, and the Related Organizations Section of this Manual.
5. Violations of Section 22(h) of the Federal Reserve Act (loans to directors, officers, and principal stockholders). Refer to Section 18(j)(2) and 18(j)(3) of the FDI Act, Part 308 of the FDIC Rules and Regulations, and the Management Section of this Manual.
6. Violations of Section 106(b) of the Bank Holding Company Act (tying arrangements - official family loans and linked correspondent accounts). Refer to Section 106(b)(2)(F) of the Bank Holding Company Act Amendments of 1970, Part 308 of the FDIC Rules and Regulations, and the Related Organizations Section of this Manual.
7. Violations of Section 3907 of the International Lending Supervision Act of 1983 involving an issued Capital Directive. Refer to Sections 3907 and 3909 of ILSA, Part 325 of the FDIC Rules and Regulations, the Capital Section and the Formal Administrative Actions Section of this Manual.

VIOLATIONS

The previously mentioned statutes and regulations, with the exception of those relating to changes in bank control, define "violations" as including, but not limited to, "any action (alone or with another) for or towards causing, bringing about, participating in, counseling, or aiding or abetting a violation." The definition is exceptionally broad and will likely encompass any violation of the applicable statutes.

ASSESSMENT OF CIVIL MONEY PENALTIES

Civil money penalties are assessed not only to punish the violator according to the degree of culpability and severity of the violation, but also to deter future violations. Although relevant to the FDIC's interests, the primary purpose for utilizing civil money penalties is not to effect remedial action. Such action, in the form of restitution or other corrective measures, should be separately pursued.

In 1998, the FDIC adopted a revised interagency statement of policy regarding the assessment of civil money penalties. To facilitate evaluation of the gravity of such violation(s), the policy statement sets forth the following factors which must be considered in determining whether civil money penalties should be imposed:

1. Evidence that the violation or practice or breach of fiduciary duty was intentional or was committed with a disregard of the law or with a disregard of the consequences to the institution;
2. The duration and frequency of the violations, practices, or breaches of fiduciary duty;
3. The continuation of the violations, practices, or breach of fiduciary duty after the respondent was notified or, alternatively, its immediate cessation and correction;
4. The failure to cooperate with the agency in effecting early resolution of the problem;
5. Evidence of concealment of the violation, practice, or breach of fiduciary duty or, alternatively, voluntary disclosure of the violation, practice or breach of fiduciary duty;
6. Any threat of loss, actual loss, or other harm to the institution, including harm to the public confidence in the institution, and the degree of such harm;
7. Evidence that a participant or his or her associates received financial gain or other benefit as a result of the violation, practice, or breach of fiduciary duty;

8. Evidence of any restitution paid by a participant of losses resulting from the violation, practice, or breach of fiduciary duty;
9. History of prior violation, practice, or breach of fiduciary duty, particularly where they are similar to the actions under consideration;
10. Previous criticism of the institution or individual for similar actions;
11. Presence or absence of a compliance program and its effectiveness;
12. Tendency to engage in violations of law, unsafe or unsound banking practices, or breaches of fiduciary duty; and
13. The existence of agreements, commitments orders, or conditions imposed in writing intended to prevent the violation, practice, or breach of fiduciary duty.

FDIC policy provides that civil money penalty recommendations should only be initiated when the fineable violation is believed to meet the test of gravity as required by FIRIRCA including consideration of the 13 relevant factors found in the interagency statement of policy and the existence of any one of the following criteria:

1. The violation causes the bank to suffer a substantial financial loss;
2. The violation is willful, flagrant, or otherwise evidences bad faith on the part of the bank or individual(s) involved in the violation (including repeated and/or multiple violations, if applicable);
3. The violation directly or indirectly involves an insider, or an associate of an insider, who benefits from the transaction in a material or substantial way; or
4. Previous supervisory means (i.e., specific supervisory comment or correspondence, Memorandum of Understanding, previous civil money penalty assessment, or Cease-and-Desist Order) have not been effective in eliminating or deterring violations.

The aforementioned policy delineates the circumstances under which civil money penalty action may possibly be initiated, but is not intended to preclude consideration of any other matters relevant to a possible civil money penalty assessment. In addition, other fineable violations will be evaluated for recommendation of civil money penalties based on the 13 factors listed above. Where assessment of a civil money penalty is not considered appropriate in these cases, corrective action may be sought by means of a Supervisory Letter sent by the Regional Office to the bank's board of directors. The letter should request adoption of a resolution indicating the directorate's intent to correct the violation(s) and request that procedures be implemented to prevent future infractions. The bank should also be advised to notify the Regional Director when and how the violation(s) have been remedied. An insufficient response from the bank/individual to the Regional Office on the issues covered in the Supervisory Letter may constitute grounds for recommending initiation of civil money penalties.

With regard to a violation of a Cease-and-Desist Order which has become final or an issued Capital Directive, at the discretion of the Regional Director, a recommendation may be made (1) for court enforcement under Section 8(i)(1) of the FDI Act or (2) for initiation of assessment of a civil money penalty, as authorized. The determination should be based on which appears to be most appropriate for the given situation, will most likely result in correction of deficiencies giving rise to the penalty and will achieve the FDIC's objectives.

Penalties

It is the FDIC's policy that, whenever a violation committed by an individual results in personal financial or economic gain and/or financial loss to the bank, the amount involved shall be repaid as a portion of the penalty assessment or, preferably, through restitution to the bank if the bank suffered a loss. More specifically, an attempt should be made to have the individual make restitution to the injured bank for all losses suffered, or absent restitution, repay the personal gain or bank loss through the recommended assessment, plus pay a penalty over and above these amounts for violating the law. If the bank has suffered a loss, willingness and promptness in making restitution should have a bearing on the amount of penalty recommended. If the size of the bank's loss is such that restitution to the bank is desirable and there is no response to informal action, Section 8(b) action should be considered. If the size of the bank's loss is of little consequence in relation to the bank's financial resources, then the amount of loss should be incorporated into the recommended assessment.

Tiered penalty levels have been established. Tier 1 penalties of up to $5,500 per day may be assessed for most violations. If a party commits a violation, recklessly engages in an unsafe or unsound practice or breaches a fiduciary duty which is part of a pattern of misconduct, causes more than minimal loss to the institution or results in a pecuniary gain to such party, then the potential maximum penalty (Tier 2 penalty) increases to $27,500 per day. A Tier 3 penalty of the lessor of $1,100,000 or 1% of total assets may be assessed if a violation, unsafe or unsound practice, or breach of fiduciary duty is knowingly committed and causes a substantial loss to the institution or a substantial pecuniary gain to the violator.

Examiners should recommend a specific money penalty and, as stated in the policy statement, the financial or economic benefit received by the violator should be given significant consideration. In this regard, details of any such benefits must be adequately documented. Depending on the circumstances, the proposed penalty may be:

1. A multiple of the benefit when a strong deterrent on future actions is believed warranted;
2. A fraction when credible assurance of future compliance is received and, where applicable, restitution has been made; or
3. Simply the benefit itself.

To determine an appropriate penalty amount, each case must be considered on its own merits in light of the factors in the law and the policy statement. Consideration should be given to the maximum amount (which must not be exceeded) that can be assessed under the statutes; however, in many cases the amount is so large as to be considered unreasonable and the penalty should be tempered through judgment as to the seriousness of the violation. Prime factors to be considered are the amount of loss to the bank and/or gain to the individual charged, if any. Restitution to the bank of the amount lost should be determined and might be used in reducing the amount of the penalty that otherwise might be assessed. If restitution does not occur, the amount may be included as a portion of the penalty. The financial resources of the individual charged must also be weighed, which may cause a recommended penalty below that which would appear appropriate. Finally, the gravity of the violation and the involvement in the violation of the individual charged should be considered. A determination that the violation was particularly egregious and/or that the individual was directly involved in causing the violation or benefited from it would result in a larger recommended penalty than would a mere technical violation or one in which the individual was not directly involved.

Specific recommendations for assessment of penalties should be forwarded to the Regional Office and not communicated to the bank, its officers, or directors.

EXAMINATION PROCEDURES

The following procedures should be followed whenever fineable violations of laws or regulations are encountered:

1. When fineable violations, unsafe or unsound banking practices, or breaches of fiduciary duty of the type detailed in Section 8(i), 7(j) or 18(j) of the FDI Act are discovered and it is contemplated that CMPs may be an appropriate administrative action, examiners should complete the Civil Money Penalty Matrix. The CMP Matrix will aid the examiner in supporting the appropriateness and/or level of CMPs. The thirteen factors contained in the FFIEC policy statement regarding CMPs are built into the matrix and provide the bases for recommended actions or assessments. Although the CMP Matrix is generally most useful in Tier 1 penalty cases, it should be prepared whenever a penalty is being considered. The CMP Matrix is included at the end of this section.
2. When other fineable violations of statute (such as those detailed in Sections 7(a) and 7(c) of the FDI Act regarding late or inaccurate Reports of Condition and inaccurate certification statements or late payment of deposit insurance assessments) are encountered, the examiner should seek guidance from the Regional Office if the violation is severe and flagrant in nature.
3. Examination comments on the Violations of Laws and Regulations schedule generally should not contain references to the FDIC's power to impose civil money penalties or the maximum dollar amount of CMPs that may be imposed; comments of this nature should be included in only the most serious situations.
4. Reference on the Examination Conclusions and Comments schedule to apparent violations of laws and regulations depends on the seriousness of the situation and the examiner's intentions regarding recommendation of penalties and/or enforcement actions.
5. Examiners should fully discuss violations of law with management; however, discussion of the civil money penalty process should be limited. Unless the examiner intends to recommend the imposition of CMPs, there is minimal need to raise the issue with bank officers or directors. If the issue is raised, examiners may discuss the criteria used by the FDIC to determine whether to assess a penalty and the process involved.
6. The home mailing address for all directors and any other individuals involved in a fineable violation should be included in the Confidential Section of the examination report when it is contemplated that CMPs may be assessed.
7. When a violation involves financial gain to an insider and/or financial loss to the bank (in most instances, the insider's gain will be the bank's loss), the examiner should attempt to determine a monetary value. If management is cooperative, the amount should be determined with the assistance of bank personnel and indicated on the violations page. Otherwise, the examiner should estimate the amount and include it in the violation write-up along with the method of calculation. If the examiner cannot estimate the

monetary value with any degree of confidence, he/she should so state and include the reason why.

8. The Regional Office should be consulted to determine the supporting evidence needed in connection with scheduling a violation where a fine is contemplated. Regional Counsel should be consulted regarding determination of the violation and sufficiency of evidence.
9. Examiners should not discuss penalty matters relating to Section 8 matters; examiners may only confirm to bank management that CMPs may be assessed for noncompliance with terms of the order. This precaution is necessary because determination of noncompliance with a Section 8 Order is made by the Regional Director.
10. Evidence in support of a likely action should be copied and retained in field office files. This evidence should be segregated in a labeled envelope and kept apart from regular workpapers.

OTHER CONSIDERATIONS

If a fineable violation, for which prompt action appears warranted, is cited in a state report of examination, the Regional Office should schedule a visitation. The assigned examiner should be instructed to investigate the violation and, if appropriate, gather sufficient documentation to support a civil money penalty recommendation and/or request for restitution. If a flagrant violation does not appear to be involved, the Regional Director may postpone an investigation until the next scheduled FDIC examination or visitation. A state report of examination should generally not be utilized to support a civil money penalty recommendation or request for restitution, however, the Regional Director does have discretion to utilize it if it is deemed adequate.

Examiners involved in recommending civil money penalties should be mindful that such actions are covered under the Equal Access to Justice Act. The Act provides that certain parties who prevail in contested administrative or judicial proceedings against an agency of the Federal government may be able to recover their litigation expenses from the agency, if the position of the agency in the proceeding was not substantially justified. Examiners should use special care not to charge any practice or violation on inadequate grounds. Examiners should also be mindful that Confidential Section comments will be a matter of record at any required hearing. Comments and observations in the Confidential Section must be well supported and able to withstand cross-examination in a hearing.

GUIDELINES FOR USING THE CMP MATRIX

1. The CMP Matrix contains factors identified by the FFIEC as those which are relevant in determining the appropriateness of initiating a civil money penalty assessment. These factors, along with those statutorily provided, are also used in determining the assessed amount of a civil money penalty. However, these factors and this Matrix are provided solely as guides and do not replace sound supervisory judgment. As a general rule, it is recommended to use the following guidelines in determining how many matrices should be filled out:

   a. One Matrix per person for all violations, reckless unsafe and unsound practices or breaches of fiduciary duty; where there are several violations, practices, or breaches of duty included in one matrix, the highest severity level applicable to any of the violations, practices or breaches of duty should be recorded for each factor on the Matrix. Thus, if a single director approved a loan in violation of Regulation O, another loan in violation of State lending limitations, and engaged in reckless unsafe practices, only 1 Matrix should be completed for that director, with the highest severity level applicable to either of the violations and any of the unsafe practices recorded for each Matrix factor.

   b. One Matrix for a group of persons with similar culpability. Thus, if 6 directors approved a loan in violation of Regulation O, another loan in violation of State lending limitations, and engaged in reckless unsafe practices, and all were equally culpable, only 1 Matrix should be completed for the 6 directors. However, if 2 directors were more culpable than the other 4 directors, a separate Matrix should be completed for those 2 directors.

2. The Matrix generally applies to tier 1 penalties of up to $5,500 per day against institutions and institution-affiliated parties (IAP's) who engage in violations of law, regulations, final or temporary orders, formal agreements, and conditions imposed in writing in connection with the grant of any application or other request by the institution. The FDIC may also assess tier 2 penalties of up to $27,500 per day for the above violations, unsafe and unsound banking practices recklessly engaged in, and breaches of fiduciary duty, which are part of a pattern of misconduct, or cause or are likely to cause more than a minimal loss to the institution, or result in a pecuniary gain to the institution or individual. In addition, the FDIC may assess tier 3 penalties of up to $1.1 million per day for knowing violations, unsafe and unsound practices, and breaches of duty, which knowingly or recklessly cause a substantial loss to the institution, or a substantial pecuniary gain to the institution or individual. If the recommendation is to assess a penalty in excess of $5,500 per day, or if penalties for unsafe practices or breaches of duty are recommended, the examiner should consult with Regional Counsel to determine whether the criteria are met for a tier 2 or tier 3 penalty.

3. One may use the following definitions as a guide in using the Matrix:

   b. An ***Institution-affiliated party (IAP)*** is (1) any director, officer, employee or controlling shareholder (other than a bank holding company) of an insured depository institution, (2) any person who has filed or is required to file a change-in-control, (3) any shareholder, consultant, joint venture partner, or other person who participates in the institution's affairs, or (4) any independent contractor (including any attorney, appraiser, or accountant) who knowingly or recklessly participates in violations of law or regulation, breaches of fiduciary duty, or unsafe or unsound practices, which caused or are likely to cause more than a minimal financial loss to, or a significant adverse effect on, the institution.

   c. An ***unsafe and unsound practice*** is one in which there has been some conduct, whether act or omission, which is contrary to accepted standards of prudent banking operation, and which might result in exposure of the bank or its shareholders to abnormal risk or loss. An unsafe or unsound practice may be considered reckless if it evidences disregard of, or indifference to, the consequences of the practice, even though no harm may be intended.

   d. A ***fiduciary duty*** is a duty of great confidence and trust, which includes a high degree of good faith. For example, bank officers and directors have a fiduciary duty to protect the bank's assets, further the best interests of the bank, and not place their interests above those of the bank.

4. ***Pecuniary Gain or Other Benefit to IAP***: In assessing this factor, the monetary gain or other benefit may be to the IAP who committed the violation, recklessly engaged in an unsafe or unsound practice, or who

breached any fiduciary duty, or to any other IAP or their related interests.

5. ***Previous Administrative Action or Criticism***: Under severity level #1, the reference to "similar violation" could refer to prior criticisms for violations under the same statute or regulation, e.g., a previous violation of a Section 23A provision and currently a violation of a different 23A provision. This could also refer to violations similar in nature, e.g., a previous violation of state law regarding lending limit and currently a violation of the aggregate lending limit provision of Regulation O.

6. ***History***: Under severity level #2, the reference to "similar violation" has the same meaning as the reference to "similar violation" used in the ***Previous Administrative Action or Criticism*** factor explained above.

7. ***Loss***: In assessing this factor, "potential loss" refers to any time at which the bank was in danger of sustaining a loss. Accordingly, if the violation caused a possible loss in its first month, but posed no risk of loss in the second month, the bank experienced a potential loss which falls with this category.

8. ***Continuation***: The reference to "notification" in this factor includes notice of the violation, practice or breach by the FDIC, other regulatory agencies, external auditors, internal auditors or other parties whose responsibilities include providing the bank and/or its subsidiaries with information about its operations.

9. ***Concealment***: This factor pertains to the concealment of a violation, practice or breach from the FDIC, the bank's board of directors or internal and external auditors.

10. ***Impact***: In assessing this factor, it is appropriate to consider any possible negative impact or harm to the bank, other than loss.

11. ***Loss or Harm to Securities Holders or Consumers***: This factor only applies in cases involving violations of securities laws, rules, or regulations applicable to state nonmember banks (where securities holders incur loss or are otherwise harmed) or consumer banking laws, orders, agreements or conditions, unsafe or unsound practices, or breaches of duty.

12. ***Good Faith***: In assessing a person's good faith, the examiner should generally focus on facts and circumstances which occurred prior to notification of the violation, practice or breach by the FDIC, other regulatory agencies, external auditors, internal auditors or other parties whose responsibilities include providing the bank and/or its subsidiaries with information about its operations.

13. ***Full Cooperation***: In assessing this factor, the examiner should generally focus on facts and circumstances which occurred after notification of the violation, practice or breach by the FDIC, other regulatory agencies, external auditors, internal auditors or other parties whose responsibilities include providing the bank and/or its subsidiaries with information about its operations.

For additional information and guidance, please also refer to:

- The **Formal and Informal Action Procedures Manual**, and
- The Division of Supervision and Consumer Protection **Case Managers Procedures Manual**.

CMP Matrix

Boxes on the Matrix (including the empty boxes) should be used to reflect progressive levels of severity. As used in the Matrix, the term "violations" also refers to reckless unsafe and unsound practices and breaches of fiduciary duty.

	0	1	2	3	4	WGT.	POINTS
Intent	No		Should Have Known		Clear Intent	5	
Pecuniary Gain or Other Benefit to Institution Affiliated Party (IAP) or Related Interest	No			Indirect Benefit to IAP or Related Interest	Direct Benefit to IAP or Related Interest	4	
Previous Administrative Action or Criticism	None	Previous Criticism for Similar Violation	Violation or Criticism on Point Cited in Exam or Visit Report	MOU or Supervisory Letter on Point	8(a), C&D, Agreement, Condition in Writing or Prior Assessment on Point	3	
History	None	Unrelated Prior Violations	At least One Similar Violation	Several Similar Violations	Frequent Similar Violations	2	
Loss or Risk of Loss to Bank	No Loss and No Risk of Loss	No Loss or Minimal Risk	Minimal Loss or Moderate Risk		Substantial Actual or Potential Loss	6	
Number of Violations at Issue					Numerous Violations	2	
Duration of Violations Prior to Notification					Violations Outstanding for Long Time	2	
Continuation after Notification	Violation(s) Ceased Prior to Notification	Violation(s) Ceased Immediately Upon Notification		Violation(s) Continued for Period of Time After Notification	Violation(s) Still Continuing	3	
Concealment	None			Purposely Complicated Transaction to Make it Difficult to Uncover	Active Concealment	5	
Impact Other Than Loss	No Impact on Bank or Banking Industry		Substantial Impact on Bank. No Impact on Banking Industry	Moderate Impact on Banking Industry or on Public Perception of Banking Industry	Substantial Impact on Banking Industry or on Public Perception of Banking Industry	6	
Loss or Harm to Securities Holders or Consumers (Securities or Consumer Laws Only)	No Loss and No Harm	No Loss or Minimal Harm	Minimal Loss or Moderate Harm		Substantial Loss or Harm	5

CMP MATRIX (Continued)

Points	Suggested Action	Responsibility
0-30	Consider not making referral.	Examiner reviews fineable offense(s) and applies Matrix. Workpapers should support decision to not refer.
31-40	Consider sending supervisory letter.	Examiner reviews fineable offense(s) and applies Matrix. Prepares referral to Regional Office. Regional Director considers sending 15-day letter. After consideration of response and referral, Regional Office applies Matrix. Regional Director considers sending a supervisory letter which would inform that, while a penalty assessment will not be pursued, policies which will prevent recurrence of the fineable offense(s) must be adopted and implemented. If decision is made to send a supervisory letter, such letter is sent by the Regional Director.
41-50	Consider assessment of $1M up to $5M.	Examiner reviews fineable offense(s), applies Matrix, and prepares referral to Regional Office. Regional Director sends 15-day letter. After consideration of response and referral, Regional Office applies Matrix. If recommendation is to assess a penalty, case should be submitted to the Washington Office. Prior to submission to Washington Office, Regional Office should determine that recommended penalty does not exceed maximum penalty permitted. Washington Office reviews recommendation and takes appropriate action.
51-60	Consider assessment of greater than $5M up to $10M.	Same as immediately above.
61-80	Consider assessment of greater than $10M up to $25M.	Same as above.
81-100	Consider assessment of greater than $25M up to $75M.	Same as above.
101-120	Consider assessment of greater than $75M up to $125M.	Same as above.
120+	Consider assessment of greater than $125M.	Same as above.

←

INTRODUCTION

Examiners must initiate corrective measures promptly if they identify excessive risks at financial institutions. Generally, examiners can use examination comments and supervisory recommendations or informal agreements to correct problems. However, various statutes and regulations authorize the FDIC to use formal enforcement actions, when necessary, to reduce risks and address deficiencies. This chapter discusses some of the main statutes and regulations that authorize formal actions, such as:

- Sections 8, 38, and 39 of the Federal Deposit Insurance (FDI) Act; and
- Part 325 of the FDIC Rules and Regulations.

Section 8 of the FDI Act provides the FDIC's Board of Directors (FDIC's Board) with broad enforcement powers. The FDIC's Board has the power to:

- Terminate deposit insurance - Section 8(a),
- Issue cease and desist orders - Section 8(b),
- Invoke temporary (effective upon service) cease and desist orders - Section 8(c),
- Remove institution-affiliated parties or prohibit their participation in bank affairs - Sections 8(e) and (g),
- Issue orders to cease and desist from violating certain anti-money laundering regulations - Section 8(s), and
- Terminate deposit insurance for certain money laundering offenses - Section 8(w).

Section 38 of the FDI Act and various sections of Part 325 of the FDIC Rules and Regulations authorize the FDIC to take prompt corrective actions against institutions that fail to maintain certain capital levels.

Section 39 of the FDI Act authorizes the FDIC to take formal actions if an institution fails to submit and implement, upon FDIC request, an acceptable plan to achieve compliance with safety and soundness standards.

Authorizations

The FDIC's Board has authority to implement various formal actions and has delegated to various levels within the Division of Risk Management Supervision (RMS), the authority to implement other actions. Parts 303 and 308 of the FDIC Rules and Regulations detail various rules and procedures relating to various types of formal actions.

Ratings

Financial institutions with composite ratings of 4 or 5 have problems of sufficient severity to warrant formal action. Therefore, it is RMS policy to take formal action pursuant to Section 8 of the FDI Act against all insured state nonmember banks rated 4 or 5 where evidence of unsafe or unsound practices is present. Such formal action normally consists of an order to cease and desist under Section 8(b). Under rare circumstances, formal actions may consist of a temporary cease and desist order under Section 8(c) or initiation of insurance termination proceedings under Section 8(a). Exceptions to the policy may be considered when the condition of the bank clearly reflects significant improvement resulting from an effective corrective program or where individual circumstances strongly mitigate against formal action.

Section 8(b) of the FDI Act authorizes the FDIC to declare that a state nonmember bank is engaging in unsafe or unsound practice if the institution receives less than satisfactory component ratings for asset quality, management, earnings, or liquidity. Examiners should assess all facts and circumstances to determine if recommendation of Section 8(b) action is warranted under such circumstances.

Note: Only the FDIC's Board is authorized to make a finding of *unsafe* or *unsound*. Therefore, examiners must not use the statutory words unsafe or unsound in a report of examination (ROE). Other descriptive terms such as undesirable, unacceptable, objectionable, or imprudent are permissible.

←

EXAMINATION CONSIDERATIONS

The ROE generally serves as the FDIC's primary supporting evidence for formal actions. Comments must be factually correct, free of inconsistencies, and not contain gratuitous, editorial, or inflammatory statements. All comments, conclusions, and recommendations must be well supported. Primary examiner responsibilities include:

- Identifying unacceptable practices or conditions that may result in excessive risk or loss to the bank or the Deposit Insurance Fund;
- Documenting unacceptable practices or conditions in accordance with instructions for the type of enforcement action recommended;
- Determining, in consultation with field- and regional-office management, if an enforcement action is necessary to address an unacceptable practice or condition;
- Ensuring that all credit classifications, component ratings, and composite ratings are accurate; and

- Submitting a memorandum to the regional director recommending an enforcement action.

Evidence Required

The FDIC must be able to prove that grounds for an action are based on facts and evidence and not merely based on suspicion. Consequently, FDIC examiners and staff must appropriately retain evidence such as:

- Copies of bank records needed to support charges;
- Documentation of all relevant meetings with management and the board;
- Documentation of all applicable recommendations made to management and the board; and
- Documentation of pertinent comments, requests, and commitments by management and the board.

Note: Copies of bank records used as evidence should generally be complete copies of the records. And, as a best practice, at least two examiners should attend relevant meetings and sign or initial examiner notes taken during meetings.

Examiners should use special care not to make any charges on inadequate grounds. Section 8 proceedings are within the purview of the Equal Access to Justice Act. The act provides that certain parties, who prevail in contested administrative or judicial proceedings against a federal government agency, may be able to recover litigation expenses if the position of the agency was not substantially justified. Examiners should also be mindful that any memorandums to the regional director recommending formal actions might be a matter of record at any required hearing. Therefore, comments must be supported by substantive evidence and be able to withstand scrutiny in a hearing.

Recommendations for Action

A recommendation to pursue a formal order is not dependent upon completion of an ROE. If sufficient evidence is otherwise available, examiners should not wait for the completion of an examination or submission of the ROE before recommending a formal order.

Examiners should consult with the regional office prior to discussing possible formal enforcement actions with the bank's board or management. Documentation of notification to the bank's board should be included in the memorandum to the regional director.

When examiners anticipate that Section 8(e) removal action may be taken, they should promptly consult with the regional office, including regional counsel, as directed. It is especially important that the ROE or other documentary evidence support all alleged practices or violations, particularly as they pertain to actions of the respondents.

Examiners that identify sufficient grounds for an action should submit, upon concurrence of regional office staff, a memorandum to the regional director recommending pursuit of an action. The memorandum, and ROE if available, should include as many details and documented facts pertaining to objectionable practices, unacceptable conditions, or apparent violations as reasonably possible.

The information required for inclusion in memorandums to regional directors varies based upon the type of proposed action. For proposed Section 8(b) actions, examiners should draft their memorandum to the regional director in accordance with the following guidelines:

- Detail each undesirable or objectionable practice or condition regarded as unsafe or unsound;
- Identify any undesirable or objectionable practice or condition that deviates from the institution's formal policies;
- Detail any apparent violations of law or regulations;
- Describe all relevant facts regarding each conclusion and recommendation;
- Include any bank director or officer statements that indicate disagreements, support charges, or show corrective actions;
- Describe issues or quote comments from previous examination reports or correspondence letters that support or refute promised corrective actions;
- Reference specific ROE schedules for additional details as necessary; and
- List items in order of importance and under appropriately descriptive subheadings.

For recommendations to pursue personal 8(b) actions and possible limitations on activities imposed against institution-affiliated parties (IAPs), examiners should identify any:

- Applicable misconduct;
- Necessary corrective measures;
- Deficiencies in an IAP's practices, skills, or competence; and
- Additional training or education requirements.

Examiners should include suggested measures and timeframes for correcting each undesirable or objectionable practice or condition detailed in the memorandum to the regional director. The measures should be tailored to each specific issue and allow sufficient time for completion. General examination recommendations that are unrelated to issues being recommended for inclusion in the proposed order should not be included.

The memorandum to the regional director should contain specific comments and recommendations relative to the adequacy of the institution's management. In some cases, existing management may be considered capable of solving the problems facing the institution, although a redirection or a clarification of authority may be necessary. If material management deficiencies are identified, the memorandum should address, as necessary, such matters as:

- The addition of independent outside directors;
- The addition of a chief executive officer, senior lending officer, or other senior officer;
- The establishment or modification of board committees, considering outside director representation;
- The addition or modification of board-approved policies;
- The implementation of board procedures to assure compliance with established directives and policies;
- The assessment of active management or the board by an independent committee or outside consultant;
- The establishment or modification of lines of authority;
- Restrictions on the authority of specific officers; and
- Any other managerial situations particular to the institution's circumstances.

The memorandum to the regional director should include the names and home addresses of any individuals to be named in a formal action to facilitate the service of a Notice of Charges. The memorandum and ROE should include facts that support why each named individual was included.

If the information needed to fully support the examiner's recommendations cannot be obtained through customary examination techniques, the regional office should be notified of the situation as soon as possible. If the matter remains unresolved, the examiner should so indicate in the memorandum and the regional director should consider using more formal investigative procedures authorized under Section 10(c) of the FDI Act.

Reviewing Compliance with an Order

Examiners are required to review a bank's compliance with any outstanding order during examinations. Orders typically require a bank to submit certain documents, including progress reports, to the regional office. Therefore, examiners should review all documentation submitted (since the prior examination) to the regional office to avoid requesting previously submitted information. Examiners should also review any regional office responses to bank submissions and follow-up on any deficiencies or recommendations included in the responses.

Examiners should include a summary of outstanding formal enforcement actions in the Examination Conclusions and Comments section of the ROE. In the Compliance with Enforcement Actions section of the ROE, examiners must document, in a factual manner, the steps taken by the bank to comply with the provisions of the order. As part of this analysis, examiners should also determine the underlying reasons for an institution's failure to meet any provisions of an Order or improve the bank's condition over a reasonable time frame, and discuss with the regional office whether a new or revised Order would be appropriate. At the first examination after the issuance of an order, examiners should detail each provision and management's response. At subsequent examinations, examiners may summarize provisions and only detail items of a continuing nature and those that the institution had not complied with at the previous examination. Examiners should not use conclusory statements of opinion such as, "The institution is in compliance/noncompliance with this provision."

←

SECTION 8 – FDI ACT

Section 8 of the FDI Act authorizes the FDIC to take certain formal enforcement actions when unsafe or unsound practices or conditions exist. However, the FDI Act does not define unsafe or unsound practices or conditions. The concept of unsafe or unsound practices or conditions touches upon a bank's entire operations, and a single definition would not capture the broad spectrum of activities or conditions included in the term.

The FDIC's Board has established examples of unsafe or unsound practices or conditions in previous Section 8 proceedings. However, examiners should understand that these examples of activities or conditions are not necessarily unsafe or unsound in every instance or when considered in light of all relevant facts pertaining to that situation.

Practices Deemed Unsafe or Unsound

Generally, an unsafe or unsound practice encompasses any action, or lack of action, by an institution or an IAP which is contrary to generally accepted standards of prudent operation, the possible consequences of which, if continued, would result in abnormal risk of loss or damage to an institution, its shareholders, or the Deposit Insurance Fund.

Actions Deemed Unsafe or Unsound

The FDIC's Board has found the following actions to be unsafe or unsound practices:

- Operating with inadequate capital for the type and quality of assets held;
- Engaging in hazardous lending and lax collection practices (such as extending credit that is inadequately secured, extending credit without first obtaining complete and current financial information, extending credit in the form of overdrafts without adequate controls, and extending credit with inadequate diversification of risk);
- Operating without adequate liquidity relative to the bank's asset and liability mix;
- Operating with excessive reliance on volatile deposits;
- Operating without adequate internal controls (including failing to maintain controls on official checks and unissued certificates of deposit, failing to segregate duties of bank personnel, and failing to reconcile differences in correspondent bank accounts);
- Engaging in speculative or hazardous investment policies;
- Paying excessive dividends in relation to the bank's capital position, earnings capacity, and asset quality; and
- Committing violations of law.

Lack of Action Deemed Unsafe or Unsound

The FDIC's Board has found the following lack of actions to be unsafe or unsound practices:

- Failure to provide adequate supervision and direction over the officers of the bank,
- Failure to provide for an adequate allowance for loan and lease losses,
- Failure to post the general ledger promptly,
- Failure to keep accurate books and records,
- Failure to account properly for transactions,
- Failure to enforce programs for repayment of loans,
- Failure to obtain or maintain on-premise evidence of priority of liens on loans secured by real estate, and
- Failure to provide supervision and oversight of the institution's compliance with federal and state laws and regulations.

Conditions Considered Unsafe or Unsound

An unsafe or unsound condition is a condition that, if continued, would result in abnormal risk of loss or damage to the bank or the Deposit Insurance Fund. An assessment of unsafe and unsound condition should be based on an assessment of virtually every aspect of the bank's operation and position. At a minimum, the bank's capital position, asset condition, management, earnings posture, and liquidity position must be carefully evaluated.

The FDIC's Board has found the following conditions to be unsafe or unsound:

- Maintenance of unduly low net interest margins,
- Excessive overhead expenses,
- Excessive volumes of loans subject to adverse classification,
- Excessive net loan losses,
- Excessive volumes of overdue loans, and
- Excessive volumes of nonearning assets.

←

TERMINATION OF INSURANCE

Section 8(a)

Section 8(a) provides the FDIC's Board with voluntary and involuntary termination of insurance powers. Voluntary termination of insurance actions are uncommon and are generally requested by institutions in the process of self-liquidation. Involuntary termination of insurance actions are also uncommon and generally used by the FDIC's Board only when other administrative actions have been ineffective and an institution is in imminent danger of failure.

The FDIC's Board may involuntarily terminate an institution's insured status under Section 8(a)(2) on the following grounds:

- An insured institution or its directors or trustees have engaged or are engaging in unsafe or unsound practices;
- An insured institution is in an unsafe or unsound condition; or
- An insured institution or its directors or trustees have violated any applicable law, rule, regulation, order, condition imposed in writing by the FDIC in connection with an application or other request by the institution, or any written agreement entered into with the FDIC.

Note: For the purposes of Section 8(a)(2), the term *written agreement* refers to a legally enforceable document, not an informal agreement such as a Memorandum of Understanding.

Before initiating formal proceedings to terminate an institution's deposit insurance, the FDIC must provide written notice to the institution's primary federal regulator or state authority. If the primary regulator or state authority fails to secure correction of the problems, the FDIC issues a *Notice of Intention to Terminate Insured Status, Findings, and Order Setting Hearing* to the institution. Unless the institution chooses not to litigate the matter, the FDIC has the burden of proving the allegations made in the Findings through the introduction of evidence at the hearing.

←

CEASE AND DESIST ORDERS

Section 8(b)

Section 8(b) of the FDI Act authorizes the FDIC to issue a cease and desist order against a state nonmember insured bank or an IAP when facts reasonably support that:

- The bank or IAP is engaging, or has engaged, in unsafe or unsound practices;
- The bank or IAP is violating, or has violated, a law, rule, or regulation; any condition imposed in writing by the FDIC with regard to the approval of a request or application; or a written agreement entered into with the FDIC; or
- There is reasonable cause to believe the bank or IAP is about to do either of the above.

The purpose of a cease and desist order is to remedy unsafe or unsound practices or violations and to correct conditions resulting from such practices or violations. Formal actions may be pursued before a violation or unsafe or unsound practice occurs in order to prevent a developing situation from reaching more serious proportions. Cease and desist orders generally contain provisions that require a bank or IAP to take, or prohibit a bank or IAP from taking, specific actions relating to inappropriate practices, violations, or conditions. Under certain circumstances, the enforcement action may require the institution or IAP to make restitution or provide indemnification against losses.

The failure of a bank to comply with any cease and desist order or consent order that has become final can be the basis for subsequent Section 8(a) termination of insurance action or 8(e) removal action against an IAP, as defined by Section 3(u) of the FDI Act. Such failure also can be the basis for the FDIC petitioning the U.S. District Court to enforce the order. Civil money penalties may also be imposed against the bank or any officer, director, employee or other person participating in the affairs of such bank.

Types of Section 8(b) Orders

The type of Section 8(b) order issued by the FDIC varies based on the institution or IAP's response to an enforcement action. If an institution or IAP agrees to comply with an enforcement action (stipulates), the FDIC will issue a consent order. However, if an institution or IAP does not stipulate, the FDIC may pursue a cease and desist order. Both actions generally contain the same corrective provisions and are public documents.

Cease and Desist Order When an institution or IAP does not agree to stipulate to a proposed enforcement action, the FDIC may pursue a cease and desist order by issuing and serving the institution or IAP with a Notice of Charges. The Notice of Charges contains a statement of facts detailing alleged practices or violations and fixes a time and place for an administrative hearing. A hearing is held to determine whether an order to cease and desist should be issued against the depository institution or IAP. If the party or parties served with the Notice of Charges does not appear at the hearing, they may be deemed to have consented to the issuance of the cease and desist order.

The FDIC's Board may issue a cease and desist order after the hearing. The action orders the institution and/or its IAPs to cease and desist from the unsafe and unsound practices outlined in the order and to take affirmative actions to correct deficiencies. A cease and desist order becomes effective 30 days after it is served upon the institution.

Consent Order Alternatively, if the institution or IAP agrees to a proposed enforcement action, the FDIC will issue a consent order. By stipulating, the institution or IAP waives its right to an administrative hearing. Eliminating the administrative hearing allows the institution or IAP to avoid lengthy and costly legal proceedings and allows the FDIC to address unsafe or unsound practices and violations more quickly. By stipulating to the action, the institution consents to the enforcement action without admitting or denying engagement in unsafe or unsound practices or violations. Unlike a cease and desist order, a consent order generally eliminates the term *cease and desist* from the action and its title and usually eliminates the list of unsafe or unsound practices from the beginning of the document. A consent order becomes effective at the time specified in the order, which is typically the date of issuance.

Personal 8(b) Orders The FDIC can seek 8(b) orders against IAPs under the same statutory authority and on the same statutory conditions as against an institution. The FDIC may pursue a personal enforcement action when remedial action is warranted, regardless of whether a violation of law or an unsafe or unsound practice warrants permanent prohibition of an IAP from the banking industry.

The FDIC may consider prioritizing possible 8(b) action against an IAP when facts reasonably support that an IAP:

- Engaged in dishonest conduct;
- Was a director or officer;
- Had a substantial role in directing the misconduct;
- Engaged in repeated or large-scale misconduct;
- Received an FDIC supervisory letter, but continued the misconduct;
- Was identified in an ROE or other formal or informal enforcement action that detailed their misconduct, but continued the misconduct; or
- Was a director or officer who abdicated their fiduciary duties in an unsafe or unsound manner.

Examiners should assess IAPs' compliance with outstanding enforcement actions during examinations. Information on IAPs subject to personal enforcement actions may be available through regional offices. However, during the examination, examiners should also ask management to identify any IAPs subject to personal enforcement actions to ensure any recently hired IAPs appropriately notified the bank and to ensure management and the board are fulfilling their responsibilities to remain informed on the professional background and qualifications of directors, officers, and employees.

If an IAP appears to be in substantial compliance with all provisions of a personal cease and desist order (PC&D), examiners should detail their findings in the Confidential - Supervisory Section. However, if an IAP appears to be in substantive noncompliance with one or more provisions of an outstanding PC&D, examiners should describe their findings on the Compliance with Enforcement Actions page in a manner similar to evaluations of a bank's compliance with other enforcement actions. Examiners should carry forward a summary of their findings to the Examiners Conclusions and Comments page.

In general, a PC&D should have a time-limit of five years and automatically expire at the end of that time. If the actions of the IAP were particularly egregious, compliance with a specific provision deemed critical, or another important supervisory reason can be articulated, the time-limit can be greater than five years or eliminated completely. This decision will be made at the initiation of the PC&D. Justification for a time-limit longer than five years should be included in the recommendation memo.

Termination prior to the end of five years, or termination of PC&Ds without a time limit should be based on satisfactory or full compliance with the provisions of the Order. When considering the issuance and provisions of a PC&D, the remedies set forth in a PC&D should lend themselves to measureable and verifiable compliance to permit a reasoned basis for termination.

In order to terminate a PC&D, regional directors should submit a memorandum to the appropriate Associate Director - Risk Management Supervision based upon an IAP's satisfactory or full compliance with the provisions of the Order.

Section 8(c) - Temporary Cease and Desist Orders

If the FDIC cannot obtain an institution's stipulation and consent for a cease and desist order, the time required to complete the administrative proceedings and obtain a cease and desist order may result in additional damages to the bank. Section 8(c), therefore, authorizes the FDIC to issue a temporary cease and desist order to stop particularly dangerous practices, or take affirmative actions to remedy conditions, pending completion of the administrative proceedings. Temporary cease and desist orders are not meant to replace permanent orders and must be issued in conjunction with or subsequent to a Notice of Charges supporting an order.

The FDIC may issue a temporary order if a violation, threatened violation, or unsafe or unsound practice specified in the Notice of Charges is likely to cause insolvency or substantial dissipation of assets or earnings, weaken the condition of the bank, or prejudice the interests of depositors prior to the completion of the Section 8(b) action. The FDIC may also issue a temporary order if an institution's accounts and records are so inadequate that the FDIC cannot determine the institution's financial condition or cannot determine the details of a transaction that may have a material effect on the institution.

A temporary order, accompanied by a *Notice of Charges*, can be issued against the bank or IAP. The order becomes effective upon service and, unless set aside or limited by court proceedings, remains effective and enforceable pending completion of the administrative proceedings pursuant to a Section 8(b) action.

Within 10 days after service of a temporary cease and desist order, the bank or IAP may apply for an injunction setting aside, limiting, or suspending the enforcement, operation, or effectiveness of such order.

Due to the nature of temporary actions, recommendations for such actions are frequently developed without the benefit of a completed ROE. In those cases, a visitation report, memorandum, or letter will discuss the practices and violations and the effect, or anticipated effect, on the institution. Examiners should immediately contact the regional office to discuss the possible need for Section 8(c) action when a situation is discovered in which an apparent violation of law or unsafe or unsound banking practice is likely to cause insolvency or substantial dissipation of assets prior to the completion of proceedings under Section 8(b).

←

REMOVAL AND PROHIBITION PROCEDURES

Section 8(e) - Removal and Prohibition

Section 8(e) of the FDI Act authorizes the FDIC to order the removal of an IAP (director, officer, employee, controlling stockholder, etc.) from a state nonmember depository institution. It also allows the FDIC to prohibit the IAP from future participation in the conduct of the affairs of any insured depository institution. Removal and/or prohibition orders may be based upon conduct at the institution from which the individual is removed or upon conduct at another institution or affiliate.

The FDIC must establish three distinct and separate grounds to institute a removal and/or prohibition action:

1. **Misconduct** The IAP has directly or indirectly violated any law or regulation, any final cease and desist order, any condition imposed in writing in connection with the granting of an application or other request, or any written agreement; participated in any unsafe or unsound practice in connection with the depository or business institution; or engaged in an act, omission, or practice which constitutes a breach of fiduciary duty; and
2. **Effect of the Misconduct** Due to the misconduct, the insured depository institution or business institution has suffered or will probably suffer financial loss or other damage; the interests of the depositors have been or could be prejudiced; or the IAP has received financial gain or other benefit; and
3. **Culpability** The IAP's acts or omissions involved personal dishonesty or demonstrated willful or continuing disregard for the safety and soundness of the insured depository or business institution.

If an IAP does not consent to the action, the FDIC may serve the IAP with a Notice of Intention to Remove from Office and/or to Prohibit from Further Participation. The Notice of Intention contains a statement of the facts and conclusions constituting grounds for an action.

Pending the hearing, the FDIC may order the temporary and immediate suspension and/or prohibition of an IAP if the IAP's continued participation poses an immediate threat to the institution or to the interests of the institution's depositors. Within 10 days after an IAP has been suspended from office and/or prohibited from participation in the conduct of the affairs of an insured bank, the IAP may apply to the U.S. District Court for stay of such suspension and/or prohibition pending completion of the administrative proceedings. Unless the court issues a stay, a temporary suspension or prohibition order remains effective until the FDIC dismisses the charges or until the effective date of the permanent removal and/or prohibition order.

Examiners should be alert for situations where Section 8(e) may be applicable and should promptly communicate concerns to the regional office. The examiner, regional director or designee, and regional counsel should consult as needed to determine whether to proceed with an investigation authorized under Section 10(c) of the FDI Act. The examiner, regional director or designee, and regional counsel should also determine what evidence should be collected during the course of the investigation. Upon completion of an investigation, examiners are required to submit a recommendation memorandum to the regional director outlining the alleged misconduct and evidence supporting the allegations. If the memorandum is submitted in conjunction with an ROE, the ROE should also support the allegations.

When an IAP's acts support a removal/prohibition action, the examiner should encourage the institution to file a Suspicious Activity Report (SAR). If the institution refuses to file the SAR, the FDIC should file the SAR.

Section 8(g) - Suspension, Removal, and Prohibition

Section 8(g) of the FDI Act authorizes the FDIC to suspend an IAP charged with a felony and to remove an IAP convicted of a felony.

IAP Charged with a Felony Under Section 8(g)(1)(A), the FDIC may suspend an IAP from office or prohibit that IAP from participating in the conduct of any institution's affairs if:

- An IAP is charged with a crime involving dishonesty or breach of trust that is punishable by imprisonment for a term exceeding one year under state or federal law (a felony); and

- Continued service or participation by the IAP may pose a threat to the interests of the bank's depositors or may threaten to impair public confidence in the bank.

When determining the threat posed by the IAP's continued service or participation, the FDIC must consider all relevant factors, including the nature of the charges and the publicity generated by the indictment. If the indictment relates to alleged crimes against a bank or other financial institution, it is expected that, except in rare instances, the IAP's continued service would pose a threat to the bank. The FDIC should also consider any potential impact to the bank from publicity that associates the bank with the criminal activity due to the IAP's continued service or participation.

If the FDIC determines that the Section 8(g) criteria for suspension have been met, the regional office may notify the IAP of the contemplated recommendation for Section 8(g) action and offer the IAP the option of a voluntary suspension. Voluntary suspension is an IAP's resignation from office and/or pledge not to participate in any manner in the affairs of the bank. A voluntary suspension is not a consent or stipulation to a formal action and it is not enforceable. When factors warrant a formal enforceable action, the FDIC will not offer a voluntary suspension.

If an IAP does not agree to voluntary suspension, the FDIC will serve a written notice of suspension upon the IAP and a copy of the notice upon the bank. The notice will suspend the IAP from office and/or prohibit his or her from further participation in the affairs of any bank. Such suspension or prohibition will remain in effect until the indictment or charge is finally disposed or until the notice is terminated. A finding of not guilty to a specific charge does not preclude the FDIC from instituting removal proceedings under Section 8(e).

IAP Convicted of a Felony Under Section 8(g)(1)(C), the FDIC may remove an IAP from office and/or prohibit an IAP from further participation in the conduct of the affairs of any depository institution without the prior written consent of the FDIC if:

- The IAP is convicted of a felony,
- The judgment is not subject to further appellate review, and
- The FDIC determines that the IAP's continued service or participation may pose a threat to the interest of the bank's depositors or may threaten to impair public confidence in the bank.

Although the FDIC typically has the discretion to determine if it is appropriate to issue a removal and/or prohibition order, Section 8(g) removes such discretion and requires the FDIC to issue a removal and/or prohibition order when an IAP is convicted of violating:

- 18 U.S.C. § 1956 (Laundering of Monetary Instruments),
- 18 U.S.C. § 1957 (Engaging in Monetary Transactions in Property Derived from Specified Unlawful Activities),
- 18 U.S.C. § 1960 (Prohibition of Unlicensed Money Transmitting Businesses), or
- 31 U.S.C. § 5324 (Structuring Transactions to Evade Reporting Requirement Prohibited).

Within 30 days of service of any notice of suspension or order of removal pursuant to Section 8(g), the IAP may request an opportunity to appear before the FDIC to show that continued service to the bank, or participation in its affairs, is not likely to pose a threat to the interests of a bank's depositors or impair public confidence in the bank. Upon receipt, the FDIC shall schedule a hearing before agency personnel (not more than 30 days after receipt of the request). Within 60 days after such hearing, the party will be notified of the FDIC's decision as to whether the prohibition or suspension will be continued, terminated, or modified, or whether an order of removal will be rescinded or modified.

←

ENFORCEMENT ACTIONS

Section 8(t) - Authority to Take Enforcement Action

Section 8(t) of the FDI Act authorizes the FDIC to take enforcement action under Section 8 of the FDI Act (among other Sections) against any insured depository institution, holding company, or IAP in certain circumstances.

When the FDIC is not the primary federal regulator, the FDIC may recommend to the appropriate federal banking agency that the agency take any enforcement action authorized under Section 8. If, within 60 days, the federal banking agency does not take the enforcement action recommended or provide a plan acceptable to the FDIC, the FDIC may take the recommended enforcement action if the FDIC's Board determines:

- The insured depository institution is in an unsafe or unsound condition,
- The institution or IAP is engaging in unsafe or unsound practices and the recommended enforcement action will prevent the institution or IAP from continuing such practices,
- The conduct or threatened conduct (including any acts or omissions) poses a risk to the Deposit Insurance

Fund or may prejudice the interest of the institution's depositors, or

- The conduct or threatened conduct (including any acts or omissions) of the depository institution holding company poses a risk to the Deposit Insurance Fund. (Such authority may not be used with respect to a depository institution holding company in a generally sound condition and whose conduct does not pose a foreseeable and material risk of loss to the Deposit Insurance Fund.)

←

ANTI-MONEY LAUNDERING

Section 8(s) - Recordkeeping and Reporting

Section 8(s) of the FDI Act states the FDIC shall issue a cease and desist order if an institution:

- Has not established programs and procedures to ensure compliance with the Bank Secrecy Act, or
- Failed to correct any related problems that were reported to the institution by the FDIC.

The FDIC shall issue the order in the same manner prescribed under Section 8(b) or 8(c) and shall require the institution to cease and desist from its violation of Section 8(s) and or its prescribed regulations.

Section 8(w) - Terminating Insurance

Section 8(w) of the FDI Act states the FDIC shall issue a notice of intent to terminate deposit insurance when the Attorney General notifies the FDIC that an institution has been convicted of violating:

- 18 U.S.C. § 1956 (Laundering of Monetary Instruments), or
- 18 U.S.C. § 1957 (Engaging in Monetary Transactions in Property Derived from Specified Unlawful Activities).

Section 8(w) also authorizes the FDIC to issue a notice of intent to terminate deposit insurance if an institution has been convicted of a criminal offense under 31 U.S.C. § 5324 (Structuring Transactions to Evade Reporting Requirement Prohibited).

In determining whether to terminate insurance under Section 8(w), the FDIC's Board shall take into account several factors, such as the extent of:

- Director or executive officer knowledge or involvement in the offense,
- Director or executive officer cooperation in the investigation,
- Existing institutional policies and procedures designed to prevent the offenses,
- Implementation of additional controls subsequent to the offense to prevent future money laundering offenses, and
- Adequate deposit and credit services in the local community if deposit insurance is terminated.

←

INADEQUATELY CAPITALIZED INSTITUTIONS

To promote capital adequacy, the FDIC is authorized, and in some instances obligated, to take action against institutions that are less than adequately capitalized. For example:

- Section 38 of the FDI Act grants the FDIC's Board powers to take prompt corrective action (PCA) against institutions that are less than adequately capitalized;
- Part 325 of the FDIC Rules and Regulations authorizes the FDIC, under certain conditions, to utilize Section 8(a), 8(b), or 8(c) powers against institutions that fail to meet certain capital levels; and
- Part 325 of the FDIC Rules and Regulation authorizes the FDIC to issue a capital directive to a bank that fails to maintain capital at or above the minimum leverage capital requirements.

Section 38 - Prompt Corrective Actions

Section 38 of the FDI Act establishes a framework of supervisory actions to address issues at less than adequately capitalized financial institutions. The implementation of a PCA is intended to ensure early intervention at banks experiencing problems and the timely closure of failing institutions.

Prompt corrective actions are based on an institution's capital levels and become increasingly severe if an institution falls into a lower capital category. Some supervisory actions associated with PCAs are mandatory; that is, the actions immediately apply to the institution as it is classified in a particular category. Other actions are discretionary.

Reclassifying a Capital Category

Pursuant to Section 38(g) of the FDI Act (as implemented by Section 325.103(d) of the FDIC Rules and Regulations), the FDIC may reclassify a well capitalized, adequately capitalized, or under capitalized institution to the next lower capital category if:

- The FDIC determines, after notice and opportunity for hearing, that the institution is in an unsafe or unsound condition; or
- The FDIC determines, after notice and opportunity for hearing, that the institution has less than satisfactory asset quality, management, earnings, or liquidity.

Issuing Supervisory PCA Directive

Section 38 outlines supervisory actions applicable to an institution based on its capital category. Section 38 requires the FDIC to impose (by issuing a supervisory PCA directive) one or more of the following provisions on a significantly undercapitalized institution or an undercapitalized institution that failed to submit and implement a capital restoration plan:

- Require recapitalization,
- Restrict transactions with affiliates,
- Restrict interest rates paid,
- Restrict asset growth,
- Restrict activities involving excessive risk,
- Improve management,
- Prohibit deposits from correspondent banks,
- Require prior approval for capital distributions by a bank holding company,
- Require the bank or holding company to divest of subsidiaries,
- Require a holding company to divest of the bank, or
- Require any other action the FDIC determines will resolve the problems of the institution.

Section 38 also authorizes the FDIC to take the following actions if the FDIC determines the action will resolve the problems of the institution at the least possible cost to the Deposit Insurance Fund:

- Impose upon an undercapitalized institution any of the discretionary provisions applicable to a significantly undercapitalized institution or an undercapitalized institution that failed to submit and implement a capital restoration plan; or
- Impose upon a significantly undercapitalized institution or undercapitalized institution that failed to submit and implement a capital restoration plan one or more of the restrictions placed upon significantly undercapitalized institutions by Section 325.105(a)(4) of the FDIC Rules and Regulations.

The FDIC must provide the bank with written notice prior to issuing a supervisory PCA directive that imposes any of the discretionary actions listed above. The notice provides the bank with an opportunity to respond to the proposed directive. Although a supervisory PCA directive does not entitle an institution to a hearing, the FDIC will consider the bank's response prior to determining whether to issue a directive. The FDIC may issue a directive without prior notice if the FDIC deems it necessary to carry out the purposes of Section 38.

Dismissing a Director or Senior Executive Officer

Section 38 authorizes the FDIC to issue a supervisory PCA directive to require institutions to improve management. The supervisory PCA directive may require the institution to dismiss from office any director or senior executive officer who held office for more than 180 days immediately before an institution became undercapitalized. Dismissal by a supervisory PCA directive is not construed as a removal under Section 8 of the FDI Act.

When the FDIC issues a directive to a bank requiring the dismissal of a director or senior executive officer, the FDIC also serves a copy of the relevant sections of the directive upon the person to be dismissed. If removed, the director or senior executive officer may file a request for reinstatement with the FDIC not later than 10 days after receiving notice of the dismissal. A post-dismissal hearing may be requested by the director or senior executive officer at which time the director or officer must demonstrate that continued employment would materially strengthen the institution's ability to become adequately capitalized and to correct the unsafe or unsound conditions or practices.

Part 325 - Section 8 Powers

Section 325.4 of the FDIC Rules and Regulations defines certain capital levels as unsafe or unsound practices or conditions pursuant to Section 8 of the FDI Act.

Unsafe or Unsound Practice Any state nonmember bank that has less than its minimum leverage capital requirement is deemed to be engaged in an unsafe or unsound practice pursuant to Section 8(b) and/or 8(c) of the FDI Act.

Exception: A bank is not deemed to be engaged in an unsafe or unsound practice if the bank has entered into and is in compliance with a written agreement with the FDIC, or the bank has submitted and is in compliance with a plan approved by the FDIC to:

- Increase its Tier 1 leverage capital ratio to such level as the FDIC deems appropriate, and
- Take such other action as may be necessary to be operated so as not to be engaged in such an unsafe or unsound practice.

Unsafe or Unsound Condition Any insured depository institution with a ratio of Tier 1 capital to total assets that is less than 2 percent is deemed to be operating in an unsafe and unsound condition pursuant to Section 8(a) of the FDI Act.

Exception: An insured depository institution is not deemed to be operating in an unsafe or unsound condition if, in the case of a state nonmember bank, it has entered into and is in compliance with a written agreement with the FDIC (or in the case of any other insured depository institution, has entered into and is in compliance with a written agreement with its primary federal regulator and to which agreement the FDIC is a party), to:

- Increase its Tier 1 capital ratio to such levels as the FDIC deems appropriate, and
- Take such other action as may be necessary to be operated in a safe and sound manner.

In most cases, capital levels may be a reflection of other supervisory concerns that have already resulted in Section 8(a), Section 8(b), or Section 8(c) enforcement actions. Institutions subject to enforcement actions that include a capital provision may meet the criteria for the exception from being deemed to be in or engaged in an unsafe or unsound condition or practice due to capital levels. However, when enforcement action has not been taken or is not warranted due to a lack of other supervisory concerns, the FDIC may choose to enter into a written agreement with the institution thereby providing the institution with an exception from the definition of unsafe or unsound practice or condition and precluding Section 8(a), Section 8(b), or Section 8(c) action solely based on capital levels.

It is important to note that the FDIC is not precluded from taking Section 8(a), Section 8(b), or any other enforcement action against an institution with capital levels that exceed those defined as unsafe or unsound in Section 325.4.

Part 325 - Capital Directives

Section 325.6 of the FDIC Rules and Regulations authorizes the FDIC's Board to issue a directive against any insured state nonmember bank that fails to maintain capital at or above the minimum leverage capital requirement. A capital directive requires the bank to restore its capital to the minimum leverage capital requirement within a specified period. The directive may require the institution to submit a plan describing the means and timing by which it shall achieve the minimum leverage capital requirement.

Prior to issuing a capital directive, the FDIC must provide the bank with written notice. The bank may submit a written response to the proposed directive. The FDIC will issue a written determination supporting any decision to issue or not to issue a directive after considering the response.

The key difference between a capital directive and PCA directive is the requirement that the FDIC may impose under each directive. Under a PCA directive, the FDIC can impose requirements ranging from recapitalization to restricting activities. However, under a capital directive, the FDIC is largely limited to requiring the institution to recapitalize and submit a capital restoration plan.

←

SAFETY AND SOUNDNESS ORDERS

Section 39 of the FDI Act requires the federal banking authorities to establish various safety and soundness standards. The Act allows the FDIC to request corrective plans from financial institutions that do not meet the standards, which are set forth in Part 364 and the interagency guidelines in Appendix A and Appendix B to Part 364.

If the FDIC requests an informal compliance plan to correct identified deficiencies and the institution fails to submit an acceptable plan, or fails to adhere to a submitted plan, the FDIC will pursue an enforceable order under Section 8 of the FDI Act. In addition, the FDIC may require by order, other corrective measures, such as restricted asset growth, higher capital levels, limits on deposit interest rates, or any other measure deemed necessary to effect corrective action.

Corrective programs for safety and soundness standards can also be incorporated into other types of formal and informal actions pursued against problem institutions. Section 39 actions may be considered for non-problem institutions having clearly inadequate safety and soundness practices and policies; however, this response will normally be limited to situations that could result in material loss to the bank, or where management has not responded effectively to similar criticisms in prior examinations.

Examiners should consult with the regional office prior to discussing possible actions with the bank's board or management. If regional management determines Section 39 action is warranted, examiners should submit a recommendation memorandum to their regional director. The memorandum should detail any discussions with the bank's board or management regarding possible actions.

Note: Examiners and regional directors must exercise care to avoid requesting compliance plans if identified problems are correctable through standard examination practices.

GENERAL INSTRUCTIONS

←

These instructions apply to all safety and soundness Reports of Examination (ROE).

References

Examiners should also consider the following:

- Federal Deposit Insurance Act, FDIC Rules and Regulations, and related statutes and regulations,
- FDIC and other applicable Statements of Policy,
- Instructions for the Preparation of Reports of Condition and Income (Call Reports),
- The User's Guide for the Uniform Bank Performance Report (UBPR),
- RMS Manual of Examination Policies (Manual),
- State Statutes and Regulations,
- FFIEC Information Technology Examination Handbooks,
- Outstanding Memoranda,
- Financial Institution Letters,
- Uniform Financial Institutions Rating System,
- Uniform Rating System for Information Technology,
- Uniform Interagency Trust Rating System, and
- Statements of FDIC Board of Directors

Unless otherwise specified, complete Report financial schedules according to Call Report Instructions.

Reminder: Reports may be affected by changes to definitions, laws, regulations, Call Report Instructions, and regulatory policies within the aforementioned references. When significant Report changes occurred since the previous examination, use footnotes on the applicable report pages to explain the difference(s). Do not footnote minor changes.

Report Comments, Supervisory Recommendations, and Matters Requiring Board Attention

As used in these instructions, the term “report comments” refers generally to text set forth in the ROE. The term “supervisory recommendation” refers to FDIC communications with a bank that are intended to inform the bank of the FDIC’s views about changes needed in its practices, operations or financial condition. As described in the Statement of FDIC Board of Directors on the Development and Communication of Supervisory Recommendations (Statement), a principal purpose of supervisory recommendations is to communicate supervisory concerns to a bank so that it can make appropriate changes in its practices, operations or financial condition and thereby avoid more formal remedies in the future, such as enforcement actions.[1] All supervisory recommendations must address meaningful concerns, communicate concerns clearly and in writing, and discuss corrective action. Supervisory recommendations are not formal or informal enforcement actions, but they are communications of FDIC expectations of banks. The Statement acknowledges that bankers take seriously supervisory recommendations made by FDIC personnel; accordingly, care should be taken in their development and communication.

In the context of the ROE, supervisory recommendations include recommendations communicated on the Examiner’s Comments and Conclusions (ECC) page, and recommendations communicated on other report pages, such as the Risk Management Assessment page. Most supervisory recommendations are generally correctable in the normal course of business. However, when there are material issues and recommendations that require the attention of the institution’s board of directors and senior management, examiners must communicate concerns using Matters Requiring Board Attention (MRBA). MRBA are a subset of supervisory recommendations. It is FDIC policy to make supervisory recommendations in writing in the ROE, in a transmittal letter, or in other correspondence under

[1] See https://www.fdic.gov/about/governance/recommendations.html

official FDIC letterhead. Supervisory recommendations may not be solely verbal, but should be discussed with, and explained to bank management.

Writing Report Comments and Supervisory Recommendations

ROE comments should be fact-based, professional, and objective. Proper presentation of factual information can be very persuasive and will ordinarily be more effective than criticism alone in achieving the desired response from bank management. Use clear, concise, well-organized, language appropriate to the subject or field and the intended audience. Simple language and short sentences are generally the most effective.

Use an Effective Writing Style. While each examiner will develop an individual style of writing comments and supervisory recommendations, the following suggestions may be helpful in increasing effective communication:

- Accurate and descriptive topical headings, in order of importance, promote reader interest.
- Comments should be as brief as is consistent with clarity.
- Comments should be factually objective and not phrased as criticisms of particular individuals.
- Comments on matters not subject to criticism or recommendation, on minor matters, or on unsatisfactory practices corrected during the examination should be limited.
- Ratios, or percentages, are meaningful to examiners, but their significance is not always apparent to bankers and particularly bank directors. Therefore, examiners should not rely upon ratios alone to convey the ideas they wish to express. When ratios are cited, they should be in support of a conclusion or supervisory recommendation, and their import should be made understandable to the reader.

Explain the Basis for any Supervisory Recommendations or Concerns. The ROE should describe the potential consequences of inaction or the benefit of corrective action to the institution related to implementing a supervisory recommendation or correcting a deficiency before the issue leads to deterioration in operations or financial performance. The ROE should factually document bank management and Board commitments for correcting the noted weaknesses.

Reminder on Major Matters. Supervisory recommendations that could establish or change existing FDIC policy, attract unusual attention or publicity, or would involve an issue of first impression must be discussed with regional office management. Regional office management should raise any such matters with senior RMS management for consideration as a Major Matter under the FDIC Board's Major Matter Resolution.

Peer Group Information - Examiners may use UBPR or user-derived ratios and peer group comparisons to support comments. However, examiners are reminded that comparisons to peer are not a part of the UFIRS ratings definitions, and should avoid over reliance on peer group comparisons.

Apparent Criminal Violations - Examiners must not discuss criminal referrals or apparent criminal violations in the open section of the ROE. All comments regarding these matters in confidential report pages or workpapers should be limited to clear-cut statements of fact. Examiners must not include opinions about the probability of indictment, conviction, or related matters. Comments should be as specific as possible and identify who reported an issue and how it occurred. Do not use language such as, "It is reported...," or, "Management indicated...." Instead, use language such as, "President Scott reported...."

Consolidated and Institution-Only Schedules

Examiners should complete ROE schedules on a consolidated basis in accordance with Call Report instructions and generally accepted accounting practices. Institution-only schedules, or a list of an institution's investments in subsidiaries, may be included in ROEs when they add meaningful information. Institution-only schedules may be meaningful when:

- A material volume of a subsidiary's assets is adversely classified and inclusion of institution-only schedules highlight a concentration of risk in a subsidiary,
- A material amount of an institution's assets or capital is invested in a subsidiary, and inclusion of institution-only schedules helps explain an examination concern (such as weak core earnings), or
- An institution is at risk of failing, and inclusion of institution-only schedules might help the bank's board or regulatory authorities develop recovery or resolution strategies.

- Examiners should create institution-only pages on continuation pages. Often, simple lists of investments in each subsidiary are adequate.

Report Dates

The Report uses four different dates:

- ***Examination as of Date -*** This is the date of the financial information analyzed throughout the Report, generally the most recent quarter-end Call Report data available. For example, if an examination commences on August 31, and June 30 financial data is available, the Examination as of Date would likely be June 30.
- ***Examination Start Date -*** This is the date the examination commenced, typically, the date when the examination team begins formal on-site examination of the institution. It is used to monitor ROE completion times and the length of time between examinations.
- ***Date Examination Completed -*** This is the date the examiner formally completes the examination and submits the ROE for review. The date is used to monitor ROE completion and processing times.
- ***Asset Review Date -*** This is the date of the asset data analyzed in the loan review, and often the investment portfolio and other real estate reviews. Although the date could be the same as the Examination as of Date, often examiners are able to obtain more current information. For example, if an examination commences on August 31, and July 31 loan data is available, the Asset Review Date might be July 31. Note the Asset Review Date on the Confidential-Supervisory Section page and within the Asset Quality comment on the Examination Conclusions and Comments (ECC) page.

Selection of the Examination as of Date and the Asset Review Date - When selecting these dates, examiners should consider the availability of the information (quarter-end Call Report data is generally not available until 45 days after the quarter end), the amount of time institutions need to compile requested information, and any material changes that occurred between the dates.

When significant changes in the composition of the balance sheet occur between the Examination as of Date and the Asset Review Date, make appropriate comments in the ROE. There may be circumstances when a more recent month-end date would better serve as the Examination as of Date (rather than the most recent quarter-end).

Page Order and Numbering

Page order is addressed in the Inventory of Report Pages section.

All pages in the open section are sequentially numbered. Sequential numbering continues through the Confidential-Supervisory Section page, but those pages are not listed in the Table of Contents. The Table of Contents lists the titles and page numbers of all open section pages. The sequence of pages should generally follow the pages listed in the Inventory of Report Pages. When user-defined pages are included, they should be included where most appropriate, but not before the Risk Management Assessment (RMA) page.

Generally, do not number the Officer's Questionnaire. However, if the Officer's Questionnaire is included in the Report, numbering may be appropriate when the Officer's Questionnaire is lengthy. In such instances, the letters OQ should precede the number (for example, OQ.1, OQ.2, and OQ.3).

Supplemental Pages

Supplemental (non-mandatory) pages should be used to support the conclusions, supervisory recommendations, and ratings on the ECC page. The Bank of Anytown ROE includes many supplemental pages that provide examples of how to format the pages. Therefore, the supplemental pages shown in The Bank of Anytown do not necessarily provide examples of comments that support ECC page conclusions and should be used as illustrations only.

Rounding

Numbers/Dollar Amounts - Examiners may round dollar amounts to the nearest thousand and omit "000." In narrative comments, "M" is the acceptable abbreviation for thousands. Examiners should round amounts consistently throughout the Report and not use abbreviations like $2.5MM, $2,500M, and $2,500,000 interchangeably.

In the Items Subject to Adverse Classification and the Items Listed for Special Mention pages, round to the nearest thousand and omit "000" in both the heading and the extended criticized amount (refer to the Bank of Anytown). In narrative comments, the numbers and dollar amounts may be rounded and abbreviated; however, it is acceptable to use precise dollar or numerical amounts to avoid confusion. *Example:* The $25,000 loan is secured by a mortgage on an 1,800 square-foot condominium valued at $31,500, or $17.50 per square foot.

When rounding, minor adjustments may be necessary to balance related totals in the Report.

Ratios

Generally, round percentages to the nearest hundredth of a percent, especially critical ratios such as Prompt Corrective Action capital ratios in problem institutions. Round noncritical or imprecise ratios to the nearest whole number.

Abbreviations

MRBA, ECC, and Compliance with Enforcement Actions (CEA) pages - An abbreviated term must be spelled out the first time it is used, with the abbreviation enclosed in parentheses following the term.

Other Report Pages - A list of standardized abbreviations for use on the other Report pages is provided on the back cover of the Report (shown in Appendix A).

Note: The effectiveness of Report comments is significantly diminished if the overuse of abbreviations makes a document harder for readers to understand by forcing them to refer to the list of approved abbreviations too often.

Writing Style and Grammar

Examiners should follow Federal Plain Language Guidelines when completing ROE comments, including loan write-ups. Following the guidelines helps improve the effectiveness of Reports by making comments and recommendations easier for directors and managers to understand. Therefore, examiners should consider the needs of their readers and avoid the use of jargon, and overuse of technical terms, acronyms, adjectives, and adverbs. When considering whether to use an abbreviation, or how many to use in a comment, examiners should keep in mind that abbreviations should make comments easier for readers to understand. The effectiveness of comments and loan write-ups is significantly diminished if the overuse of abbreviations make a document harder for readers to understand by forcing them to refer to the list of approved abbreviations too often.

Listed below are a few style and grammar conventions that should be used in the Report. Refer to the Federal Plain Writing Guidelines; Appendix B (Grammar and Punctuation Guide), of this document; and references such as dictionaries and writer's handbooks for additional guidance.

Footnotes - For ROE pages that have a section titled Footnotes, use the section for footnotes and not for comments.

Dollar signs - Use dollar signs in narrative comments, but not tables.

Commas - Use commas in amounts of 1,000 or more.

Spaces - Use two spaces between sentences.

Negative figures - Consistently enclose negative figures in parentheses or refer to them as negative values. Reminder: Do not write double negative numbers.

Examples:

Correct: The borrower reports a negative NW of $25M.
Or
The borrower reports a NW of ($25M).

Incorrect: The borrower reports a negative NW of ($25M).

Names - On the first reference to a person in the Report, generally use the complete title, first name, middle initial, and last name (for example, Senior Vice President (SVP) John A. Doe). After the initial reference, an abbreviated name may be used (SVP Doe), if confusion with other officers is unlikely. Use references consistently throughout the Report.

Financial Ratios - Typically, UBPR financial ratios are uploaded into the ROE through automated examination tools. The most current information should be in the left column on all pages. Manually calculated ratios should conform with UBPR Users Guide definitions and be footnoted as having been manually calculated.

INVENTORY OF REPORT PAGES

International Report Page Order

Page	Section	Mandatory
Examination Data and Ratios (International)	Open	Yes, when applicable
Transfer Risks Subject to Classification or Comment	Open	Yes, when applicable
Analysis of the Country Exposure Management System	Open	Yes, when applicable
Selected Concentrations of Country Exposure	Open	Yes, when applicable

For International ROE: Use the EDR (International) page, in lieu of the standard EDR page, in the core section of the Report. Place International Report Pages immediately after the Items Subject to Adverse Classification and Items Listed for Special Mention pages.

MATTERS REQUIRING BOARD ATTENTION (MRBA)

←

Purpose

MRBA are a subset of Supervisory Recommendations,[2] which are an FDIC communication intended to inform the institution of the FDIC's views about changes needed in its practices, operations, or financial condition to help directors prioritize their efforts to address examiner concerns, identify emerging problems, and correct deficiencies before the bank's condition deteriorates (or to keep the bank viable if conditions already deteriorated). A principal purpose of supervisory recommendations is to communicate supervisory concerns to a bank so that it can make appropriate changes in its practices, operations or financial condition and thereby avoid more formal remedies in the future, such as enforcement actions.

A MRBA is defined as an issue or risk of significant importance that requires board attention. Examples of matters requiring board attention that could warrant highlighting include:

- Emerging issues in which the board needs to be more proactive in establishing policy and risk management parameters;
- Policy weaknesses that, if left unaddressed, could increase the institution's risk profile or, adversely affect the condition of the institution;
- Ineffective management;
- Repeat examination recommendations or regulatory, audit, or risk management criticisms that have escalated in importance;
- Enforcement action provisions requiring continued attention (these should be included in one summary bullet point); or
- Significant noncompliance with laws, regulations, or the bank's own policies.

When To Include This Schedule

Examiners must use this schedule whenever MRBA are included in the ROE to briefly highlight material issues and recommendations that require prompt attention by the directorate and senior management and follow-up by regulators between examinations. When the MRBA page is included in a Report, place it before the ECC page.

Deficiencies and supervisory recommendations that management can address in the normal course of business should be included in the ECC, RMA, or other supporting pages.

Comment Structure

MRBA should be brief, addressed to the board of directors, and include:

- An introductory statement to explain the purpose of the MRBA comments.
- For each MRBA, a description of the practice or condition that is of concern, a description of the corrective action needed, and a description of the potential consequence of the inaction or non-timely action to the bank's financial condition or operations. Comments should be informative and persuasive by describing the risk(s) associated with an issue and the benefits of corrective action, or consequences of inaction, to the institution and board of directors. The comment should not highlight the threat of potential, escalated supervisory action. In cases where conditions have already deteriorated, comments should prompt the board and senior management to take immediate action to correct deficiencies.
- A statement reminding the directorate and senior management of the importance of addressing the noted issues and its responsibility to respond appropriately to the matters highlighted in the schedule and informing them that there will be follow-up by regulators between examinations.

The MRBA should be listed in order of importance. As with all supervisory recommendations, MRBA are expected to be meaningful, actionable, fully supported and clearly communicated. For example, "develop a plan to reduce

[2] Statement of FDIC Board of Directors on the Development and Communication of Supervisory Recommendations, see footnote 1.

overhead expenses by…" rather than "improve earnings." Clear expectations will enable the institution's board, senior management, and examiners to determine when the MRBA has been adequately addressed.

EXAMINATION CONCLUSIONS AND COMMENTS (ECC)

←

Purpose

The ECC page is the primary schedule examiners use to summarize examination findings, inform directors and senior management of undue risks, and guide corrective actions through presentation of supervisory recommendations, when appropriate.

Content

Examiners should convey all significant examination findings on this page, including those relating to risk management, specialty areas, and, when material and relevant, Compliance/ Community Reinvestment Act (CRA) examinations.

The ECC page should include significant issues to be addressed by senior management─with board awareness─that do not meet the significant and immediate criteria of MRBA. However, when applicable, ECC comments should support issues raised on the MRBA schedule. Generally, the remediation of supervisory recommendations set forth on the ECC page can occur during the normal course of business. Supervisory recommendations on the ECC page should be associated with material practices that deviate from sound governance, internal controls, or risk management or consumer protection principles and noncompliance with laws and regulations, enforcement actions, or conditions imposed in writing. Supervisory recommendations should be relevant to the institution and not based on examiner preference or industry “best practices.”

Examiners must document management's response to each supervisory recommendation and include an assessment of each CAMELS component on this page.

In general, comments on the ECC page should not be duplicated on other ROE pages. However, some duplication is acceptable as certain types of examination issues can affect multiple UFIRS components.

Comment Structure

Comments should focus the reader’s attention on the condition or practices that caused or otherwise led to the examiner’s criticisms and supervisory recommendations. Comments should be sufficiently detailed to support all examination findings, ratings, and recommendations. Examiners are encouraged to use tables, charts, or graphs to illustrate a complex concept or to help readers understand examination findings. Generally, commentary for a stable 1-rated component should be concise, while commentary for 2- through 5-rated components should be progressively more detailed.

Page Structure

Numerical Ratings

Uniform Financial Institutions Rating System – The top of the ECC page includes a grid to display the component and composite ratings for the current and two prior examinations. Previous examination dates should correspond to those noted elsewhere in the Report. Identify state examinations with "S" following the date, and designate other agency examinations with appropriate abbreviations. Composite ratings for the current and two prior specialty examinations, and the most recent Compliance and CRA examinations should be included at the bottom of the rating grid. Footnote any examination dates that do not correspond with the current or previous risk management examination dates.

Composite rating definitions for risk management and specialty examinations should be included on the Composite Rating Definitions page. Definitions of component ratings are publicly available in the FDIC Statement of Policy on the Uniform Financial Institutions Rating System.[3]

Overall Condition, and Risk Profile Summary

The first narrative comments on this page should be a concise, high level, executive summary of the overall condition, business model, risk profile, and complexity of the bank. This comment should be concise; however, more extensive comments may be necessary for institutions with elevated risks or a complex business model. The focus should be on providing the reader with a concise description of the bank's nature and scope of major activities and business lines (business model); the overall risk associated with the business model (risk profile) and the complexity of the bank's operations (complexity). The comments should include a description of applicable external factors such as the operating environment in the beginning of the report. Often, bulleted comments can provide brief, yet effective, summaries. Examiners should include brief assessments of specialty areas in this section, but avoid significant duplication of comments included in other sections of the ECC page. In all cases, the narrative should:

- State the approximate asset size of the institution ($80 million, not $80,604M)
- Provide an overview of the institution's business model (e.g. the primary products and/or services offered by the institution).
- Provide a concise analysis of the institution's key risks as it relates to the condition of the institution and an assessment of how management is managing the risks to the institution.
- Summarize the complexity of the institution's operations (e.g. volume, sophistication, and interconnectedness among various activities and business lines)
- Describe external factors, operating environment, major planned changes in management or mergers.
- Avoid using adjectives to describe component areas and instead, focus on how a component area is affected by the institution's risk management practices. For example, avoid statements such as "Liquidity is marginal" in favor of "Management's recent decision to use wholesale funding to support strong loan growth without adopting a contingency funding plan exposes the bank to elevated risk of not being able to secure cost-effective funding going forward."

Compliance with Enforcement Actions

Examiners should include a summary of outstanding formal or informal enforcement actions on the ECC page. Detailed analysis of outstanding actions should be presented on the Compliance with Enforcement Actions page. Generally, the summary should be included after the Overall Condition and Risk Profile summary; however, placement of the comment depends on its significance in relation to other examination issues. Regardless of the type of action (formal or informal), the summary should discuss any unsafe or unsound practices or apparent violation of law that precipitated the enforcement action. Examiners should conclude comments by indicating if each practice, condition, or apparent violation was discontinued or still exists.

Only the FDIC's Board of Directors is authorized to make a finding of unsafe or unsound banking practices. Therefore, do not use the statutorily significant phrase "unsafe or unsound" in ROE comments. However, examiners should describe the facts that relate to unsafe and unsound conditions, and can use terms such as undesirable, unacceptable, or objectionable when commenting on unsafe and unsound practices and describe consequences to the institution of not addressing such practices.

***Prompt Corrective Action* -** When applicable, present a summary of the Prompt Corrective Action (PCA) provisions included on the Compliance with Enforcement Actions page**.**

[3] See https://www.fdic.gov/regulations/laws/rules/5000-900.html

CAMELS Components

Each CAMELS component must be addressed on the ECC page. Components should be addressed in order of risk, although some latitude is allowed to facilitate effective communication. Include the assigned rating after each component heading (for example, Capital - 1). The narrative for each component must include an assessment of pertinent factors and support the assigned rating. If applicable, recommendations and management responses should also be detailed. When recommendations are included, the rationale for the recommendation should be provided. Refer to the Addendum to Section 1.1 (Basic Examination Concepts and Guidelines), of the RMS Risk Management Manual of Examination Policies for rating definitions and specific items to consider when evaluating each component. Note that "peer" is not included among the specific items to consider when evaluating each component. When relevant, peer data may be considered in conjunction with other pertinent evaluation factors. However, peer data should not be used in isolation in assigning ratings.

The length of comments and level of detail should be consistent with assigned ratings. Generally, comments should be brief for 1- and 2-rated components and progressively more detailed for 3-, 4-, and 5-rated components. When comments are critical, ensure the narrative describes the underlying conditions or practices that led to the criticism. As commentary expands, it is important to use effective organization and presentation techniques. Subheadings and bullet points are encouraged to improve readability, as are charts and graphs when appropriate. Generally, lengthy comments should begin with a concise summary of the major issues being covered.

Violations of Law

If apparent violations of law, regulations, or nonconformance with interagency guidelines included as appendices to FDIC Rules and Regulations, are cited in the ROE, the ECC page must include, at a minimum, a brief summary comment and reference to the Violations of Laws and Regulations page. References to other report pages may also be necessary if related issues, such as internal control or policy weaknesses, are detailed elsewhere in the ROE. Based on the significance of the violations, examiners may place the comments under a subheading in the appropriate CAMELS or specialty examination sections, or in a separate section on the ECC page. The amount of detail provided on the ECC page should be based on the materiality of a violation, management's response, and supervisory intentions regarding civil money penalties and enforcement actions.

Disposition of Assets Classified Loss

When applicable, management's response to examination Loss classifications should be discussed within the Asset Quality segment of the ECC page. For example, "President Smith indicated he will charge off all assets classified Loss prior to filing the June 30, xxxx Call Report."

Examiners should not suggest management charge off a portion of loans classified Doubtful except when required by state law or in formal enforcement actions. When securities are adversely classified Doubtful or Loss, examiners should follow guidance contained in Section 3.3 (Securities and Derivatives), of the Manual. Other asset categories against which valuation allowances are not normally maintained require a judgment regarding a recommendation for charge-off.

Specialty Examinations

Concurrent specialty examinations <u>embedded in the Risk Management ROE</u> - Specialty examination findings must be summarized in the ECC pages of the ROE. The placement and length of the comments should be commensurate with identified risks. When structuring comments, examiners should consider a department's risk profile, control environment, and risk management practices. Generally, comments should:

- Summarize the examination scope and key findings,
- Detail material recommendations and violations,
- Include management's response (including the timing of promised corrective actions) to material recommendations and violations, and
- Identify bank officials with whom examination findings were discussed.

With the exception of the ITA page, there are no other mandatory specialty examination pages. However, examiners may include specialty examination pages in the ROE to communicate findings, or to facilitate forwarding of information to other regulators or serviced institutions.

Comments on the ECC page relating to RTA/MSD/GSD examinations should specifically state whether any apparent violations of laws or regulations were discovered. If apparent violations were discovered, but management disagrees, the apparent violation(s) should be cited and discussed in the ROE. If apparent violations were discovered and management agrees the violation occurred, examiners can list the violations associated with the applicable specialty examination in the ROE or include a statement indicating a list of violations was left with management. In either case, an ECC comment must be included detailing management's commitment, or lack of commitment, to correct the violations cited at the examination.

Comments on the ECC page relating to IT examinations must summarize key ITA findings and assessments of the institution's cybersecurity preparedness and conformance with Appendix B to Part 364, Interagency Guidelines Establishing Information Security Standards (Security Guidelines). The length of the comment should vary based on the size and complexity of the institution and the significance of any weaknesses noted and should support the composite Uniform Rating System for Information Technology (USIRT) rating assigned. The comment should reference the ITA page when IT risk examinations are embedded in the Safety and Soundness examination. Significant findings from separate cover IT reports completed during the risk management examination cycle must also be summarized on the ECC page.

Bank Secrecy Act (BSA)

Examiners must describe the adequacy of BSA and Office of Foreign Assets Control (OFAC) programs on the ECC page and factor their assessment into the Management component. The placement and length of comments should relate to the adequacy of the program and any outstanding regional guidance.

- Programs deemed satisfactory should be briefly discussed within a subsection of the Management component.
- Programs with moderate deficiencies should be discussed within a subsection under Management, with details of noted deficiencies and related recommendations included, as deemed appropriate, on the RMA or ECC page.
- Programs with significant deficiencies or violations of BSA related regulations should be presented, as deemed appropriate, in subsections under Management or as a separate section on the ECC page or MRBA page. Details of noted deficiencies and related recommendations should be included on the RMA or ECC pages.

Concurrent specialty examinations <u>submitted under separate cover</u> (Information Technology (IT), Trust, Municipal/Government Securities Dealers (MSD/GSD), or Registered Transfer Agent (RTA)) - In some situations, it may be necessary for specialty examination reports to be completed separately from Risk Management examinations. In these rare cases, separate cover specialty examinations should be prepared consistent with specialty examination instructions. Separate cover specialty ROEs require the approval of the regional director or designee.

Specialty examination findings for separate cover reports should be summarized in the ECC section of the risk management ROE. The placement and length of specialty examination comments should be commensurate with the risk profile of the specialty area.

Meetings with Management and the Board of Directors

If a meeting with the board of directors is held, the ECC page should include a concise description of the topics discussed and any related board responses and commitments. Specific management actions, commitments, or responses that are included in preceding comments need not be repeated. However, examiners should include enough detail to make the comment informative and to document commitments for corrective actions. The date of the meeting and a listing of attendees should be included. If a board meeting was not held, examiners should summarize the exit meeting held with senior management. This comment should precede the Board of Directors Reminder described below.

Board of Directors Reminder

This comment should be under a separate heading and the last narrative item on the ECC page. The comment should remind the directorate of their responsibility to review the entire ROE and sign the Signatures of Directors/Trustees page.

Examiner’s Signature and Reviewing Official’s Signature and Title

The examiner's signature (signatures if joint), and the reviewing official’s signature and title should be the last items on the ECC page.

COMPLIANCE WITH ENFORCEMENT ACTIONS

←

Purpose

This schedule presents facts relating to an institution's adherence to formal and informal administrative actions and to Prompt Corrective Actions. As noted below, examiners should address continuing conditions related to applications, notices, or other written requests on a separate schedule.

Formal enforcement actions are notices or orders issued by the FDIC against insured financial institutions and/or individuals. The purpose of formal actions is to correct noted safety and soundness deficiencies, ensure compliance with Federal and State banking laws, assess civil money penalties, and/or pursue removal or prohibition proceedings. Formal actions are legally enforceable and final orders are available to the public after issuance.

Informal enforcement actions are voluntary commitments made by an institution’s board of directors. They are designed to correct noted safety and soundness deficiencies or ensure compliance with Federal and State laws. Informal actions are not legally enforceable and are not available to the public.

When To Include This Schedule

Include this schedule when an institution has one of the following outstanding actions:

Formal Action

- Final Order pursuant to Section 8
- Capital Directive
- Section 39 Safety and Soundness Order
- Other formal administrative action of a state authority or other regulatory agency
- Continuing Condition

Informal Action

- Board Resolution
- Memorandum of Understanding
- Section 39 Safety and Soundness Compliance Plan
- Other informal administrative action of a state authority or other regulatory agency

Prompt Corrective Actions

When an institution is subject to Prompt Corrective Action (PCA), summarize the applicable provisions of the PCA and follow each provision with an examiner assessment.

Continuing Conditions

Create a separate schedule titled "Compliance with Ongoing Conditions" to discuss an institution’s adherence to conditions imposed by the FDIC or other relevant banking agency in connection with an application, notice, or other request made in writing. Address continuing conditions, including any conditions or requirements imposed through orders approving deposit insurance, mergers, or other applications, as well as continuing conditions or requirements imposed through a non-objection to a change in bank control notice or other filing. Continuing conditions or requirements to be addressed may also be included in various agreements relating to an application, notice, or filing such as operating agreements, parent company agreements, capital and liquidity maintenance agreements, and passivity agreements. The schedule should follow the Compliance with Enforcement Actions page (if formal or informal actions are in place) or the ECC page.

Page Structure

Examiners should begin comments with a brief overview of the facts leading to the issuance of an action. (For example, "Based on deficiencies noted at the xx/xx/xx examination, ...") Comments should detail the type of action, effective date, and affected parties. At the first examination after the issuance of a formal or informal administrative action, the action should generally appear verbatim on this page. If the action is lengthy and management is agreeable, it may be paraphrased.

Use bold print, indentation, quotations or similar techniques to differentiate between action provisions and examiner assessments.

Each provision should be followed with an assessment of the adequacy of the steps taken by the institution to comply with each provision of the action. For example, an assessment of a new policy might say, "The updated Liquidity Policy appears to address the requirements of provision X." Examiners should not use conclusory statements of opinion such as, "The institution is in compliance/partial compliance/substantial compliance/noncompliance with this provision." Comments should also indicate whether time limits set forth in actions have been met.

At subsequent examinations, provisions may be paraphrased or summarized. Address only those points of the action that the institution has not complied with since the previous examination and requirements of a continuing nature. When all provisions have been satisfied, and the only remaining provisions are those of a continuing nature having no expiration date, remarks may be limited to a short paragraph concerning the continuing requirements of the action.

In all cases, carry forward a summary of the institution's adherence to any outstanding formal or informal actions to the ECC page.

RISK MANAGEMENT ASSESSMENT

←

Purpose

The purpose of this schedule is to highlight deficiencies in risk management policies, procedures, and practices and to provide recommendations for corrective action, ideally before risk management practices impact the institution's condition.

When To Include This Schedule

Examiners should use the Risk Management Assessment (RMA) page to concisely detail supervisory recommendations about risk management deficiencies and corresponding management responses that are material enough to be included in the ROE, but not on the ECC page. When determining where to place comments (ECC vs. RMA), consider the materiality of an issue, the impact an issue has on CAMELS ratings, and how placement of a comment most effectively supports recommendations and ratings.

General

Examiners should answer each RMA question by responding: "Yes," "No," or "Generally, yes." Responses at most 1 and 2 rated institutions will likely be answered: "Yes", or "Generally, yes."

"Yes" answers do not require ROE comments.

"Generally, yes" answers, which may be appropriate for moderate weaknesses, require comment on the RMA page, but may not require ECC page comments. Related comments should be concise and address management's response.

Answers of "No" normally require ECC page comments and may even require MRBA, depending on the significance of the deficiency and urgency and seriousness of required corrective action. To the extent possible, examiners should not duplicate comments on the ECC and RMA pages; however, RMA page comments may be used to address less significant issues or to provide additional details about weaknesses that are addressed on the ECC page.

In some cases, coverage of related issues may be split between the ECC and RMA pages. For example, assume a bank's loan policy is inadequate for several significant reasons. In addition, a number of less significant policy related weaknesses are identified that alone would not justify considering the policy inadequate. In this scenario, an appropriate RMA Question No. 2 response may be:

No. As indicated on the Examination Conclusions and Comments page, underwriting and credit administration practices relating to acquisition and development lending are deficient. Additionally, management should strengthen the Loan Administration Policy by:

- Addressing minimum documentation requirements relating to home lending,
- Developing minimum liquidity and net worth requirements for unsecured borrowers, and
- Modifying accounts receivable lending guidance to be consistent with actual practices.

President Smith agreed to modify the Loan Policy by the end of the year.

Risk Management Questions

The list of items under each question is for illustrative purposes and is not all-inclusive. In responding to these questions, examiners should consider the institution's existing and projected business model, risk profile, and complexity.

1) ***Are risk management processes adequate in relation to economic conditions and asset concentrations?***

Consider issues such as:

- Local economic conditions and trends (including real estate markets),
- Trade area demographics,
- Loan demand and diversification strategies,
- Industry or economic-sector concentrations, and
- Diversity and availability of funding sources.

The level of formality in risk management processes should be consistent with the existing and projected size and complexity of an institution's activities. For example, written policies relating to monitoring economic conditions may not be needed in a stable 1 or 2 rated community bank.

2) ***Are risk management policies and practices for the credit function adequate?***

Consider the adequacy of policies and practices relating to issues such as:

- Credit administration,
- Underwriting standards,
- Credit grading system,
- ALLL or ACL methodology,
- Real estate appraisals and evaluations,
- Concentration limits and oversight,
- Internal and external loan review programs,
- Documentation standards,
- Lending authorities,
- Loan approval processes,
- Loan committee structures,
- Nonaccruals and chargeoffs,
- Environmental risk controls,
- Out-of-area lending,
- Loan purchases and participations,
- Subprime lending programs,
- Credit card lending programs, and
- Renewals and extensions.

Additional guidance regarding this area is included in Section 3.2 (Loans), of the Manual.

3) ***Are risk management policies and practices for asset/liability management and the investment function adequate?***

Consider the adequacy of policies and practices relating to issues such as:

- Asset/Liability management,
- Liquidity strategies,
- Investment strategies,
- Hedging strategies,
- How growth is funded,
- Investment authorities,
- Committee structures, and
- Outside advisory services.

Additional guidance regarding this area is included in Sections 3.3 (Securities and Derivatives), 6.1 (Liquidity and Funds Management), and 7.1 (Sensitivity to Market Risk), of the Manual.

4) ***Are risk management processes adequate in relation to, and consistent with, the institution's business plan, competitive conditions, and proposed new activities or products?***

Consider the adequacy of policies and processes relating to issues such as:

- Strategic and capital planning,
- Management depth and succession,
- New or expanded activities or products,
- Competitive environment,
- Feasibility and budgeting analysis,
- Fidelity insurance coverage, and
- Consistency of present business plan and proposed new activities with that provided with the Application for Federal Deposit Insurance (de novo institutions).

5) ***Are internal controls, audit procedures, and compliance with laws and regulations adequate (includes compliance with the Bank Secrecy Act [BSA] and related regulations)?***

Consider the adequacy of practices, as well as policy coverage and implementation, relating to issues such as:

- Independence, scope, and frequency of internal/external audit programs;
- Internal control standards;
- Management information systems;
- Audit committee composition;
- Management's responses to previous regulatory and audit recommendations;
- Accounting issues/Call Report errors;
- Fidelity insurance coverage;
- Compliance with the Bank Secrecy Act and Financial Recordkeeping regulations; and
- Compliance with laws and regulations, including continuing conditions other than orders granting approval for deposit insurance (which should be covered on the Compliance with Enforcement Actions Page).

RMA page comments should only briefly address cited violations. Primary commentary regarding apparent violations should be included on the ECC and Violations of Laws and Regulations pages.

BSA and OFAC comments are not required on the RMA page if there are no concerns. However, moderate deficiencies or recommendations for program enhancements that do not require MRBA or ECC comments may be detailed on this page. (In all cases, scope comments for BSA and OFAC should be included on the Confidential - Supervisory Section page.)

6) ***Is board supervision adequate; and are controls over insider transactions, conflicts of interest, and parent/affiliate relationships acceptable?***

Consider issues such as:

- Ownership/Control of the institution;
- Quality and completeness of Board reporting;
- Committee structure adequacy to the extent not addressed in prior questions;
- Directorate attendance;
- Transactions with insiders, affiliates, holding companies, and parallel-owned banking organizations;
- Unusual or nontraditional activities conducted through affiliates;
- Policies and procedures regarding conflicts of interest and ethical conduct;
- Affiliate/subsidiary relationships;
- Compensation policies, procedures and practices including excessive compensation and appropriateness of director's fees; and
- Key man life insurance/deferred compensation arrangements.

VIOLATIONS OF LAWS AND REGULATIONS

←

Purpose

Examiners use this page to communicate details regarding apparent violations of laws and regulations, or nonconformance with guidelines or standards that are incorporated into regulations as appendices to FDIC rules, such as the appendices to Parts 364 and 365 of the FDIC Rules and Regulations.

General

The ECC page must include a reference to this page whenever violations of laws or regulations, or nonconformance with guidelines incorporated into an appendix to a regulation, are cited. The MRBA page may also require a reference to this page depending upon the significance and prevalence of the infractions and whether they are repeat infractions. References to this page on other report pages may also be necessary if related issues, such as internal control or policy weaknesses, are detailed elsewhere in the ROE.

Because of possible administrative or judicial reviews, all violations must be described as "apparent violations."

Examiners should list violations in order of importance, with consideration given to the materiality of violations, adequacy of management's response, and supervisory intentions regarding civil money penalties and enforcement actions.

Formatting Write-ups

Headings - A descriptive heading should precede each scheduled violation or group of violations.

Citation of Violation - When scheduling apparent violations of laws or regulations:

- Refer to general regulations by part number (for example, Part 329);
- Refer to specific parts of regulations by section number (for example, Section 328.2 or Section 329.1(e));
- Quote or paraphrase the requirements of violated statutes; and
- Ensure all summarized statutes or regulations accurately reflect the key aspects of the statutes or regulations. For example, "Section 337.3(b) of the FDIC Rules and Regulations prohibits banks from making loans exceeding defined amounts to directors without prior board approval."

Description of Violation - Describe the specific actions or circumstances that caused an apparent violation. For example, "The $3 million loan to Director Smith funded on 12/2/16 is in apparent violation of Section 337.3 (b) of the FDIC Rules and Regulations because it was extended without prior board approval." Lengthy descriptions of violations may be unnecessary, especially if details are included in other schedules. In such cases, include references to the other schedules.

Management Response - Comments should include:

- Management's explanation for violations and their commitments for corrective action, or lack thereof,
- The name and title of any officers or directors who provided explanations and commitments, and
- Details of any promises of restitution (when applicable).

Director Approval - To reflect director responsibility, include the names of directors who approved assets held in nonconformance with applicable State or Federal laws, regulations, or similar guidelines. While this is not necessary in all violation write-ups, it is essential when violations may result in civil money penalties. In such cases, show the date approval was granted and include the names of any dissenting directors. Follow this procedure even when an approval consisted merely of ratifying a group of loans identified only by numbers. Generally, also include director approval information when the apparent violation(s) involves insider transactions, whether or not civil money penalties are being recommended.

Summary of Technical Violations – Generally, when citing technical violations involving numerous accounts or credits, examiners may include lists of sample violations in the ROE. If sample lists are included, examiners should give complete lists to management and retain a copy in the workpapers. Refer to specialty examination instructions when citing apparent violations relating to specialty examinations.

Legal Lending Limit Violations

Generally, courts have held that only the loan(s) that cause a borrower's debt to exceed the legal limit is illegal. Therefore, consider only the advance(s) that cause the excess over the legal limit a violation. However, the state law or practices regarding this matter should prevail.

Uncorrectable Vs. Repeat Violations

After violations are first cited at an examination, refrain from citing the violations at subsequent examinations if they cannot be corrected. For example, violations of Regulation O prior approval requirements are not correctable and should not be cited at subsequent examinations. However, examiners should cite repeat violations (new infractions of previously cited violations), and violations that could have been corrected but were not.

Civil Money Penalties

Examiners must not refer to the FDIC's ability to impose Civil Money Penalties (CMPs) except in the most serious circumstances. If institutions repeat or fail to correct serious violations, comments can indicate that violations may be subject to CMPs.

Examiners must determine if an insured depository institution should be considered for a CMP referral when significant violations of the BSA/AML Compliance Program have been cited.

When CMPs are being recommended, the home mailing addresses of all directors and any other individuals involved in the violation should be included in the Confidential-Supervisory Section.

Nonconformance with Guidelines Incorporated into Regulations

After cited apparent violations, list nonconformance with guidelines or standards that are incorporated into an appendix of a regulation under the heading *Nonconformance with Guidelines Incorporated into Regulations*. An example of nonconformance with guidelines incorporated into a regulation would be when the institution did not meet one or more of the standards established in Appendix A or B of Part 364, or Appendix A of Part 365. Write-ups for nonconformance should follow the general format as violation write-ups.

INFORMATION TECHNOLOGY AND OPERATIONS RISK ASSESSMENT (ITA)

←

Purpose

The purpose of the ITA page is to convey the URSIT ratings for embedded information and operations risk (IT) examinations and provide detailed comments that support each component rating.

Examiners must include comments on the Examination Conclusions and Comments (ECC) page that summarize key ITA findings, and assessments of the institution's cybersecurity preparedness and conformance with Appendix B to Part 364, Interagency Guidelines Establishing Information Security Standards (Security Guidelines). Significant findings from separate cover IT examination reports completed during the risk management examination cycle must also be summarized on the ECC page.

Page Structure and Order

The ITA is a mandatory page when IT examinations are embedded in the Safety and Soundness examination. The page should immediately follow the Violations of Laws and Regulations page, if it is included. Detailed comments supporting assigned URSIT ratings and assessments of the institution's cybersecurity preparedness and conformance with Security Guidelines are required on the ITA page.

Numerical Ratings

The ITA page includes a grid at the top of the page to display the composite and component ratings for the current and two prior IT examinations.

Supporting Comments

Comments should be presented in order of importance and provide support for the conclusions and supervisory recommendations summarized on the ECC page. Use descriptive subheadings, bulleted lists, and other such devices to promote readability.

Comments should include:

- Assessment or condition statements for each component;
- Findings and, as needed, recommendations;
- Descriptions of the consequences of inaction, or benefit of corrective action, relating to each recommendation; and
- Management's response, name and title of respondent, and timeframe specified for corrective action.

If the institution incorporates a cybersecurity tool or framework (e.g., FFIEC Cybersecurity Assessment Tool or NIST Cybersecurity Framework) into its risk management process, examiners should detail the results of management's assessment. The details should be presented in conjunction with the examiner's review of the institution's overall information security risk assessment and can be included under the supporting comments for cybersecurity preparedness.

FIDUCIARY ACTIVITIES ASSESSMENT (FAA)

←

Purpose

The purpose of the FAA page is to convey supporting comments for embedded trust examination findings that are summarized on the ECC page.

When to Include

Examiners have the option to include an FAA page when additional information regarding embedded trust examination findings, recommendations, or management responses is necessary to support ECC page comments.

Supporting comments on an FAA page may relate to apparent violations, contingent liabilities, potential losses, estimated losses, or other issues subject to comment or criticism.

Page Structure and Order

Numerical Ratings

The FAA page includes a grid at the top of the page to display the component and composite ratings for the current and two prior trust examinations. At a minimum, examiners must include composite trust ratings and a summary comment on the ECC page. However, if deemed appropriate, examiners may also include composite and component trust ratings on the FAA page. The definition of the assigned composite rating must be included on the Composite Rating Definitions page.

Supporting Comments

Examiners should prepare comments on an exception-only basis as much as possible. Comments should be presented in order of importance and provide support for the conclusions and supervisory recommendations summarized on the ECC page. Descriptive subheadings, bulleted lists, and other such devices should be used to promote readability.

EXAMINATION DATA AND RATIOS (EDR)

←

Purpose

The EDR page includes various data that details trends in key financial components and supplements examination assessments of capital, asset quality, earnings, and liquidity. Examiners must include the EDR page in all examination reports.

Summary of Items Subject To Adverse Classification

Generally, classification information automatically pulls from other report schedules.

Contingent Liabilities

Only Category I contingent liabilities (liabilities that will result in an equivalent increase in bank assets if the contingencies convert to actual liabilities) are subject to adverse classification.

Financial Performance and Condition Ratios

The standard ratios included on this page are derived from examination results, Call Reports, and the UBPR. When Call Report data is used, ratio calculations are consistent with UBPR User's Guide definitions. Call Report instructions require banks to report capital ratios, which are used for determining the PCA capital category, as a percentage, rounded to four decimal places. Capital ratios reflected in the EDR page are truncated at two decimals.

Note: Institutions can elect the Current Expected Credit Loss (CECL) transition provision in order to transition the day-one impact of adopting CECL in regulatory capital through transition adjustments to retained earnings, average total consolidated assets, temporary difference deferred tax assets (DTAs) , and the adjusted allowance for credit losses (AACL). Additionally, those institutions that were required to adopt CECL during the 2020 calendar year can elect the CECL revised transition to delay for two years an estimate of CECL's effect on regulatory capital followed by the three-year transition provision.

Selection of Ratios

Data in the Asset Quality section and the top portion of the Capital section[4] is based on results from current and prior examinations (if applicable). The left column of the bottom three Capital ratios[5] and the Earnings and Liquidity ratios should tie to the Examination as of Date of the current examination. The information in the adjacent columns is user-defined. When selecting the period and type of information displayed in the adjacent columns (whether institution or peer), examiners should select the data that best supports examination conclusions.

For institutions reporting capital under the community bank leverage ratio (CBLR) framework, the risk based capital ratios will not be calculated; the related ratios can be shown as "0.00" and footnoted as "Not calculated under CBLR".

Examiners can add one user-defined ratio to each section to further support examination findings. User-defined ratios for prior periods that are not readily available can be shown as NA and footnoted as Not Available, or manually calculated based on UBPR definitions.

Note: The Capital Category will need to be changed from "W-Well-Capitalized" if the bank is operating under a formal corrective action that contains a capital provision even if the capital ratios meet the requirements of the Well-

[4] Tier 1 Capital/Average Total Assets, Common Equity Tier 1 Capital/Risk Weighted Assets, Tier 1 Capital/Risk-Weighted Assets, and Total Capital/Risk-Weighted Assets.

[5] Retained Earnings/Average Total Equity, Asset Growth Rate, and Cash Dividends/Net Income.

Capitalized PCA category. (Change the category designation by overwriting the Capital Category cell in the automated examination tool.)

COMPARATIVE STATEMENTS OF FINANCIAL CONDITION

←

Purpose

This schedule presents a general snapshot of the balance sheet. It is not intended for detailed financial analysis. Examiners should use the institution's Report of Condition, UBPR, and other sources for balance sheet analysis.

General

This schedule should conform to Call Report Instructions. If Call Report Instructions change, examiners may need to add new line items.

Show all asset categories net of specific and general valuation allowances, except Total Loans and Leases, which has a separate line item for general valuation allowances (the Allowance for Loan and Lease Losses or the Allowance for Credit Losses, as applicable). Additionally, examiners should consider the following:

- *Securities Purchased Under Agreements to Resell*, and *Held-to-Maturity* (HTM) securities - These items are reported net of applicable Allowances for Credit Losses.
- *Securities: Available-for-Sale (AFS) (at Fair Value)* - For institutions that adopted ASU 2016-01, this line item only includes AFS debt securities. For institutions that have not adopted ASU 2016-01, this item would include AFS equity securities.
- *Equity securities with readily determinable fair values not held for trading* - For institutions that adopted ASU 2016-01, this line item includes investments in equity securities, unless the institution has designated the investments as trading.

Dates

Left Column - In the left column, place the financial information for the current Examination as of Date. Generally, this will be the most recent quarter-end available; however, month-end or another date may be more appropriate when circumstances dictate.

Right Column - The right column should usually detail information for the year-end prior to the Examination as of Date shown in the left column. However, when desired, substitute a different date, such as the Examination as of Date from the prior examination. If using a date other than the previous Examination as of Date, ensure the information follows Call Report Instructions.

At the first examination of a new institution, examiners may use the right column to display a projected balance sheet. If this information is not useful, leave the right column blank. In the case of a new institution, footnote the date the institution opened.

Assets, Liabilities, and Equity Capital

Ensure line items tie to Call Reports line items and footnote any unusual items. If an examination as-of date does not correspond to a quarter-end, line items must still conform to Call Report definitions.

Derivatives and Off-Balance Sheet Items

Derivatives and off-balance sheet Items should correspond to amounts listed on Call Report Schedule RC-L, (for banks that file Form 031 or 041), or Schedule RC-L and Schedule-SU, item 1 (for banks that file Form 051). If additional categories are needed, space is available below Other Off-Balance Sheet Items.

Include only Category I contingent liabilities (contingencies that give rise to accompanying increases in assets if the contingencies convert into actual liabilities). Do not include Category II contingent liabilities (those that are not expected to result in an increase in assets if converted to actual liabilities, such as pending litigation). Significant

Category II contingent liabilities should be discussed on the ECC page under the financial aspect most significantly affected (for example, capital, management, earnings, or liquidity). If more than one financial aspect is impacted, comments relating to the other areas should briefly reference the contingencies and be cross-referenced as needed.

Footnotes

Use this section strictly for footnotes, not comments.

LOAN AND LEASE FINANCING RECEIVABLES

←

Purpose

The purpose of this schedule is to provide an overview of the types of loans in an institution's loan portfolio and the volume of past-due and nonaccrual loans. This schedule is not intended for in-depth loan analysis. Examiners should review an institution's internal records, Call Reports, and UBPR to gain a thorough understanding of the composition and quality of a loan portfolio.

General

Complete this schedule according to Call Report Instructions.

Percentages - Round percentages to the nearest whole percent in the loan portfolio section and to the nearest hundredth percent in the past-due and nonaccrual section.

Dates - Examiners have the flexibility to use the same or different dates for the loan category and past-due/nonaccrual sections. The loan category date will usually be the Examination as of Date. The past-due/nonaccrual date should normally correspond with the Asset Review Date.

Past due and nonaccrual ratios may not tie to Call Report ratios if the Asset Review Date and the Examination as of Date are not the same. When the dates differ, ensure the dates used are clearly footnoted. Examiners may prepare the loan portfolio section as of the Asset Review Date if significant loan portfolio changes occurred after the Examination as of Date.

Loan Portfolio Breakdown

All Other Loans and Leases - This item includes overdrafts.

Gross loans and leases per the Call Report may actually be total loans and leases (gross loans and leases less unearned income). Call Report Instructions encourage but do not require institutions to report loan categories net of unearned income. Using total loans is acceptable when total and gross figures are not substantially different or unearned income is difficult to separate from loan categories.

Past-due And Nonaccrual Loans And Leases

Past-due and nonaccrual information should correspond to information in Call Report Schedule RC-N. Refer to the instructions for Schedule RC-N and the Call Report Glossary under "Nonaccrual Status."

The past-due columns are only for past due loans that are still accruing interest. The nonaccrual column may contain current and past-due loans.

Total Past Due and Accruing - This column is the sum of the previous two columns within each category.

Percent of Category Columns - The Percent of Category column calculates the ratio of past-due and accruing loans to the respective loan category. The Nonaccrual Percent of Category column calculates the ratio of nonaccrual loans to the respective loan category. (The totals in these two columns are not the sum of the ratios above the totals. The column totals are the Total Past Due and Accruing and the Nonaccrual dollar amounts expressed as a percent of gross loans and leases. The total Percent of Category ratio plus the total Nonaccrual Percent of Category ratio equals the Past Due and Nonaccrual Loans and Leases/Gross Loans and Leases ratio shown on the Examination Data and Ratios Page.) The percent of categories columns should not add to 100 percent unless the entire loan portfolio is past-due or on nonaccrual.

Restructured Loans and Leases

Memorandum: Restructured Loans and Leases - Include restructured loans here only if they are past due and accruing or on nonaccrual. These restructured loans are included in the above past-due and nonaccrual totals. Footnote restructured loans that are not past due and accruing or on nonaccrual.

Restructured loans, also known as troubled debt restructurings, are described in ASC Subtopic 310-40, Receivables - Troubled Debt Restructurings by Creditors (formerly FASB Statement No. 15, "Accounting by Debtors and Creditors for Troubled Debt Restructurings," as amended by FASB Statement No. 114, "Accounting by Creditors for Impairment of a Loan"). Such loan restructurings may include, but are not limited to, reductions in principal or accrued interest, reductions in interest rates, and extensions of the maturity date because of deterioration in the borrower's financial position.

The following loans are not considered troubled debt restructurings:

- A loan extended or renewed at a stated interest rate equal to the current interest rate for new debt with similar risk,
- A loan that was a troubled debt restructuring, which had, subsequent to its restructuring, been assumed by a financially sound, unrelated third party, and
- A loan to purchasers of ORE which, to facilitate disposal, is granted at contract rates lower than market rates for loans of similar risk.

References:

- ASC Subtopic 310-40, Receivables - Troubled Debt Restructurings by Creditors
- Call Report Instruction Glossary under Troubled Debt Restructurings
- Interagency Supervisory Guidance Addressing Certain Issues Related to Troubled Debt Restructurings (FIL-50-2013)

Footnote

Use this area to clarify items in the above sections. Do not use it to detail loan categories. A continuation page may be used if it is necessary to break down loan categories (such as, construction, commercial real estate, 1- to 4-family residential).

RECAPITULATION OF SECURITIES

←

Purpose

The purpose of this schedule is to analyze the general composition of a bank's investment portfolio, as well as any appreciation or depreciation in securities. Review the institution's internal records, Call Reports, and UBPR to gain a thorough understanding of the composition and quality of the investment portfolio.

General

Examiners should complete this schedule in accordance with Call Report Instructions-Schedule RC-B and the Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities.

Rounding - Round percentages to the nearest hundredth of a percent.

Trading Account Assets - Do not include trading account assets, other than as a footnote.

Sub-investment Quality/Investment Quality

This schedule allows examiners to detail investment and sub-investment quality securities for States and Political Subdivisions, Mortgage-backed Securities, Other Debt Securities, and Equity Securities. When applicable, schedule sub-investment quality securities immediately below the appropriate line item. For instance, if an institution has a sub-investment quality other debt security (other domestic debt), add a line item titled Sub-Investment Quality Other Domestic Debt Securities directly below Other Domestic Debt Securities. The manually created Sub-investment line items will not appear unless a sub-investment quality security exists.

Fair Value And Estimated Fair Value

Fair Value is defined as the price that would be received to sell an asset, or paid to transfer a liability, in an orderly transaction between market participants in the principal, or most advantageous, market of the asset or liability at the measurement date. The value is often referred to as an "exit" price.

An orderly transaction is a transaction that assumes exposure to the market for a period before the measurement date to allow for marketing activities that are usual and customary for transactions involving such assets or liabilities. It is not a forced liquidation or distressed sale.

If using other than quarter-end statements and it is impractical to obtain the fair value for some securities, include the amortized cost of those securities in the Fair Value column. For each line item, footnote the dollar amount of amortized costs included in the Fair Value column.

Asset-backed Securities

For the purpose of this schedule, asset-backed securities are backed by assets other than 1- to 4-family residential properties. For example, securities backed by credit card receivables, home equity lines, automobile loans, other consumer loans or commercial and industrial loans. Footnote, if appropriate, the type of assets securitized if other than those previously listed.

- Capital Markets Handbook
- Call Report Glossary (particularly, Coupon Stripping, Treasury Receipts, and STRIPS; Marketable Equity Securities; Participation in Pools of Securities; and Trading Accounts)

ITEMS SUBJECT TO ADVERSE CLASSIFICATION

←

Purpose

The purpose of this schedule is to detail adversely classified items, and when necessary, communicate the rationale for adverse classifications via write-ups.

General

The page heading includes the interagency definitions of Substandard, Doubtful, and Loss.

All types of assets are subject to adverse classification.

Asset Classification Write-Ups

Asset classification write-ups are prepared to support the examiner's conclusions and recommendations to the Board of Directors, senior management, and regulatory authorities (including support for enforcement actions). Write-ups may not be necessary when the Asset Quality (AQ) component is rated 1 or 2. However, when AQ is rated 3 or worse, examiners are to prepare a sufficient number of write-ups to explain individual asset classifications, highlight underwriting deficiencies, and support examination supervisory recommendations and ratings.

Examiners should structure their write-ups to present information most effectively. For example, fulsome write-ups, addressing the elements discussed under the Loan Write-Ups heading below, may be completed for loans over a certain size or to support specific conclusions or supervisory recommendations detailed on the ECC or RMA pages. Less comprehensive write-ups, or write-ups that only include a bulleted list of facts, may be completed for less complex credits. Examiners may also include lists of individual loans, or group homogeneous loans together, if appropriate. The examiner-in-charge has discretion as to the level of detail necessary to support conclusions and satisfactorily convey examination findings.

Regardless of the Asset Quality rating, examiners should consider including loan write-ups when any of the following circumstances are present:

- Significant weaknesses or adverse trends in credit underwriting or administration policies or practices,
- Material Loss classifications,
- Management disagrees with one or more classifications,
- Directors or management are not adequately aware of the impact of significant weaknesses in credit policies, practices, or conditions,
- Adversely classified assets involve institution insiders, or
- Internal credit grading systems are deficient.

Report Presentation

General

- In all cases, the dollar amount of adverse classifications must be included in the table at the top of the Examination Data and Ratios (EDR) page.
- If adverse classification write-ups are not prepared, examiners may list individual assets and groups of homogeneous assets on the Items Subject to Adverse Classification page.
- Regardless of ROE presentation, a detailed list of classifications should be left with management before the end of the examination. In this case, a copy of the list, signed by an executive officer (signifying acknowledgement of receipt of the list), should be retained in the workpapers for follow-up at the next examination.
- If classified assets are grouped together, include a comment as to the number of assets and basis for classification. For example, "32 Consumer Installment Loans adversely classified based on the Uniform Retail Credit Classification and Account Management Policy."

- The order of adversely classified asset categories should follow the table at the top of the EDR page. Use appropriate subheadings, alphabetize assets within categories, and subtotal each category containing adversely classified items.

Loan Write-ups

When full-scope loan write-ups are prepared, comments should address pertinent factors affecting a classified asset. To the extent necessary, write-ups should address the following elements:

Identification - Indicate the name and occupation or type of business of the borrower. In the case of business loans, identify the business structure (corporation, partnership, sole proprietorship, etc.). Identify signers, cosigners, endorsers, and guarantors.

Description - Concisely describe the make-up of the debt as to the loan type, original and current amounts, and terms. Briefly describe the loan's general history, purpose, and source of repayment.

Collateral - Describe and evaluate any collateral, including its condition and/or marketability. When relevant, identify the appraiser. Also, state if the appraisal or estimate of value is independent or in-house.

Financial Data - Present key balance sheet and income information of the borrower and guarantors. The amount of financial information included in the write up should coincide with its relevance to the classification.

Summarization of the Problem - Explicitly point out the reasons for the adverse classification. Where portions of the line are accorded different classifications or are not subject to adverse classification, state the reasons for the split classifications.

Management's Intentions - Describe management's intention with the debt/borrower. Include any corrective actions contemplated by management, and identify the bank manager who committed to the actions.

Responsibility - Immediately following each loan write-up, identify the originating officer, servicing officer, and the examiner who reviewed the loan.

Consider the following when preparing write-ups:

- The format of write-ups within each asset category should be consistent in presentation, style, and appearance.
- Be concise, but do not omit pertinent information. Assess only relevant factors.
- Write informatively and factually. Do not include extraneous information that may overshadow important weaknesses.
- Round to the nearest thousand (with 000 omitted) in both the heading and adverse classification. In narrative comments, round dollar amounts to the nearest dollar (for example, $24,985) or to the nearest thousand (for example, $25M). Note: Round all dollar amounts in narrative ROE comments the same.
- When participation loans are adversely classified, list each participant and the participant's corresponding ownership percentage (whether or not originated by the institution). This requirement does not apply to Shared National Credits.
- When applicable, discuss contingent liabilities with the related credit relationship. However, do not extend adversely classified contingent liabilities with classified credits. Adversely classified contingent liabilities should be listed under the subheading Contingent Liabilities.
- When applicable, include overdraft amounts in outstanding debt recaps and discuss details on material or chronic overdrafts of borrowers with adversely classified loans in the same general comment.
- If an adversely classified asset has been partially charged off prior to the asset review date, note the date and amount of the charge-off.
- If an asset was adversely classified at prior examinations, indicate the number of times the asset was previously classified.
- If a previously classified and written up asset is again listed for classification, an abbreviated narrative, or a simple listing of name and amount, may be sufficient, <u>if all of the following conditions are met:</u>
    - The fundamental deficiencies have not materially changed,

- Management agrees with the adverse classification,
  - Management and the board are sufficiently familiar with the deficiencies, and
  - Management and the board are taking feasible steps to improve or collect the asset.
- Indicate whether the loan is identified on the institution's internal watch list. If internally identified, indicate the internal rating.
- Indicate the past-due (30 days or more) or nonaccrual status of an asset. Occasionally, it may be pertinent to disclose delinquencies of less than 30 days.
- Indicate whether a loan had numerous extensions or rewrites.

It may not be necessary to address credit factors that do not have a significant bearing on a classification. For example, it may be unnecessary to identify the interest rate on a loan that is delinquent because a borrower went out of business and is no longer making payments. However, examiners may need to identify the interest rate on a variable rate loan that is chronically delinquent if the rate is about to increase and further strain the borrower's repayment ability. Additionally, it may be unnecessary to include numerous details on several small loans if a majority of a borrower's debt is centered in one or more large loans. For example, if a borrower has six loans totaling $1 million and the current balance of one of the loans is $950,000, the remaining five loans might be grouped together and described as, "Five related loans totaling $50,000 originated in 2005-2010. Debts classified Substandard due to the troubled financial condition of the borrower and weak overall collateral protection." (Do not group small loans together if detailed descriptions of the credits would provide better support for other examination comments or recommendations.)

Miscellaneous

- When adversely classified loans or other assets involve alleged fraud, embezzlement, or other dishonest conduct, state the facts that support the adverse classification. Do not discuss any possible criminal intent or conduct.
- Clearly distinguish the adversely classified assets of consolidated subsidiaries from institution-only classified assets.

ITEMS LISTED FOR SPECIAL MENTION

←

Purpose

The purpose of this schedule is to detail assets listed for Special Mention and to communicate the rationale for the criticism.

General

The page heading includes the definition for Special Mention items.

Do not include smaller items unless they are part of a large grouping listed for related reasons.

Write-Ups

Each item listed for Special Mention should be supported by a write-up. However, items that exhibit similar deficient characteristics may be grouped together under a single write-up. The narrative, which generally need not be lengthy, should focus on weaknesses in management's administration, documentation, servicing, and/or collection activities, and on how these deficiencies can reasonably be expected to lead to increased credit risk if not remedied.

ANALYSIS OF LOANS SUBJECT TO ADVERSE CLASSIFICATION

←

Purpose

The purpose of this schedule is to provide insight regarding the migration of classified loans from one examination to the next. From the analysis, the examiner will be better able to cite specific areas of change and the causes of these changes. In particular, the schedule may illustrate deterioration in the loan portfolio through the migration of loans previously classified Substandard to more severe classification categories.

When To Complete

- When institutions have marginal or unsatisfactory loan quality.
- When the volume or composition of adversely classified loans changed significantly from the previous examination.

General

Classification totals from the previous FDIC examination should normally be the starting point for the schedule. The FDIC may not always have access to state or other regulatory examination classification workpapers, which makes it difficult to use non-FDIC examinations as the starting point. However, when possible, analyze changes from a previous non-FDIC examination.

Generally, do not include adversely classified consumer loans and overdrafts. If overdrafts or consumer loans are included, they should be footnoted. Examiners also have discretion to exclude other small dollar loan balances from the schedule. Examiners should footnote amounts that are excluded.

Reductions pertain only to loans adversely classified at the previous examination.

Additional Line Items

Examiners may add line items when necessary. For example, other line items under Additions may include Previously Classified ORE where disposition did not originally meet the criteria for consummation of a sale (under ASC Subtopic 360-20, Property, Plant, and Equipment – Real Estate Sales (formerly FASB Statement No. 66, Accounting for Sales of Real Estate)), but now, subsequent to the transfer of the ORE, meets those requirements.

Payments vs. Recoveries

Nominal recoveries on loans charged off since the previous examination may be handled by: (a) including recoveries in Payments and deducting them from the line item Charged-Off, or (b) making no adjustment. However, when recoveries are significant, examiners should add a line item called Recoveries rather than include recoveries in the line item Payments. The amount included in the line item Recoveries would also be deducted from the line item Charged-Off.

Further Advances - Loans Not Adversely Classified Previously

Circumstances when this line item may be used include:

- Advances (since the previous examination) on a loan existing at the previous examination, and
- A new loan is granted to borrowers who were indebted to the institution at the previous examination and whose loans were not adversely classified at that time.

For practical purposes, do not research the payment and advance history on a loan that was on the bank's books at the last examination and not adversely classified previously. The amount listed in Further Advances - Loans Not Adversely Classified Previously should be the difference between the current balance and the previous examination balance (assuming the current balance is greater than the previous examination balance).

Further Advances - Loans Adversely Classified Previously

Circumstances when this line item may be used include:

- Advances (since the previous examination) on an adversely classified loan existing at the previous examination, and
- A new loan granted to borrowers who were adversely classified at the previous examination.

Credits Newly Extended

Include loans to borrowers who were not indebted to the institution at the previous examination.

Note: The aforementioned examples are not all-inclusive.

ANALYSIS OF OTHER REAL ESTATE SUBJECT TO ADVERSE CLASSIFICATION

←

Purpose

The purpose of this schedule is to provide analysis of adverse ORE classifications from one examination to the next. From the analysis, examiners will be better able to cite specific areas of change and the causes of the changes. In particular, the schedule may illustrate deterioration in the ORE portfolio through the migration of ORE classified Substandard to more severe classification categories.

When To Complete

Examiners should consider completing this schedule if the volume of ORE is material or the composition of adversely classified ORE changed significantly since the previous examination.

General

Generally, the previous FDIC examination should be the starting point for preparing the schedule. The FDIC does not always have access to state or other regulatory examination workpapers, which makes it difficult to use non-FDIC examinations as the starting point. However, if it is possible to analyze changes from the previous non-FDIC examination, examiners may do so.

This schedule is designed to illustrate changes in adverse ORE classifications since the previous FDIC examination. Therefore, only include activity for ORE that was on the books at the last examination and ORE assets on the books at the current examination. (Do not schedule assets that both transferred into and transferred out of ORE between examinations.) If significant activity in the ORE account occurred between examinations, examiners should evaluate the reasons why assets transferred in and how they transferred out (with or without internal financing). Narrative comments may suffice to address this activity. For example, assume the following:

> Book value at previous examination: $ 5MM
> Book value at current examination: $ 3MM
> Book value of ORE acquired and sold between examinations: $12MM

In situations such as this, a separate schedule may be completed for the acquisition and sale of the $12MM. (This schedule may aid in analyzing management practices, asset quality, and loss histories.)

Examiners have the flexibility to exclude some ORE parcels. (That is, when numerous smaller parcels represent only a small portion of the total volume of ORE.) Footnote the schedule to indicate what is excluded.

Additional Line Items

Add line items when necessary.

Examples of other possible line items under Reductions:

- To Premises
- Sales for Cash
- Sales to Insiders
- Now Adversely Classified Loan (This line item may be used when internally financed sales of ORE, which did not originally meet ASC Subtopic 360-20 requirements, now meets those requirements.)
- Examples of other possible line items under Additions:
- Capitalized Improvements (This line item may be used when capitalized improvements are substantial as a whole or to a particular parcel. Otherwise, one of the Further Advances line items may be used.)
- Formerly Premises

- Loans to Facilitate the Sale of ORE (sales of ORE that do not meet the criteria for the consummation of a sale under ASC Subtopic 360-20). Use this line item when a significant volume of sales has occurred. Otherwise, sales can go under ORE from Credits Newly Extended.

Note: Reductions pertain only to ORE adversely classified at the previous examination.

Charged-off

This line item may include losses on the sale of ORE, or write-downs on existing ORE, that resulted from re-evaluations or new appraisals.

Not Adversely Classified Previously

This line item may include amounts representing both loans and ORE at the previous examination

ORE From Credits Newly Extended

This line item may include loans to facilitate ORE sales that do not meet down-payment requirements (that is, loans reported as ORE for Call Report purposes). Additionally, this item may include loans extended since the previous examination that are now adversely classified ORE.

Note: The aforementioned examples are not all-inclusive.

ASSETS WITH CREDIT DATA OR COLLATERAL DOCUMENTATION EXCEPTIONS

←

Purpose

The purpose of this schedule is to support criticisms of excessive documentation exceptions and highlight specific risk management weaknesses, such as numerous exceptions involving outdated financial information.

When To Include

This schedule may be included for support when documentation exceptions are excessive, and comments regarding poor risk management practices on the MRBA page, ECC page or RMA page are appropriate. Do not include this schedule in the Report when the number of exceptions is not deemed excessive. Instead, leave a detailed list with management.

In certain circumstances, MRBA, ECC or RMA page comments about risk management practices may be appropriate if excessive deficiencies were outstanding when the examination commenced, but were substantially corrected during the examination and this schedule is not included in the Report.

General

During the examination, examiners should provide management with a list of documentation deficiencies on specific assets. This procedure is intended to expedite early correction of the deficiencies. Generally, deficiencies corrected during the examination are not included in this ROE schedule. However, examiners may include corrected deficiencies (clearly noted as having been corrected during the examination), to demonstrate reactive, rather than proactive, risk management practices.

Examiners have the flexibility to add line items in the heading to more accurately describe documentation exceptions encountered at the institution. Descriptive headings may include but are not limited to:

- 1 - Appraisal,
- 2 - Title Search or Legal Opinion,
- 3 - Borrowing Authorization,
- 4 - Recordation,
- 5 - Insurance,
- 6 - Collateral Assignment,
- 7 - Financial Statement,
- 8 - Inadequate Income/Cash Flow Statement,
- 9 - Livestock Inspection, and
- 10-Crop Inspection.

Include the date of a borrower's financial statement in the Date of Most Recent Financial Statement column only when financial statements are stale or otherwise deficient. Enter "None" when credit files contain no financial statements.

When documentation deficiencies are listed on adversely classified assets, cross-reference the appropriate ROE page.

Use this schedule to detail loan documentation deficiencies, as well as deficiencies in other assets/items (for example, ORE, securities, and letters of credit). Use subheadings to segregate categories and list exceptions in alphabetical order by the borrower's name within each subheading.

CONCENTRATIONS

←

Purpose

The Concentrations page is an analytical page intended to identify *specific* concentrations of assets and liabilities that have similar risk characteristics and to communicate the examiner's evaluation of the institution's risk management practices for concentrations meeting the thresholds for write-ups described below. As an analytical page, the Concentrations page should not contain supervisory recommendations or management comments or commitments.

Overall concentration management practices and supervisory recommendations relating to concentrations should be detailed elsewhere in the ROE, such as on the ECC page, or, if included, the Risk Management Assessment (RMA) page. Material supervisory recommendations and management responses regarding concentrations should always be summarized on the ECC page. Also, depending on the extent of issues identified, commentary may be warranted on the Matters Requiring Board Attention (MRBA) page.

When to Include

Examiners must include this page to highlight asset or funding source concentrations that exceed the *listing* thresholds below, and examiners must include their analysis of the potential risks and risk management practices for concentrations that exceed the *concentration written analysis* thresholds below.

Asset concentrations are pools of assets that share common risk characteristics or have heightened sensitivity to similar economic, financial, or other risk factors. An institution's asset quality, earnings, or capital can be disproportionally affected by a single or localized economic event or market conditions if the institution holds significant asset concentrations. Therefore, having risk management systems that ensure early identification of problems in these portfolios is a prudent risk management practice.

Funding concentrations are funding types that share common risk characteristics or have heightened sensitivity to similar economic, financial, or other risk factors. The primary risk of a funding concentration is that an institution may have to replace the related funds quickly or at unfavorable terms or both. This risk may become more pronounced if the bank's condition, or the condition of the party or parties providing the funds, deteriorates, which can significantly reduce the availability of funding.

The thresholds are only aimed at directing the examiner in the context of when to list a concentration for informational purposes and when to include a written analysis of a particular concentration in the Report of Examination (ROE). The thresholds are **not** limits for institutions.

Sound examiner judgment must be used to determine the most appropriate ROE treatment of concentrations in relation to the overall risk to the institution. Concentrations not meeting thresholds set forth in these instructions may also be included and analyzed on this page at the discretion of the Examiner-in-Charge (EIC) if elevated risk is evident or inclusion supports material examination findings.

Concentration Categories Requiring Listing

Asset and funding concentrations that meet or exceed the thresholds below should be listed on the Concentrations page. As a general rule, asset concentrations for credit-related assets should be measured as a percentage of Tier 1

Capital (T1C)[6] plus the applicable reserve for loans and lease losses. The applicable reserve for loans and lease losses is equal to either the Allowance for Loan and Lease Losses (ALLL) or the Allowance for Credit Losses (ACL) related to loans and leases,[7] for institutions that have adopted the Current Expected Credit Losses (CECL) methodology. Examiners should identify only the funded exposures in the "Detail" and "Amount Extended" columns; unfunded amounts should be commented on in the narrative analysis but not be included in the calculation determining listing applicability.

For institutions that have adopted the CECL methodology and elected to use the three-year CECL transition or the revised CECL transition to delay the impacts of CECL to regulatory capital, transitioned amounts could result in a portion of the ACL to also be included as a component of T1C for the years the institution reports its regulatory capital ratios using the allowable capital relief provided by those rules. To prevent potential double-counting of the transitioned amounts of the ACL in the denominator for purposes of measuring lending-related concentrations, examiners should eliminate from T1C the transitioned amounts during the period the institution reports its regulatory capital ratios using the three-year CECL transition or the revised CECL transition provisions.

The amount to be eliminated from T1C can be calculated as the difference between the item reported on Schedule RC, Balance Sheet, item 26.a., Retained Earnings and the item reported on Schedule RC-R, Part I, Regulatory Capital Components and Ratios, item 2, Retained Earnings in the Consolidated Reports of Condition and Income. As a result of this adjustment, the amount of retained earnings used to calculate T1C for purposes of measuring lending-related concentrations will equal retained earnings as reported on the balance sheet of the institution. Examiners should ensure that, for the purposes of measuring and assessing lending-related concentrations, the denominator within the calculation represents T1C, excluding CECL transitioned amounts, if elected, plus the ACL related to loans and leases.

Asset concentrations for all other assets should be measured as a percentage of T1C, which excludes the allowance for credit losses. When capital is so low that it is no longer useful in identifying an asset concentration, examiners should use an appropriate percentage of assets as a guideline for the calculation (generally two percent of total assets (TA)).

List concentrations in order of importance (concentrations with higher perceived risks should be listed first). In determining whether, and how, to list a concentration, consider whether elevated risk is evident or whether groups of assets or funding types share common characteristics or have heightened sensitivity to similar economic, financial, or other risk factors.

1) Asset concentrations representing 25 percent or more of T1C plus the ALLL or the ACL related to loans and leases (for loans) or T1C (for securities and all other) by:
- Individual borrower,
- Small, interrelated group of individuals,
- Single repayment source, or
- Individual project.

2) Asset concentrations representing 100 percent or more of T1C plus the ALLL or the ACL related to loans and leases (for loans) or T1C (for securities and all other) by:
- Industry,
- Product line,[8]
- Type of collateral, or

[6] "Tier 1 Capital" as reported in the Consolidated Reports of Condition and Income, Schedule RC-R-Regulatory Capital.

[7] "Allowance for Credit Losses (ACL) on loans and leases" as reported in the Consolidated Reports of Condition and Income, Schedule RC-Balance Sheet.

[8] Product lines are common programs used by an institution that target specialty lending within a broad loan category, such as leveraged financing, accounts receivable, home equity, row crops, farm equipment, and subprime.

- Short-term obligations of one financial institution or affiliated group.[9]

3) Funding concentrations representing 10 percent or more of TA by a single funding source.[10]

Concentration Categories Requiring Written Analysis of Risk Management

Examiners are to provide a written analysis on the Concentrations page summarizing the examiner's evaluation of the institution's related risk management practices for each of the following asset or funding concentrations:

- Individual borrower concentrations (including small interrelated groups of individuals, a single repayment source, or an individual project) of 25 percent or more of T1C plus the ALLL or the ACL related to loans and leases (for loans) or T1C (for securities).
- Industry, product line, or collateral type loan concentrations of 300 percent or more of TC. For example, written analysis would be required for a concentration of non-owner occupied commercial real estate (CRE) loans; owner-occupied CRE loans only if they have similar risk characteristics; agricultural real estate loans; agricultural production loans (crop loans and other loans to farmers); livestock loans; or asset-based loans, among others.
- Acquisition, Development, and Construction (ADC) loan concentrations of 100 percent or more of T1C plus the ALLL or the ACL related to loans and leases.
- Correspondent credit concentrations of 100 percent or more of T1C plus the ALLL or the ACL related to loans and leases.
- Obligations of one, or a closely related group of, municipalities of 100 percent or more of T1C.[11]
- Non-agency securities (including private label mortgage backed securities, asset backed securities, and structured products) concentrations of 100 percent or more of T1C.
- Bank-owned Life Insurance (BOLI) concentrations of 25 percent or more of T1C.
- Single funding types representing 10 percent or more of TA.

Written Analysis Instructions

Written analysis for concentrations should be risk-focused and provide a forward-looking assessment of risk that is centered on consideration of the institution's risk management practices. As a risk-focused analysis:

- When concentration risk is appropriately evaluated and controlled by institution management, the examiner's written analysis will usually be more concise than when concentration risk management is weak or deficient.
- Examiners have the option to combine concentrations with similar risk characteristics into one written analysis. For example, if the institution has ADC loans exceeding 100 percent of T1C plus the ALLL or the ACL related to loans and leases, that include an exposure to a single developer of more than 25 percent of the same denominator, then both concentrations may be combined into one analysis. Similarly, agricultural real estate loans and agricultural production loans are generally viewed as separate product lines. However, examiners have the discretion to aggregate the types, if the related risk is supported in the analysis.

The written analysis must address material factors within each of the following areas, although the examiner has discretion on formatting and does not need to expressly list or bullet each of the areas. In situations in which

[9] For the purposes of concentration identification, short-term obligations represent Federal funds sold with a maturity of one day or less or Federal funds sold under a continuing contract, and resale agreements that have an original maturity of one business day (or is under a continuing contract) and are in immediately available funds in domestic offices.

[10] Funding "types" could include funding categories or programs that may be sensitive to interest rates or have other common risk factors. See FDIC RMS Manual of Examination Policies, Section 6.1 "Liquidity and Funds Management" for descriptions of types of funding.

[11] Examiner judgment is needed to assess when municipalities are related. For example, if a bank invests over 100 percent of T1C in municipals located in one county, an examiner could find that there is an economic co-dependence on local employers and other microeconomic factors that could collectively impact the local municipalities' repayment capacity in some counties but not in others. Secondly, an examiner could find that a class of municipal securities, like non-rated bonds, "dirt" bonds, or revenue obligations, might be appropriate for inclusion as a concentration above 100 percent of T1C.

examiners address the areas on other ROE pages, such as the RMA page or ECC page, discussion on the Concentration page should be limited to minimize repetition.

Identification – Describe the concentration and the percentage of capital or assets it represents. Examiners should consider, and address in written analysis if warranted, the impact of unfunded loan commitments in the assessment of concentration management. Also, describe the methodology used by the institution to identify and monitor exposure to this specific concentration.

Economic, Market, and Competitive Factors - Discuss management's consideration of relevant economic, market, and competitive conditions that affect the concentration's risk profile.

Risk Stratification and Vulnerability Assessment - Discuss the current risk profile and trends, including (when appropriate) product type, collateral type, geographic location, internal risk ratings, source of funding, and other factors deemed relevant.

Also, include management's assessment of the concentration's vulnerability to an economic downturn, sharp interest rate movements, or other scenarios as applicable. For asset concentrations, detail management's estimate of potential deterioration in credit quality. For funding concentrations, include management's assessment of the funding type's stability.

Comments must also specifically address any interrelationship between concentrated asset and funding exposures, including whether concentrations in funding types are being used to support significant growth in concentrated assets or whether an economic downturn or other scenario is negatively affecting, or could negatively affect, both asset and funding concentrations concurrently.

Risk Management and Control Processes - Discuss the risk management practices and control processes regarding the concentration including current levels, proposed levels, and adverse scenario sensitivity analyses (if applicable). Risk-focused analysis and comments should also address the following considerations, although examiners have flexibility in presentation and do not need to list all risk management and control processes:

- The reasonableness of the board's and management's risk tolerance in relation to the inherent risk of the concentration, capital protection, and risk management practices.
- Management's consideration of current and projected economic and competitive factors when establishing concentration policies, practices and monitoring processes covering items such as concentration limits, underwriting standards, and pricing terms. When applicable, this should also include scenario analyses and contingency funding plans.
- The presence of risk-mitigating enhancements, such as government guarantees or crop insurance backed by government agencies for loans or asset pledging, private insurance arrangements, or callable features for liabilities.
- Strategic actions to address changing risk profiles of the concentration, including capital adequacy determinations, staffing and managerial needs, and pricing actions.
- Adequacy of the incorporation of analytical information (such as scenario analysis results, if conducted) into policy limits, staffing and managerial resources, capital support, funding requirements, etc.
- Sufficiency of reports used by management and the board regarding concentration exposure levels and risk estimates.

Assessment Summary – Summarize the overall risk posed by the concentration; assess the overall governance, risk management, and controls over the concentration; and address any risk management issues. Also address the volume of adversely classified assets within a concentration, if the volume is material. If management plans to change the administration or size of the concentration, briefly address the change. If a concentration is well-managed and monitored, examiners should comment to that effect.

Treatment of Select Concentration Types

Specialty Business Models - If an institution has a specialty business model concentrated in one general class of credit (such as credit cards or equipment leases), it may be appropriate to simply identify the entire loan class as a concentration and focus assessments on the adequacy of related underwriting, credit administration, monitoring, and other risk management practices.

U.S. Government Securities - Securities issued by the U.S. Treasury, U.S. Government agencies and corporations, and other obligations either backed by the full faith and credit of or fully guaranteed by the U.S. Government (hereafter referred to as "U.S. Government securities") are considered risk-free from a credit risk standpoint. Therefore, these securities and other assets collateralized by them should generally not be scheduled as concentrations, provided the existence of the collateral has been verified.

However, examiners may exercise judgment in scheduling concentrations of U.S. Government securities if the instruments could potentially impact an institution's financial condition, particularly through market risk exposure. For example, an examiner may list a concentration in U.S. Government securities (such as zero coupon bonds) that present outsized market risk and potential depreciation in a changing interest rate environment. Finally, concentrations for other U.S. Government-related securities that are not in the zero percent risk-weighted category for regulatory capital purposes may be scheduled at examiner discretion.

Real Estate Lending Concentrations - Analysis of concentrations in CRE lending is warranted, as evidenced by the significant credit losses experienced in the past when such concentrations were coupled with weak loan underwriting and depressed CRE markets.[12] Accordingly, examiners should schedule non-owner occupied CRE concentrations on the page. The risk profile of owner occupied CRE loans may be somewhat less influenced by the condition of the general CRE market because repayment is dependent on the operations of the business housed by the property. Examiners retain the discretion to schedule owner-occupied portfolios where the portfolio contains common risk elements. The analysis expected is similar to that for other concentration types, and the extent of the written analysis, when necessary, will depend on risk identified in the concentration and in how the institution manages the risk.

Prudently underwritten residential loan portfolios generally would not be required to be scheduled as they do not usually have a common risk characteristic. However, when the residential loan portfolio, or one or more segments thereof, share common risk characteristics and meet or exceed the thresholds, then listing and preparing a written analysis (as appropriate) of the portfolio, or the applicable segment(s) thereof, would be appropriate. Examples could include, but are not limited to, subprime loans, high loan-to-value loans, or nontraditional mortgage loans.

At the discretion of the EIC, Other Real Estate (ORE) may be listed as a concentration if such assets are concentrated in a certain industry, product line or collateral type (e.g., ORE concentrated in ADC properties).

Out-of-Territory Lending Concentrations - When properly managed and monitored, out-of-territory lending can diversify an institution's loan portfolio, but in other instances, if out-of-territory credits are concentrated in a particular loan type or geographic area, these exposures could pose increased risk. When examiners identify out-of-territory concentrations, they should determine concentration levels (for example, by loan type or geographic location) and evaluate common risk factors, such as exposure to depressed local economies or elevated credit administration requirements.

Purchased Loans and Participation Loans - Similar to, and often associated with, out-of-territory loans, a significant volume of purchased or participated loans may result in concentration risks. If the loans are centered in a particular loan type or geographic location, purchased through the same loan broker, or originated from the same financial institution, examiners should list and evaluate the loans as concentrations.

Correspondent Bank Concentrations - A financial institution's relationship with a correspondent may result in credit or funding concentrations. A credit concentration exists when an institution advances or commits a significant volume of funds to a correspondent. A funding concentration exists when an institution depends on one or a few correspondents for a disproportionate share of its total funding. List credit concentrations that exceed 25 percent of

[12] See FDIC, History of the 80's, Lessons for the Future, https://www.fdic.gov/bank/historical/history/ and FDIC, Crisis and Response, an FDIC History, 2008-2013.

T1C plus the ALLL or the ACL related to loans and leases. Also provide a written analysis if the credit concentration exceeds 100 percent of T1C plus the ALLL or the ACL related to loans and leases. Funding concentrations that exceed 10 percent of TA should be listed with a written analysis included. While correspondent concentrations often meet legitimate business needs, the concentrations represent diversification risks that management should consider when formulating strategic plans and internal risk limits. Refer to Federal Reserve Board Regulation F, Part 206-Limitations on Interbank Liabilities and the Correspondent Concentration Risks Interagency Guidance for additional details.

Mutual Funds - Despite their inherent diversification, list an investment in a single mutual fund, the book value of which represents 25 percent or more of T1C (including those investing exclusively in U.S. Government securities).

Non-Agency Securitization Exposures in Structured Credit Products - Non-agency structured credit products, such as private label mortgage backed securities, asset backed securities, collateralized debt obligations, and collateralized loan obligations, can contain complex structures and characteristics that make their performance more volatile and susceptible to losses in adverse market or economic environments. Examiners should include these investments as concentrations when the aggregate book or fair value (whichever is greater) of an investment type represents 25 percent or more of T1C or when the aggregate book or fair value (whichever is greater) of all such investment types exceeds 100 percent of T1C.

Extensions of Credit to a Foreign Government – Examiners are expected to aggregate extensions of credit to a foreign government, its agencies, and majority-owned or controlled entities as a class of borrower. If the extensions of credit equal or exceed the 25 percent of T1C guideline, schedule them as a concentration. Loans to private sector enterprises may also be included with public sector borrowings if an interrelationship exists in the form of government guarantees, moral commitments, significant subsidies, or other pertinent factors pointing toward reliance on public sector support. Include amounts where sizable extensions of credit to related private entities equal or exceed the 25 percent of T1C guidelines.

The aforementioned procedures are intended to facilitate reporting of concentrations involving borrowers evidencing commonality of commercial credit risk. Follow outstanding instructions when handling transfer risk or country risk, where all public and private sector credits within a country are aggregated and related to the institution's capital structure. The International Banking section of the Manual and the instructions for the International section of the Bank of Anytown contain additional instructions regarding concentrations in the area of credit to foreign governments and their entities.

Funding Concentrations – Examiners are to include individual funding type concentrations that equal or exceed 10 percent of total assets when they have common risk characteristics. Examiners should consider management's internal analyses, if comprehensive and reasonable in relation to materiality, when identifying funding concentrations. An institution's liquidity MIS and reporting typically provide information regarding deposit categories, wholesale funding, non-relationship or higher-cost funding strategies and programs, and the stability of deposit customers, among other items. Examiners are also to take into account the purpose for raising the funds and how they are deployed.

Wholesale funding concentrations are relatively straightforward to identify from Call Reports or institution-provided reports. These may include, but are not limited to, Federal Home Loan Bank borrowings, other borrowings, public funds, deposits raised through listing services, or brokered deposits.

Funding concentrations arising from a targeted deposit gathering strategy or program may be more difficult to identify and are dependent on whether the deposits share common risk characteristics. For example, deposits drawn to the institution solely because it pays significantly higher than market rates may be less stable than deposits with other relationships with the bank. Similarly, for institutions with a sizeable volume of uninsured deposits, examiners need to consider whether such deposits, or a portion thereof share similar run-risk attributes. Management information and analysis may show these deposits have characteristics that contribute to stability, such as those from local customers with a long-term relationship, those with compensating accounts, or those that they are not gathered through a targeted program.

Examiners should, however, always include large depositors (depositors who own or control 2 percent or more of total deposits) to the extent that these deposits total 10 percent or more of total assets. Inclusion of these large depositors is premised on run risk as a common characteristic, given the size of the deposits. However, to the extent that management has demonstrated stability or other mitigating factors regarding a concentration of large depositors, this should be noted in the write-up. It is also important to note that, more generally, during times of stress, stability characteristics could be tested when depositors stand to lose their uninsured funds. Therefore, if a bank's financial condition is deteriorating or stress is probable, examiners should assess stability closely and reflect the uninsured levels on the page as warranted.

CAPITAL CALCULATIONS

←

Purpose

The purpose of this schedule is to detail regulatory capital calculations, including adjustments resulting from examination findings.

General

Examiners should prepare this schedule according to Part 324 of the FDIC Rules and Regulations. The date of the financial information should be the same as the Examination as of Date.

CBLR – Beginning with the March 31, 2020 Call Report, certain qualifying institutions may elect to use the CBLR framework. Such institutions will not calculate Tier 2 Capital, Total Capital, or risk weighted assets, and therefore those sections of this schedule will not be completed. For further information, refer to FIL-66-2019 *Community Bank Leverage Ratio Framework* and Part 324.

Current Expected Credit Losses (CECL) Methodology – Institutions may begin adopting CECL with the March 31, 2020 Call Report. In general, for those institutions that have adopted CECL, references to the allowance for loan and lease losses (ALLL) below should be considered references to the allowance for credit losses (ACL).

Computation of Common Equity Tier 1 Capital

The definition of Tier 1 Capital is the same for both Leverage and Risk-Based Capital standards.

Individual line items are provided for Common Equity Tier 1 Capital elements, followed by Adjustments and Deductions to Common Equity Tier 1 Capital. Refer to Schedule RC-R of the Call Report Instructions for line item explanations.

In addition to those items, make adjustments for any of the following items identified during the examination process:

Assets Other Than Held-for-Investment Loans & Leases Classified Loss - This item includes assets classified Loss other than held-for-investment loans and leases, such as loans held for sale (or trading), securities, other real estate, and other assets classified Loss.

Automated examination tools may not distinguish between loans held for investment and loans held for sale and may automatically deduct all loans classified Loss from the Allowance for Loan and Lease Losses calculation in Tier 2 Capital. In such instances, examiners should make adjustments to remove the amount of loans held for sale (or trading) classified Loss from the *Less: Held-for-Investment Loans and Leases Classified Loss* line item and make adjustments to include such amount in the *Less: Assets Other than Held-for-Investment Loans and Leases Classified Loss* line item.

Additional Provision to be Transferred to Tier 2 Capital- Refer below for explanation.

Other Adjustments to and Deductions from Common Equity Tier 1 Capital - This item may include:

- Contingent Liabilities Losses - Category I contingent liabilities classified Loss and Category II contingent liabilities Estimated Loss. Refer to the RMS Manual of Examination Policies (Manual) Sections 2.1 - Capital and 3.8 - Off-Balance Sheet Activities for an explanation of Category I and II contingency liabilities, Loss classification, and Estimated Loss. Do not include in this line item Potential Loss, which should be included in the Memorandum section as discussed below. *Note:* To the extent allowances for credit losses on off-balance sheet credit exposures are included in the Allowance for Loan and Lease Losses line item for Tier 2 calculation purposes and are available to cover the Category I contingent liabilities classified Loss, do not include the

Category I Loss classifications in the Contingent Liabilities Losses to be deducted from Common Equity Tier 1 Capital; instead include the Loss in the item for Less: Held-for-Investment Loans and Leases Classified Loss.

- Differences in Accounts Which Represent Shortages - Shortages in assets (to the extent not already included in *Assets Other Than Held-for-Investment Loans and Leases Classified Loss* above), overages in liability accounts, or liabilities not shown on the institution's books. Refer to Section 2.1 - Capital for an explanation of Liabilities Not Shown on Books.
- Losses From Apparent Criminal Violations - Material losses attributed to a criminal violation that cannot be addressed by a specific asset classification should be deducted from Common Equity Tier 1 Capital. When the exact amount of the loss has not been determined, the examiner may recommend that the institution engage an outside accountant or legal counsel to conduct an appropriate audit or investigation.

Include the above items only when significant, and add appropriate footnotes. Refer to Deductions for Loss Classifications and Insufficient ALLL (or ACL, as applicable) section below for discussion on what is significant.

Computation of Additional Tier 1 Capital

Individual line items are provided for the Additional Tier 1 Capital elements. Refer to Schedule RC-R of the Call Report Instructions for line item explanations.

Computation of Tier 2 Capital

Individual line items are provided for Tier 2 Capital elements. Refer to Schedule RC-R of the Call Report Instructions for line item explanations.

Allowance for Loan and Lease Losses (ALLL)

The line item, *Allowance for Loan & Lease Losses,* is the ALLL (excluding any Allocated Transfer Risk Allowances) reflected on the Comparative Statements of Financial Condition page. If applicable, add any allowances for off-balance sheet credit exposures reflected in Schedule RC-G, Other Liabilities. As necessary, deduct the amount of held-for-investment loans and leases classified Loss on the line item *Less: Held-for-Investment Loans and Leases Classified Loss* and include any adjustments necessary to replenish the ALLL to an appropriate level in the line item *Add: Additional Provision Transferred from Common Equity Tier 1 Capital.* The resulting figure is the *Adjusted Allowance for Loan and Lease Losses.*

Loans held for sale (or trading) classified Loss should not be included in the amount *Less: Held-for-Investment Loans and Leases Classified Loss*, such losses should instead be included in *Less: Assets Other than Held-for-Investment Loans and Leases Classified Loss* in the Common Equity Tier 1 Capital calculation. Manual adjustments to automated examination tools may be necessary, as discussed above. Also refer to the discussion on Contingent Liabilities Losses in the Common Equity Tier 1 Capital section above.

Eligible ALLL - The eligible amount of the ALLL to be included in Tier 2 Capital is limited to 1.25 percent of Risk-Weighted Assets base for purposes of calculating the ALLL (RWA base), as defined in Call Report Instructions. The RWA base should be adjusted to reflect examination findings as outlined in the RWA section below. When the eligible amount is less than the amount shown on the line item *Adjusted Allowance for Loan and Lease Losses,* the ineligible ALLL is shown on the line item *Less: Excess Allowance for Loan and Lease Losses (If Applicable).*

Capital Calculations for Institutions that have adopted CECL

For institutions that have adopted CECL, the ALLL is replaced with the adjusted allowance for credit losses (AACL) for purposes of regulatory capital calculations. AACL equals allowance for credit losses (ACL) under U.S. GAAP adjusted to exclude credit allowances for purchased credit deteriorated assets and AFS debt securities.

Institutions can elect the CECL transition provision to transition the day-one impact of adopting CECL in regulatory capital, which permits transition adjustments to retained earnings, average total consolidated assets, temporary differences in deferred tax assets, and the ACL. Additionally, institutions that were required to adopt CECL during the 2020 calendar year can elect the CECL revised transition to delay for two years an estimate of CECL's effect on regulatory capital followed by the three-year transition provision.

The eligible amount of the AACL to be included in Tier 2 Capital is limited to 1.25 percent of the Risk-Weighted Assets base. The RWA base should be adjusted to reflect examination findings as outlined in the RWA section below. When the eligible amount is less than the amount shown on the line item *Examination Adjusted AACL,* the ineligible AACL is shown on the line item *Less: Excess Adjusted Allowance for Credit Losses (If Applicable).*

Deductions for Loss Classifications and Insufficient ALLL (or ACL, as applicable)

Part 324 states that on a case-by-case basis and in conjunction with supervisory examinations of an FDIC-supervised institution, other deductions from capital may also be required. These should include any adjustments deemed appropriate for identified losses, including assets other than held-for-investment loans and leases classified Loss and provisions for an insufficient ALLL.

Use the following method to adjust capital for items classified Loss and to adjust for an insufficient ALLL. This method avoids adjustments that may result in a double deduction when Common Equity Tier 1 Capital already has been effectively reduced through the provision expense in establishing an appropriate ALLL level. Additionally, this method addresses those situations where certain institutions have overstated the amount of their Common Equity Tier 1 Capital by failing to take provision expenses necessary to establish and maintain an appropriate ALLL level.

Method

- The amount of Loss for items other than held-for-investment loans and leases is deducted from the calculation of Common Equity Tier 1 Capital.
- Loss for held-for-investment loans and leases are deducted from the ALLL in the calculation of Tier 2 Capital and, if significant, examiners should deduct from Common Equity Tier 1 Capital the provision expenses necessary to replenish the ALLL to an appropriate level (as discussed in the ALLL paragraph above).

Evaluation of the appropriateness of the ALLL includes consideration of the amount of adversely classified loans and leases. If the ALLL is considered insufficient, make an estimate of the amount of provision expense needed for an appropriate ALLL. Make the estimate after the identified losses in the ROE have been deducted from the ALLL. Do not deduct loans and leases classified Doubtful from capital. These items will be included in the evaluation of the ALLL and, if appropriate, will be accounted for by the adjustment for an insufficient ALLL.

Make an adjustment from Common Equity Tier 1 Capital to Tier 2 Capital for an insufficient ALLL only when the amount is considered significant. The decision as to what is significant is a matter of judgment. As such, consider how much the adjustment would change the capital ratios, how much the reader's perception of the institution's capital level will be influenced, and whether the institution's capital category for Prompt Corrective Action will be changed. Where adjustments for an insufficient ALLL may reduce an institution's capital level to a point where Prompt Corrective Action or other restrictions may apply, particular care and attention, including consultation with the appropriate field supervisor and regional office, should be considered prior to incorporating such adjustments in the ROE.

Other-than-Temporary Impairment (OTTI): If an institution made the Accumulated Other Comprehensive Income (AOCI) opt-out election for regulatory capital purposes and it has debt securities (not held for trading) classified Loss because of OTTI, the portion of the amount classified Loss related to all factors other than credit losses that will be included in AOCI (if any) should be reversed using line item *Other Adjustments to and Deductions from Common Equity Tier 1 Capital.* For examination as of dates prior to January 1, 2018, if an institution did not make the AOCI opt-out election and has debt securities (not held for trading) classified Loss because of OTTI, a percentage of the portion of the amount classified Loss related to all factors other than credit losses that will be included in AOCI (if any) should be reversed using the same line item so that the deduction from Common Equity Tier 1 Capital reflects the AOCI adjustment transition schedule outlined in Part 324.

AFS Securities Classified Loss for institutions that have adopted CECL: For institutions that have adopted CECL and made the AOCI opt-out election for regulatory capital purposes and have AFS securities (not held for trading) classified Loss because of impairment, the portion of impairment that has not been charged to earnings, if any, should be reversed using line item Other Adjustments to and Deductions from Common Equity Tier 1 Capital. Examiners should contact the Regional Office accounting and capital markets specialists for more information.

Capital Treatment of Other Real Estate (ORE) Allowances

ORE valuation allowances are not recognized as a component of capital for either Risk-Based Capital or Leverage Capital standards. A valuation allowance is established for each parcel of ORE during the holding period when the real estate's fair value minus the estimated costs to sell the real estate is less than the real estate's *cost*. Call Report Instructions clarify that valuation allowances must be determined on an asset-by-asset basis. As a result, the individual valuation allowance should be subtracted from the related asset's *cost* to determine the property's carrying value.

Risk-Weighted Assets

Risk-Weighted Assets are as of the latest Call Report date. Refer to Schedule RC-R of the Call Report Instructions for information regarding the Risk-Weighted Assets calculation. Adjustments for any Risk-Weighted Assets classified Loss should be reflected in line item *Less: Risk-Weighted Asset Amounts Deducted from Capital*. This line item should also include adjustments for items identified during the examination process in the *Other Adjustments to and Deductions from Common Equity Tier 1 Capital* line item, but only to the extent the items were risk weighted. For example, a Category I contingent liability classified Loss should be deducted if the contingent liability is included in the calculation of risk-weighted assets; however, other losses that are not associated with an asset or off-balance sheet item that is included in the calculation of risk-weighted assets should not be deducted from Risk-Weighted Assets.

The amount deducted from Risk-Weighted Assets should represent the risk-weighted portion of the asset. Automated examination tools may deduct the classified Loss amount instead of the risk-weighted portion; examiners should adjust the automated examination tool deduction from risk-weighted assets if the difference is significant (refer to the inadequate ALLL section above for discussion on significance).

Average Total Assets

Average Total Assets are as of the latest Call Report date. Refer to Schedules RC-K and RC-R of the Call Report Instructions for detailed information on this figure. Use the amounts deducted from Common Equity Tier 1 Capital above to adjust *Average Total Assets* to calculate *Average Total Assets for the Leverage Ratio. Note:* Do not deduct *Other Adjustments to and Deductions from Common Equity Tier 1 Capital* that are not associated with an asset. For example, do not deduct contingent liabilities losses from *Average Total Assets*.

Use Average Total Assets from the latest Call Report date, even if using a month-end financial date throughout the ROE.

Memoranda Items

Capital Conservation Buffer (beginning first quarter of 2016) - The capital buffer necessary to avoid limitations on distributions and discretionary bonus payments.

Securities appreciation (depreciation) - The dollar amount of securities appreciation (depreciation), net of Loss classifications, reflected in the HTM and AFS portfolios.

Contingent Liabilities - The first item, Contingent Liabilities, refers to Category I contingent liabilities. The second item, Potential Loss, refers only to Category II contingent liabilities. Refer to the *Contingent Liabilities* entry in Manual Section 2.1 – Capital for a discussion of potential and estimated losses.

Advanced Approaches Institutions

For an advanced approaches institution that exited parallel run, consult with the Regional Capital Markets Specialist to make any necessary adjustments to Tier 2 Capital, Total Capital, and Risk-Weighted Assets. It may be necessary to overwrite existing Allowance for Loan and Lease Losses line items in Tier 2 on the Capital Calculations page to reflect eligible credit reserves.

Reminder: Examiners adjusting the Call Report schedule within automated examination tools (such as the Examination Tool Suite) to reflect correction of Call Report filing errors identified during the examination, should also determine whether other capital components are impacted and require adjustments. Adjustments to Tier 2 Capital may impact Additional Tier 1 Capital deductions. Likewise, adjustments to certain Common Equity Tier 1 Capital, Additional Tier 1 Capital, or Tier 2 Capital elements may impact Common Equity Tier 1 Capital deductions. Examiners should ensure that any adjustments are in accordance with Call Report Instructions for schedule RC-R.

- Part 324 of the FDIC Rules and Regulations
- Manual Section 2.1 - Capital
- Call Report Instructions

ANALYSIS OF EARNINGS

←

Purpose

This page details changes in income, expense, and equity accounts; activity in the ALLL;[13] and trends in key ratios.

For institutions that have adopted CECL, examiners should ensure that this page reflects the ACL instead of the ALLL.

Selection of Financial Periods

Examiners should use dates consistently in the Comparative Statement of Income, Reconcilement of Allowance for Loan and Lease Losses, and Other Component Ratios and Trends sections. Three data columns are available, allowing for two calendar years and one interim period (or three calendar years for examinations commencing shortly after the end of a calendar year). The interim period should correspond with the Examination as of Date.

Comparative Statement of Income

This schedule reflects data that conforms to Call Report Instructions and generally ties to the supplemental ROE page titled *Comparative Statements of Income and Changes in Equity Capital Accounts*, the Call Report schedule *RI - Income Statement*, and the UBPR *Income Statement* (except that UBPR data is completed on a tax-equivalent basis). Data fields populate automatically; however, examiners should modify the information if necessary (for example, if Call Report changes are required or if information other than quarter end is used). Footnote all changes.

- ***Provision for Loan and Lease Losses*** - Only applicable to institutions that have not adopted CECL.
- ***Provision for Credit Losses*** - Only applicable to institutions that have adopted CECL. This item reflects provisions for credit losses on all financial assets that fall within the scope of CECL.
- ***Securities Gains (Losses)*** - For banks that have not adopted ASU 2016-01, this item includes gains (losses) from the sale of HTM and AFS securities; and, for banks that have adopted ASU 2016-01, this item includes unrealized holding gains (losses) on equities securities not held for trading.
- ***Applicable Income Taxes*** - Worksheets for calculating Applicable Income Taxes are included in quarterly Call Report updates. The worksheets can be beneficial in verifying the accuracy of income tax accruals.
- ***Discontinued Operations, Net of Applicable Income Taxes*** – Corresponds to line item 11, Schedule RI. If the amount reported in this item is a net loss, report it with a minus (-) sign.
- ***Net Income (Loss) Attributable to Noncontrolling (Minority) Interests*** **–** Corresponds to line item 13, Schedule RI. A noncontrolling interest, also called a minority interest, is the portion of equity in a bank's subsidiary not attributable, directly or indirectly, to the parent bank. If the amount reported in this item is a net loss, report it with a minus (-) sign.
- ***Other Increases/Decreases*** - This title does not match a specific Call Report line item but includes all categories in the Changes in Equity Capital section (Schedule RI-A) that are not included in other line items.

Reconcilement of Allowance for Loan and Lease Losses (ALLL), or the Allowance for Credit Losses (ACL), as applicable.

Negative Provisions to the ALLL (or ACL on loans and leases, as applicable) - Negative provisions may be appropriate if clearly supported and applicable accounting guidelines are followed.

- ***Other Increases (Decreases)*** - Refer to Call Report Instructions for details.
- For banks that have adopted CECL, reconcilement reflects Call Report Schedule RI-B, Part II, Column A.

[13] Allowance for Credit Losses on loans and leases held for investment for institutions that have adopted CECL.

Other Component Ratios and Trends

- ***Noncurrent Loans and Leases to ALLL Ratio*** - Noncurrent loans and leases and past-due loans and leases are defined differently. Refer to the UBPR User's Guide and Call Report Instructions for these definitions.
- Examiners should include additional ratios when they are informative and support ECC page comments.
- For institutions that have adopted CECL, references to ALLL should be changed to ACL, reflecting the ACL on loans and leases held for investment.

COMPARATIVE STATEMENTS OF INCOME AND CHANGES IN EQUITY CAPITAL ACCOUNTS

←

Purpose

This page provides details of income and expense items and a summary of changes in equity capital accounts. Include this schedule when needed to support ECC page comments.

General

- Complete this schedule according to Call Report Instructions.
- Dates used should be consistent with the Analysis of Earnings page.
- For institutions that have adopted ASU 2016-01, Securities gains (losses) includes Gains (losses) from the sale of HTM and AFS debt securities, and Unrealized holding gains (losses) on equity securities not held for trading.

Footnotes

Only footnotes, not comments, should appear here.

RELATIONSHIPS WITH AFFILIATES AND HOLDING COMPANIES

←

Purpose

Examiners use this page for detailing information on bank affiliates, their relationships to the bank, and credits extended to affiliated entities. It can also be used to provide a financial overview of the bank's holding company.

General

Include this schedule, when needed, to support MRBA, ECC, or RMA page comments.

Financial Statements - While examiners may obtain financial statements of the holding company (consolidated and parent-only), affiliates, and consolidated and unconsolidated subsidiaries for financial analysis purposes, include the statements in the Report only when necessary to support comments.

Service Corporations and Premises Subsidiaries - Affiliated service corporations and affiliates holding title to premises or ORE for the institution's benefit should be included here.

Holding Company Ratios and Trends

Ratios are included to facilitate holding company financial analysis. All ratios, except This Institution's Assets to Consolidated Holding Company Assets, are available in the Federal Reserve Bank Holding Company Performance Reports (BHCPR). Calculate the referenced ratio from information in Call Reports and the BHCPR. The inclusion of additional BHCPR ratios is encouraged when the ratios contribute to financial analysis or comments.

The type and availability of BHCPRs depend upon the size of a holding company's consolidated assets. A BHCPR is produced quarterly for three groups of top-tier bank holding companies (collectively, "holding companies"): holding companies with consolidated assets of $1 billion or more, holding companies that are required to file the FR Y-9C and FR Y-9LP to meet supervisory needs, and holding companies that are not subject to the FRB's risk-based capital guideline but elect to voluntarily comply with the guidelines and file the FR Y-9C and FR Y-9LP report forms.

Extensions of Credit to Affiliated Organizations Schedule

Extensions of credit to, and securities issued by, affiliated organizations (when the organizations are related interests of insiders), should be included both here and on the Extensions of Credit to Directors/Trustees, Officers, Principal Shareholders, and Their Related Interests page.

Include extensions of credit to insiders that are collateralized by securities issued by affiliated organizations (as well as on the Extensions of Credit to Directors, Officers, Principal Shareholders and Their Related Interests page). Include these items because they are subject to the provisions of Section 18(j) of the Federal Deposit Insurance Act and Section 23A of the Federal Reserve Act with regard to determining possible violations of extensions of credit to affiliated organizations.

Indirect extensions of credit include borrowings guaranteed by an affiliate.

Comments

Holding Company - Describe holding company relationships here. Generally, include the following information:

- Name,
- Location,
- Period of existence,
- Number of shares of the institution's stock owned or controlled by the company, by each subsidiary of the company, and by trustees for the benefit of stockholders or members of the company, and
- A description of holding company trends and their potential impact on the institution. Consider the amount and terms of outstanding debt, lender- or Federal Reserve System-imposed restrictions or covenants, and the dividend payout record. Discuss any adverse trends, conditions, and recommendations on the MRBA, ECC or RMA page, depending upon their significance.

Include comments on the MRBA or ECC page when payments from an institution to its holding company are large and do not appear justified based on the services received by the institution. Also, consider compliance with Section 23B of the Federal Reserve Act.

Affiliates/Subsidiaries - Fully describe affiliate relationships in the comments section. The following information should be included:

- Name,
- Location,
- Asset size,
- Net income,
- Nature of affiliation,
- Period of existence,
- Circumstances under which the affiliation arose, and
- Primary business activities of the affiliate.

Include officers or directors when relevant. Additionally, include details regarding the amount and terms of any transactions, including extensions of credit, to and from affiliates. This information is important because the provisions of Section 18(j) of the Federal Deposit Insurance Act and Section 23A of the Federal Reserve Act apply insofar as determining possible violations of extensions of credit to affiliated organizations. Generally, comments should be brief pertaining to each extension of credit.

Nonbank Banks - Note when the institution under examination is a grandfathered nonbank bank. List violations of the Competitive Equality Banking Act of 1987 on the Violations of Laws and Regulations page and summarize the violations in a memorandum to the Regional Office. In such cases, include appropriate information on the parent company.

EXTENSIONS OF CREDIT TO DIRECTORS, OFFICERS, PRINCIPAL SHAREHOLDERS, AND THEIR RELATED INTERESTS

←

Purpose

The purpose of this page is to provide details regarding loans extended to bank insiders and their related interests.

When to Include

Use this schedule to highlight loans to directors, executive officers, principal shareholders, and their related interests that are subject to criticism due to overall volume, credit quality, or preferential treatment.

General

Cross-reference here and on the appropriate Report pages extensions of credit subject to adverse classification, violation, or comment. List the current balances of indebtedness in the total column. Footnote charged-off items.

If a director or principal shareholder is also an executive officer, include that person as an executive officer. (Executive officers are subject to the more stringent restrictions of Regulation O.)

Definition of Terms

Prepare the schedule in conformance with Regulation O definitions of extension of credit, unimpaired capital and surplus, director, executive officer, principal shareholder, and related interest.

List of Insider Credits

List insiders alphabetically by description: Group A (Executive Officers and their related interests), and Group B (Directors/Trustees and Principal Shareholders and their related interests). Generally, comments regarding extensions of credit to insiders should be brief and not include detailed descriptions of the credits or related collateral. However, include details on material overdrafts or other unusual items.

Per Regulation O, directors, executive officers, and principal shareholders of the holding company are considered to be directors, executive officers, and principal shareholders, respectively, of the institution. As such, the prior approval, terms, creditworthiness, and lending limit provisions of Regulation O are applicable. List these individuals when appropriate.

In unusual circumstances, examiners may wish to obtain information regarding extensions of credit to non-executive officers and other employees. If such information is listed, do not include the indebtedness in the table at the top of the schedule.

Duplications With Extensions of Credit to Affiliates

Extensions of credit to, and securities issued by, affiliated organizations that are related interests of insiders should be reported here and on the Extensions of Credit to Affiliated Organizations schedule of the Relationships with Affiliates and Holding Companies page.

References:

- Federal Reserve Board Regulation O
- Section 337.3 of the FDIC Rules and Regulations
- Manual Section 4.3, Related Organizations

COMPOSITE RATING DEFINITIONS

←

Purpose

This page provides definitions of the composite CAMELS (UFIRS) and specialty examination ratings detailed in the ROE. Disclosure of composite and component ratings encourages a more complete discussion of examination findings and assists bank directors and managers in making effective risk management decisions.

General

Examiners should ensure that each composite rating listed on the ECC page is defined on this page. List definitions in the same order as the ratings listed on the ECC page.

References:

- Uniform Interagency Consumer Compliance Rating System - Statement of Policy 11/28/80
- Appendix A to Part 345 of the FDIC's Rules and Regulations
- Uniform Rating System for Information Technology (FIL 12-99 02/05/99)
- Uniform Financial Institutions Rating System (FIL 105-96 12/26/96)
- Uniform Interagency Trust Examination Rating System (FIL 115-98 10/21/98)

All rating definitions are available at www.fdic.gov/regulations/examinations/ratings/.

If the automated examination tool is used to generate the ROE, the rating definitions should appear upon entering the composite ratings on the ECC page.

SIGNATURES OF DIRECTORS/TRUSTEES

←

Purpose

This page, when signed and dated by all of the institution's directors, serves as the directors' certification that they each reviewed the Report in its entirety.

This form is the last page in all ROEs forwarded to institutions.

General

Enter the full name of each director in alphabetical order. This will facilitate the proper signatures of directors after they reviewed the ROE.

The page will be included in the institution's copy of the ROE. The signed form is to remain attached to the Report and retained in the institution's files for examiner review at subsequent examinations.

OFFICER'S QUESTIONNAIRE

←

Purpose

The purpose of the Officer's Questionnaire (Questionnaire) is to obtain information that might not otherwise come to the examiner's attention during the examination.

General

- The Questionnaire is an official document prepared by the institution. Examiners must not alter the specific questions or answers in any way.
- Generally, the chief executive officer (CEO) should sign the Questionnaire. However, an executive officer, as defined by Regulation O, may sign if designated to do so by the CEO and material concerns are not anticipated.
- The EIC has flexibility in determining the as-of date of the Questionnaire. The Questionnaire may be completed as of the Examination as of Date or the Examination Start Date. However, the Questionnaire should never be completed as of a date subsequent to the date the institution received the questionnaire.
- The Questionnaire should be completed on a consolidated-bank basis.
- In general, bank management should be instructed to base their responses on transactions or events that have occurred since the date of the previous FDIC examination. Where a specific timeframe is not specified in the question, examiners have the discretion to request only information since the previous state examination if the state ROE is acceptable. Exception: responses to questions 10, 11, and 12 are not to be limited to any time period.
- Examiners may review these instructions with management to help them understand and complete the Questionnaire.
- Answers can be listed on continuation pages if adequate space is not provided following a question. Copies of the institution's records are acceptable if the documents furnish all the requested information and contain original signatures. If responses are voluminous, they may be provided separately from the Officer's Questionnaire. The Questionnaire should state when separate information was given to the EIC, and the information should identify the questions to which it pertains.
- Financial institutions can submit Questionnaire responses in a printed form (such as hardcopy attachments), in a secure electronic format (such as through FDICconnect), or in a combination or of paper and electronic documents. Upon receipt of Questionnaire responses, examiners should scan any printed forms into an electronic portable document format (pdf) file and convert any electronically received documents into a pdf file, to the extent not already in pdf format. Examiners should then import the pdf files of the documents into the Officer's Questionnaire folder in the Regional Automated Document Distribution and Imaging System (RADD).
- If an EIC believes an officer gave an answer in error due to oversight or misunderstanding, the signing officer may be permitted to correct the answer. The signing officer should initial all corrections.
- The Questionnaire may be submitted with the Report of Examination when appropriate. For example, the
- Questionnaire should be included if the examiner suspects that an officer knowingly provided incorrect information in the document.
- The Questionnaire should be retained for a minimum of ten years from the examination start date.
- The Questionnaire should be retained indefinitely when irregularities are discovered or suspected during the ten-year retention period.
- If management is given an electronic copy of the Questionnaire, examiners must carefully compare the returned questionnaire to ensure the wording in each question is identical to the wording in original documents.

Question 1

List all extensions of credit and their corresponding balances, which, since the last FDIC examination, have been renewed or extended under any of the following circumstances:

a) without full collection of interest due
b) with acceptance of separate notes for the payment of interest
c) with capitalization of interest to the balance of the note

For all listed loans, state which situation applies. Consumer credit/installment loans may be aggregated by number and total dollar volume.

The purpose of the question is to:

- Determine the extent of interest capitalization.
- Identify loans with potentially poor credit quality.
- Identify credit practices that may distort past-due information.
- Identify practices that may adversely affect the quality of the institution's reported earnings.

Forward affirmative answers to examiners reviewing loans. An excessive number of these loans may distort the institution's financial position by overstating earnings and understating the past-due ratios. If there is a lengthy response to this question, it may be appropriate to include comments regarding the accuracy of the past-due ratios on the RMA page. Excessive use of these practices may warrant an ECC page comment.

Question 2

List all extensions of credit secured by stock of other financial institutions, or financial institution holding companies, or their affiliates where the total of all shares held as collateral represents five percent or more of the entity's outstanding shares. Provide the following information for each listing:

- Name and location of entity
- Name of stockholder and borrower
- Number of shares held as collateral
- Percentage of ownership
- Certificate number(s)
- Original amount
- Current balance
- Origination date
- Maturity date
- Interest rate
- Purpose

The purpose of the question is to:

- Assist in determining compliance with the reporting requirements of Section 7(j) of the FDI Act.
- Assist in determining or assessing the extent of interbank activity, and assist in understanding relationships between entities and their management teams.
- Review insider relationships, when applicable.
- Assist in determining or assessing direct or indirect control issues, asset quality, and dividend requirements of other entities.
- Generate information necessary for bank correspondence cross-referencing and verifying the accuracy of information at other institutions.

References:

- Section 7(j) of the FDI Act
- Section 23A of the Federal Reserve Act
- Bank Holding Company Act
- Manual Section 4.3, Related Organizations

Question 3

List all extensions of credit made for the accommodation or direct benefit of anyone other than those whose names appear either on the note or on other related credit instruments. If any executive officer, principal shareholder, director, or their related interest (per Federal Reserve Board Regulation O definitions) is or was involved.

The purpose of the question is to:

- Determine compliance with applicable laws and regulations.
- Assist in reviewing legal lending limits.
- Assist in determining asset quality.
- Assist in determining concentrations.
- Assist in reviewing potential conflicts of interest.
- Identify straw borrowers, also known as bogus or pass-through borrowers. If loan proceeds went to the benefit of a person other than the person named on the note, or otherwise disclosed in bank records, it should be applied to the benefiting parties' aggregate debt for legal lending limit purposes.

References:

- Federal Reserve Board Regulation O
- Part 353 of the FDIC Rules and Regulations
- Manual Section 4.5, Violations of Laws and Regulations

Question 4

List all extensions of credit made by the bank (or its subsidiaries) to the officers, directors, (or their related interests) of other financial institutions or their affiliates. Provide the following information for each listing:

- Name and title of director, officer, or related interest
- Name and location of the entity
- Original amount
- Original date
- Current balance
- Maturity date
- Interest rate
- Security
- Purpose

The purpose of the question is to:

- Allow for the appropriate cross-referencing of files and verification of data at other institutions.
- Determine compliance with applicable laws and regulations.
- Assist in reviewing potential conflicts of interest and preferential treatment.
- Assist in determining the extent of such activities, and assist in better understanding the entities' business relationships with each other.
- Assist in reviewing asset quality.
- Assist in determining concentrations in this type of lending.

Reference: Section 106(b)(2) of the Bank Holding Company Act

Question 5

List all transactions between the institution and any of its executive officers, principal shareholders, directors, or their related interests, except for:

- Loans
- Deposits
- Bonuses
- Salaries
- Director fees

Include the insider's name, as well as the date and nature of the transaction.

The purpose of the question is to:

- Determine the extent, and allow for the review, of insider transactions.
- Assist in determining whether insider transactions harmed the institution.

Reportable transactions may involve equipment leases, leasing of bank premises, or insiders providing institution-related services such as appraisals, IT services, legal services, or insurance.

References:

- Manual Section 9.1, Fraud and Insider Abuse
- Manual Section 4.5, Violations of Laws and Regulations
- Manual Section 4.1, Management

Question 6

List any oral or written agreements with correspondent depository institutions that establish balances to be maintained, or other similar consideration, in connection with loans to either institution's directors, officers, employees, or principal shareholders.

The purpose of the question is to:

- Assist in reviewing potential conflicts of interest.
- Assist in determining if such transactions have an adverse effect on the institution.
- Assist in reviewing potential misapplication of funds.
- Assist in determining tying arrangements per Section 106 of the Bank Holding Company Act of 1956.
- Assist in assessing practices related to establishing or maintaining relationships via oral agreements, if any.

Reference: Manual Section 4.3, Related Organizations

Question 7

List all extensions of credit to accountants, lawyers, consultants, appraisers, or other similar individuals (including their related interests) who have provided professional services to the institution since the last FDIC examination. Exclude loans to directors, officers, or employees who perform these services, if such loans have been disclosed to examiners in other documents. Provide the following information for each listing:

- Name of borrower
- Borrower's relationship with the institution
- Current Balance

The purpose of the question is to:

- Assist in reviewing potential conflicts of interest.

Question 8

List all arrangements where the institution is obligated to make payments to a former institution-affiliated person (per Section 3 of the FDI Act) who has left the institution's employment, or has otherwise terminated his/her affiliation with the institution. Provide the following information for each listing:

- Name of person receiving payments
- Total amount of payments
- Basis for payment
- Explanation of the type of agreement (such as severance pay or deferred compensation)

If more than one person is covered by a single agreement, list the plan only once and summarize the plan's coverage.

The purpose of the question is to:

- Determine compliance with applicable laws and regulations regarding severance agreement payments.
- Identify poorly designed compensation structures that misalign incentives and induce excessive risk-taking.
- Determine potential abuse resulting from excessive compensation.
- Determine potential adverse effects on profitability.
- Assist in checking the accuracy of accounting issues and financial statements (that is, if the institution has booked appropriate liabilities).

This question looks for potential payments that may meet the definition of a golden parachute payment as defined by Section 18(k) of the FDI Act. Such payments might be prohibited if the institution becomes troubled. Examiners can also use the information provided in the response to review for excessive compensation.

References:

- Section 18(k) of the FDI Act
- Part 324 of the FDIC Rules and Regulations (Prompt Corrective Action)
- FIL-66-2010 Guidance on Golden Parachute Applications
- Part 364 of the FDIC Rules and Regulations
- Manual Section 4.1, Management

Question 9

List any written or oral contract or agreement (not included in responses to questions five and eight above) that obligates the institution to pay more than ten percent of its current equity capital over the life of the contract or agreement. Provide the following information for each listing:

- Name of the counter party or payee
- Date of the contract or agreement
- A brief description of the purpose, terms and conditions

The purpose of the question is to:

- Assist in identifying undesirable lengths of contracts and potential excessive liabilities.
- Assist in determining any impairment of capital.
- Review for adverse termination clauses.
- Determine impact on the institution's future profitability.
- Assist in assessing practices related to establishing or maintaining relationships via oral agreements, if any.

Use the Regulation O definition of equity capital when determining ten percent of equity capital.

This question is intended to identify contracts that may adversely affect the safety and soundness of the institution. Appropriate management review and approval should be recorded for large contracts.

Reference: Section 30 of the FDI Act

Question 10

List any director who has been ineligible or disqualified from serving as a director at any time. Also, furnish the reason for his/her ineligibility or disqualification.

The purpose of the question is to:

- Determine compliance with applicable state laws and regulations.
- Verify the directors' continued eligibility to serve on the bank's board. For example, many states require a director to own and maintain qualifying shares of stock in the institution. In addition, some state laws prohibit individuals from serving as a director, if their loan(s) have been adversely classified. State laws generally govern the meaning of disqualification for the response to this question. However, any current director that was ever deemed ineligible from serving as a director at an insured depository institution due to statutory or regulatory guidelines (state or federal), or internal (bank) restrictions, should be identified. Cross-check responses here with responses in question No. 12 for possible tie-ins.

Question 11

List all instances where a director, officer, or employee has committed a crime involving the institution's funds or property, including any funds or property for which the institution is responsible. Provide the following information for each listing:

- Name(s) of all individuals involved
- Date and nature of irregularities
- Extent of restitution made, if any
- Whether the proper law enforcement authorities and the fidelity bond carrier were promptly notified

If either law enforcement officials or the bond carrier was not notified, explain the situation in a separate memorandum to the examiner-in-charge.

The purpose of the question is to:

- Determine compliance with applicable laws and regulations.
- Ensure notification was given to proper authorities.
- Assist in reviewing recovery potential from the bonding company.
- Indicate possible internal routine and control deficiencies.

References:

- Section 8(e) of the FDI Act
- Part 353 of the FDIC Rules and Regulations
- Manual Section 4.5, Violations of Laws and Regulations

Question 12

List any director, officer, or employee who has been convicted of, or who is presently under indictment or similar action for, or has agreed to enter into a pretrial diversion or similar program in connection with the prosecution for any criminal offense involving dishonesty, breach of trust, or money laundering. Briefly describe the situation.

The purpose of the question is to:

- Determine compliance with applicable laws and regulations.
- Assess conformance with corporate codes of conduct and bank ethics policies
- Assess UFIRS Management component

References:

- Sections 8(e), 8(g), and 19 of the FDI Act
- FIL 105-2005, Corporate Codes of Conduct, Guidance On Implementing An Effective Ethics Program
- Manual Section 4.1- Management

Question 13

List all assets of value the institution owns but does not show on its books.

The purpose of the question is to:
- Assist in ensuring proper internal control and accounting over such items.
- Assist in determining the institution's capital position.

This question may encompass a variety of answers. Typical answers include charged-off assets of undetermined value.

Reference:
- Manual Section 2.1, Capital
- Manual Section 3.7, Other Assets and Liabilities
- Manual Section 4.1, Management
- Manual Section 4.2, Internal Routine and Controls

Question 14

If the institution is a defendant in any lawsuit, provide the following summary information:
- Names of the plaintiffs
- Amount sued for
- Nature of, or basis for, litigation
- Expected result, including any probable loss

If necessary, provide full details to examiners, in a separate memorandum.

The purpose of the question is to:
- Determine the impact of contingent liabilities, the likelihood of contingencies becoming direct liabilities, and the potential impact on capital.

In some instances, institutions incur significant costs in obtaining a formal attorney's letter. As such, examiners should not specifically request or require such a letter as a means of answering this question. Nonetheless, many institutions will obtain an attorney's letter. Normally, a summary should be provided here, and the attorney’s letter(s) should be retained in the examination workpapers. If the letter(s) are being included in the Report (with the Officer's Questionnaire), include the letters on a continuation page.

References: Manual Section 2.1, Capital - Contingent Liabilities

Question 15

List all organizations that are directly or indirectly affiliated with, or otherwise related to, the institution in any way, including fiduciary relationships. Related organizations may be corporations, partnerships, business trusts, or any similar organization. Provide the following information for each listing:
- Name of affiliate or related entity
- Location
- Type of business
- Current balance of all direct and indirect extensions of credit to the affiliate (per Section 23A of the
- Federal Reserve Act)
- Current balance of all loans to third parties, where the loans are collateralized with securities issued by the affiliate

The purpose of the question is to:

- Identify affiliated or related organizations.
- Identify loans to affiliates or related organizations.
- Reveal trust powers and the extent to which trust powers are exercised.
- Ensure all contingent liabilities are reviewed.

References:

- Section 303.7 of the FDIC Rules and Regulations
- Section 23A of the Federal Reserve Act
- Manual Section 4.3, Related Organizations

- Trust Examination Manual, Section 10, Other Trust Matters

CONFIDENTIAL – SUPERVISORY SECTION

←

Purpose

The purpose of this page is to communicate non-public information to regulatory personnel. Generally, information on this page should not duplicate information in the open section of the Report. Use descriptive headings to separate topics and improve readability.

Mandatory Comments

Institution Control and Relationships - Concisely identify the individuals or organizations that control the institution, material subsidiaries, and affiliates. Such information is important in tracking chain bank organizations and updating holding company records.

Examiners should interpret the word "controlled" broadly. Control may exist in an individual or group, through stock ownership, or other means. Depending on the situation, ownership of varying percentages of stock may result in control. In a mutual institution, effective control may exist in the form of a board, committee, or dominant individual. A concentration of decision-making power and a lack of oversight or accountability are keys to determining the level of control.

References:

- Change in Bank Control - Section 7(j) of the FDI Act

Part 362 - Activities of Insured State Banks and Insured Savings Association

Director Involvement **–** Prepare a brief statement of any Director contacts with the examiners outside of the exit/board meetings. If no such contact takes place, no comment is necessary.

Dominant Management **–** Identify the dominant officials, if any, and describe the dominant official's influence and effect on the institution, the board's independence and oversight, and the effectiveness of mitigating controls, if no concerns are identified. If there is a dominant official, ensure this is indicated on the SAER page. If there is no dominant official present, indicate such on the SAER page and no comment is required in the confidential pages.

Examination Scope – Prepare a brief comment addressing any deviations greater than 15% between projected and actual hours or any material change in examination scope or procedures. If there are no significant deviations or any material changes, then no comment is necessary.

If applicable, address within the examination scope comment any increased Bank Secrecy Act/Anti-Money Laundering or Office of Foreign Asset Control risk that should be reviewed at subsequent examinations and/or address significant or material changes in examination scope or examination procedures. If there are no increased risks and/or significant variances from the original scope did not occur, no comment is necessary.

Specialty Examinations (Including Information Technology, Trust, Registered Transfer Agent, Government and Municipal Securities Dealers) **–** Comments should include:

- Specialty examination numbers (used for hours tracking)
- Discussion and explanation of any material change in examination scope or procedures, or deviations between projected and actual hours of 15% or greater.
- For Information Technology, note any participation by other regulatory agencies in the IT examination, including the name of the agency and examination hours, if applicable. Comments should also include a listing of serviced institutions, if applicable.
- For Trust examinations, note the component ratings and list any unique characteristics of the client base or services, unless already addressed elsewhere in the ROE.

Capital Enhancement Sources – This section is applicable if not addressed within the ECC pages and earnings retention of the bank is significantly insufficient to maintain adequate capital, and the sale of new equity may be necessary to address capital needs. This section would primarily address potential capital resources, including the perceived capacity and willingness of potential investors to purchase stock. The following items may also be addressed at the examiner's discretion:

- A complete list of present shareholders detailing the amount of stock held and their financial worth (small holdings may be aggregated if a complete listing is impractical),
- Individual director's capacity and willingness to purchase stock,
- A list of prominent customers and depositors who are not shareholders but who may be interested in acquiring stock,
- A list of other individuals or possible sources of support in the community who, because of known wealth or other reasons, might want to subscribe to new stock, and
- Any other information regarding new capital sources, along with the examiner's opinions regarding the most likely prospects for the sale of new equity.

Optional Comments

Questionnaires and Work Programs – Prepare a summary comment if any findings from a Questionnaire or Work Program completed during the examination identifies an increased risk or some other item that should be reviewed at a subsequent examination.

Express Determination Letters **–** Include a brief comment if management requests, and is provided or denied, an express determination letter for tax purposes. For additional details, refer to Section 3.2 (Loans), of the Manual.
Additional Items – The following topics may be addressed if relevant:

- Information supporting examination comments, recommendations, ratings, and/or sensitive information regarding management, strategic plans, offices, products, or services.
- Comments reconciling apparent discrepancies between the assigned rating and recommended supervisory actions (or lack of recommended actions),
- Sensitive or nonpublic information such as planned management changes and merger discussions, and other issues such as a lack of cooperation from management.
- Noting the name of the acting EIC if the examination served as a practice job

Suggestions and Comments for Future Examinations

Comments may include the following:

- Special Expertise requirements (e.g., capital markets experts),
- Dress code and locations and business hours,
- Records maintained at locations other than the main office,
- Working space limitations, and
- Any other information that may improve examination efficiencies.

Recommendations for Administrative Actions

Do not reference administrative actions on the Confidential Page. Address, in a separate memorandum, actions such as: (1) imposing or not imposing civil money penalties, (2) terminating insurance, (3) issuing a Cease and Desist Order or other formal action, (4) issuing a Memorandum of Understanding or other informal action (Board Resolution), and (5) releasing an institution from outstanding action.

When administrative action is contemplated, remember that Confidential-Supervisory Section comments may be a matter of record at an administrative hearing. All comments must be accurate, well supported, and able to withstand cross-examination.

DIRECTORS/TRUSTEES AND OFFICERS

←

Purpose

This confidential page provides information of interest to nonbank users of the ROE. The information assists Case Managers, other field, regional, or Washington Office management, and other regulatory authorities in their case management, applications processing, ROE review, and general bank supervision duties.

General

List all directors, executive officers, and principal shareholders (as defined in Federal Reserve Regulation O) under those respective subtitles. Other officers or employees (such as officers who head functional areas or the internal auditor) may be included at the discretion of the examiner-in-charge. Generally, detail functional responsibilities, banking experience, and post-secondary education for all officers listed. For directors, include their occupation, banking experience, and any other significant information relating to their contribution to the institution. When relevant, identify the related interests of all directors, executive officers, and principal shareholders.

Include holding company officers or directors who exert significant control over the institution's affairs (for example, when a holding company treasurer manages a subsidiary institution's investment portfolio), even though they are not official officers/directors of the institution.

While inclusion of this page in the ROE is discretionary, the information must be gathered and input into the automated examination tool for transmittal to reviewers. Retain copies of source documents in the workpapers.

Other

Net Worth - Directors' net worth should be obtained and included when relevant (for example, when an institution's capital position is inadequate and directors may be a source of additional capital). When estimated net worths are obtained, footnote the Date of Statement column to indicate the source of information (for example, net worths estimated by President Smith).

Attendance at Board Meetings - Board meeting attendance figures shown should be since the previous FDIC or state examination, unless otherwise noted.

Parent Company Ownership - If a holding company owns the institution, note ownership in the holding company. If relevant, examiners may include the percentage of shares owned below the number of shares owned. When informative, total the Number of Shares Owned column. Show the percentage of shares controlled by the directorate as a whole.

Salary and Bonus - Footnote the dates of salary and bonus information if it is not the current annual salary or most recent annual bonus.

Home Addresses of Directors - List the directors' complete home addresses here or on a separate continuation page when the following conditions exist:

- Formal or informal administrative action is contemplated,
- The institution is rated a composite 3, 4, or 5, or
- Civil money penalties may be recommended.

Memoranda - Note the following information:

- Number of board meetings since the previous FDIC or state examination
- Memberships in important committees (particularly audit)
- Directors' fees for board and committee meetings

APPENDIX A – ABBREVIATIONS

←

The following are the principal abbreviations used in this Report of Examination.

et al	And Others
a/k/a	Also Known As
ABS	Asset-Backed Securities
ACH	Automated Clearing House
ACI	Adversely Classified Items
ACL	Allowance for Credit Losses
ADC	Acquisition, Development, and Construction
AFS	Available-for-Sale
AGI	Adjusted Gross Income
AL	Acres of Land
ALCO	Asset/Liability Committee
ALLL	Allowance for Loan and Lease Losses
AML	Anti-Money Laundering
AOCI	Accumulated Other Comprehensive Income
AP	Accounts Payable
AR	Accounts Receivable
ARM	Adjustable Rate Mortgage
ASC	Accounting Standards Codification
ASU	Accounting Standards Update
ATM	Automated Teller Machine
AV	Appraised Value
AVP	Assistant Vice President
BIA	Business Impact Analysis
BCP	Business Continuity Plan
BHC	Bank Holding Company
BOLI	Bank-Owned Life Insurance
bp	Basis Point(s)
BSA	Bank Secrecy Act
BV	Book Value
Call Report	Reports of Condition and Income
CCO	Chief Credit Officer
CD	Certificate of Deposit
CDD	Customer Due Diligence
CEO	Chief Executive Officer
CFO	Chief Financial Officer
CF	Cash Flow
CFP	Contingency Funding Plan
CFPB	Consumer Financial Protection Bureau
CFR	Code of Federal Regulations
C&I	Commercial and Industrial
CIP	Customer Identification Program
CISO	Chief Information Security Officer
COO	Chief Operations Officer
CRA	Community Reinvestment Act
CRE	Commercial Real Estate
CTR	Currency Transaction Report
CPA	Certified Public Accountant
CSV	Cash Surrender Value
DDA	Demand Deposit Account
DDoS	Distributed Denial of Service
DSC	Debt Service Coverage
DTA	Deferred Tax Asset
DTL	Deferred Tax Liability
d/b/a	Doing Business As
DPC	Debts Previously Contracted
DT	Deed of Trust
EBITDA	Earnings Before Interest, Taxes, Depreciation, and Amortization
EFT	Electronic Funds Transfer
EIC	Examiner-in-Charge
EVE	Economic Value of Equity
EVP	Executive Vice President
FA	Fixed Assets
FASB	Financial Accounting Standards Board
F&F	Furniture and Fixtures
FDIC	Federal Deposit Insurance Corporation
FFIEC	Federal Financial Institutions Examination Council
FHA	Federal Housing Administration
FHLB	Federal Home Loan Bank
FHLMC	Federal Home Loan Mortgage Corporation
FinCEN	Financial Crimes Enforcement Network
f/k/a	formerly known as
FNMA	Federal National Mortgage Association
FRB	Federal Reserve Bank
FS	Financial Statement
FSA	Farm Service Agency
FS-ISAC	Financial Services - Information Sharing and Analysis Center
FV	Fair Value
GAAP	Generally Accepted Accounting Principles
GNMA	Government National Mortgage Association
Gty	Guaranty or Guarantee
HTM	Held-to-Maturity
HVCRE	High Volatility Commercial Real Estate
ID	Income Data
Inc	Incorporated
IPO	Initial Public Offering
IRR	Interest Rate Risk
IRS	Internal Revenue Service
ISO	Information Security Officer
ISP	Information Secuirty Program
IT	Information Technology
JM	Joint Maker
LAN	Local Area Network
LLC	Limited Liability Company
LOC	Line of Credit

LP	Limited Partnership
LS	Livestock
LTV	Loan-to-Value
M	Thousands
M&E	Machinery & Equipment
MBS	Mortgage-Backed Security
MMDA	Money Market Deposit Account
MRBA	Matter Requiring Board Attention
MSA	Mortgage Servicing Asset
Mtg	Mortgage
MV	Market Value
NI	Net Income
NII	Net Interest Income
NIM	Net Interest Margin
NNCFD	Net Non-Core Funding Dependence
NOI	Net Operating Income
NOL	Net Operating Loss
NOW	Negotiable Order of Withdrawal
NP	Notes Payable
NR	Notes Receivable
NW	Net Worth
OD	Overdraft
OFAC	Office of Foreign Assets Control
ORE	Other Real Estate
PCA	Prompt Corrective Action
PD	Past Due
P&I	Principal & Interest
P&L	Profit & Loss Statement
PV	Present Value
RE	Real Estate
ROA	Return on Average Assets
RBC	Risk-Based Capital
RE	Real Estate
REM	Real Estate Mortgage
SVP	Senior Vice President
SA	Security Agreement
SAR	Suspicious Activity Report
SBA	Small Business Administration
SEC	U.S. Securities and Exchange Commission
SFR	Single-Family Residence
SLOC	Standby Letter of Credit
TA	Total Assets
TDR	Troubled Debt Restructure
TE	Tax Equivalent Basis
TL	Total Liabilities
TR	Tax Return
UBPR	Uniform Bank Performance Report
UCC	Uniform Commercial Code
USDA	United States Department of Agriculture
VA	Veteran's Administration
VOIP	Voice Over Internet Protocol
VP	Vice President
WAN	Wide Area Network
YTD	Year-to-Date

APPENDIX B – GRAMMAR AND PUNCTUATION GUIDE

←

The general rules and standards contained in this appendix are applicable only to the Report of Examination. The rules and standards cover matters commonly encountered in Report comments and are intended to promote consistency. The general rules are not a substitute for writing and grammar guides. Refer to those resources for formal guidance.

HYPHENATION - ADJECTIVES:

General Rule: Two- and three-word modifiers that express a single thought should be hyphenated when they precede a noun (an out-of-date policy).

Do not use a hyphen if each of the words can modify the noun without the aid of the other modifying word or words (a new digital computer).

Do not hyphenate words that follow the noun they modify (the policy is out of date).

<u>Examples:</u>

A full-scope examination began on June 30.

The loan is secured by a single family residence.

The apartment complex has 50 units.

HYPHENATION - PREFIXES:

General Rule: Words containing prefixes generally do not require hyphens. Include the hyphen after the prefix if not doing so would cause confusion in sound or meaning.

<u>Examples:</u>

nonaccrual nonperforming subtotal

HYPHENATION - COMPOUND VERBS:

General Rule: Compound verbs can be separate, solid, or hyphenated. If you do not find a compound verb in a dictionary, write the components as separate words.

<u>Report standards:</u>

charge off paid off write off/ up/ down

HYPHENATION - COMPOUND NOUNS:

General Rule: Compound nouns may be separate, solid, or hyphenated. If you are not certain whether a compound word should be hyphenated, check a dictionary. If you do not find a compound noun in a dictionary, hyphenate the components.

Report Standards: charge-off pay-off write-off/-up/-down examiner-in-charge

HYPHENATION - SUSPENDING HYPHEN:

General Rule: When a series of hyphenated adjectives has a common basic element, and the element is shown only with the last term, insert a suspending hyphen after each of the incomplete adjectives to indicate a relationship with the last term.

Examples:

long- and short-term securities
private- and public-sector partnerships

HYPHENATION - ADVERBS:

General Rule: If the first word is an adverb ending in "ly," do not use a hyphen.

Examples:

publicly held widely held wholly owned

CAPITALIZATION:

General Rule: There are numerous exceptions to basic capitalization rules. The most important rule is to be consistent throughout a Report. Examiners may deviate from the following standards as long as they are consistent.

Report Standards: Do not capitalize bank unless it is used with the full name of the institution.

Capitalize Board of Directors, Board, or Directors when referring to a specific board.

Capitalize Call Report, Call Report Instructions, and Consolidated Reports of Condition and Income.

Do not capitalize examiner-in-charge unless it is followed by a specific person's name.

Capitalize account titles (for example, Other Borrowings).

Capitalize the word federal.

Capitalize only the word Federal in Federal funds sold or purchased (unless referring to an account title).

Capitalize Regional Director and Regional Office.

Capitalize Report of Examination and Report when referring to a specific report.

Do not capitalize the word State unless referring to a specific public agency or the word is being used in the same sentence as Federal.

Capitalize Substandard, Doubtful, Loss, and Special Mention when referring to FDIC asset classification titles.

Capitalize the specific titles of formal institution policies (for example, the Loan Administration Policy vs. the loan policy).

Capitalize the titles of specific institution committees (for example, the Audit Committee).

DATES:

Report Standard:	A comma precedes and follows the year when the month and day precede the year. However, when the date consists only of month and year, commas are not necessary.
Examples:	The examination that began on December 2, 1998, was completed in two weeks. The report is due in January 1999.

NUMBERS:

General Rule:	Write out numbers below 10. Use figures for numbers 10 and above. Regardless of the number's size, use figures if they are followed by a unit of measure. Write out numbers that begin a sentence. Do not begin a sentence with a large number.
Examples:	The bank employs five people. The examiners cited 14 deficiencies. Twenty-six examiners attended the field office meeting.

SPELLING:

Report Standards:	installment	totaling	totaled

INTERNATIONAL REPORT PAGES

GENERAL INSTRUCTIONS

←

Purpose

Examiners use international report schedules to document the level of foreign exposure risk, the adequacy of risk management systems for controlling country exposures, the risks associated with commonly controlled foreign institutions, and the effect of international activities and risk management practices on the institution's overall condition.

When to Include

Examiners should complete these schedules if the level of country risk is material or the composition of international operations changed significantly since the previous examination.

General

Complete the following ROE report pages and include them after the domestic Items Listed for Special Mention page:

- Transfer Risks Subject to Classification
- Analysis of the Country Exposure Management System
- Selected Concentrations of Country Exposure
- Parallel-Owned Banking Organizations (PBO)

The first three pages listed above focus on an assessment of the impact of country risks and the adequacy of country risk management systems. The PBO page should be completed when the examiner determines the institution is part of a PBO. Refer to RMS Manual Section 11.1, International Banking, for information and guidance on PBOs.

Instructions for completing the schedules listed above are discussed on the following pages. In addition, the International Workpapers section contains instructions for completing a series of optional workpapers that may assist examiners in reviewing specialized areas of an institution's international operations (e.g., foreign exchange trading). The workpapers are not part of the ROE, but if completed, should be retained in the workpapers.

Note: Insert International report pages in the order shown above after the Items Listed for Special Mention page, and use the EDR (International) page in lieu of the standard EDR page in the core section of the Report.

INTERNATIONAL REPORT PAGE

TRANSFER RISKS SUBJECT TO CLASSIFICATION

←

Purpose

The purpose of this page is to identify assets that are adversely classified because of transfer risk considerations.

When to Include

Include this page when the institution has claims subject to transfer risk. The amount extended for adverse classification or comment should be as of the asset review date if possible, particularly if there has been a material change in the outstanding exposure balance since the date of the last quarterly Country Exposure Report (FFIEC Form 009).

General

In general, countries are adversely classified for transfer risk when an interruption in payments has occurred or appears imminent. The Interagency Country Exposure Review Committee (ICERC) makes the decision to adversely classify countries for transfer risk. If a financial institution has claims extended to entities within a classified country, the claims (e.g., loans) are subject to transfer risk and classified accordingly. Examiners have the discretion to assign a more severe classification than assigned by the ICERC when appropriate, but cannot assign a less severe classification. The ICERC also prepares the ROE write-ups supporting the adverse transfer risk classifications. Adverse transfer risk classifications used by ICERC are Substandard, Value Impaired, or Loss. For additional information on the committee's policies, practices, and procedures, refer to the most recent Guide to the ICERC Process (www.fdic.gov/regulations/safety/guide/Icerc.pdf). For assistance, contact the International Affairs Branch of the Division of Insurance and Research.

Write-ups are available through the FDIC representative to ICERC and generally should be included in the ROE. Include a paragraph detailing the composition of the institution's claims subject to transfer risk. Report exposures alphabetically by country and total each classification category. Examiners should follow the same instructions contained in the Items Subject to Adverse Classification page as a guide to determine when the transfer risk write-ups can be omitted from the ROE. If transfer risk write-ups are omitted from the ROE, examiners should provide the write-ups to bank management during the examination.

Some or all of the assets adversely classified for transfer risk may also be adversely classified for credit risk. Duplicate classifications should be eliminated on an asset-by-asset basis, or through a single line item at the end of page(s) detailing the adverse classifications. In all cases, the most severe criticism should prevail. For example, if an asset is classified Doubtful for credit risk and Substandard for transfer risk, make the adjustment for the duplication before calculating a total for adverse classification due to transfer risk. Apply the same procedure if both transfer risk and credit risk bear the same adverse classification. For example:

TRANSFER RISK	SUB STANDARD	VALUE IMPAIRED	LOSS
Subtotal assets classified due to transfer risk	5,000,000		
Less-amount classified due to commercial credit risk Total adversely classified assets due to transfer risk	500,000 4,500,000		

On the other hand, if the transfer risk classification is more severe, eliminate the amount classified for transfer risk from the Items Subject to Adverse Classification page(s) where credit classifications are calculated, and list the amount classified for transfer risk on this page. In addition, examiners should reduce the amount extended for classification by the amount of the allocated transfer risk reserve (ATRR). *Note: Manual adjustments to automated examination tools may be necessary to net the ATRR from the amount extended for adverse classification.* Exposures adversely classified due to transfer risk (less duplication adjustments) are included in the Asset Quality section of the Examination Data and Ratios page, under a separate line item, Other Transfer Risk.

When evaluating an institution's asset quality and other measures of financial soundness, including capital adequacy and ALLL sufficiency, examiners should combine classified credits with exposures that have been adversely classified due to transfer risk. Certain types of exposures in a given country (e.g. trade credit) may not be rated or adversely classified, while other portions (e.g. term loans) might warrant adverse classification. To facilitate uniform treatment, ICERC has defined *short-term credit* as credits maturing within one year, and *trade credit* as credit extensions that are directly related to imports and exports and will be liquidated through the proceeds of international trade (e.g. commercial letters of credit, acceptances, etc.). Past due or extended acceptances are considered loans.

Report split designations under the proper columns. Extend for adverse classification, all contingent liabilities subject to transfer risk (including commercial and standby letters of credit, as well as loan commitments) that will result in a concomitant increase in an institution's assets if the contingencies convert into an actual liability. Classify contingent liabilities extended for adverse classification according to the type and tenor of the asset that would result from conversion of the contingency into an actual liability. For example, classify commercial import/export letters of credit the same as trade credit, and classify commitments to fund long-term project loans the same as long-term loans. In cases where the type or tenor is not easily discernible and exposure is accorded a split classification, the more severe classification should prevail.

Commitments include the institution's obligations to participate in debt facilities (e.g., underwriting bonds) and syndicated credits that are managed by other institutions. Commitments should only include those for which a legally binding commitment exists, a commitment fee charged, or other consideration given. Adversely classified underwriting commitments should be shown net of firm third-party commitments to purchase the assets without recourse within a short period. Similarly, when adversely classifying syndicated loan commitments, extend only the institution's proportional share of the commitment.

(Continued on next Page)

Allocated Transfer Risk Reserve

Pursuant to the International Lending Supervision Act (ILSA), the federal banking agencies require institutions to establish and maintain a special reserve when:

(1) The value of international loans has been impaired by the protracted inability of the borrowers in a country to make payments on external indebtedness, or

(2) No definite prospects exist for orderly restoration of debt service.

In either case, these assets are typically classified as Value Impaired. Determination of the level of the special reserve, known as the Allocated Transfer Risk Reserve (ATRR), is the responsibility of the ICERC.

The ATRR is a contra-asset to the international asset, and must be established by a charge to current income and segregated from the institution's general allowance for possible loan losses. The ATRR should be netted from amounts extended for adverse classifications. Do not include the ATRR as a part of bank capital. The institution has the option to charge off the required amount rather than set up the ATRR. Examiners should ascertain whether the appropriate percentage ATRR, or charge-off, of outstanding Value Impaired exposures has been made. The amount of charge-off or ATRR required is the amount equal to the appropriate percentage of outstanding exposures, as illustrated in the following examples:

	EXPOSURE TO COUNTRY X	EXPOSURE TO COUNTRY Y
Outstanding Balance	1,000,000	3,000,000
Previous ATRR (ICERC set a 15% requirement for Country X)	150,000 (ATRR or Charge-off)	
New ATRR (ICERC sets a 10% requirement for Country Y)		300,000
New ATRR (ICERC increases ATRR requirement for Country X to 20%)	50,000 (ATRR or Charge-off)	
Final ATRR (These are the only amounts that should be reflected in the ROE)	200,000 (ATRR or Charge-off)	300,000 (ATRR or Charge-off)

If an ATRR or charge-off for the required amount has not been established by the bank, the amount should be deducted on the Capital Calculations page. This deficiency should be addressed on the Examination Conclusions and Comments page and cited on the Violations of Laws and Regulations page (refer to Part 347 of the FDIC Rules and Regulations).

The required ATRR or charge-off is based on the original amount of exposure to a country less payments received. Loans extended after the initial amount, as determined for ATRR purposes, are generally not subject to an ATRR or charge-off if the new money was extended pursuant to economic reforms and if the credits are performing.

INTERNATIONAL REPORT PAGE

ANALYSIS OF THE COUNTRY EXPOSURE MANAGEMENT SYSTEM

←

Purpose

The purpose of this schedule is to present analysis of the institution's system for monitoring and controlling country exposure.

When to Include

Complete this schedule when the institution has material cross-border exposures and examiners conduct an analysis of its country risk management systems. Guidelines for conducting such analysis are incorporated in the RMS Manual, Section 11.1, International Banking. Also, the joint Statement on Sound Risk Management Practices (FIL 23-2002), describes the elements of an effective country risk management process and the leading factors affecting country risk.

General

The analysis should include evaluations of the institution's:

- Procedures for measuring exposure,
- System for establishing country lending limits,
- Ability to analyze country risk, and
- Adherence to internal policies in this area.

The evaluation of the institution's international loan portfolio (including loans made to domestic borrowers to facilitate international transactions) and the institution's country exposure management program may warrant commentary on the Examination Conclusions and Comments page. Examples might include excessive concentrations of transfer risk in one or more countries, concentrations in certain classes of countries, such as emerging economies, large amounts of assets classified because of transfer risk, or an ineffective country exposure management system.

INTERNATIONAL REPORT PAGE

SELECTED CONCENTRATIONS OF COUNTRY EXPOSURES

←

Purpose

The purpose of this schedule is to present concentrations in crossborder exposures that are considered large relative to the institution's capital, or of special interest in terms of the economic, social, political, or geographical circumstances. The latter may include countries experiencing adverse events, countries with developing economies, countries with membership in troubled monetary unions or economic blocks, countries located within a region of special interest, etc.

When to Include

Use this schedule when the institution's exposure in any given country exceeds 25 percent of Tier 1 Capital. Examiners should also consider listing any countries of significance or special interest where exposures exceed 5 percent of Tier 1 Capital. In addition, list all exposures to adversely classified countries regardless of the percentage of Tier 1 Capital.

General

Schedule the exposures by country in alphabetical order and add any necessary explanatory remarks, including the percentage of Tier 1 Capital, reason for presenting the concentration, and any concerns regarding individual country risks or circumstances.

The Country Exposure Report (FFIEC 009), which is filed quarterly, provides detailed information on the bank's exposures by individual country. If the institution is required to prepare the report, obtain the information from the most recently filed report. Compiling the required data as of the examination start date is unnecessary unless the institution's exposure has changed materially since the last quarterly report. Examiners may wish to verify the accuracy of the report against internal bank records by sampling the data provided for one or more of the countries reported by the bank.

Some banks have significant country exposures but are not required to submit the FFIEC 009 report because the institution does not maintain a foreign office (i.e. branch, subsidiary, Edge Act or Agreement subsidiary, international banking facility, etc.). However, institutions are required to file monthly reports with the U.S. Treasury, under the Treasury International Capital System, if they have international claims to one country in excess of $25 million, or aggregate claims in excess of $50 million to all countries. These reports may be useful when determining the volume of foreign lending activity and concentrations of country exposures.

Examiners should describe concentrations of country exposure and assess related risk management practices on the Examination Conclusions and Comments page. The placement and length of comments should be commensurate with level of exposure(s) and any related examination recommendations. Also, examiners should include concentrations of country exposure on the appropriate lines of the Summary Analysis of Examination Report (SAER) page.

INTERNATIONAL REPORT PAGE

PARALLEL-OWNED BANKING ORGANIZATIONS

←

Purpose

The purpose of this schedule is to detail the information used in ascertaining whether a parallel-owned banking organization (PBO) exists and to document any concerns noted with the organization or commonly controlled foreign institutions. The fundamental risk presented by these organizations is that they may be acting in a de facto organizational structure that, because it is not formalized, is not subject to comprehensive consolidated supervision.

When to Include

Complete this schedule when the institution and at least one foreign bank appear to be controlled either directly or indirectly by the same person or group of people and the organizations are not subject to comprehensive consolidated supervision. Examiners should consider whether a person or group of people control an institution if the person or group controls 10 percent or more of any class of voting shares of the depository institution.[1] (Refer to the International Banking section of the RMS Manual and the Joint Agency Statement on Parallel-Owned Banking Institutions (FIL-35-2002) for additional information.) This schedule must be included in the ROE if control equals or exceeds 25 percent of any class of voting stock. In situations where control is rebuttable, inclusion of this schedule is discretionary; however, if the examiner concludes that a PBO does not exist, this page should be maintained in the examination workpapers to document the basis of that conclusion.

General

The FDIC does not typically request or review information on foreign banks or foreign bank holding companies during the examination process. However, examiners should consider all of the issues detailed in the Parallel-Owned Banking Organizations page when determining if a PBO exists. If a PBO relationship is suspected, the examiner should request and review information to ensure they understand the ownership/control structure of any foreign entities. The requested information about foreign banks or foreign bank holding companies may include, but is not limited to:

- Shareholder list of the foreign bank(s) and any of the companies that own/control it,
- Minutes of the most recent shareholder meeting(s),
- Annual reports,
- Composition of the board(s) of directors and executive management,
- Organizational charts,
- Website addresses,
- Policies that the bank in the U.S. has been instructed to follow,
- Products or services that the bank in the U.S. has been instructed to offer, and
- Cross-border transactions or services.

Bank And/Or Bank Holding Company Information

The first section of this schedule instructs examiners to list the bank(s) and bank holding company(s) within the PBO. Information for U.S. bank(s) should be listed first and then the foreign entities in the PBO. The examiner may add rows to the table to accommodate the requested information. Alternatively, the examiner may limit the list to key organizations; however, examiners must footnote the schedule with the basis of any omissions. For example,

[1] Note: PBOs do not include structures in which one depository institution is a subsidiary of the other, or the organization is controlled by a company subject to the Bank Holding Company Act.

examiners may include a footnote for organizations that regularly engage in transactions with the U.S. bank and list the name, city, and country of those entities. The examiner may also footnote the schedule for any bank or bank holding companies that are wholly owned subsidiaries.

Stock Ownership

Detail the stock ownership of the bank(s) and bank holding company(s) in the U.S. and foreign country that provide the primary connection for the PBO. Since the connection may contain more than one bank or bank holding company, the examiner may need to add rows to the table. To the right of the labels *U.S. Name* and *Foreign Name*, list the name of the entity for which information on beneficial ownership is being provided. To the right of the *Beneficial Owner* label, list the owner's name and corresponding ownership information (number of shares owned, percentage of ownership, and type of control). Footnote any pertinent information, for example, indirect control of ownership shares.

Factors Considered

Comment on each of the factors or attributes that are listed on the PBO page. These factors, in addition to common stock ownership, help the examiner determine if sufficient control is exercised to conclude that a PBO relationship exists. If items are not applicable, so state.

Summarize The Examination's Findings

Detail any affiliate or insider relationships (as defined by Section 23A of the Federal Reserve Act and Regulation O). Cross-reference any concerns or criticisms here and on the appropriate ROE page(s). Additionally, discuss the availability and quality of financial information for the other parallel-owned banks and note any apparent concerns with their financial condition. Refer to the International Banking section of the RMS Manual for additional information.

Confidential Information

The examiner should use discretion in detailing information on this page. If the information provided is of a sensitive nature, or obtained through confidential sources (e.g., foreign regulators), the information should not be included in the open section of the ROE.

INTERNATIONAL WORKPAPERS

←

The **optional** workpapers discussed below may assist examiners in forming conclusions about the institution's international activities. If used, the workpapers should be retained, but not included in the Report of Examination. Address any material issues identified on the ECC, RMA, or other appropriate ROE page(s).

- International Loans, Acceptances, and Letters of Credit - Distribution
- International Loans, Acceptances, and Letters of Credit - Questionnaire
- Eurocurrency Operations
- Foreign Exchange Activities
- Position Analysis - Major Currency Positions
- Position Analysis - Other Currencies
- Maturity Distribution (GAP) Analysis
- Revaluation and Income/Loss Analysis
- Income Loss Schedule
- Policy and Procedures
- Audit and Internal Controls - Audit
- Audit and Internal Controls - Internal Controls

INTERNATIONAL WORKPAPER

←

INTERNATIONAL LOANS, ACCEPTANCES, AND LETTERS OF CREDIT-DISTRIBUTION

This schedule is intended to help the examiner identify the level of lending, letters of credit, and acceptance financing between the institution and obligors and/or guarantors living outside the U.S., its territories, and possessions. The inclusion of obligations guaranteed by foreign-domiciled individuals or entities in this definition is based on the concept that ultimate liability for repayment rests with the guarantor. Therefore, the basic objective is to designate transactions where repayment channels cross international boundaries. This approach is consistent with the method used in the Country Exposure Report (FFIEC 009) to reallocate claims to the country of the individual or entity ultimately liable for repayment.

For this schedule, guaranteed instruments are those for which a third party legally obligates itself to repay the institution's claim on the direct obligor if the latter fails to do so. Documents such as *comfort letters* or *letters of awareness* or *intent* are not considered guarantees for this schedule. The term *guaranteed* covers collateralized instruments if the collateral meets the following requirements:

- The collateral is liquid and readily realizable, and
- Realizable outside of the country of residence of the borrower.

Using the foregoing guidelines, include in the schedule obligations of residents or entities domiciled in the U.S. bearing a guarantee from a resident or entity in a foreign country. Similarly, exclude from the schedule direct obligations of foreign residents or entities with guarantees from domestically domiciled residents or entities.

Loans:

Base the distribution of loans in this schedule on the nature of the direct obligor on the indebtedness.

Mortgage loans include liens or deeds of trust on real property, aircraft, or ships. Shipping loans included in this category will be secured by first or second preferred-ship mortgages. Exclude loans collateralized solely by bareboat, time, or consecutive charter agreements, which are more properly shown in the *Loans to commercial, industrial, and agricultural interests* category.

Other Loans (Describe) should include credits not properly categorized in the five preceding captions in the workpapers that are made to obligors with similar characteristics and represent a material percentage of total international loans (approximately 10 percent of international loans is a reasonable criteria).

Use the footnote "Loans to U.S. subsidiaries of foreign corporations not included above." to show the aggregate of loans to borrowers that are not shown in categories above in the Distribution schedule.

Other:

Syndication and consortium financing should include the institution's investment in syndicated credits. These loans differ from the customary participation loan as multiple institutions participate at the outset and are known to the borrower. As such, the loan must be structured to meet both the requirements of the participating institutions and the needs of the borrowing entity. The function of packaging the credit to satisfy the needs of all parties to the transaction is the responsibility of the syndicate leader.

Other (Describe) is for special types of international lending or financing activity deemed worthy of separate listing. For example, a separate listing of the aggregate volume of syndicated loans originated by the institution as syndicate leader or loans in certain geographic areas may be warranted.

INTERNATIONAL LOANS, ACCEPTANCES, AND LETTERS OF CREDIT-QUESTIONNAIRE

The questions in this workpaper are intended to assist examiners with identifying risk management weaknesses in a bank's international operations. Significant concerns should be addressed on the ECC, RMA, or other appropriate ROE page (e.g. the Analysis of the Country Exposure Management System page).

INTERNATIONAL WORKPAPER

EUROCURRENCY OPERATIONS

←

The questions in this workpaper are intended to assist the examiner with identifying risk management weaknesses in the bank's international operations. Significant concerns should be addressed in the ECC, RMA, or other appropriate ROE page (e.g. the Analysis of the Country Exposure Management System page).

INTERNATIONAL WORKPAPER

FOREIGN EXCHANGE ACTIVITIES

←

This workpaper should be used in conjunction with other workpapers that address risks associated with foreign exchange activities. Other workpapers might include Position Analysis - Major Currency Positions, Position Analysis - Other Currencies, Maturity Distribution (GAP) Analysis, Revaluation and Income/Loss Analysis, and the Income/Loss Schedule. Significant concerns should be addressed in the ECC, RMA, or other appropriate ROE page(s).

INTERNATIONAL WORKPAPER

←

POSITION ANALYSIS - MAJOR CURRENCY POSITIONS

This worksheet may be useful for determining the institution's position in various currencies, calculating unrealized profits or loss, and assessing foreign exchange policies and risk management practices. Significant concerns should be brought forward as needed to the ECC, RMA, or other appropriate ROE page.

Position Analysis

If an institution has assets or liabilities denominated in a foreign currency, or the institution has commitments to purchase or sell foreign exchange with a future delivery date, a net position for each foreign currency must be calculated. This calculation facilitates the analysis of exposure to fluctuations in exchange rates and aids in determining unrealized profits or loss. Further, the position analysis enables examiners to ascertain the institution's practice of periodically adjusting U. S. dollar equivalents of foreign currency accounts.

To analyze the position on each foreign currency, make a trial balance of each asset and liability account denominated in a foreign currency. Asset accounts (long position) include, but are not limited to, foreign currency on hand, due from bank accounts (nostro), demand and time loans, investments, accrued interest receivable, and commitments to purchase exchange on a spot or future basis. Liabilities (short position) include due to accounts (vostro) with other institutions (including nostro overdrafts), demand and time deposits, cash collateral, accrued interest payable, accounts payable, and commitments to sell exchange on a spot or future basis. These accounts or subsidiary records will normally contain both the amount of foreign currency and an equivalent amount expressed in U.S. dollars. The examiner's trial balance of foreign currency should prove to the institution's position sheet, and dollar equivalents should correspond to the general ledger. Certain transactions, such as the previous day's spot or future exchange transactions may not have been recorded on the institution's books. Obtain these *holdover items* from the foreign exchange trader, and include them in the calculation of the currency position.

Major Currency Position

This schedule is reserved primarily for the currency posing the greatest exposure to the institution's total capital and reserves. If the institution maintains substantial positions in several currencies, the schedule should be completed separately for each currency.

Derive the entries for foreign currency and dollar equivalents for each asset and liability category from the institution's records (using the examination as of date). **Do not revalue these accounts at current exchange rates.** Deduct the lesser of long/short position from the larger figure to arrive at the net position in foreign currency and dollar equivalent. The net-position dollar equivalent should be evaluated in comparison to capital and reserve levels.

INTERNATIONAL WORKPAPER

←

POSITION ANALYSIS - OTHER CURRENCIES

This worksheet may be useful for determining the institution's position in various currencies, calculating unrealized profits or loss, and assessing foreign exchange policies and risk management practices. Significant concerns should be addressed as needed to the ECC, RMA, or other appropriate ROE page.

Position Analysis

If an institution has assets or liabilities denominated in a foreign currency, or the institution has commitments to purchase or sell foreign exchange with a future delivery date, a net position for each foreign currency must be calculated. This calculation facilitates the analysis of exposure to fluctuations in exchange rates and aids in determining unrealized profits or loss. Further, the position analysis enables examiners to ascertain the institution's practice of periodically adjusting U. S. dollar equivalents of foreign currency accounts.

To analyze the position on each foreign currency, prepare a trial balance (using the examination as of date) of each asset and liability account denominated in a foreign currency. Asset accounts (long position) include, but are not limited to, foreign currency on hand, due from bank accounts (nostro), demand and time loans, investments, accrued interest receivable, and commitments to purchase exchange on a spot or future basis. Liabilities (short position) include due to accounts (vostro) with other institutions (including nostro overdrafts), demand and time deposits cash collateral, accrued interest payable, accounts payable, and commitments to sell exchange on a spot or future basis. These accounts or subsidiary records will normally contain both the amount of foreign currency and an equivalent amount expressed in U.S. dollars. The examiner's trial balance of foreign currency should prove to the institution's position sheet, and dollar equivalents should correspond to the general ledger. Certain transactions, such as the previous day's spot or future exchange transactions may not have been recorded on the institution's books. Obtain these *holdover items* from the foreign exchange trader, and include them in the calculation of the currency position.

Other Currencies

For each currency, aggregate the assets and purchase commitments (long position) and the liabilities and sale commitments (short position) and deduct the smaller figure to arrive at the net position for each currency. The net dollar equivalent should be evaluated in comparison to capital and reserve levels.

If the foreign currency total is net long and the U.S. dollar equivalent is net short, a split position exists. This so-called split position usually results from a heavy volume of activity flowing through the institution's nostro accounts, which will subsequently require adjustment to restore balance to the relationship between the foreign currency and U.S. dollar equivalent.

In calculating the aggregate position (U.S.) for all currencies, add all U.S. equivalent figures regardless of sign (that is, short positions are added to long positions as a positive number).

QUESTIONS 1a. and 1b.

These questions help determine whether the institution's net position appears unwarranted, excessive, or speculative. The following criteria may be used in evaluating the institution's position:

- Competency of the trading and executive officers,
- Purpose of the position,
- Volatility of the individual currencies,
- Volume of business in the country, and
- Size of the institution.

Negative responses to these questions may suggest the need for commentary in the ROE.

INTERNATIONAL WORKPAPER

←

MATURITY DISTRIBUTION (GAP) ANALYSIS

When using this worksheet, examiners should complete a maturity distribution for all major currencies outlined in the Position Analysis - Major Currency Positions worksheet. At the discretion of the examiner, material currency positions enumerated in the Position Analysis - Other Currencies worksheet may be detailed. Show each currency on a separate form. Question No. 2 at the bottom of this Maturity Distribution worksheet applies to all currencies listed.

In arranging the maturity distribution, it is recommended that at least the first two weeks of activity subsequent to the examination start date be detailed on a daily basis. (In active departments, a daily enumeration for the first month following the examination start date may be appropriate). Thereafter, semi-monthly or monthly intervals may be used depending on the institution's method of pricing forward commitments and the volume of activity. Longer-range maturities may be grouped by years.

The preparation of this schedule requires the inclusion of all currency ledger accounts. Show ledger accounts not bearing a maturity date in the first day's maturities. Show spot contracts as of the date the settlement is expected to occur. The total of assets and purchases (long), liabilities and sales (short), and the net amount of these two columns should correspond to the foreign currency amounts shown in the position sheet. Compare the net gap for each period to limits imposed by institution management. Further, review the cumulative gap position (the addition of gaps for each time interval) for conformance to policy and the incidence of excessive periods of positive or negative gaps. Such events may require comment if potential exposures appear excessive in relation to liquidity, earnings, or capital.

It is normally unnecessary to complete a profit and loss revaluation on this worksheet (in the right three columns) unless a position results in a material profit or loss. Refer to the example in the Revaluation and Income/Loss Analysis worksheet instructions. Price future contracts at the given premium or discount rate. Price spot contracts and ledger accounts at the spot rate. When one or more rates are used to price a position at a point in time, type *various* in the Spot Rate column. All swap contracts should be removed before valuing the position since the profit/loss is fixed at the time of the transaction and reflected in the return on the asset for which the swap was effected. In any event, the schedule can be used as a workpaper to calculate the future profit/loss adjustment in the Revaluation and Income/Loss Analysis worksheet.

INTERNATIONAL WORKPAPER

←

REVALUATION AND INCOME/LOSS ANALYSIS

The purpose of this worksheet is to determine the unrealized profit or loss for the institution in connection with positions undertaken in foreign currency. The computation is based on the assumption that the entire position will be liquidated (that is, all long foreign currency positions will be sold and all short positions will be covered).

The primary input for this schedule comes from the Position Analysis - Other Currencies schedule. List each currency under the Monetary Unit column. Insert in the Book Value column the institution's net position in the foreign currency amount and U.S. dollar equivalent less any swap contracts included in the position. (Refer to the following paragraph for an explanation of these transactions). Obtain the spot exchange rate from the Wall Street Journal or similar publications containing foreign exchange rates. Express the exchange rates in terms of the U.S. dollar cost per unit of foreign currency (for example, one Euro sells for $x.xxxx) with the values carried to four decimal places or four-digit level of significance (i.e., one Japanese yen equals $.004560). Multiply the net amount of foreign currency by the spot rate to arrive at the current market value of the position. Apply the following rules when determining the spot rate profit or loss on each position:

1. Long foreign currency position combined with long U.S. dollar equivalent: profit is excess of market value over book value; loss is the excess of book over market.
2. Long foreign currency position combined with short U.S. dollar equivalent: profit is the current market value plus the short U.S. dollar book value.
3. Short foreign currency position combined with short U.S. dollar equivalent: profit is the excess of book value over current market value; loss is the excess of market value over book value.
4. Short foreign currency position combined with long U.S. dollar equivalent: loss is the current market value plus the long U.S. dollar book value.

Rules No. 2 and No. 4 refer to split positions discussed in the Position Analysis - Other Currencies worksheet instructions for calculating the net open position. In rule No. 2, the position can only result in a profit. In rule No. 4, the position can only result in a loss.

A financial swap combines a spot purchase or sale of a foreign currency and a forward sale or purchase of the currency. Through this arrangement, the institution effectively locks in the potential gain or loss by entering into a transaction involving the temporary movement of funds into another currency and back again. For example, the institution has an investment opportunity to lend 1,000,000 pounds sterling for three months. The institution will purchase necessary exchange spot for $1.8660 per pound sterling ($1,866,000) to make the loan. Simultaneously, the institution will enter into a forward exchange contract to sell 1,000,000 pounds sterling at the anticipated maturity date for $1.8690 per pound sterling ($1,869,000). Customarily, the institution will sell forward the expected interest income as well. Accordingly, the institution has realized a $3,000 profit on the transaction at the inception of the loan. Customarily, the profit (or alternatively cost) is applied to the rate of interest on the loan to determine the true yield on the investment. The profit (or loss) is accrued to income and expenses monthly. In these circumstances, it is inappropriate to allocate the profit to the exchange function. A review of the institution's records will facilitate the identification of swap transactions and, as previously stated, these amounts should not be included in the revaluation schedule.

Adjust the spot-rate profit (loss) for discounts or premiums on forward exchange contracts, which are included in the net currency position. A discount is a rate of exchange lower than the spot rate expressed in terms of percentage per annum or points on which a dealer buys or sells foreign exchange for forward delivery. For example, if a dealer quotes $186 and $191 (bid and asked) for spot sterling, and the discounts for six-month forward exchange contracts are .0300 and .0275, the forward quotes would be modified to $183 and $1.8825. In most cases, the discount reflects an interest rate differential in the U.S. vis-à-vis the U.K., although in periods of downward market pressure on a currency a discount may indicate market anticipation of a lower price for the currency. A premium is a rate of exchange higher than the spot rate. Again, interest rate trends and upward market pressure will play a role in this situation. The premium situation works exactly opposite to the discount example. That is, premium quotes are added to the applicable spot rates quoted.

The calculation of future profit (loss) adjustments will require the listing of all contracts by maturity or value dates from near-term to longer-term. Certain contracts are made on an option basis because of uncertainty as to the date when foreign currency will be received or needed. In option contracts involving the purchase of exchange, list contracts with premiums at the earliest date and contracts with discounts as of the latest date. Conversely, show contracts involving the sale of exchange at premiums at the latest date and those at a discount at the earliest date. The format of the maturity distribution will depend on the system used by the institution in providing future rates. A summary of contracts on a monthly basis can be prepared provided the rates supplied by the institution are based on a monthly scale. If rates are on a semi-monthly basis, prepare the summary figures by the first and second halves of the month. To calculate the profit and loss on futures, the following rules apply:

1. A long position at a discount reflects a loss.
2. A short position at a discount reflects a profit.
3. A long position at a premium reflects a profit.
4. A short position at a premium reflects a loss.

In the absence of a significant profit or loss from the revaluation of the foreign currencies, it is not necessary to adjust book capital.

Question 3 - Significance Of Profit Or Loss

In weighing the significance of profit or loss from foreign exchange operations, it is important to consider the amount in relation to the capital account of the institution, the volume of exchange activity, and the institution's history in sustaining profits and/or losses. The criteria enumerated as guidance in responding to questions 1a and 1b of the Position Analysis - Other Currencies worksheet would also warrant consideration.

AUDIT AND INTERNAL CONTROLS-AUDIT

This section of the workpaper is primarily designed to assist examiners evaluate the institution's audit function. The questionnaire is designed for use at institutions with relatively sophisticated trading operations.

Examiners should consider an institution's risk profile, size, and complexity when assessing the overall adequacy of audit programs. Additionally, examiners should consider the cost and effectiveness of an audit or control feature before making recommendations to add or improve features, especially at institutions with less complex trading operations.

Nevertheless, all institutions should implement appropriate audit programs and internal controls to prevent, identify, and/or report irregularities. Basically, all of the audit and control standards and procedures used in domestic departments apply to the foreign exchange function. Examiners should bring forward address any significant concerns with the institution's international audit program on the ECC, RMA, or other appropriate ROE page.

PRE-EXAMINATION QUESTIONNAIRE

Examiners can use this optional questionnaire, in whole or part, during the pre-examination to facilitate their preliminary risk assessment. This workpaper includes a list of questions that examiners can ask management to help identify international activities, develop document request lists, and scope examination activities.

Briefly summarize significant discussion topics in the pre-examination planning memorandum. Summarize items such as material changes since the prior examination, economic conditions in the institution's area of operation, new products or services, and areas of perceived risk. Include any other information useful for allocating examination resources. Document the name and title of any officer with whom disccusion(s) were held, and note the discussion date(s).

The Bank of Anytown illustrates the application of ROE instructions when presenting examination findings. The Bank of Anytown does not cover all possible examination circumstances and should not be used as boilerplate language. The Bank of Anytown is not intended to inhibit examiner judgment in situations that require other presentation methods due to unique situations.

BANK OF ANYTOWN

ANYTOWN ANYCOUNTY ANYSTATE

Region:	Any Region	Certificate Number:	99999
Examiner-In-Charge:	Sandra E. Smart		
Examination Start Date:	August 01, 20x6		
Examination As Of Date:	June 30, 20x6		

All dollar amounts are reported in thousands, unless otherwise indicated.

Abbreviations within the report are included inside the back cover and can also be found at https://www.fdic.gov/regulations/safety/manual/section16-1.pdf

The following practices or financial conditions or operations require Board attention and corrective actions. Unsatisfactory conditions and practices identified during this examination, and recommendations from the previous examination that were not satisfactorily addressed, are described more fully throughout this Report of Examination (ROE).

MEMORANDUM OF UNDERSTANDING

The Memorandum of Understanding (MOU) provisions relating to the Allowance for Loan and Lease Losses (ALLL), Reports of Condition and Income (Call Report), and credit extensions to borrowers with charged-off loans remain outstanding and uncorrected. Failure to satisfactorily address the MOU provisions will likely impede progress in returning the bank to a satisfactory condition. The Board should take additional action to ensure full remediation of the unsatisfactory conditions addressed by the MOU.

ALLOWANCE FOR LOAN AND LEASE LOSSES

The ALLL is underfunded by $325M due to elevated loan losses and deficiencies in the methodology for establishing the ALLL. The Board's attention is needed to ensure a sound process for maintaining an appropriate ALLL is developed and implemented to protect the institution and accurately report earnings and capital.

INTERAGENCY GUIDELINES ESTABLISHING SAFETY AND SOUNDNESS STANDARDS - APPENDIX A OF PART 364 OF THE FDIC RULES AND REGULATIONS

The institution is not in conformance with established safety and soundness standards contained in Appendix A of Part 364, in the areas of internal controls and information systems, internal audit system, loan documentation, credit underwriting, and asset quality. Failure to appropriately address these deficiencies and improve risk management practices may result in further deterioration in the bank's financial condition. In particular, the Board's attention is necessary to ensure the following inadequate risk management practices are corrected to prevent future financial deterioration:

- Asset Quality, Credit Administration, and Loan Underwriting: Inaccurately graded credits contributed to the inadequately funded ALLL. In addition, poor credit administration practices (relating to weak participation loan underwriting, the lack of construction loan inspections, and lack of on-going cash-flow analysis for commercial real estate loans) inhibit management's ability to make sound credit decisions, hamper collection efforts, and could lead to further loan losses. Also, procedures to identify and monitor asset concentrations are inadequate. Poor controls over concentrated asset positions can lead to disproportionately higher losses in the event of problems.

- Internal Controls and Internal Audit: Internal controls have not been sufficient to provide for operations in compliance with rules and regulations. For example, the Board approved loans in apparent violation of the Federal Reserve Board's Regulation O, and senior management purchased investments above its Board-approved investment authority. Moreover, the internal audit function lacks independence, as the internal auditor reports directly to the bank's president. Weak internal controls prevent the Board and management from adequately identifying, monitoring, and controlling risks, potentially exposing earnings and capital.

STRATEGIC PLANNING

Despite the continued decline of the local fishing industry and the increase of local financial service providers, the bank's strategic plan does not adequately address regional economic conditions or local competition. Therefore, the plan may not provide the Board or management with adequate information to assess business opportunities or to adjust strategies and practices in light of changing conditions. The Board should direct correction of the deficiencies in the strategic plan and ensure supporting data is current and comprehensive.

SUMMARY

The Board should address the weaknesses and recommendations highlighted above. The FDIC and Any State will monitor the remediation of these matters between examinations.

For additional details, including management's responses to these matters, refer to related comments included in this ROE.

1 Examination dated xx/xx/xxxx

SUMMARY

This $80 million community bank is a locally owned, full-service commercial bank offering traditional deposit and credit products with particular focus on customers directly and indirectly reliant upon maritime-related businesses. The trade area is centered in a regional economic area heavily dependent upon a depressed fishing industry. Assets consist primarily of commercial and real estate loans to small, local businesses. Similarly, the bank's depositors are mostly business loan clients and local retail customers. In efforts to diversify from maritime-related businesses, management has purchased commercial loan participations, primarily from Other Bank, Othertown, Other State. In addition, the bank has a trust department that manages approximately $3.3 million in assets, most of which is in non-discretionary accounts.

The bank remains in less than satisfactory condition due to the lingering effects of poor risk selection and underwriting during an aggressive growth campaign in commercial real estate (CRE) and particularly acquisition development and construction (ADC) loans identified at the previous examination. Significant and increasing weaknesses in the local economy have further exacerbated credit risk problems. Numerous workout credits and further deterioration in CRE due to poor credit administration have resulted in an underfunded ALLL and have negatively impacted earnings. Capital levels are less than satisfactory in relation to the heightened risk profile. Management needs to make additional efforts to comply with the outstanding Memorandum of Understanding (MOU). Information Technology, Trust, and Bank Secrecy Act (BSA)/Anti-Money Laundering programs are adequately managed as findings identified during the examination are limited and correctable in the normal course of business. Compliance and Community Reinvestment Act programs are also satisfactory.

MEMORANDUM OF UNDERSTANDING

The bank entered into a MOU on January 21, 20x5, based on the October 21, 20x4, FDIC examination findings. Management and the Board have not fully addressed three MOU provisions, relating to the appropriateness of the Allowance for Loan and Lease Losses (ALLL), accuracy of the Reports of Condition and Income, and documentation for credit extensions to previously classified borrowers. Refer to the Compliance with Enforcement Actions page for additional details.

ASSET QUALITY - 4

Asset quality remains weak and is the primary impediment to improving the bank's overall financial condition. As reflected on the Examination Data and Ratios page, the volume of adversely classified items (ACI) has decreased by 12 percent since the prior examination, with the volume of adversely classified loans dropping by 24 percent. Despite these improvements, adverse classifications still represent 84 percent of Tier 1 Capital and the ALLL. Additionally, the volume of Loss classifications increased from $194M at the 20x4 examination to $1,015M at the current examination. (Asset Review Date: 6/30/20x6.)

Loans

Examination classifications are centered in the CRE portfolio. Loans adversely classified Loss (portions of three relationships totaling $890M) are CRE loans that were adversely classified Substandard at the prior examination. Most troubled credits reflect liberal lending practices exacerbated by the depressed regional economy, particularly the local fishing industry. In response to past regulatory criticisms, management has taken affirmative steps to strengthen credit administration by tightening overall underwriting standards, strengthening collection efforts, decreasing CRE advance rates from 90 percent to 75 percent, and avoiding financing for speculative real estate acquisition and development projects. These actions have longer-term positive implications, but present credit quality remains hindered by numerous workout situations and the deterioration of existing credits not previously subject to adverse classification. Moreover, underwriting weaknesses are evident in participations purchased, and credit administration weaknesses were noted in the areas of construction loan inspections and cash-flow analysis. Additional details regarding trends in the level of adversely classified loans are included on the Analysis of Loans Subject to Adverse Classification page.

Loan Review and Internal Grading System

The institution's internal loan review and grading program is not producing timely or accurate information about the condition of the loan portfolio. Management has been unable to comply with internal review frequency standards due to elevated personnel demands associated with problem asset workouts. Assigned credit grades for several larger credits were inaccurate, as exemplified by examiner identification of the partial Loss classification of the Irma Deat, Ltd. and Last Chance Motel credits. In both cases, the credits were internally rated Substandard. Additionally, several credits adversely classified Substandard by examiners were internally rated Watch. Failure to accurately grade credits on a timely basis has resulted in inadequate funding of the ALLL and may hinder management's ability to take appropriate and timely corrective action. To address this issue, management needs to provide additional resources to improve performance of this function.

President Allie C. Lincoln stated that management would add staff by year-end 20x6, and meet review frequency standards by mid-20x7.

Allowance for Loan and Lease Losses

The ALLL is inadequate by at least $325M, primarily due to inaccurate internal credit grading. Additionally, the ALLL allocation for non-watch list credits is inadequate based upon recent loan loss experience on non-watch list loans. Specifically, the institution's average loss rate on non-watch list loans since 20x4 is 0.75 percent; however, management only allocates 0.1 percent for residential mortgages and 0.5 percent for all other non-watch list loans.

Institutions are expected to maintain an ALLL methodology in accordance with Generally Accepted Accounting Principles (GAAP), which reflects consideration of the risk profile of the loan portfolio. Moreover, due to the deficiencies in the loan grading system, earnings and capital could be exposed should future loan and lease loss provisions prove inadequate. Refer to the Risk Management Assessment page for additional details. Additionally, management may refer to the Interagency Policy Statement on the Allowance for Loans and Lease Losses for additional information regarding internal loan grading systems and ALLL methodologies.

President Lincoln indicated management intends to file amended June 30, 20x6, Reports of Condition and Income to address reporting issues (see comments below) and will include a $325M loan loss provision in the amended filings. President Lincoln also initiated a review of the loan grading system during the examination and stated that all existing loss-rate percentages would be reviewed and updated to ensure full conformance with GAAP.

Credit Underwriting and Administration

Credit underwriting and administration, although improving, requires further attention. The Robert Rain, LLC., credit is representative of deficiencies in the monitoring of construction loans and performing cash flow (CF) analysis; refer to the Items Listed as Special Mention for further details. As detailed on the Assets with Credit Data or Collateral Documentation Exceptions pages, the number of loans possessing potential weaknesses and documentation exceptions remains high. In particular, the following underwriting and credit administration weaknesses should be promptly addressed:

- *Credit Analysis on Participations Purchased* - The bank does not perform pre-purchase credit analysis on participations purchased. Pre-purchase analysis is necessary for management to assess the repayment capacity of the borrower(s) and assign an appropriate loan grade. An institution purchasing all or part of a loan should perform the same degree of independent credit analysis as if it were the originator.

- *Financial Statements (FSs)* - Loan officers have not obtained updated FSs from all repayment sources to perform global CF analysis and verify assets of guarantors. Obtaining current FSs allows a loan officer to analyze and document a guarantor's source of strength to a loan or borrowing relationship.

- *Inspections and Lien Waivers* - The bank does not perform inspections or obtain mechanic's lien waivers prior to making construction loan advances. Timely inspections and lien waivers protect the institution's collateral and lien positions and allow management to make informed decisions regarding the ALLL, particularly if required to individually test these loans for impairment under Accounting Standards Codification (ASC) 310.

- *Rent Rolls* - Loan officers do not obtain rent rolls and vacancy figures on an ongoing basis for loans secured by CRE. Rent rolls and vacancy information allow management to properly monitor these types of loans if conditions are changing, understand any changes in the condition, and make informed and timely credit decisions.

- *Lien Perfection* - The bank periodically allows perfected interests in collateral to lapse by not filing timely Uniform Commercial Code (UCC-1) continuation statements. Use of a system to assist in keeping filings current protects collateral positions determined to be appropriate in original loan underwriting.

President Lincoln stated loan officers would immediately begin performing pre-purchase analyses on participations purchased. She also stated that the volume of documentation deficiencies is primarily due to understaffing and indicated management is in the process of hiring an additional loan clerk to assist in this area.

Other Real Estate (ORE)

Management maintains appropriate policies and procedures for acquiring, holding, and disposing of ORE. However, due to deterioration in existing credits, the dollar volume of adversely classified ORE increased $535M, or 78 percent, since the previous examination. The ORE portfolio primarily consists of CRE previously written down to fair value. The $100M ORE Loss classification reflected in this Report is based on the recently obtained (August 3, 20x6), appraised value of the Rolly property.

Concentrations

Several asset concentrations, including a fishing industry concentration, are listed on the Concentrations page. Management does not currently have procedures in place to adequately identify and monitor such concentrations. Concentrations that are not monitored and managed through sound risk management practices can expose a bank's capital and earnings to disproportionately higher losses in the event of a borrower's financial problems or an industry downturn, such as is currently being experienced by the local fishing industry. Given the potential for increased risk posed by asset concentrations, appropriate policies and procedures should be established to ensure these risks are properly identified, monitored, and managed.

President Lincoln indicated that management will develop procedures for identifying, monitoring, and managing the risk of concentrations and present them to the Board for its review and approval by year-end 20x6.

Disposition of Assets Classified Loss

President Lincoln stated that assets classified Loss totaling $1,015M will be charged off by September 30, 20x6.

EARNINGS - 4

Earnings performance remains poor. As detailed on the Analysis of Earnings page of this Report, the bank experienced significant operating losses in 20x4 and 20x5. Although the bank shows net operating income of $103M for the first six months of 20x6, profits are substantially overstated due to inadequate provisions for loan losses. As reflected in the footnote on the Examination Data and Ratios page, the bank will show a negative 0.58 percent Return on Average Assets, based on a net operating loss of $222M, after amending the June 30, 20x6 Call Report for the additional $325M ALLL provision.

The poor earnings performance is a direct result of persistent poor asset quality and increasing ORE levels. Although improving, the high level of nonperforming assets has required high ALLL provisions and increased overhead expenses. In spite of the volume of nonaccruals and other nonearning assets remaining high, the net interest margin for the first six months of 20x6 improved to 4.74 percent from 4.37 percent at year-end 20x5. This improvement is primarily the result of management's ability to maintain average interest rates in the loan portfolio above 8 percent, while reducing the average cost of funds to below 3 percent.

Total Noninterest Expense as a percentage of Average Assets has steadily increased over the last three years and reached 3.82 percent as of June 30, 20x6. Overhead expenses are nearly 100 basis points above comparable institutions, primarily due to expenses associated with ORE. Given the composition and level of problem assets, management does not expect ORE-related expenses to diminish in the near future. Overhead expenses will also increase due to the planned hiring of additional credit administration personnel. However, in an effort to reduce overhead, management plans to close the institution's only branch office on September 30, 20x6.

The 20x6 budget forecasts net income of $226M. With the exception of inaccurate assumptions related to the level of provision expense, the budgeting process is adequate and the assumptions used are reasonable. Future profitability is primarily dependent on improved asset quality and controlled overhead expenses.

Chairman of the Board White stated that the directorate and senior management would revise the budget to depict provision expense levels more accurately. He directed President Lincoln to have the revised budget ready for Board review and approval at the November 20x6 Board meeting.

MANAGEMENT - 3

The overall performance of senior management and the Board of Directors remains less than satisfactory. The bank's weak financial condition is primarily the result of liberal lending policies and poor credit administration practices. As documented in prior examination reports, the present management team aggressively pursued loan growth without regard for prudent lending standards and, ultimately, asset quality. Although initial signs of more prudent loan underwriting and improved credit administration are evident, asset quality remains weak and significant aspects of the credit function remain deficient.

Board Supervision

A director's duty to oversee the conduct of a bank's business necessitates that each director exercise independent judgment in evaluating management's actions and competence. Directors need to critically evaluate the issues before them, rather than routinely deferring to management. However, Board minutes lack evidence to demonstrate that directors are exercising their independent judgment. Instead, Board minutes indicate that Chairman White and President Lincoln dominate policy discussions and decisions. Moreover, Director Michael D. Brown attended only 5 of the 12 Board meetings held since the previous examination. Regular attendance at Board and committee meetings is a prerequisite to fulfilling the duty to oversee the conduct of the bank's business, and directors who are unable to meet this obligation should consider resignation. Weaknesses in the strategic planning process and the inadequacy of certain written policies are additional indicators that the Board needs to improve its oversight of the bank's operations and management's actions.

Chairman of the Board White indicated that directors are more engaged in discussions regarding the bank's business than is reflected in the minutes and that future minutes will be more descriptive regarding the input

from various directors. Director Brown stated that he frequently travels out of town on business; however, he committed to attending Board meetings on a more regular basis.

Apparent Violations of Laws and Regulations

Examiners cited apparent violations of the Treasury Department's BSA regulations for late currency transaction report (CTR) filings, the Federal Reserve Board's Regulation O for two insider loans that did not receive full Board approval, and exceeding the state's legal lending limit statute. An apparent violation of the BSA was also cited at the last FDIC examination, and although the number of late filings of currency transaction reports (CTRs) has declined, repeat infractions reflect unfavorably on the Board and management. The Board of Directors should implement improved controls and procedures to ensure timely CTR filings, appropriate Regulation O loan approvals, and identification of concentrations of loans to one borrower. Additionally, the institution is in nonconformance with multiple parts of the Interagency Guidelines Establishing Standards for Safety and Soundness, Appendix A to Part 364 of the FDIC Rules and Regulations.

Chairman of the Board White committed to improve BSA and Regulation O controls and promised future conformance with all Safety and Soundness standards detailed in Appendix A to Part 364.

Strategic Planning

The 20x4 five-year strategic plan has not been updated, and is therefore inconsistent with the present condition of the bank, the regional economy, and the local competitive environment. Specifically, the plan's assumptions do not consider the continuing decline of the local fishing industry, the potential impact of a new commercial bank in town, or the recent merger of two local savings and loan associations. Based on these factors, many of the goals and strategies in the plan may be unrealistic. Setting a bank's strategic focus, in conjunction with executive management, is one of the key responsibilities of a bank's Board. An effective strategic planning process provides for regular reviews to determine whether assumptions and strategies remain valid or should be revised. The Board and management should update the strategic plan to reflect current conditions and should adopt a process to periodically review the plan going forward.

Chairman of the Board White stated that the strategic plan would be reviewed and updated before the end of 20x6 and annually thereafter.

Audit and Internal Control

The audit and internal control functions lack independence. While the scope and frequency of the internal audit program are adequate, Internal Auditor Mary Jackson reports directly to President Lincoln. Since President Lincoln is ultimately responsible for most of the day-to-day operations reviewed by the internal auditor, this situation compromises the independence of the internal audit program. The internal auditor should report directly to the Board of Directors or the Audit Committee of the Board to ensure the independence and effectiveness of the audit function. President Lincoln is also a member of the Audit Committee, which oversees the external audit function. Her presence on the committee further limits audit independence. Lack of independence in the internal control structure exposes the institution to operational and financial risks and could impact management and the Board's ability to appropriately control risks. Several outside directors are qualified to serve on the Audit Committee, and it is recommended that the Board strengthen the audit function by limiting committee membership to outside directors.

Several internal control deficiencies are detailed under Item 5 of the Risk Management Assessment section of this Report. While these deficiencies are relatively minor, management incorrectly reported that two of these items were corrected in the response to the last internal audit. Failure to accurately monitor and track corrective actions of audit findings decreases the Board's ability to fulfill their oversight responsibilities.

Chairman of the Board White stated that the Board would consider these recommendations at its next meeting. He also stated the internal control deficiencies would be addressed by the end of 20x6.

<u>Reports of Condition and Income (Call Report)</u>

Material errors were noted in the last three quarterly Reports of Condition and Income. In numerous cases, examiners were unable to reconcile bank records with the quarterly filings. The most significant errors relate to inaccurately reported interest and fee income on loans, the inappropriate inclusion of gains on the sale of repossessed assets in interest and fee income, and the shortfall in the ALLL. These errors misrepresent financial performance and negatively affect management's ability to make informed decisions. Management should investigate these errors and amend prior Reports of Condition and Income as appropriate.

Executive Vice President/Cashier John M. Gutierrez stated he will file amended June 30, 20x6, Reports of Condition and Income, prior to September 30, 20x6, to address these issues.

<u>Bank Secrecy Act (BSA)</u>

The BSA program is generally satisfactory; however, examiners cited apparent violations of Title 31 C.F.R. Chapter X Section 1010.306(a)(1) of the Treasury Department's BSA regulations. The apparent violations relate to CTRs that were not filed within prescribed periods; refer to the Violations of Laws and Regulations page for additional details. Management should establish procedures to ensure CTRs are filed within prescribed timeframes.

President Lincoln indicated procedures would be implemented within 90 days to ensure CTRs are submitted in a timely manner.

<u>Office of Foreign Assets Control (OFAC)</u>

Effective policies, procedures, and controls are in place to ensure satisfactory compliance with OFAC regulations.

CAPITAL - 3

Capital is less than satisfactory in relation to the bank's risk profile. The ACI Coverage Ratio remains high at approximately 84 percent. In addition, after adjustments for provisions to fund the ALLL appropriately, the bank has had net operating losses over the past two and a half years. The existing concentration in fishing industry loans, considering the industry's current depressed condition and anticipated continuing decline, adds to capital concerns. The Leverage Capital ratio of 7.44 percent, detailed on the Examination Data and Ratios page, reflects current examination adjustments for assets classified Loss and the provision expense needed to fund the ALLL appropriately.

President Lincoln stated that dividends have not been paid for five years. She further stated that no dividends would be paid until the Tier 1 Leverage Capital ratio exceeds eight percent and earnings become positive and stable.

LIQUIDITY - 2

The bank's liquidity position is satisfactory. Asset growth has been minimal since the prior examination and the loan portfolio is shrinking. Management has increased the volume of investments in mortgage-backed securities, with the portfolio maintaining slight appreciation. Non-core funding has increased slightly but management is using these funds appropriately. Management could further strengthen funds management practices by developing a written funds management policy and a contingency funding plan (CFP) commensurate with the bank's risk profile. Clearly articulated policies reflective of the bank's characteristics help ensure that the institution is operating within Board-approved risk tolerances, which can mitigate the negative impact of overreliance on volatile funding sources in an adverse economic environment. Off-balance sheet commitments are minimal.

President Lincoln stated a written funds management policy and a CFP would be developed.

SENSITIVITY TO MARKET RISK - 2

Sensitivity to market risk is moderate and risk management practices are satisfactory. Funding sources reasonably match the bank's asset repricing structure, and the loan portfolio includes a high volume of adjustable-rate commercial loans. Over the past two years, depositors have moved funds out of maturing time deposits and into money market demand accounts. Management actively manages rates on these deposits, as the local market is very competitive. The bank does not engage in off-balance sheet derivative activity.

Management regularly monitors the bank's rate sensitivity position using income simulations and an economic value of equity model, and presents detailed quarterly reports to the Board. However, the Board and management should establish interest rate risk (IRR) policy limits. If not properly controlled, IRR can impact an institution's earnings, capital, and its underlying economic value. Setting policy limits helps control this risk by establishing a baseline for the institution's tolerance for interest risk. Monitoring compliance with these limits ensures that the level of IRR is maintained at prudent levels and in accordance with the Board's expectations. Refer to the Risk Management Assessment page for additional details.

For additional information on prudent IRR management principles, refer to the Joint Agency Policy Statement on Interest Rate Risk.

Chairman of the Board White stated that management and the Board would establish IRR policy limits by year-end 20x6.

TRUST - 2

The Board and management's performance and risk management practices are satisfactory relative to the size of the department and the complexity of trust activities. Only moderate weaknesses are present and within management's ability to correct.

Account administration is generally in compliance with originating documents. However, potential conflicts of interest exist from the trust department using own-bank deposits, as well as from holding stock of the parent holding company and an affiliate in one trust account. Trust Officer Hancock surveys local deposit rates to ensure competitive rates are being paid on deposits, but does not maintain documentation of her surveys. Appropriate policies, procedures, and practices should be developed and implemented to effectively control conflicts of interest and manage own-bank deposits and stock holdings. Without proper policies, procedures, and practices, the bank is exposed to potential litigation risk, which could negatively affect earnings and capital.

Trust Officer Hancock stated she would maintain documentation of comparable rates in the future.

Asset management practices are generally satisfactory. All account transactions, including discretionary disbursements, are included in monthly Board reports, and the Board reviews all accounts annually. However, management should annually document its needs assessment for each applicable account and/or beneficiary, and indicate whether the account's investment mix is meeting those needs. Failure to adequately document needs assessments, evaluate the mix, and document the review exposes the bank to litigation risks.

Trust Officer Hancock committed to documenting annual needs assessments for each trust account.

INFORMATION TECHNOLOGY - 2

Overall, IT operations, risk management practices, and cybersecurity are satisfactory. The IT audit program is generally adequate. Management and Board oversight of IT programs are generally satisfactory demonstrated by adequate policies and risk management practices. The bank is in general conformance with Appendix B to Part 364 - Interagency Guidelines Establishing Information Security Standards. Management adequately assesses its cybersecurity risk exposure including its inherent risks, and cyber maturity levels.

While the overall IT department is satisfactory, minor exceptions were noted related to:

- Audit reporting lines and scoping,
- Patch Management,
- Financial and audit review of critical vendors,
- Control assessments on third party providers,
- Detail in project documentation, and
- Business Continuity Plan parameters.

Findings of the IT examination were discussed in detail on August 27, 20x6, with Information Technology Manager William Robbins and President Lincoln.

Management indicated agreement with all findings. Refer to the Information Technology Page for details on the exceptions and management commitment and timeframes for corrective action.

MEETING WITH THE DIRECTORATE

A Board of Directors meeting was held on September 18, 20x6. All directors were present with the exception of Director Henry P. Black. William E. Smith, partner in the bank's auditing firm, was also present. Deputy Commissioner of Banking Cynthia B. Jones represented the State Department of Banking. Field Supervisor

James D. Gilmore, Examiner-in-Charge Sandra E. Smart, and Financial Institution Examiner Monica D. Powers represented the FDIC. All matters listed above were discussed with the Board. Most of the discussion concerned the increase in severity of adverse classifications, the need to improve the ALLL methodology, and management's efforts to improve loan administration procedures. The Directorate and management's commitments for corrective action are noted within this report. Chairman of the Board White asserted that because of the improvement in the bank's overall condition, the MOU should be removed.

DIRECTORATE RESPONSIBILITY

Each member of the Board of Directors is responsible for reviewing this Report of Examination. Each Director must sign the Signatures of Directors page, which affirms that he or she reviewed the Report in its entirety.

Examiner (Signature)	Reviewing Official (Signature) and Title
Sandra E. Smart	Dale K. Watson, Assistant Regional Director

A Memorandum of Understanding (MOU) between the FDIC and the bank became effective on January 21, 20x5. Provisions of the MOU that require further efforts or are of a continuing nature are detailed below.

2(b). The bank shall maintain an Allowance for Loan and Lease Losses at an appropriate level.

Based on this examination's findings, the ALLL is underfunded by at least $325M.

3(a). The bank shall maintain a Leverage Capital ratio equal to or greater than 7 percent.

As of June 30, 20x5, the Leverage Capital ratio, adjusted for the additional $325M provision for loan and lease loss expense, approximates 7.44 percent.

3(d). The bank shall maintain a Total Capital ratio equal to or greater than 10 percent.

As of June 30, 20x6, the Total Capital ratio, adjusted for the additional $325M provision for loan and lease loss expense is 11.75 percent.

4. The bank shall file accurate Call Reports.

Examiners noted significant errors in the December 31, 20x5, March 31, and June 30, 20x6, Call Reports which require amendments.

5. The bank shall not extend or renew, directly or indirectly, credit to, or for the benefit of, any borrower who has a loan or other extension of credit with the bank that has been charged off or classified, in whole or in part, Loss, Doubtful, or Substandard, unless rationale for the extension is noted in the official Board minutes and the appropriate credit file.

On January 30, 20x6, the bank extended a $50M loan to U. R. Worth. The borrower was adversely classified Loss at the previous examination. The Board did not specifically document the reason(s) for the extension in the official Board minutes or in the appropriate credit file.

6. The bank shall not declare or pay any dividends without the written consent of the FDIC.

No dividends have been declared or paid since the previous examination.

1. **Are risk management processes adequate in relation to economic conditions and asset concentration levels?**

No. As discussed on the Examination Conclusions and Comments (ECC) pages, the Board's strategic plan is outdated and does not reflect the institution's current condition or operating environment. In addition, management does not adequately identify, evaluate and monitor asset concentrations as exemplified by the deficiencies noted in managing the correspondent bank, fishing industry, and individual borrower concentrations identified in this report. Establishment of appropriate concentration risk policies and procedures would enhance the management's ability to identify and control risks and avoid potential violations of law. Refer to the Concentrations pages for additional details.

President Lincoln stated that management will develop procedures to identify, evaluate, and monitor concentrations.

2. **Are risk management policies and practices for the credit function adequate?**

No. Internal credit review and grading procedures are weak, and credit administration practices are deficient. Recommendations for improvement are included under Asset Quality on the ECC page.

Due to the deficiencies noted in the institution's internal credit grading system and the use of inaccurate loan loss rates, the ALLL is insufficient. In addition, management utilized an inappropriate loan loss experience to establish a reserve rate for its non-watch list loans, which contributed to the insufficient ALLL level. Management should ensure controls are in place to consistently determine the ALLL is maintained in accordance with GAAP and should maintain supporting documentation for the techniques used to develop the historical loss rate for each group of loans and the resulting estimated credit losses.

For additional information, refer to the Interagency Policy Statement on the Allowance for Loan and Lease Losses.

President Lincoln committed to filing Call Report amendments prior to the September 30, 20x6 submission and to reviewing the loan grading system.

Additionally, although the bank's loan policy is generally adequate, it does not address the following matters:

- *Participation Loans* - The bank regularly purchases loans or portions of loans from other institutions. These specialized lending activities are not covered in the loan policy.

- *Construction Loans* - The bank finances the construction of 1- to 4-family residences and mixed use commercial property. While practices are generally adequate, a large construction loan listed for Special Mention reflects several weaknesses in construction lending. The policy lacks specific guidelines pertaining to construction lending.

Development of comprehensive loan policy guidance provides management and staff with clear expectations for administering the lending function and facilitates sound risk management practices.

President Lincoln stated that management would develop guidelines for purchased loans and construction lending and revise the loan policy by December 31, 20x6.

3. Are risk management policies and practices for asset/liability management and the investment function adequate?

Generally, yes. Management's liquidity management practices are generally adequate; but could be improved by implementing a formal funds management policy or a CFP. Overall practices for Sensitivity to Market Risk are generally adequate; however, policy parameters should be established that reflect the Board's tolerance for IRR. The Board should establish and guide the bank's tolerance for IRR, including approving relevant risk limits and other key policies, identifying lines of authority and responsibility for managing risk, and ensuring adequate resources are devoted to IRR management. Implementing appropriate limits strengthens management's ability to manage IRR and monitor actual risk taking activity.

President Lincoln stated that IRR policy limits would be established by year-end 20x6.

Investment policy guidelines are adequate; however, management's adherence to its written investment policy is inconsistent. On at least three occasions since the previous examination, President Lincoln exceeded her purchasing authority when she purchased securities over $250M without prior Board approval. Failure to adhere to Board approved purchasing authority could increase the risk profile of the institution above Board approved risk tolerances.

The Board should ensure management purchases investments in conformance with existing policy standards or determine if it would be prudent to revise the standards to meet purchasing needs.

President Lincoln stated that she was presented with the opportunity to purchase these securities at a good price and could not wait for Board approval. She further stated she would comply with the policy in the future or discuss modifying the policy with the Board at the next Board meeting.

4. Are risk management processes adequate in relation to, and consistent with, the institution's business plan, competitive conditions, and proposed new activities or products?

No. As discussed on the ECC pages, risk management practices regarding the credit portfolio are insufficient for the institution's business model and risk profile.

5. Are internal controls, audit procedures, and compliance with laws and regulations adequate (includes compliance with the Bank Secrecy Act [BSA] and related regulations)?

No. As indicated on the ECC page, apparent violations of BSA regulations, Regulation O, and the state legal lending limit were cited during this examination. Additionally, the bank is not in conformance with the Interagency Guidelines Establishing Safety and Soundness Standards. Full details of these citations can be found on the Violations of Laws and Regulations pages. In addition, the audit and internal control functions lack independence.

<u>Internal Controls</u>

Examiners noted the weaknesses below in the bank's system of internal controls. Maintaining strong internal controls helps ensure the integrity of operations and discourages potential insider abuse.

- *Vacation Policy* – The bank's vacation policy requires employees to be absent from their normal duties for an uninterrupted period of two weeks each calendar year. Executive Vice President Leslie S. Cook did not remain absent during her two-week vacation in 20x5 as she returned daily to reconcile the Federal funds sold account. Management should enforce the policy, particularly for employees who are responsible for sensitive transactions.

- *Reconcilement of Correspondent Bank Accounts* – Management has not reconciled the correspondent bank accounts for the past three months. While personnel reconciled these accounts during the examination, they should be reconciled at least monthly.

President Lincoln stated she would take action to address these deficiencies before year-end 20x6.

6. Is Board supervision adequate, and are controls over insider transactions, conflicts of interest, and parent/affiliate relationships acceptable?

No. Board supervision is less than satisfactory. Numerous underwriting weaknesses and credit administration deficiencies remain uncorrected from prior examinations, and the Board has not established an effective independent internal audit function. Refer to comments under Management on the ECC page for more details. Additionally, examiners cited two loans as apparent violations of the Federal Reserve Board's Regulation O because management did not obtain the prior approval of the Board on loans to the related interests of President Lincoln and Director Larry G. Green. Refer to the Violations of Laws and Regulations page of this Report for details.

APPARENT VIOLATIONS OF LAWS AND REGULATIONS

BANK SECRECY ACT

Title 31 C.F.R. Chapter X Section 1010.306(a)(1) of the Treasury Department's Bank Secrecy Act regulations requires a covered financial institution to file a CTR (FinCEN Form 104) within the prescribed period.

Examiners identified numerous instances where CTRs were not filed within the required 15-day period. This infraction was also cited at the previous FDIC examination. Between October 20x5 and July 20x6, 289 of 944 CTRs (31 percent) were filed late. In many cases, CTRs were signed by the approving official more than 15 days after the transaction date. The time between the transaction date and receipt by the Treasury Department on these late filings was generally around 20 to 25 days, with a few exceeding 70 days.

BSA Officer Donna Ludlow stated that some of the late CTRs were filed after an internal audit noted that the forms had not been submitted; however, she could offer no explanation as to why the remaining CTRs were filed late. President Lincoln stated that new procedures would be implemented within 90 days to ensure all CTRs are submitted in a timely manner in the future.

REGULATION O

The Federal Reserve Board's Regulation O, which implements Section 22(h) of the Federal Reserve Act and is made applicable to insured nonmember institutions by Section 18(j)(2) of the Federal Deposit Insurance Act, covers transactions with bank insiders. Section 215.4(b)(1) of Regulation O requires extensions of credit by an institution to a director or related interest exceeding the greater of $25M or five percent of unimpaired capital and surplus to have prior approval by a majority of the institution's board of directors.

The bank is in apparent violation of this section for extending the following loans with the prior approval of the Executive Loan Committee, which is composed of only three Board members, rather than prior approval by a majority of the Board.

Borrower	Date of Note	Original Amount
Lincoln, Allie C.	12/11/20x5	$500M
Any Body, Inc.	12/28/20x5	$250M
(A related interest of President Lincoln and Director Green.)		

President Lincoln stated that these exceptions were the result of oversight. She further indicated that bank policy requires that all insider loans receive the prior approval of the full Board. Examiners noted that all other insider loans received prior Board approval. President Lincoln and the Board of Directors promised future compliance.

LEGAL LENDING LIMIT

Section 1127 of the State Banking Code provides that the total direct or indirect loans and extension of credit or lease by a bank to one obligor or guarantor at no time shall exceed 15 percent of "statutory capital" (equivalent to total capital) of the bank, except upon approval by two-third vote of its board of directors, the limit may be increased up to 25 percent of the statutory capital of the bank. On January 2, 20x6, the bank extended an additional $650M to J&M Realty Trust, guaranteed by John and Mary Smith, which increased total outstanding debt to the Smiths and their companies to $1,950M, or 31 percent of statutory capital. The extension of additional credit was made without approval by the board of directors, and represents an apparent violation of Section 1127.

President Lincoln stated that the extension of credit over the lending limit was the result of oversight.

NONCONFORMANCE WITH GUIDELINES INCORPORATED INTO REGULATIONS

INTERAGENCY GUIDELINES ESTABLISHING STANDARDS FOR SAFETY AND SOUNDNESS APPENDIX A TO PART 364 OF THE FDIC's RULES AND REGULATIONS (APPENDIX A)

Appendix A sets out the safety and soundness standards that the FDIC uses to identify and address problems at insured depository institutions before capital becomes impaired. The institution is in nonconformance with the following sections of the Operational and Managerial Standards of Appendix A to Part 364.

A. Internal controls and information systems. An institution should have internal controls and information systems that, in part, are appropriate to the size of the institution and the nature, scope and risk of its activities and that provide for timely and accurate financial, operational, and regulatory reports and compliance with applicable laws and regulations.

> Material errors were noted in the institution's quarterly Call Report filings over the last three quarters, which necessitates restatement of the institution's most recent Call Report. Additionally, three apparent violations of laws and regulations were noted, including a repeat violation regarding untimely CTR filings.

B. Internal audit system. An institution should have an internal audit system that is appropriate to the size of the institution and the nature and scope of its activities and that provides for, in part: independence and objectivity; adequate testing and review of information systems; and adequate documentation of tests and findings and any corrective actions.

> The audit and internal control functions lack independence, which jeopardizes the effectiveness of the internal audit program. Further, the lack of independence coupled with inadequate monitoring of audit findings status reports resulted in previously identified deficiencies being inaccurately reported as corrected.

C. Loan documentation. An institution should establish and maintain loan documentation practices that, in part: enable the institution to make an informed lending decision and to assess risk, as necessary, on an ongoing basis; identify the purpose of a loan and the source of repayment, and assess the ability of the borrower to repay the indebtedness in a timely manner; ensure that any claim against a borrower is legally enforceable; and demonstrate appropriate administration and monitoring of loans.

> Credit administration, although improving, remains deficient. Noted weaknesses include lapses in UCC-1 filings, absence of inspections or mechanic's lien waivers prior to construction advances, and absence of rent roll information. As noted on the Assets with Credit Data or Collateral Documentation Exceptions page, one-third of the dollar volume of loans reviewed had documentation exceptions that impaired management's ability to make an informed lending decision and to assess risk, as necessary on an ongoing basis.

D. Credit underwriting. An institution should establish and maintain prudent credit underwriting practices that: are commensurate with the types of loans the institution will make and, in part, provide for consideration, prior to credit commitment, of the borrower's overall financial condition and resources, the nature and value of any underlying collateral, and the borrower's character and willingness to repay as agreed; establish a system of independent, ongoing credit review and appropriate communication to management and to the board of directors; and take adequate account of concentration of credit risk.

Management does not conduct pre-purchase credit analysis for participations purchased, which precludes its ability to evaluate the underlying creditworthiness of these credits and the borrower's ability to repay. Additionally, inadequate staffing of the credit review function contributed to inaccurate loan grading for several large credits. Moreover, management does not have adequate procedures in place to identify and monitor concentrations.

G. Asset quality. An insured depository institution should establish and maintain a system that is commensurate with the institution's size and the nature and scope of its operations to identify problem assets and prevent deterioration in those assets. The institution should, in part, estimate the inherent losses in those assets and establish reserves that are sufficient to absorb estimated losses.

As detailed on the ECC page, inaccurate internal loan grading resulted in an underfunded ALLL.

President Lincoln stated that all noted deficiencies will be added to the Audit Findings Tracking Report and that applicable executive officers would begin action to address deficiencies immediately.

Uniform Rating System for Information Technology

	Current Exam	Prior Exam	Prior Exam
Examination Start Date	08/01/20x6	11/13/20x5 / S	10/21/20x4
Composite Rating	**2**	**1**	**2**
Component Ratings:			
Audit	**2**		
Management	**2**		
Development & Acquisition	**2**		
Support & Delivery	**2**		

Overall, IT, operations, risk management, and security are satisfactory. Management's attention is directed to the items below.

Audit - 2

The IT audit program is generally adequate, and internal auditors promptly identify and report deficiencies and risks. Identified issues are formally tracked and resolved in a timely fashion, and the IT audit plan is based on a thorough risk assessment of IT assets and internal and external threats.

The majority of critical IT areas were reviewed in recent IT audits; however, examiners identified a concern with the current audit scope. Specifically, patch management and cybersecurity are not included in the bank's IT audits. Management should ensure all critical IT areas are included in the scope of IT audits, with the frequency being based on the audit risk assessment. Including all critical IT areas in the internal audits may have reduced the number of items noted in the recent external vulnerability assessment and will help ensure operations continue functioning as needed going forward.

Examiners also noted a concern with the audit reporting structure. At present, internal auditors report to President Lincoln rather than the Board's Audit Committee. In order to increase the auditors' independence and help ensure the Board is able to fulfill its oversight responsibilities, the internal auditors should report directly to the Board's Audit Committee.

President Lincoln stated that the omission of patch management and cybersecurity from the recent IT General Controls audit was an oversight and agreed to include the areas in future audits. President Lincoln also stated that she would recommend to the Board that they modify the IT audit reporting structure so auditors report directly to the Board's Audit Committee.

Management - 2

Overall IT management provides adequate guidance and direction. The oversight and supervision of the information security program and related practices are supported by adequate Board approved policies and risk management practices. Managers are well qualified and tenured for their respective positions.

<u>Vendor Management</u>

Overall, management monitors service providers to confirm they satisfied their contractual obligations; however, management did not review the financial statements or the Statement on Standards for Attestation Engagements (SSAE 16) reports of two critical service providers. To help ensure all service providers are appropriately monitored and to improve the effectiveness of management's monitoring activities, management should formally document all required reviews.

President Lincoln indicated the missing reviews were an oversight and stated that a tickler system would be developed to remind the vendor -review officer of upcoming vendor reviews.

Conformance with Information Security Standards

Management is in general conformance with Appendix B to Part 364 - Interagency Guidelines Establishing Information Security Standards, of the FDIC Rules and Regulations. Management identified the location of all non-public personal information, both electronic and hard copy. Threats to each type of information were identified, adequate controls are in place, and an annual report of the program is presented to the Board. While the overall program is adequate, management did not conduct control assessments on all third-party providers that obtain, use, or process non-public personal information. Management should expand the scope of the control assessments to include all applicable third-party providers. Including all applicable third parties in the assessments will help ensure the providers are appropriately identified and risk rated, and will help confirm third parties have adequate internal controls to protect non-public information.

President Lincoln stated that the vendor management program would be updated to identify all vendors with access to non-public personal information and that control assessments would be conducted on all identified vendors before March 31, 20x7.

Cybersecurity Preparedness

Management's assessment of the bank's cybersecurity risk exposure appropriately identifies inherent risks; however, cybersecurity preparedness could be strengthened by determining whether cyber-related controls are sufficient. By identifying cyber-related controls and determining whether they mitigate the identified inherent risks to an acceptable level, management will be better able to identify cybersecurity weaknesses and implement appropriate controls.

President Lincoln indicated that the assessment process would be expanded to include targeted maturity levels by June 30, 20x7.

Development and Acquisition - 2

Development and acquisition practices, which include hardware and software implementation and change-management practices, are appropriate for the institution's size and complexity. Overall, project management processes are adequate and provide sufficient guidance to manage projects. Currently, any project exceeding $20M is rated as a major project and requires specific project documentation. However, not all project documentation complies with the internal bank guidelines. For example, the documentation of three recent projects did not include reviews of alternative project solutions or explanations of why the solutions recommended in the project proposals were the most appropriate solutions. Management should comply with internal bank guidelines to ensure project requirements are met and consistent project documentation is in place.

President Lincoln indicated the project management program was relatively new and that project requirements were being introduced in a phased approach so as to not overwhelm employees. However, she agreed to follow internal project guidelines on future projects.

Support and Delivery - 2

Overall computer operations and information security practices are adequate, and management has improved its business continuity and disaster recovery plans. Management established an information security group to set standards, monitor trends, and review system logs and alerts. Although overall operations are adequate, examiners identified areas that require management's attention such as system-log monitoring, vulnerability assessments, patch management, and business continuity planning.

Logging and Monitoring

Management uses different logging platforms for firewalls, internal servers, and routers, and data are not shared or correlated among the logging systems. While servers and base operating systems are logged, logging is not enabled for virtual operating system environments. Management should review its current logging program to ensure all critical systems are included and that there is sufficient data correlation between the systems. Improving the logging program will help ensure all necessary information is obtained and provide the information security group with data in a more effective, centralized format.

Vulnerability Assessments

Management contracts an outside third party to conduct annual, internal vulnerability assessments as part of an overall security review. The scope of the vulnerability assessment is adequate; however, having only one assessment per year could result in vulnerabilities not being promptly identified. Management should review the frequency of its vulnerability assessment to ensure the frequency of the assessments is based on appropriate risk analysis.

President Lincoln committed to revisiting the logging and monitoring program to ensure that all needed information is logged and, to the extent possible, centralized. Additionally, she stated that management would review the frequency of the vulnerability assessments and conduct more frequent assessments based on appropriate risk analysis. President Lincoln stated the reviews would be completed by the end of 20x6, and appropriate corrective actions would be implemented by March 31, 20x7.

Business Continuity Planning (BCP)

Management changed the structure of its BCP this year. Most elements of the new program are adequate, but some should be improved. The areas of business impact analysis (BIA) and disaster recovery (DR) testing require further refinement.

The BIA and risk assessments are out-of-date, but are being updated to include new recovery time objectives (RTO) and to identify reasonably foreseeable threats, including cybersecurity threats. Currently, the shortest RTO is 24 hours. The 24-hour RTO may be too extended for the application, and there are several systems that may benefit from RTOs of four hours or less. The current extended RTOs may significantly affect multiple business lines and the institution's ability to restore critical systems after a disaster. Management should ensure RTOs are appropriate so that critical operations can be restored promptly after a disaster or business interruption. While some disaster recovery (DR) testing has occurred, management has not sufficiently tested a few critical systems. Management should review its testing universe and implement a risk-based testing approach to ensure all necessary testing is completed in a timely manner. Failure to conduct appropriate tests could result in material delays in restoring critical systems if a disaster occurs.

President Lincoln agreed to conduct the BIA and risk assessments, review RTOs, and implement risk-based DR testing by March 31, 20x7.

AMHILL TOOL & DIE, INC.
By: Robert E. Hill, President
Gty: Roger S. Barrett

Amhill Tool & Die, Inc. manufactures custom plastic-forming dies and provides injection-molding services.

(1) Note originated 1/7/20x2 at $500M to refinance a $450M mortgage on the obligor's manufacturing plant and provide $50M working capital. The note matures 1/7/20x9 and requires interest-only payments, with principal due on demand. (2) Term note originated 6/10/20x3 at $280M, matures 6/11/20x0, and was extended to refinance a working capital note at another financial institution. The primary source of repayment for both notes is operating CF.

The loans are cross collateralized by a first mortgage on the manufacturing plant, located in Anytown, Anystate, and a first security interest in all business assets. A 12/7/20x1 appraisal reflects a property value of $625M; however, the valuation appears stale given downward trends in local RE values. As of 12/31/20x5, management estimated the value of account receivables and inventory at $100M and assigned an estimated liquidation value of $125M to machinery and equipment. Reliance on the machinery and equipment as a secondary repayment source is restricted by their highly specialized nature and limited marketability.

Amhill Tool & Die, Inc. has been negatively impacted by cancelled contracts and high employee turnover. Weak CFs have caused on-going delinquency problems and management placed the notes on nonaccrual on 3/31/20x6. The obligor's 12/31/20x5 income statement reported gross income of $800M and a NOI of $100M. Gross sale revenues declined steadily since year-end 2012 and operating losses of $123M and $234M were reported as of 12/31/20x3 and 12/31/20x4, respectively. NW declined to $125M at year-end 20x5, and DSC was calculated at 0.91 as of 12/31/20x5. The guarantor's 12/31/20x4 personal FS reflects liquid assets of $30M, a NW of $375M, and TA of $890M centered in his ownership interest in Amhill Tool & Die, Inc.

EVP/SLO Leslie S. Cook indicated managerial conflicts contributed to the loss of several lucrative contracts and numerous highly trained employees; however, he stated production output is increasing due to the addition of two knowledgeable managers and improved employee training. He also stated management intends to obtain a new property appraisal, restructure the notes to better match the corporation's cash flows, and to require principal and interest payments on the modified mortgage note.

Debts classified Substandard based on inadequate cash flows, continuing delinquencies, and marginal collateral protection.

RAIN, ROBERT, L.L.C.
GTY: Robert Rain

Debt represents the balance outstanding on a $1,600M construction/permanent facility, dated 3/7/20x6, to refinance an existing $1,200M loan at subject bank granted 1/5/20x5. The original loan was granted to develop a 3-story mixed-use commercial and apartment building in Neighboring Town. The new loan provided the borrower with an additional $400M in funds to accommodate a revised construction budget stemming from plan modifications. Loan terms require interest-only payments at 4.375% for a 10-month period. Principal and interest payments of $8,231 based on a 25-year amortization are to commence on 1/7/20x7, with the loan to mature in 20x1. Collateral consists of a first mortgage on the property under construction appraised at $1,000M "as is" and $2,000M "as complete."

The following credit concerns are associated with the indebtedness:

- The project encountered numerous delays due to difficulty in obtaining permits resulting from the changes in construction plans and due to the need for additional financing.
- Guarantor analysis is inadequate, as liquid assets were not verified and a global CF analysis was not prepared.
- Monitoring of the project has been weak. As a result, the loan has been 53 percent funded, but the project is only 40 percent completed, with the difference representing construction funds used for soft costs.
- No feasibility analysis was performed to support the 20x5 origination.
- The guarantor's experience as a construction manager is questionable considering the delays, revisions, and cost overruns.
- The appraised value may need to be updated, as it is based on the project being completed within the revised budget and assumes that projected operating results will materialize.

Given the concerns noted above and weaknesses associated with this indebtedness, a Special Mention designation is warranted. To strengthen the credit, close management oversight and monitoring is required, along with the following actions:

- Monitor construction progress and compare to budget to ensure percentage completion is brought in line with funding.
- Verify the guarantor's liquid assets and obtain financial information to perform a global CF analysis.
- Obtain an updated appraisal if actual rental rates significantly diverge from the appraisal's projections, if project costs outstrip the revised budget, or if further delays ensue.

DESCRIPTION	DETAIL	AMOUNT EXTENDED

CORRESPONDENT BANK CONCENTRATIONS

FIRST NATIONAL BANK
Anothercity, Anotherstate

Due From Account	3,025	
Federal Funds Sold	4,000	
		7,025

- Concentration to First National Bank (FNB) represents 124 percent of Tier 1 Capital plus the allowance for credit losses for loans and leases.
- Aggregate monthly balances have averaged over $7 million for the past six quarters.
- Management does not formally measure or track the level of this concentration.
- Management does not perform formal financial analysis of FNB.

- Management stays abreast of the FNB's financial condition through routine business contacts and review of publicly available financial data.
- The overall health of regional banks is satisfactory.
- Credit risk is relatively low due to FNB's current financial strength.
- Concentration risk is moderate due to a lack of formal monitoring procedures.
- Deterioration in FNB's financial position could negatively affect daily operations as the Bank of Anytown uses the Due From FNB account to clear transactions and the federal funds sold account is a primary liquidity source.
- Policies and procedures for ensuring compliance with the Federal Reserve's Regulation F are satisfactory; however, management has not established formal guidelines for identifying or limiting overall correspondent concentrations.

Summary

This correspondent bank concentration presents moderate risk to the institution and is generally adequately managed, though President Lincoln indicated that more formal correspondent bank risk management guidelines would be developed. See Question 1 on the Risk Management Assessment Page.

INDIVIDUAL BORROWER CONCENTRATION

John and Mary Smith Relationship

John and Mary Smith		
RE mortgage	400	
JMS Corporation		
JM: John and Mary Smith		
Secured commercial loans (3)	685	
Commercial letters of credit (2)	215	
J&M Realty Trust		
Gty: John and Mary Smith		
Commercial RE mortgage	650	
		1,950

The Smiths own JMS Corporation (JMS), which repairs and resells used wood pallets, and J&M Realty Trust, which holds their commercial property. This credit concentration represents 31 percent of Tier 1 Capital (T1C) plus the allowance for credit losses for loans and leases.

The wood pallet industry is facing increased competition from the plastic pallet industry. However, JMS's recycling of scrap wood has allowed it to maintain solid sales and profitability levels to offset the effect of the increased competition. The borrowers have had a very positive, long-term credit relationship with the bank, the notes are well collateralized by diverse and marketable collateral, and the concentration poses limited risk to the bank.

The Loan Policy includes appropriate credit limits to one borrower, and management reports large credit relationships to the Board each month. However, the Smith's residential mortgage was not identified in the bank's relationship analysis and the Smith relationship has not been reported to the Board as a concentration. The most recent annual loan review for this credit relationship included adequate analysis of the economic and competitive factors that may affect this concentration's risk profile, and the internal risk rating is appropriate. However, the origination of the J&M Realty Trust mortgage on 1/2/20x6, caused the outstanding balances for this relationship to exceed the Anystate legal lending limit statute, as discussed previously on the Violations of Laws and Regulations page for further discussion.

Summary

The concentration poses limited risk to the institution. However, concentration identification and reporting practices need improvement. See Question 1 on the Risk Management Assessment Page.

INDUSTRY CONCENTRATION

Shellfish Fishing Industry (NAICS Code 114112)	8,694

Identification - This credit concentration consists of loans to borrowers who specialize in shell fishing or the sale of customized fishing vessels and equipment. Although loans to the shell fishing industry represent 137 percent of T1C plus the allowance for credit losses for loans and leases, management does not measure or track the credits as a concentration of risk.

Economic and Competitive Factors - Management stays abreast of general factors and economic trends relating to the industry through local news reports and discussions with borrowers. However, management does not maintain a formal process for obtaining and disseminating economic, competitive, or regulatory information to the Board or loan staff. Given the informality of the process, management was unaware of some key factors adversely affecting the industry, such as federal efforts to reduce overfishing through lower fuel subsidies and State proposals to reduce daily catch limits and shorten permissible fishing hours.

Risk Stratification and Vulnerability Assessment - Most of the borrowers are fishermen that share the same fishing grounds, as there are no alternative grounds readily available. The collateral consists of specialized fishing vessels and equipment that are not easily converted to other purposes, thereby limiting their marketability.

Borrower CF is heavily influenced by catch volumes, market price, and operating costs. Although sustained demand has contributed to higher per-pound prices, lower catch volumes and higher fuel costs have reduced profitability levels and increased repayment risk associated with this industry.

Underwriting standards are heavily reliant on collateral values, with limited analysis of projected CFs. Delinquencies remain relatively low, but have been increasing. Internal risk ratings, which appear to accurately reflect the characteristics of individual loans, have not been aggregated for analysis of the fishing portfolio. Additionally, as management does not formally monitor industry risks, there has been no analysis of the potential impact to the institution's asset quality, earnings, or capital if adverse trends continue.

Risk Management and Control Processes - Management relies on general loan delinquency reports and periodic discussions with borrowers to monitor loans to the fishing industry. Although the strategic plan identifies fishing as an important factor in the local economy, it does not address any of the unique risks or mitigating risk management practices associated with lending to this industry. Also, as noted above, management has not established formal procedures to identify, aggregate, or track loans to the fishing industry, and the loan policy does not address portfolio concentration limits.

<u>Summary</u>

Monitoring of this concentration has been relatively informal, given management's long term experience in lending to this industry, but given the size of the concentration and vulnerabilities in the industry, risk management should be more robust. President Lincoln stated that plans are to continue to lend in this industry at the current levels; however, she stated that oversight and administration of the concentration would be strengthened. See Question 1 on the Risk Management Assessment Page.

Safety and Soundness

Composite 3. Financial institutions in this group exhibit some degree of supervisory concern in one or more of the component areas. These financial institutions exhibit a combination of weaknesses that may range from moderate to severe; however, the magnitude of the deficiencies generally will not cause a component to be rated more severely than 4. Management may lack the ability or willingness to effectively address weaknesses within appropriate time frames. Financial institutions in this group generally are less capable of withstanding business fluctuations and are more vulnerable to outside influences than those institutions rated a composite 1 or 2. Additionally, these financial institutions may be in significant noncompliance with laws and regulations. Risk management practices may be less than satisfactory relative to the institution's size, complexity, and risk profile. These financial institutions require more than normal supervision, which may include formal or informal enforcement actions. Failure appears unlikely, however, given the overall strength and financial capacity of these institutions.

Information Technology

Composite 2. Financial institutions and service providers rated composite "2" exhibit safe and sound performance but may demonstrate modest weaknesses in operating performance, monitoring, management processes, or system development. Generally, senior management corrects weaknesses in the normal course of business. Risk management processes adequately identify and monitor risk relative to the size, complexity, and risk profile of the entity. Strategic plans are defined but may require clarification, better coordination, or improved communication throughout the organization. As a result, management anticipates, but responds less quickly to changes in market, business, and technological needs of the entity. Management normally identifies weaknesses and takes appropriate corrective action. However, greater reliance is placed on audit and regulatory intervention to identify and resolve concerns. The financial condition of the service provider is acceptable and while internal control weaknesses may exist, there are no significant supervisory concerns. As a result, supervisory action is informal and limited.

Trust

Composite 2. Administration of fiduciary activities is fundamentally sound. Generally, no component rating should be more severe than 3. Only moderate weaknesses are present and are well within management's capabilities and willingness to correct. Fiduciary activities are conducted in substantial compliance with laws and regulations. Overall risk management practices are satisfactory relative to the institution's size, complexity, and risk profile. There are no material supervisory concerns and, as a result, the supervisory response is informal and limited.

Compliance

Composite 2. An institution in this category is in a generally strong compliance position. Management is capable of administering an effective compliance program. Although a system of internal operating procedures and controls has been established to ensure compliance, violations have nonetheless occurred. These violations, however, involve technical aspects of the law or result from oversight on the part of operating personnel. Modification in the bank's compliance program and/or the establishment of additional review/audit procedures may eliminate many of the violations. Compliance training is satisfactory. There is no evidence of discriminatory acts or practices, reimbursable violations, or practices resulting in repeat violations.

Community Reinvestment Act (CRA)

A CRA rating of "**Satisfactory**" is assigned. An institution in this group has a satisfactory record of helping to meet the credit needs of its assessment area, including low- and moderate income neighborhoods, in a manner consistent with its resources and capabilities.

Refer to *http://www.fdic.gov/regulations/examinations/ratings/index.html* for definitions of all composite ratings.

We the undersigned directors/trustees of Bank of Anytown, Anytown, Anystate, have personally reviewed the contents of the Report of Examination dated June 30, 20x6.

Signatures of Directors/Trustees	**Date**
HENRY P. BLACK	
MICHAEL D. BROWN	
LARRY G. GREEN	
KERRY A. JONES	
ALLIE C. LINCOLN	
JAIME S. MARTIN	
JOHN D. SCOTT	
ROGER WHITE	

NOTE: This form should remain attached to the Report of Examination and be retained in the institution's file for review during subsequent examinations. The signatures of committee members will suffice only if the committee includes outside directors and a resolution has been passed by the full board delegating the review to such committee.

CONTROL AND RELATIONSHIPS

Any Company, Inc., a one-bank holding company, continues to own 100 percent of the bank's common stock. Bank directors own or control a combined 908,584 shares or 56 percent of holding company stock. President Lincoln is the largest individual stockholder, controlling 500,326 shares or 31 percent of the outstanding stock. Any Time, Inc. is a subsidiary of the bank and holds title to ORE. Any Body, Inc., is an on-premise insurance agency owned by President Lincoln and Director Green that sells credit life, auto, fire, and disability insurance. but does not utilize bank employees or equipment. President Lincoln stated that no ownership or management changes are planned. President Lincoln notified the bonding company of the nonbank activity being conducted on the premises and received an acknowledgement letter from the bonding company dated November 9, 20x5. On January 20, 20x6, the board of directors of Any Company reviewed the operations of Any Body, Inc., and approved its continued operations and lease of bank space for another year.

DIRECTOR INVOLVEMENT

One of the bank's directors contacted the EIC during the examination to discuss his concerns with the current committee structure of the bank. Director John Scott indicated that he felt the Loan Committee membership should be expanded and that the committees were dominated by Chairman White and President Lincoln.

DOMINANT MANAGEMENT

Chairman of the Board Roger White and President Allie Lincoln exhibit a dominant influence over the bank's affairs. Their dominance over policy discussion and decisions has negatively impacted the institution as noted throughout the examination. Both Chairman White and President Lincoln were responsive to regulatory concerns and promised prompt corrective actions to implement the current exam recommendations and outstanding MOU.

EXAMINATION SCOPE

Examination Number 12345

The examination scope was expanded from the pre-exam planning (EP) memo in the following areas:

- *Construction Lending* – Expanded due to administrative problems identified in the original loan sample. Ten additional construction loans serviced by the two construction lenders and originated in 20x6 were reviewed.
- *BSA Review* – Expanded to include a review of all Currency Transaction Reports filed in 20x6 due to indications that they were being filed late.
- *Call Report Review* – Expanded to include year-end 20x5 in response to the volume of errors noted with the original review.

As a result, examination hours, totaling 760, are 150 over budget (25 percent). Other examination procedures were not modified from those identified in the EP memo and no significant variances between projected and actual examination hours, scope, or procedures were noted in the BSA/AML (Exam #12346), Trust (Exam #12347), or IT (Exam #12348) reviews.

SUGGESTIONS FOR FUTURE EXAMINATIONS

There is sufficient working space for seven examiners.
Management accommodated working hours of 7:30am to 5:30pm.
The examination crew should contain at least one examiner with experience in construction loan analysis.

List alphabetically all directors/trustees, senior officers, and principal stockholders. Also indicate their titles. Number of shares owned is not rounded. (J – indicates stock jointly owned; P – indicates preferred stock owned; H – indicates holding company stock owned; C – indicates stock controlled but not owned)

Net Exposure			100		

In December 2014, the Anycountry government defaulted on $50 billion of bonds held by foreign creditors and subsequently imposed strict capital controls that severely limited the ability of private borrowers to service their external liabilities. Private borrowers from Anycountry have accumulated significant interest and principal arrears to external creditors. Prior to the present interruption of external debt service, the country had been current on payments since completing a restructuring of bank debt in the early 1990s.

U.S. banks cut their exposures to Anycountry sharply in 2014, reflecting material reductions in business activities/lending and significant write-offs. In June 2015, U.S. banks' cross-border exposure totaled $6.2 billion, down roughly 44 percent from a year earlier. Locally funded business fell by over two-thirds, to $3.3 billion.

Amount scheduled as Substandard represents exposure to the Anycountry Distillery Corporation. Another facility to the Anycountry Oil Corporation is not adversely classified for transfer risk as it is subject to a credit risk classification of Loss.

Insert the actual transfer risk write-up provided by the Interagency Country Exposure Review Committee. Adjust the comments if more severe adverse classifications (based on credit risk) are scheduled in the ROE.

Note: Countries and amounts provided are for illustrative purposes and do not reflect actual classifications.

Management of the country risk process is satisfactory. Senior management and the Asset/Liability Management Committee continue to closely monitor the economic and political stability of countries where the bank maintains international transaction activity. Due to deteriorated economic and political situations in certain countries where the bank conducts business, there has been a reorientation of business strategy. The Board has strategically decided to focus future business development on its domestic banking market and to reduce its overall risk emanating from transfer risk exposure. As a result, the bank has substantially reduced the level of approved country limits, and it has frozen most assigned limits, and the resulting level of net transfer risk exposure.

Refer to additional guidance for completing this page contained in the ROE Instructions and the Interagency Statement on Sound Country Risk Management Practices.

Note: Countries and amounts provided are for illustrative purposes and do not reflect actual classifications. Amounts shown do not correspond with other information in the Bank of Anytown ROE.

Note: Countries and amounts provided are for illustrative purposes and do not correspond with other information in the Bank of Anytown ROE.

DISCLAIMER: This information is provided to illustrate a relatively complex PBO. It does not correspond to other ownership/control information provided in the Bank of Anytown.

List the following information for the bank(s) and/or bank holding company(s) in the PBO.

U.S. Name: Demo International Bank[1]
City, Country: Miami, FL
Number of Outstanding Shares: 1,000,000

Foreign Name: Demo International, C.A.
City, Country: Caracas, Venezuela
Number of Outstanding Shares: 50,000

Foreign Name: Demo Bank Venezuela[2]
City, Country: Caracas, Venezuela

Foreign Name: Demo Bank do Brazil[3]
City, Country: Brasillia, Brazil

Foreign Name: Demo Bank Mexico
City, Country: Mexico City, Mexico
Number of Outstanding Shares: 100,000

[1] Of the ten entities that compose the PBO, only the three foreign banks and the foreign bank holding company that actively engage in transactions with Demo International Bank, Miami, Florida are detailed above. The remaining five entities within the PBO structure include Demo Holdings, Caracas, Venezuela, which wholly owns Demo Bank International, Panama City, Panama; Demo Finance Company, Caracas, Venezuela, which wholly owns Demo Bank International, Guayaquil, Ecuador and Demo Bank Interandino, Lima, Peru.
[2] Wholly owned subsidiary of Demo International, C.A., Caracus, Venezuela.
[3] Wholly owned subsidiary of Demo Bank Venezuela, Caracas, Venezuela.

Detail the stock owned by the beneficial owner(s) whose direct/indirect control forms the nexus of the PBO.

U.S. Name: Demo International Bank	**Number of Shares**	**Percent Owned**	**Type of Control**
Beneficial Owner: Demo Family Trust (Jose Demo controls 100%)	750,000	75.00%	Direct
Beneficial Owner: Example Family Trust (Juan Example controls 100%)	250,000	25.00%	Direct

Foreign Name: Demo International, C.A.	**Number of Shares**	**Percent Owned**	**Type of Control[1]**
Beneficial Owner: Jose M. Demo[4]	5,000	10.00%	Direct
Beneficial Owner: Carlita S. Demo[4]	12,500	25.00%	Direct
Beneficial Owner: Paco M. Demo	7,500	15.00%	Direct
Beneficial Owner: Juan H. Example	12,500	25.00%	Direct
Beneficial Owner: Demo Family Members	12,500	25.00%	Direct

[4] Mr. Jose M. Demo has indirect control of the shares owned by his wife, Ms. Carlita S. Demo.

Foreign Name: Demo Bank (Mexico)	**Number of Shares**	**Percent Owned**	**Type of Control[1]**
Beneficial Owner: Jose M. Demo[5]	50,000	50.00%	Direct
Beneficial Owner: Carlita S. Demo[5]	25,000	25.00%	Direct

[5] Mr. Jose M. Demo has indirect control of the shares owned by his wife, Ms. Carlita S. Demo.

Discuss the factor(s) or combination of attributes (besides or in addition to common stock ownership) that was considered in determining whether a PBO relationship exists. Consider whether an individual or a group of individuals (e.g., family members, business partners, or any other group) acting together (directly or indirectly):

1) **Constitute a quorum or a significant presence on the board of directors of both the U.S. depository institution and the foreign bank or the foreign bank holding company.**

   The members of the Demo family listed above serve as the chairman, vice chairman, or director for seven of the banking entities. However, none of the individuals are on the board of directors of Demo Bank International, Panama. Their membership does not constitute a quorum on any of the three foreign or U.S. bank boards, but does constitute a quorum on the board of the foreign bank holding company, Demo International, C.A.

2) **Controls, in any manner, the election of a majority of the directors of the U.S. depository institution and the foreign bank or the foreign bank holding company.**

   The shareholder-meeting minutes for electing the directorate for Demo Bank Venezuela were not available for review. However, Mr. Jose Demo and his family members control the election through their ability to vote a majority of the holding company's stock. Mr. Jose Demo's ability to vote the majority of Demo International Bank's stock indicates that he controls the election of its directorate.

3) **Constitutes a quorum or a significant portion of the executive management of both the U.S. depository institution and the foreign bank or the foreign bank holding company.**

   The members of the Demo family listed above serve as the president, vice president or cashier of Demo International Bank, Demo International, C.A. and at the seven foreign banks, except Demo Bank International, Panama. Their positions constitute a quorum of the executive management at Demo International, C.A., (Venezuela) but not the other banks, but they do occupy critical positions on those teams.

4) **Exercises a controlling influence over the management and/or policies of both organizations.**

   Mr. Jose Demo is chairman of Demo International Bank and president of Demo Bank Venezuela, which enables him to exert a controlling influence over the management and policies of both organizations.

5) **Engages in an unusually high level of reciprocal correspondent banking and/or other transactions or facilities between the U.S. depository institution and the foreign bank.**

   The banks primarily engage in correspondent bank services, dollar clearings, letters of credit, and trade related transactions. Fee income from transactions with the three foreign banks equaled over 40 percent of the total fee income generated by Demo International Bank in 2011. The U.S. bank also extended a $5 million line of credit secured by a $5 million certificate of deposit to Demo Bank Venezuela, Caracus, Venezuela.

6) **Obtains financing to purchase the stock of either the U.S. depository institution or the foreign bank or the foreign bank holding company from, or arranged by, the foreign bank, especially if the shares of the U.S. depository institution are collateral for the stock-purchase loan.**

   None noted.

7) Requires the U.S. depository institution to adopt particular/unique policies or strategies similar to those of the foreign bank, such as common or joint marketing strategies, cross-selling of products, sharing of customer information, or linked web sites.

The Demo International Bank's website is linked to Demo Bank Venezuela's website. Both offer similar loan and deposit products and banking services.

8) Names the U.S. depository institution in a similar fashion to that of the foreign bank.

The titles of the banking organizations use similar naming conventions.

9) Presents any other factor(s) or attribute(s) that affected the conclusion.

None known.

Summarize the Examination Findings

The review determined that a PBO relationship exists between Demo International Bank and three foreign banks and a foreign bank holding company through the common control of the Demo family, primarily through Mr. Jose Demo's ownership/control of the Demo International Bank in Miami, Florida; Demo International, C.A. in Caracas, Venezuela (foreign bank holding company); and Demo Bank Mexico in Mexico City, Mexico. Each of the affiliated foreign banks has audited annual reports for the most recent fiscal year.

Demo Bank do Brazil reported a negative 0.3 percent return on average assets for the most recent fiscal year because of elevated credit losses. Its book capital (minus goodwill) declined to 5 percent of total assets as of December 31, 2015. Other foreign financial affiliates had positive net income and at minimum, a book capital to assets ratio of 10 percent as of December 31, 2015.

Bank management acknowledges that the institutions are under common control and actively monitors all transactions with affiliated entities. No adverse trends were noted relating to transactions with foreign banking affiliates. Refer to the Related Organizations page and the Risk Management Assessment page for additional information.

INTERNATIONAL WORKPAPERS

An international loan, acceptance, or letter of credit is defined as any such instrument between this bank and a resident or entity domiciled outside the United States, District of Columbia, Puerto Rico or other United States Territory or Possession.

DISTRIBUTION

Description	Amount
Mortgage loans (Including Ship loans of $2,327)	8,732
Loans insured or guaranteed by the U.S. government or its agencies	14,065
Loans to foreign governments, agencies thereof and central banks	15.971
Loans to financial institutions other than central banks	500
Loans to commercial, industrial and agricultural interests	41,689
Other Loans (Describe) Loans to religious institutions	8,572
All other loans	1,171
Total International Loans*	90,700
*Does NOT include loans to U.S. subsidiaries of foreign corporations	12,444

Description	Amount
Participation loans and paper purchased	41,505
Placed paper, direct loans and participation loans sold	5,365
Syndication and consortium financing	5,000
International acceptances outstanding	1,489
International letters of credit outstanding	7,836
Other (Describe)	

1. **Are duties and responsibilities for the conduct of international operations clearly defined? Comment briefly.**

Yes. The bank's Board of Directors has approved a satisfactory, written policy statement setting forth the various duties and responsibilities of the operating entities within the international division.

2. **Does the bank have a definite international lending policy? If "yes", summarize such, state whether it has been approved by the board of directors/trustees, and indicate extent of compliance.**

Yes. The bank's Board of Directors, in line with the directives of the parent bank, has delineated specific guidelines on clientele to be served, limits on country exposure both in the aggregate and by maturity within those limits and risks to be undertaken. Officers submit recommendations to the international loan committee, which has authority to approve loans up to $5 million. Larger loans require senior loan committee approval. In all cases, these policies are adequate for the bank's needs and have been appropriately followed.

3. **(a) Comment upon policy guidelines in effect regarding country risk assets and volume limitations imposed thereon. (b) How often are guidelines reviewed? (c) Does the bank have any country risk concentrations of credit? If "yes", list the country and percentage of such extensions of credit to the bank's total capital and reserves.**

(a) The policy requires all extensions of credit (including bank placements, formal loan commitments, and foreign exchange lines) to be included within country limits. Claims are reallocated to the country of guarantor or the country where collateral is realizable. Sub-limits are provided by maturity of the obligation. Separate limits are provided for each of the 15 countries where lending is permitted.
(b) Reviewed quarterly.
(c) Yes, Japan 84%, France 40%, Federal Republic of Germany 59%, United Kingdom 39%.

4. **Are guarantees of other banking institutions and/or parent or affiliated organizations of borrowers required on certain loan obligations? If "yes", under what circumstances and in what form are such guarantees extended?**

Yes. Letters of Guarantee from two European banks have been furnished as support to financially weak borrowers. The parent bank has extended guarantees in the form of letters of credit essentially to provide additional protection to the subject bank's position. The parent's guarantee was not relied upon as a primary source for repayment of the loan.

5. **(a) Describe the general nature and character of collateral pledged, and (b) comment upon the adequacy of supporting documentation.**

(a) Collateral includes first preferred ship mortgages, notes and bond obligations of various foreign governments, time deposits, commodities, stocks, and UCC filings.
(b) Supporting documentation appeared in order.

6. Is credit information timely in content and available in sufficient readable detail?

Credit information on loans originated at the Nassau Branch continues to be inadequate. Deficiencies include a lack of current and complete financial information on the obligor and guarantor, an absence of thorough credit analysis, and a lack of complete information on country conditions. Management initiated a project (and hired two new credit analysts at the Nassau Branch) during the examination to enhance the availability and sufficiency of credit information on loans originated at the Nassau Branch.

7. (a) Describe the general nature and types of acceptance financing extended, and (b) the general lines of business involved.

(a) The bank is primarily involved in acceptance financing in connection with international trade activity.

(b) The acceptance financing involves manufactured goods, commodities, and exchange activities of central banks.

8. (a) Describe the general nature and types of letter of credit accommodations offered, and (b) the general lines of business involved.

(a) The bank issues documentary letters of credit to importers, confirms other banks' letters of credit for export customers and, to a limited extent, engages in deferred payment letter of credit financing. Standby letters of credit are undertaken only for prime customers.

(b) The letters of credit involve manufacturers, machinery exporters and importers, commodity importers, and foreign governments and agencies.

9. Describe the provision for repayment of (a) acceptances, and (b) drafts drawn under letters of credit. Include comment regarding extent of refinancing.

(a) and (b) Provisions for repayment are arranged prior to issuance and vary as individual conditions warrant. Repayment is generally accomplished by charge to customer's account or by loan accommodation under approved credit lines in the case of acceptances and by charge to the customer's account or acceptance with respect to letters of credit. In certain situations, refinancing is permitted, generally for short periods.

1. Comment on the general nature and volume of present Eurocurrency operations.

Eurocurrency operations are conducted through the Nassau Branch. Investments are primarily loans to South American corporations and central governments, securities of foreign governments and bank placements. Sources of funding are individual, partnership, corporation, bank, and affiliate time deposits. As of the examination date, Eurocurrency loans, securities, and bank placements totaled $325 million with approximately 98 percent of the placements funded by Eurocurrency time deposits.

2. Describe the procedures followed and guidelines utilized in establishing lines of credit and making and approving due to (takings) and due from (placements). Comment on the adequacy of procedures enabling senior management to ascertain compliance with guidelines and directives.

The parent bank has issued adequate guidelines to be considered before establishing lines of credit and bank relationships. With respect to banks, these criteria center on the obligor's capital resources, country risk, and type of institution. Bank and nonbank clientele analysis includes consideration of volume and maturity factors, as well as a review of financial responsibility and reputation. Senior management receives weekly reports.

3. (a) Comment on the maturity composition of present Eurocurrency takings and placements and the effect of such on the bank's liquidity position. (b) Are asset and liability maturities reasonably matched?

(a) On the examination date, Eurocurrency takings totaled $285 million, while placements aggregate $195 million. All placements and 74% of takings ($210 million) mature within 90 days with no adverse effects on the bank's liquidity position.

(b) Both near-term and longer-term maturities are reasonably matched.

4. Are all interbank placements confirmed at inception and, thereafter, subject to periodic direct verification audits?

Yes.

NOTE: A negative answer below (questions 2 through 8(e)) may be indicative of a condition in need of correction. Such answers may call for comment, or expanded treatment, below or elsewhere in the examination report.

DESCRIPTION	YES	NO
1. Is the bank engaged, in any manner, in foreign exchange activities? If "Yes", answer the following questions:	X	
2. Is the net open position of each foreign currency reasonable in relation to the bank's total capital and reserves?	X	
3. Is the aggregate net open position of all foreign currencies reasonable in relation to the bank's total capital and reserves?	X	
4. Are the future maturities of foreign currency assets, liabilities, and contracts reasonably matched with respect to long and short positions in all time periods?	X	
5. Does a current revaluation of the bank's foreign currencies reflect an insignificant profit or loss?	X	
6. Has the directorate and/or head office imposed reasonable guidelines and limits with respect to foreign exchange operations?	X	
7. Are guidelines and limits being adhered to by active management?	X	
8. With respect to foreign exchange operations, are the following adequate:		
(a) recording procedures?	X	
(b) bookkeeping procedures other than 8(a)?		X
(c) contract confirmation procedures?	X	
(d) internal routines and controls other than 8(c)?	X	
(e) audit procedures?	X	

8(b) Refer to comments under Audit and Internal Controls.

Does not include $ profit (loss) attributable to outstanding SWAP transactions

$ has already been taken into income/expense through accrual accounting

	YES	NO
3. Does a current revaluation of the bank's foreign currencies reflect an insignificant profit or loss?	X	

Previous Calendar Year	Amount or Percent
Quarterly Average of Gross Assets	562,500,000
Total Foreign Exchange Income	1,000,000
Net Foreign Exchange Income (Loss)	550,000
% of Total Foreign Exchange Income to Average Gross Assets	0.18%
% of Net Foreign Exchange Income (Loss) to Average Gross Assets	0.10%
Year to Date	**Amount or Percent**
Total Operating Income (Bank)	25,156,300
Net Operating Income (Loss)	4,192,700
Total Foreign Exchange Income	735,200
Net Foreign Exchange Income (Loss)	404,400

1. **(a) Describe the net and aggregate position limits, maturity exposure limits, and any other limits placed on foreign exchange operations by the board of directors/trustees. (b) Do such limits appear reasonable?**

(a) The bank's Board of Directors has authorized trading only in currencies listed in the position schedules. Overnight limits for each currency with the exception of the pound sterling are fixed at $250M; pound sterling limit is $1,500M. The aggregate position limit for all currencies is $2,000M. Maturity gaps are authorized only on major active currencies up to $100M not to exceed 3 months. Major active currencies have been described as having an active forward market.

(b) Limits appear to be reasonable.

2. **Describe the limits and guidelines established by the board of directors/trustees for dealing in foreign exchange with other banks and customers.**

Individual customer limits are approved by the bank's International Committee based on the customer's creditworthiness and the volume of its foreign currency needs. The bank's written internal credit policy pertaining to bank and nonbank customer foreign exchange lines is:

(a) 100% of the foreign exchange line may mature within 180 days,
(b) 50% of the foreign exchange line may mature within 360 days,
(c) 20% of the foreign exchange line is available for contracts with maturities up to 18 months, and
(d) no maturities may exceed 18 months.

Excesses must be approved in writing by the account officer who approved the customer line. Maximum daily delivery risk limits per customer are set at 20% of the aggregate limits approved.

3. **Fully describe any recent significant deviations by the bank from established limits and guidelines. Include in this description any significant deviations noted after completion of the Position Analysis, and the Maturity Distribution (GAP) Analysis.**

No deviations from bank policy were noted in preparing the position analysis. Two exceptions to bank policy on GAP exposure were in evidence due to an inability to obtain forward cover. These exceptions were approved by the International Committee. No other recent deviations were identified.

4. **(a) Describe the reports (i.e., position maturity, gap, revaluation, etc.) required by the directorate and senior management to ascertain compliance with bank policy. (b) Determine whether the directorate or senior management are notified when actions are taken which constitute deviation from policy? Describe and assess the approval procedures for such deviations from policy.**

(a) Net position reports enumerating all foreign currency balance sheet items, future contracts, and after-hour and holdover transactions are transmitted to the designee of the International Committee on a daily basis. Reports are prepared by the foreign exchange bookkeeping department and reconciled to the trader's blotter. Maturity gap reports are produced daily with the next month's transaction reflected on a daily basis and subsequent transactions grouped in two-week intervals. Revaluation reports detailing ledger accounts, spot contracts, and forward contracts are developed on a weekly basis.

(b) Bank's written policy provides for the immediate generation of exception reports where applicable limits are exceeded. Prior written approval of the account officer is required for deviation from customer limits. Deviation from other limits is not permitted under any circumstances without prior approval of International Committee.

5. If the bank is a subsidiary of a foreign bank, describe the controls and guidelines the parent has imposed on the bank's foreign exchange activities, and describe the foreign exchange reports prepared by the bank for the parent.

The aforementioned guidelines and limits have been implemented at the direction of the parent bank. All reports of the bank's audit department and the reporting mechanisms described in 4(a) are furnished to the parent bank for review prior to implementation.

6. Briefly describe the procedures used in the revaluation, including the frequency and responsible party. If forward contracts are not revalued at future rates, so indicate.

Revaluation is performed on a bi-weekly basis by the International Operations section. Actual realized profit or loss is calculated by applying current spot rates to balance sheet accounts, as well as contracts of very near maturities. Unrealized profit or loss on future transactions is determined by applying the appropriate forward rates to the net position for each future period in the bank's gap report.

7. Describe the general ledger accounts affected by the periodic revaluation and the journal entries used to effect changes in these accounts. If any accounts are being used to capitalize losses or defer immediate recognition of profit, so indicate.

Actual realized profit or loss is charged to the profit and loss account with offsetting entries to the applicable local currency ledger accounts. With respect to future transactions, the bank charges the "estimated profit(loss) on foreign exchange futures" account for the amount of the adjustment with an offset to the profit and loss account. Profits and losses are recognized at the date of revaluation.

8. (a) Approximate the volume of foreign exchange transactions the bank has with related companies or banks? (b) Determine whether the terms and conditions of such dealings vary from similar transactions with non-related companies and banks?

(a) During 2015, the bank entered into approximately $40,000M of forward contracts to purchase and sell foreign exchange with a related bank, First European Bank, London, England.

(b) Terms and conditions of contracts are substantially the same as transactions with non-related parties.

9. **Regarding holdover and/or after hour transactions, describe and assess the bank's system for controlling and recording such transactions. Indicate how management is informed of such transactions before recordation, and determine whether the system is correctly designed and adequately controlled?**

The foreign exchange control group prepares a list of holdover items. Holdover items are incorporated into the daily position sheet, which together with the holdover list, is furnished to management on a daily basis. Holdover items are posted as of the dates contracted. The system is considered adequately controlled.

NOTE: A negative response below may indicate a condition that requires correction and comment(s) below and/or in the report of examination.

AUDIT

			YES	NO
1		Have the directors/trustees made provision for an audit of the foreign exchange area?	X	
		If "Yes," indicate method utilized:		
	X	Employment of full time auditor.		
	X	Periodic employment of independent auditor.		
	______	Designation of an audit supervisor and an established program of internal audit by bank personnel.		
		Name of Audit Supervisor:		
2		If the answer to question 1 is "yes", does the audit program include the following:		
	(a)	Periodic proof of forward and spot contracts?	X	
	(b)	Periodic proof and/or reconcilement of foreign exchange general ledger accounts?	X	
	(c)	Periodic direct verification of forward and spot contracts?	X	
		Frequency: Annually Amount: $25,200,000		
	(d)	Review of management reports and adherence to guidelines?	X	
	(e)	Comparison of rate quotations in management reports and revaluations with outside sources?	X	
	(f)	Perusal of authorized signatures?	X	
	(g)	Briefly describe any other audit procedures conducted:		
3		If applicable, has the bank corrected major criticisms noted in the last independent audit report?		X
		Date of audit: 12/31/2014		
		Briefly describe major criticisms and/or recommendations in such report: The bank was criticized for not maintaining a complete and current set of instructional memoranda describing the information generated from the accounting system and the general and subsidiary ledger accounts affected by trading activity. This defect has been corrected. Deficiencies still exist with respect to confirmation procedures.		
4		Is the foreign exchange audit program adequate as to scope and frequency?	X	
5		Does the foreign exchange auditor or audit supervisor report regularly and directly to the bank's board of directors/trustees or a committee thereof?		
6		Is a written audit report of the foreign exchange area maintained by the bank?	X	

2(c) All outstanding spot and forward contracts as of the audit date are directly verified.

NOTE: A negative response below may indicate a condition that requires correction and comment(s) below and/or in the report of examination.

INTERNAL CONTROLS

		YES	NO
1	Are all contracts recorded on the date contracted?	X	
2	Is it a firm rule that all forward and spot contracts be confirmed at inception?	X	
3	Has the bank instituted an effective and current (within seven days) follow-up system regarding unconfirmed and/or incorrectly confirmed forward and spot contracts?		X
4	Are foreign exchange contracts and dealing slips prenumbered and used in such order?	X	
5	Does the bank have an effective system of controls over the trader and the trading environment?	X	
	A "Yes" answer to this question requires a "Yes" answer to each of the following: Is it a firm rule that:		
	(a) The trader not be allowed to receive confirmations on forward and spot contracts?	X	
	(b) The trader not be allowed to sign contracts?	X	
	(c) The trader be prohibited from initiating and receiving interbank funds transfers, opening current accounts, or receiving credits to current accounts?	X	
	(d) The trader not be involved in the revaluation procedure?	X	
	(e) Trading activities be segregated from other bank activities, in particular the accounting, confirmation, and report functions?	X	

2-3 Although the bank established guidelines regarding the confirmation of spot and future contracts, examiners observed that outgoing confirmations are frequently incomplete, with trade and value dates frequently omitted. Further, many entries in the confirmation exception logs are incomplete, and the log is not reviewed by an operations officer. These deficiencies were noted by both the bank's internal and external auditors; however, management has not yet corrected the deficiencies .

INTERNATIONAL PRE-EXAMINATION QUESTIONNAIRE

Examiners can use this optional questionnaire, in whole or part, during the pre-examination process as part of the preliminary risk assessment. This workpaper includes a list of questions that examiners can ask management to help identify international activities, develop document request lists, and scope examination activities.

Briefly summarize significant discussion topics in the pre-examination planning memorandum. Summarize items such as material changes since the prior examination, economic conditions in the institution's area of operation, new products or services, and areas of perceived risk. Include any other information useful for allocating examination resources. Document the officer's name and title, and note the discussion date.

INTERNATIONAL ACTIVITIES

1) Does the bank offer any international products or services? For example:
   - Cross-border loans or investments,
   - Loans to domestic borrowers that are part of an international supply chain or that are guaranteed by a foreign parent, or other foreign legal entity,
   - Trade financing,
   - Foreign wire transfers,
   - Foreign deposits or borrowings,
   - Loans to non-resident aliens (NRAs),
   - Private banking or wealth management for foreign nationals,
   - Foreign correspondent banking, or
   - Foreign exchange trading.

   If yes:
   - Provide a summary description of each activity,
   - Indicate where the activities are conducted within the organization, and
   - Provide the name and title of the person(s) responsible for each area.

2) Does the bank have an International Banking Facility (IBF)?

   (Note: An IBF is a set of asset and liability accounts segregated on the books and records of a depository institution, United States branch or agency of a foreign bank, or an Edge or Agreement corporation that includes only IBF time deposits and IBF extensions of credit.)

3) Does the bank have any representative office(s)?

   If yes:
   - Indicate where the office(s) are located,
   - Provide the name and title of the person(s) responsible for each office, and
   - Provide a summary of the activities conducted by the office(s).

4) Does the bank maintain any foreign branches or subsidiaries, control a foreign organization, or have 20 percent or more of the organization's voting equity interests in a foreign organization?

   If yes:
   - What records and record keeping policies does the bank maintain to ensure compliance with the provisions of Section 347.116 of the FDIC Rules and Regulations?

FOREIGN BANKING ORGANIZATION (FBO)

5) Is the bank part of a FBO?

(Note: An FBO is a U.S. banking operation owned by a foreign banking organization. An FBO's operations may encompass a variety of banking and nonbanking activities conducted through subsidiaries, branches, agencies, or representative offices.)

If yes:

- Describe the organizational and ownership structure of the FBO.
- Summarize transactions or agreements of the FBO with its parent/controlling institution, and
  - o Include a list of transactions conducted with the parent institution (participations purchased, participations sold, fund transfers, etc.), including the volume and approximate number of transactions, dollar amount, and percentage of income derived from such transactions.
  - o Include a list of services provided to or received from the FBO (rental space, correspondent services, auditing, IT-related services, etc.).
  - o Indicate fees paid or received for services rendered.

PARALLEL BANKING ORGANIZATION (PBO)

6) Is the bank owned or controlled, directly or indirectly, by an individual, family or group of individuals that are closely associated in their business, or otherwise acting in concert, that also own/control at least one foreign banking institution?

If yes:

- Provide a list of all relationships and international affiliations within the PBO, and
- Summarize transactions or agreements with the international relationships or affiliates listed, including the volume and approximate number of transactions, dollar amount, and percentage of income derived from such transactions.

7) Do any bank insiders, as defined by Regulation O, have cross-border related interests?

If yes:

- Describe the type of transactions between the bank and the related interests.

CORRESPONDENT BANKING

8) Does the bank have any foreign correspondent bank relationships?

If yes:

- Summarize the nature of the relationships and services offered (clearings, deposits, loans, trade financing, etc.), and
- Describe the due diligence conducted on each foreign correspondent.

COUNTRY EXPOSURE

9) Does the bank's present or future business strategy include cross-border lending or investment activities, in particular with emerging markets and other notable countries and regions?

If yes:

- Describe the bank's systems and controls over their country exposure, and
- Describe the process management uses to monitor economic and political situations in countries where the bank has exposure (either directly or through NRA relationships).

10) Does the bank file FFIEC Form 009 and/or Treasury International Capital (TIC) forms?

FOREIGN DEPOSITS

11) Does the bank accept foreign deposits?

If yes:

- Describe the bank's foreign deposit gathering activities or programs.

12) Are deposits referred to the bank by affiliates or other related foreign organizations?

If yes:

- Describe the process of how deposit accounts are referred by affiliates or related foreign organizations.

13) Does the bank use independent agents to acquire foreign deposits?

If yes:

- Describe how foreign deposit accounts are acquired through independent agents, and indicate if a fee is paid for deposit referral services.

GENERAL INSTRUCTIONS

These instructions provide general guidance for conducting field investigations and preparing the Report of Investigation (ROI). Since each application has unique characteristics and often involves special circumstances, examiners should consult the references below and discuss issues or questions with the appropriate Case Manager. The examiner should look beyond the surface of the proposal and address the likelihood of success or failure. The final report should be comprehensive, well supported, and address any atypical attributes.

APPLICATION PROCESSING

The FDIC is responsible for approving or denying all applications for deposit insurance, regardless of the type of institution or fund affiliation. In addition to proposed state nonmember banks, mutual savings banks, and industrial banks, the FDIC acts on any application for deposit insurance from a proposed national bank, member bank, district bank, trust company, Federal or State savings association, or savings and loan. Applications for de novo institutions are filed with the chartering authority and the FDIC using the *Interagency Charter and Federal Deposit Insurance Application*. To ensure interagency applications go smoothly, examiners should contact the chartering agency as soon as possible to coordinate a joint field investigation and reduce regulatory burden.

Generally, examiners should attend any pre-filing or other meetings held by the chartering agency with the applicant. Application processing timelines vary among the banking agencies, therefore close coordination with the chartering agency is necessary. Duplication of work should be avoided such as conducting background checks on proposed officers and directors. Normally, in an application for a thrift or national bank charter, the OTS or OCC conduct the background checks.

REPORT OF INVESTIGATION PROCEDURES

Reports of Investigation often vary in content and structure and emphasis should be placed on producing a well-conceived final product rather than following any strict format. The Statement of Policy on Applications for Deposit Insurance (SOP) is the primary source document for the factors that should be considered during the investigation. These guidelines are designed to assure uniform and fair treatment to all applicants.

Examiners should review the entire application and business plan to identify potential problems, incomplete or inconsistent information, areas of non-compliance with the SOP and/or Federal and State banking statutes, and any other factors which will require additional attention. It is important to identify, early on in the process, any concerns that will require significant attention to ensure that they do not delay the timely processing of the report. Subject Matter Experts in areas such as Consumer Compliance, Information Systems, Trust, Capital Markets, and Specialized Lending should be involved in the investigation when deemed necessary to adequately assess a proposal.

Examiners should be aware that proposals not conforming to the SOP are not delegated to the Regional Office and will be forward to the Washington Office for final action. Further, applications involving foreign ownership of 25% or more (foreign ownership includes ownership by a foreign non-banking entity, a foreign bank, or person who is not a citizen of the United States) are also forward to the Washington Office for final action.

After a thorough review and Regional Office concurrence, examiners should contact the organizers to discuss the specific issues and request any additional information. The examiner should hold a board meeting with proposed directors and senior officers. At a minimum, the meeting should include a discussion of the FDIC's expectations regarding director supervision, conduct and ethics. A sample agenda with suggested topics is found in Appendix A. The organizers and proposed directors should be individually interviewed to determine the extent of their understanding of the responsibilities they are taking on as directors, their abilities to execute the business plan and their commitment to the proposed bank. A sample Management/Director Interview form is found in Appendix A.

Examiners should not discuss the probable outcome of the investigation with the applicants.

STATUTORY FACTORS

Sections 5 and 6 of the FDI Act specifically deal with the granting of deposit insurance. Section 6 identifies seven statutory factors that must be considered by the FDIC in determining the merits of an application. Those factors include:

1. Financial history and condition;
2. Adequacy of capital;
3. Future earnings prospects;
4. General character of management;
5. Risk presented to the insurance fund;
6. Convenience and needs of the community;
7. Consistency of corporate powers.

The Report of Investigation should detail the relevant facts pertinent to each of the statutory factors and state the examiner's opinion as to whether the criteria under each area has been met. Findings of Favorable Subject to the Imposition of Conditions are permissible if the reasons for such a finding are clearly supported. Narrative comments should fully support any negative finding and when possible, identify any corrective action that, if taken, would favorably resolve the concerns. Examples could be issues such as finalizing blanket bond coverage, obtaining an appraisal on the premises, finalizing stock sale, etc.

While all factors are important and must receive a favorable finding, the FDIC considers Management and Capital as being the two most important factors. The Investigation Report Conclusions and Recommendations page should include a description of the proposal, a summary of each factor, and an overall recommendation relative to the granting of insurance.

MISCELLANEOUS REPORT ISSUES

Generally, the public may inspect the non-confidential portions of an application. While the burden is on the applicant to request confidential treatment of certain application material, the following areas are generally considered confidential:

1. Personal information, the release of which would constitute a clearly unwarranted invasion of privacy;
2. Commercial or financial information, the disclosure of which would result in substantial competitive harm to the submitter; and
3. Information the disclosure of which could seriously affect the financial condition of any depository institution.

The public may obtain photocopies of non-confidential material through a Freedom of Information Act request and by an oral or written request to the Regional Office.

Financial numbers are rounded to the nearest thousand.

COVER – REPORT OF INVESTIGATION

Insert complete name of proposed bank, city, county, and state.

Insert Region, EIC, and type of charter.

- Date investigation commenced would be the date review began in the field office.
- Investigation closed date is date the report was mailed to Regional Office.
- Date of application is obtained from the application.
- Date application accepted is found on ViSION's Application Tracking (AT).

TABLE OF CONTENTS

The table of contents identifies the three major report sections: Conclusions and Recommendations; Assessment; and Other Information. Completion of all pages is mandatory. Examiners may create and add pages under each factor if it supports their conclusions and recommendations.

INVESTIGATION REPORT CONCLUSIONS AND RECOMMENDATIONS

This page should summarize the proposal with enough details to give the reader a complete understanding of the transaction. The investigating examiner should provide a brief summary of the proposed business plan under the "Description of the Transaction" heading. Each statutory factor and finding of Favorable, Unfavorable, or Favorable Subject to Conditions should also be summarized. The investigating examiner should conclude with an overall recommendation.

FINANCIAL HISTORY AND CONDITION

Generally, proposed financial institutions have no financial history to serve as a basis for determining qualification for deposit insurance. Therefore, the primary areas of consideration under this factor are the reasonableness of asset and liability projections and composition in relation to the proposed market, the level of investment in fixed assets, the ability of insiders to provide financial support to the institution, terms upon which transactions with insiders are granted, and whether adequate disclosure of insider transactions has been made.

- Assess the applicant's projected asset and deposit mix for reasonableness and as compared to the proposed business plan and an appropriate peer group.

- Using the financial statements contained in the business plan, construct the projected balance sheet for the first three years of operation. Discuss with the applicant, significant differences between the proposal's projections and yours. If necessary, the applicant should revise the projections. Projections that are not reasonable or unsupportable should lead to an unfavorable finding.

- Total direct and indirect fixed asset investment (including leases) should be reasonable in relation to projected earnings capacity and capital levels. A brief review should determine if the figures provided by the proponents are reasonable with regard to anticipated need and cost. Fixed asset schedules from other newly formed institutions can be used as a point of reference. Compliance with State law should be considered since most states impose a statutory limit on fixed asset investment relative to either capital or total assets.

- When real estate is to be purchased and a building constructed, the investigating examiner should review the cost of the land, estimated construction costs, the identity of the seller and general contractor, completeness of the title policy, and terms of any financing obtained. Part 323 of the FDIC Rules and Regulations is applicable to the purchase of real property, including leaseholds, and a qualifying appraisal is usually required. For leased premises, the terms and reasonableness of the lease should be discussed. Applicants are generally cautioned against purchasing any fixed assets or entering into any non-cancelable construction contracts, lease or other binding arrangements related to the proposal unless and until the FDIC approves the application.

- Any time assets are purchased or leased from insiders or when insiders are involved in providing contracted services, the transactions should be supported by an independent appraisal or competitive bid process. The organizers must substantiate that any transaction with an insider is made on substantially the same terms as those prevailing for comparable transactions with non-insiders and do not involve more than a normal degree of risk. Such transactions must be intended for the benefit of the institution and not entered into as an accommodation to the insider. All such transactions must also be approved in advance by a majority of the incorporators and fully disclosed to all proposed directors and shareholders.

- Organizers, including an affiliated holding company, must demonstrate the ability to provide on-going financial support. Analyzing the ability of the proponents to raise additional capital is important since new banks (operating at a loss) will often experience difficulty in attracting capital from outside sources. Analysis of this will be primarily dependent upon the financial statements submitted by the proponents or Uniform Bank Holding Company Reports when a holding company is involved. If reasonable, consideration should be given to the ability of the proponents to raise additional funds through the capital markets or the local community.

- Assess compliance with the security requirements of Part 326 of the FDIC Rules and Regulations.

- Assess compliance with the National Environmental Policy Act of 1969. The FDIC is responsible for making a determination whether certain decisions made by it constitute "major Federal actions significantly affecting the quality of the human environment" under this Act. Granting of approval for deposit insurance seldom constitutes a significant action requiring an environmental impact statement, but a threshold determination as to the probable effect upon the human environment must be made under the statute. The environmental factors to be considered include: (a) compliance with local zoning laws; (b) location; (c) traffic patterns including the adequacy of roads, parking places and traffic congestion; and (d) any favorable impact such as possible decrease in pollution or fuel consumption.

Compliance with zoning laws is generally the key determining factor for the FDIC since courts have ruled that compliance is an assurance that such environmental effects will be no greater than demanded by the residents acting through their elected representatives.

- Section 106 of the National Historic Preservation Act (NHPA) requires that a Federal agency having authority to license any undertaking shall, prior to issuing any license, take into account the effect of the undertaking on any district, site, building, structure, or object that is included in, or eligible for inclusion in, the National Register of Historic Places (National Register).

  At the time of filing an application for Federal deposit insurance, the proponents should have already been in contact with the appropriate State Historic Preservation Officer (SHPO) regarding whether the proposed main office (as well as any branch office) site is an historic property - that is, listed in, or eligible for listing in, the National Register. The FDIC generally relies on the SHPO's opinion regarding whether the proposed office site is historic and, if it is, what effect the Federal deposit insurance proposal will have on the property. If it is determined that the proposal will have an adverse effect on an historic property, then the FDIC (usually the RO staff) must work with the proponents, the SHPO, other consulting parties, and, in some cases, the Advisory Council, to develop and evaluate alternatives or modifications to the undertaking that could avoid, minimize, or mitigate the adverse effect.

  It is very important that the examiner advise the proponents that absolutely no site preparation work should be initiated until SHPO has been consulted and a determination has been made regarding whether the proposed office site is historic and, if it is, what effect the proposal will have on the historic property.

  For Federal deposit insurance applications that involve establishment of a new national bank or thrift, for which a charter application has been filed with the OCC or OTS, the FDIC may not have to determine whether the proposed office site is historic and how the proposal will affect an historic property, if the primary Federal regulator has assumed this responsibility. The examiner or the Case Manager should contact their counterparts at the Federal chartering authority in order to ascertain which agency will be responsible for complying with the requirements of the NHPA.

Conclude with a "Favorable", Unfavorable" or "Favorable Subjected to Conditions" statement.

ADEQUACY OF THE CAPITAL STRUCTURE

Normally, initial capital of a proposed institution should be sufficient to provide a Tier 1 capital to assets leverage ratio of at least 8% throughout the first three years of operation. In addition, the institution must maintain an adequate allowance for loan and lease losses. This means that the proposed institution **can not** inject the capital as it grows. Opening day capital must be sufficient to maintain at least an 8% Tier 1 Leverage ratio based on the three-year projections. Exceptions apply to new institutions formed by an eligible holding company (See section 303.22).

The adequacy of capital is closely related to the new bank's risk appetite, its deposit volume, fixed assets, and anticipated growth. Deposit projections made by the applicant must be fully supported and documented. Projections should be based on identifiable patterns in the target market. Special purpose institutions (such as credit card banks) should provide initial capital commensurate with the type of business to be conducted and the potential for growth of that business. Additional discussion of unique capital proposals such as contribution of in-kind capital as part of initial capitalization, and capital adequacy of new institutions organized to facilitate and carry on an existing business line is presented below. Examiners are reminded that these types of proposals and others presenting a higher risk profile may warrant a leverage capital ratio greater than 8%.

- Using capital data contained in the application, construct the Proposed Capital Structure table.
    - “Minimum Statutory Requirements” line should include any minimum capital required by the chartering agency.
    - “Amount indicated on Application” should reflect capital allocations shown in the application excluding any adjustments made by the examiner. All components of this line should be based on applicant’s projections.
    - “Revised Proposal” line is used only when the organizers present a revised capital proposal.
    - “Recommendation of Examiner” line may or may not be the same as applicant’s proposal; however, it must agree with final projections used throughout the report.
    - “Retained Earnings” column is the cumulative 3-year net income.
    - “Third Year Average Assets” column comes from the business plan projections and examiner’s estimates.

- The examiner should assess the deposit forecasts and make any necessary adjustments. The proponents should have a good feel for the deposit potential of their market. However, if growth projections are inconsistent with the size of the market, with current economic conditions, or with the overall business plan, adjustments should be made along with the examiner’s rationale. Examiners could consult any number of sources including the Uniform Bank Performance Report and DIR’s Statistics on Depository Institutions, for supporting data.

- If available, review the stock offering circular, stock solicitation material and related documents. The Washington Office’s Registration, Disclosure and Securities Operations Unit normally reviews both private and public offering materials and is available for assistance. All stock of the same class should be offered at the same price, and have the same voting rights. Arrangements that give insiders greater rights or more favorable pricing are not acceptable. A price disparity may allow organizers to gain control disproportionate to their investment and may promote excessive risk taking. In addition, such arrangements are analogous to compensating or paying a fee to organizers solely for their efforts in establishing the institution. Stock price disparities may also be used to hide excessive reimbursement to organizers. Another example of price disparity is offering stock warrants to investors who purchase a large volume of shares in the stock offering. Closely assess the appropriateness of stock offerings that award incorporators warrants to acquire additional shares. Stock warrants to insiders or investors that are beyond the guidance contained under the management factor of the SOP are not acceptable.

- If the institution is being established as a wholly owned subsidiary of an eligible holding company (as defined in part 303, subpart B) consider the financial resources of the parent organization in assessing the adequacy of the initial capital. In some cases, DSC may find favorably with respect to the capital factor when initial capital is sufficient to provide a Tier 1 leverage capital ratio of at least 8% at the end of the first year of operation, based on a realistic business plan, or initial capital meets the $2 million minimum standard set in the SOP, or any minimum standards established by the chartering authority, whichever is greater. The holding company must also provide a written commitment to maintain the Tier 1 leverage ratio at no less than 8% throughout the first three years of operation.

- Stock financing arrangements by proposed officers, directors, and 10% shareholders should be carefully reviewed. Financing arrangements are only acceptable if the investor can clearly demonstrate the ability to service the debt without undue reliance on dividends or other forms of compensation from the new institution. Normally the direct or indirect financing of 75% or more of the purchase price by an individual or the financing of 50% of the purchase price by all insiders in the aggregate will require supporting justification. Ensure that the applicant bank did not agree to maintain compensating balances with the lender in order to procure financing. Also, the proponents should be made aware that such loans can not be refinanced by the applicant bank.

- Watch for voting trust arrangements. Generally, these agreements are discouraged in new banks because of control issues (insiders gaining control disproportionate to their investment), but are not prohibited per se. Review the agreements for any unfavorable features, such as control issues, or hampering sale of additional stock. Examiners should consult with the case manager and/or a regional attorney to obtain additional guidance.

- The stock subscription list should be reviewed to ensure that control issues have been identified and resolved, and to determine the likelihood of a successful offering.

- Cash dividends during the first three years of operation should only be paid from cumulative net operating income and only after an appropriate allowance for loan and lease loss has been established and overall capital is adequate.

Unique capital proposals and capital for institutions organized to facilitate and carry on existing business lines.

The SOP is silent on the issue of organizing an institution with in-kind capital. Likewise, it does not address how the FDIC will assess proposals that entail a new institution organized to facilitate and carry on an existing business line. Nonetheless, the FDIC has been presented with applications containing both proposals. In-kind capital contributions have been in several forms including, but not limited to, real estate, fixed assets, loans, leases, and mortgage banking operations. Existing business lines proposed in prior applications included equipment lease financing, credit card operations, and mortgage banking operations. These proposals present unique risks deserving close scrutiny. Examiners should also evaluate possible 23A and 23B implications and limitation from Part 325 capital calculation. The following points address prior instances where in-kind capital and existing business lines were part of applications.

- In applications where the FDIC will not be the primary regulator, the examiner should participate in the primary regulator's investigation.

- When loans or leases are proposed to be contributed as initial capital, the examiner should conduct a review of the loans and leases comparable to that completed during a traditional safety and soundness examination in order to assess asset quality. The sample should be large enough to assess loan or lease mix, underwriting standards, valuation and residual values, and proper documentation. Valuations should be supported by proper market value analysis such as discounted cash flow analysis. The examiner should strive to obtain an independent physical inspection of the assets in the sample. In lieu of a physical inspection, the examiner may rely on an independent audit confirmation of the assets in question.

- Tangible assets such as real estate and fixed assets contributed as part of initial capital present two main questions: valuation and insider involvement.

    - In the case of real estate, organizers must have an independent appraisal performed by certified or licensed appraisers (see Part 323 of the FDIC Rules and Regulations). The appraisal should conform to generally accepted appraisal standards and arrive at a fair market value. Fixed asset values should be supported by independent market valuations performed by experienced appraisers. Review the appropriateness of scheduled depreciation. A longer than normal depreciation period could overstate book value and earnings. Total fixed asset investment must also conform to State limitations.

    - Transactions involving organizers, directors, officers, or principal shareholders (insiders) should be closely reviewed to determine fairness and proper disclosure. For example, a contribution of bank premises under construction by an insider or related interest should not contain unfavorable features. Proper disclosure to other shareholders, written construction contracts based on a competitive bid process, and independent appraisals should be required.

    - In-kind capital contributions may be proposed in the form of the market value of an existing business such as a mortgage company. Proposals such as this should be fully supported by at least two appraisals of the company's fair market value. Examiners should ensure that the appraisals are independent, current (within 6 months) and based on recognized valuation methods.

Proposals for new institutions organized to facilitate and carry on an existing business line also provide special capital considerations. Contribution of the business as initial capital may or may not be a part of the proposal; however, recent cases have contained both. These include:

- An institution organized with a leasing company to provide equipment lease financing.
- An institution partly capitalized with seasoned auto loans, specializing in direct purchase of dealer-originated auto loans and from an affiliate credit finance company.
- An institution formed by an energy company, capitalized with in-kind contribution of consumer loans and will specialize in providing loans for energy-related home improvements.
- An institution formed by a farm equipment retailer to acquire its credit card receivables and continue origination and servicing company branded credit cards.
- An institution formed by a company that provides capital lease financing for small to medium sized businesses over the Internet. New bank to provide retail funding and lease financing.

Examiners should look to the prior performance of the business and the character of the management continuing on with the institution. The management group should be sufficient to satisfy the management factor. The business line should be financial in nature, and not expose the institution to undue risk. The business plan should be reasonable and the projections should be well supported by historical performance and sound analysis. Examiners should use all available information such as Dun & Bradstreet reports, SEC filings, independent audit reports, public recordings, and credit rating agency reports to verify data. If deemed necessary, an on-site visit to review the existing business' operations should be conducted.

When assets are proposed to be contributed as capital or purchased from organizing group or affiliate, values should be supported by independent appraisals. Asset quality should be assessed the same way credit reviews are conducted, i.e. sample by risk, volume, delinquency, underwriting, etc (refer to ED risk focus modules). If the business has not had a recent audit, or credit or collateral documentation is not complete, an independent verification or inspection of assets should be obtained.

Conclude with a "Favorable", Unfavorable" or "Favorable Subjected to Conditions" statement.

EARNINGS PROSPECTS

Construct the "Estimated Income and Expense", and the "Estimated Average Deposits and Average Earning Assets" schedules using the financial statements contained in the Business Plan.

The examiner should determine whether the proposed bank is likely to be profitable within a reasonable period of time, usually three years. The main concern is whether the applicant's projections are realistic and supportable. The earnings should be sufficient to provide an adequate profit. When projections are not reasonable or deficiencies are material, revisions should be requested from the proponents. Examiner-derived estimates can be incorporated into the report; however, comments should clearly address the differences between the examiner's estimates and those of the organizers. Common shortcomings in projections include, but are not limited to:

- Unreasonable earning asset yields
- Unreasonable interest expense factors
- Overstated earnings factors (NIM, ROAA)
- Underestimating data processing costs
- Understated overhead costs
- Inadequate loan loss provisions
- Failure to write-off organizational expenses during the first year of operations

Items to be considered include projected loan growth relative to other new banks and that of competing institutions, likely structure of the deposit base, investment objectives, estimated asset and liability mix, reasonable noninterest income, and probable provision expense. Consideration should also be given to ensure consistency with other projections such as deposit growth and personnel expense. Projections and assumptions should be consistent with the overall business plan.

The UBPR generally provides sufficient data to assess the line items contained in the projections. Financial data from recently formed institutions should prove to be the most beneficial. Peer data is also available for all new banks established within three years and under $50 million in assets. Peer data for established community banks also warrants review especially when serving the same general area or market niche. Examiners should be aware that using peer ratios of established banks might result in some differences since new banks generally have a larger percentage of assets funded by capital. This results in higher margins during the early years. Examiner's selection and use of Peer data should be fully discussed and supported.

Loan loss provisions should be closely reviewed. Niche or special purpose banks that engage in higher risk lending, such as subprime loans and high loan to value lending, should fully support their loan loss reserve methodology, estimated losses and provisions. The methodology should account for replenishing the reserve to an adequate level after charge-offs.

Conclude with a "Favorable", Unfavorable" or "Favorable Subjected to Conditions" statement.

GENERAL CHARACTER OF MANAGEMENT

Management is often the most important factor. Although the SOP indicates that evidence should support a management rating tantamount to a "2" rating or better under the Uniform Bank Rating System, this is somewhat difficult to determine without an operating record as a management team. As a result, the assessment of management should center on an evaluation of the individual's background in relation to their proposed duties and responsibilities. Consideration should be given to the following:

- Financial institution experience
- Other business experience
- Personal and professional financial responsibility
- Reputation for honesty and integrity; and
- Familiarity with the economy, banking needs, and general character of the community in which the bank will operate.

Examiners should provide an overall assessment of the management team and board of directors on the General Character of Management page. Address each proposed officers and directors' qualification on the biographical section of the report. Comments should also include any prior experience that may reflect positively or negatively on the individual, any serious business failures or compromising of debts and length of residence in the community or trade area. All entities in which the proposed officer or director has a financial or other significant interest should also be identified.

The examiner should normally conduct personal interviews with all of the organizers, senior management, and directors. Any pertinent information derived should be included with the individual's biographical information. Current and former employers may also be contacted unless a prospective officer raises a valid objection (current employers may not know officer is seeking other employment and contacting them may cause the officer harm). Prior employer's concerns over privacy laws, however, may prevent them from divulging much information. At a minimum, a former employer should be able to tell you the individual's title, and whether the individual is eligible for rehire.

The biographical and financial information (FDIC 3064-0006, Interagency Biographical Financial Report) submitted as part of the application serves as the primary tool in assessing financial standing and responsibility. All questions should be answered and fully supported. These forms should disclose any prior bankruptcies or the compromise of any debt. The forms should also include information on contingent liabilities, civil litigation, prior criminal convictions, administrative proceedings, and other matters involving a breach of trust.

A section 19 application will be necessary if an employee, officer, director, controlling shareholder or Institution Affiliated Party has been convicted of a criminal offense involving dishonesty or breach of trust, money laundering or has entered into a pretrial diversion in connection with a prosecution of such an offense. The Applicant must obtain the FDIC's written consent under section 19 of the FDI Act before any such person may serve in one or more of those capacities.

Significant assets in the form of closely held corporations, partnerships, or sole proprietorships should be supported by detailed financial statements on these entities. Net equity positions should be reviewed to determine the reasonableness of the carrying value and the potential impact of related debt. In addition, if an individual's financial standing is largely dependent upon appreciated value of real estate or closely held companies, the basis for valuation of the assets should be sought.

For state nonmember charters, background checks are normally requested by the Regional Office and if necessary and available, forwarded to field personnel for review during preparation of the investigation report. Such information provides an independent, third party check that can be used to verify the applicant's stated financial position, credit history, and confirm the absence of public filings and judgements. Liens, lawsuits, wage assignments, defaults, and public filings such as bankruptcies and judgements will be shown. The major credit reporting agencies also provide an additional service that automatically alerts the requester to possible false social security numbers and high risk addresses such as post office boxes, and multiple business addresses.

If necessary, additional information can be requested through the Regional Office, including Nexis/Lexis. These systems feature searches that can be conducted by key words or names. Nexis provides access to numerous news service publications and Lexis allows for a search of legal databases containing final case law from Federal and State courts. Finalized civil and criminal proceedings as well as bankruptcy cases are listed. Also, a background check can include a search of State Corporation Commission records, Dun & Bradstreet, and county and other State records. The Federal Reserve also maintains information on international and foreign companies.

Be cautious of bank ownership that is restricted to a single individual or entity, or a small group of individuals who lack broad-based financial strength. Also identify any proposed directors that have little or no prior financial institution experience, minimal financial interest in the proposal, or are poorly equipped to contribute to policy formation or adequate supervision. Determine whether senior officers lack necessary experience, or have not served in senior management positions, which provide adequate insight into proposed roles. The SOP requires at least a five-member board of directors. At a minimum, an even mix of directors with and without banking experience is preferred. The proposed board should provide for officer/director continuing education, and a management succession plan.

The SOP requires that the proposed full-time chief executive officer be made known to the FDIC. If the proposed CEO has not served in a similar capacity, it is important to determine whether the individual has the technical competence to fulfill the responsibilities of the position. Further, the proposed CEO's expertise and experience should correlate with the proposed business plan. Knowledge of such areas as lending and investments, interest rate risk management, internal controls, and bank regulations should be considered.

The proposed operating policies and strategic plan should be reviewed in assessing management. Inadequate policies may be an indication of a weak management team. Written investment, loan, funds management, and liquidity policies should be reviewed and comments should be made regarding their soundness and acceptability. The CEO is also expected to be a qualified and experienced lending officer. If not, an explanation should be provided and the name of the proposed chief lending officer should be furnished.

While conditional approval can be granted prior to the selection of a chief executive officer or primary lender, this is allowable in only very limited circumstances. An example is where the new bank will be owned by an "eligible holding company" as defined in section 303.22 of the FDIC's regulations. Ultimately, prior to opening, these individuals should be identified and their abilities assessed. Any changes in the directorate, active management, or 10% shareholders prior to the bank's opening must also be disclosed to the FDIC in writing.

When it appears that an unfavorable ruling will be made regarding an individual's qualifications or fitness to serve, the examiner should consult with the responsible Case Manager. The examiner should thoroughly support any negative assessment by:

- Conducting an adequate investigation into the individual's qualifications;
- With the concurrence of the Case Manager, give the individual the chance in an interview or letter to respond to any objections raised;
- Checking any files to which the FDIC has access before making an adverse determination regarding the individual;
- To the extent possible, attempting to locate documentary evidence rather than relying on oral opinions.

All information relied upon should be maintained. When information is obtained from an outside source, every effort should be made to obtain such information in writing and verify through a secondary source.

Organizational expenses should be reviewed for reasonableness. Prudent management would not commit a bank to excessive expenses, the existence of which may be indicative of a management deficiency, even if the fees or costs were approved by formal action of the incorporating shareholders. This applies to all costs, organizational expenses, and legal fees. Identify and assess the source of funding; start-up cash, personal or bank loans.

Review expenses for professional or other services rendered by insiders for any indication of self-dealing to the detriment of the institution or its shareholders. The FDIC expects full disclosure to all directors and shareholders of any arrangement with an insider.

Employment agreements should be reviewed to ensure that the contracts limit severance pay to a duration of one year. Under Part 359 - Golden Parachutes, severance payments are limited to one year in the case of troubled institutions. While not applicable to non-troubled institutions, the one-year guideline should be used as a benchmark. Section 359.1(f)(2)(v) states payments pursuant to a nondiscriminatory severance plan should not exceed the base compensation during the twelve months immediately preceding termination. Employment contracts that contain severance payments exceeding one year of compensation should be assessed for appropriateness and supported by extraordinary factors.

Stock Options and Warrants

Organizers/incorporators (incorporators) may propose establishing stock benefit plans, including stock options, stock warrants, and similar stock based compensation plans. Participants may include officers as well as directors, although the FDIC anticipates that such plans will focus primarily on active officers. Stock benefit plans may also be established to compensate incorporators who place funds at risk to finance the organization or who provide professional or other services during the organizational phase. Stock option/warrant plans are also found in both private and public stock offering material.

Management stability is generally an essential element for the ultimate success of a de novo institution. Therefore, the structure of the stock benefit plans, whether available to active management or incorporators, should encourage the continued involvement of the participants and serve as an incentive for the successful operation of the institution. Satisfactory management should not commit the bank, directly or indirectly, to plans that result in excessive compensation to insiders, place undue incentives on short-term performance (at the potential expense of long-term safety and soundness), or present other unfavorable features.

The SOP describes features that are required in order for stock benefit plans to be deemed acceptable, and sets forth certain unacceptable features. In considering whether stock benefit plans are acceptable, each case should be reviewed independently. Stock benefit plans involving only a nominal percentage of ownership in the proposed institution need not be subjected to in-depth scrutiny.

Guidance provided in the SOP distinguishes between two types of award plans:

1. Options/warrants granted to directors and active management to reward future performance. (Type 1)
2. Options/warrants granted to incorporators as compensation for financial risk borne during the organizational phases or as compensation for professional or other services rendered in conjunction with the organization. (Type 2)

Type 1 plans for active directors and officers must include the following provisions and should be reviewed as part of the total compensation package:

- disclosure,
- duration limits (maximum 10 years),
- vesting requirements (generally, a minimum of three years, in equal amounts),
- transferability restrictions (not transferable),
- exercise price requirements (not less than fair market value at time of grant),
- rights upon termination (expire within a reasonable time), and
- an "exercise or forfeiture" clause (in the event capital falls below regulatory minimums).

Examiners should refer to FASB Statement No. 123, “Accounting for Stock-based Compensation”, which provides guidance on calculating fair market value of stock options.

Type 2 plans do not require vesting, transferability restrictions, or continued association with the institution, but would require equal restrictions regarding disclosure, duration limits, strike price requirements, and an "exercise or forfeiture" clause.

Type 2 plans for incorporators not continuing as directors or officers should serve as compensation for services rendered or "seed" money placed at risk. Typically, it is the latter since professional services (accounting, legal, etc.) are normally paid for in cash. Incorporators often receive a proportional amount of stock after the bank is established as "repayment" of their initial financial contribution. In addition to stock acquired in this manner, incorporators may also receive some proportional volume of stock options/warrants as compensation for financial risk borne during the organizational phase of the bank.

The following summarizes the plan types:

Type 1 Plans

- **Directors and officers who are not incorporators** may participate in prospective management incentive plans. Such plans should be reviewed as part of the total compensation package offered to the individuals involved.

- **Incorporators who are also directors and officers** are allowed to receive a maximum of one option/warrant for each share of stock for which they subscribed in the initial offering. An incorporator who will also be a senior executive officer may receive additional options as part of a prospective management incentive plan. The volume of additional options/warrants proposed beyond that based on stock subscribed should be reviewed for reasonableness on a case-by-case basis, giving consideration to the individual's financial commitment, time, expertise, and continuing involvement in the management of the proposed institution.

Type 2 Plans

- **Incorporators who are not continuing as directors or officers** are allowed to receive a maximum of one option/warrant per share received for "repayment" of seed money and do not qualify for options/warrants based on additional stock subscribed beyond that which is a return of seed money.

- **Incorporators who are not continuing as directors or officers** who agree to accept shares of bank stock as payment for professional services (which otherwise would have been purchased from non-insiders) are also allowed to receive a maximum of one option/warrant for each share received as payment for professional services. The value of such professional services should be supported by proper documentation.

RED FLAGS. Stock appreciation rights, phantom stock, and other similar plans that include a cash payment to the recipient based directly on the market value of the depository institution's stock are unacceptable. These plans have the potential of removing an undetermined amount of cash from the bank's capital accounts, in contrast to option plans that provide an infusion. Under a cash-less exercise of options plan, a broker lends funds to exercise the options and immediately sells the shares to repay the loan. This discourages insiders from retaining the stock and having an on-going stake in the bank. Further, the bank should not be assuming responsibility for paying any of the taxes associated with exercise of the options. These types of options are objectionable in the formative years of a new bank when there is often a need to preserve capital during a period of rapid growth and operating losses.

If the proposal involves the formation of a de novo holding company and a stock benefit plan is being proposed at the holding company level, that plan will be reviewed by the FDIC in the same manner as a plan involving stock issued by the proposed institution. Many de novo banks are organized as subsidiaries of a bank holding company whose only substantive function is to own the stock of the proposed bank. If the FDIC did not assert its right to set standards on stock benefit plans sponsored by de novo shell holding companies organized to sponsor new banks, the FDIC would in essence be giving up its ability to review stock benefit plans in new banks since the agency's requirements could easily be avoided by organizing a bank holding company.

The FDIC does not assert the right to regulate stock benefit plans for *operating* holding companies or holding companies with other material businesses. Additionally, the above criteria relating to stock benefit plans should not be applied to operating institutions but rather only to de novo institutions.

Finally, the following documents provide good guidance and resource on the subject of stock options; Fairmark Press Tax Guide for Investors http://www.fairmark.com/execcomp the Foundation for Enterprise Development http://www.fed.org and the National Center for Employee Ownership http://www.nceo.org .

Fidelity bond coverage and excess employee dishonesty bond coverage should equal or exceed $1 million if the primary blanket bond is less. It is helpful if a binder or commitment letter is obtained; however, approval may be conditioned upon acquisition of adequate coverage prior to opening.

Applicants are expected to commit to obtain an opinion audit by an independent public accountant annually for at least the first three years. The requirement for an external audit is a standard condition of the FDI Order granting deposit insurance. When the applicant is owned by a holding company, a consolidated audit of the holding company will generally suffice.

The proposed management structure should be reviewed to ensure that no management interlocks exist as defined in Part 348 of the FDIC Rules and Regulations.

Conclude with a “Favorable”, Unfavorable” or “Favorable Subjected to Conditions” statement.

RISK TO THE FUNDS

Assess the proposed institution’s business plan, particularly addressing any unsound activities, practices or other issues. Any high-risk activity to establish market share, attain growth, or provide for profitable operations should be discussed. Business plans that are not commensurate with management's capabilities, should be addressed here as well. Operating plans that rely on high risk lending, niche marketing or significant funding from sources other than core deposits or that diverge from conventional banking will require substantial documentation as to the suitability of the proposed activities. Extensive documentation will also be necessary when economic conditions are marginal. The business plan should demonstrate a reasonable ability to achieve sustainable market share, generate earnings, and attract and maintain adequate capital.

Industrial Loan Companies (ILC) and Special Purpose Banks (SPB)

Industrial loan companies and special purpose banks are unique in that neither are considered “banks” under the Bank Holding Company Act. As such, parent and affiliated entities are not regulated by Federal or State supervisory agencies.

Currently, states offering the ILC charter include California, Colorado, and Utah. The charters typically allow institutions to be organized and owned by commercial enterprises, including retailers and manufacturers. Special purpose banks can include credit card issuers organized under the Competitive Equality in Banking Act (CEBA) and trust companies. Because these charters allow institutions to export rates and terms, the formats can provide for a single platform from which to operate in all 50 states. The charters also provide access to the payment system and additional sources of funding.

However, the ILC charter also presents a potentially significant limiting factor that emanates from the stated intention of serving the working class within an institution’s defined market area. To encourage ILC’s to maintain this focus, institutions are prohibited from accepting demand deposits if total assets exceed $100 million, generally. Although not restricted by regulation, in practice, special purpose institutions might limit their deposit activities.

In general, ILC’s and special purpose banks limit their deposit activities to money center operations or brokered deposits; retail accounts might be limited to time deposits and accounts securing outstanding credit lines. In certain operations, including credit card and trust operations, deposit activities might be limited to a single account from the parent organization – a $500,000 deposit that, under the FDIC’s General Counsel’s Opinion, qualifies as “being in the business of accepting deposits.”

Regardless of the form of charter, ILC’s and special purpose charters present unique characteristics that must be fully considered during the investigation. As noted, these include the absence of a regulatory regime outside the insured entity and unique limitations or practical restraints on deposit activities. When coupled with the broad powers conferred, examiners must be particularly cautious in reviewing management competencies, corporate structures and relationships, and the underlying business plans.

Conclude with a “Favorable”, Unfavorable” or “Favorable Subjected to Conditions” statement.

CONVENIENCE AND NEEDS OF THE COMMUNITY TO BE SERVED

Discussion of this factor should begin with a description of the primary trade area, including its location and population. A drive through the neighborhood surrounding the proposed location may be beneficial in determining the visibility, proximity to potential customers, accessibility, and immediate competition. A general discussion of land development in the immediate trade area may also be pertinent. Any differences between the examiner's perception of the trade area and that of the proponents should be discussed.

Also provide a general discussion of the relevant economic conditions, primary industries, and employers. Economic data should be limited to relevant information and relate a general understanding of the vitality and composition of the local economy. Population figures are particularly relevant (especially growth rates) and data establishing trends and projections should be provided if available. Several sources of economic data that provide insight into the economic conditions of the State, county or MSA are available. These include the Federal Reserve Quarterly Economic Review, the FDIC's statistical publications and databases, and other economic periodicals published by creditable sources.

Detail competition, both bank and non-bank, if applicable. Usually this is provided by the organizers, but driving through the surrounding area or consulting data that provides a summary of branches can be beneficial.

Finally, consider the services to be offered by the applicant and how they differ from those presently available including physical convenience. Consult with the responsible Case Manager to determine CRA requirements.

Conclude with a "Favorable", Unfavorable" or "Favorable Subjected to Conditions" statement.

CONSISTENCY OF CORPORATE POWERS

This factor was originally intended to eliminate institutions with broad-based charters that permitted the applicant to engage in unusual or risky forms of business. However, most states have issued statutes that preclude granting any powers inconsistent with the FDI Act. If any doubts exist, the Legal Division should be contacted. Pursuant to Section 24 of the FDI Act, no insured bank may engage in any activity that is not permissible for a national bank unless the FDIC has determined that the activity would not pose a significant risk to the fund and the institution is in compliance with applicable capital regulations. Applicants are also prohibited from exercising trust powers without the written approval of the FDIC; most States also require written approval.

Conclude with a "Favorable", Unfavorable" or "Favorable Subjected to Conditions" statement.

OTHER MATTERS

Currently, it is the responsibility of the examiner to evaluate the applicant's Articles of Incorporation and Corporate Bylaws. Of particular importance is a review of the director indemnification, to ensure that the agreements are not overly liberal. Liberal clauses, which include protection against gross negligence and fraud, should be closely scrutinized. The FDIC has taken the position that such broad agreements are not acceptable. With case manager concurrence, consult with a Regional Office attorney.

Review the offering circular when securities are to be offered to the public. The goal is to ensure that de novo financial institutions comply with the anti-fraud provisions of the Federal securities laws that require full and adequate disclosure. Flawed disclosures may expose the institution to litigation and serious capital loss. Refer to the FDIC Statement of Policy Regarding Use of Offering Circulars in Connection with Public Distribution of Bank Securities. The Washington Office's Registration, Disclosure and Securities Operations Unit normally reviews both private and public offering materials and is available for assistance.

The review should insure that the circular provides sufficient disclosure of all material facts. SEC Rule I Ob-5 makes it unlawful to employ any device, scheme, or artifice to defraud, to make any untrue statement of a material fact or to omit a material fact in connection with an offering of any security.

In most cases, when securities are offered to the public an attorney specializing in securities law is employed. This usually ensures that the basic disclosures are made.

Offering circulars may also disclose proposed stock option plans, employment agreements, and issuance of stock warrants that should be closely reviewed.

Officials of area depository institutions should be contacted during the investigation and given an opportunity to express their opinions regarding the application. Opinions of other business and community leaders may also prove beneficial. Any formal objections should be investigated and appropriate comments set forth in the report. Sole reliance upon the opinions of competitors should be avoided and impartial conclusions should be reached. A sample Community/Competition Interview form is found in Appendix A.

For applicant's proposing to deliver services over electronic channels, such as the Internet or wireless devices, the examiner should assess the information systems infrastructure, policies and security. An information systems subject matter expert should be required to participate in the investigation, depending on the complexity of the proposed delivery channel.

INVESTIGATION REPORT SUMMARY

Detail the applicant's designated contact person, including title, mailing address, email address, fax and phone number.

APPENDIX A

PROPONENTS/ORGANIZERS MEETING AGENDA SAMPLE

AND

MANAGEMENT/DIRECTOR INTERVIEW FORM

AND

COMMUNITY/COMPETITION INTERVIEW FORM

ANYWHERE BANK (PROPOSED)
MEETING WITH PROPONENTS
MAY 15, 2002

AGENDA

I. Opening Remarks

A. Acquaint Directors With Their Responsibilities and Liabilities
B. Apprise Organizers of Regulatory Involvement and Concerns

II. Directors Responsibilities

A. Sound, Independent Business Judgment
a. Candid, Open Discussion of Bank Business
b. Documentation of Decisions and Expression of Dissent Within the Board Minutes
c. Confidentiality and Integrity
B. Informed of All Facets of Bank, Operations, Regulatory Environment, Competitive Environment
a. Management, Reports, UBPRs
b. Report of Examination and Visitation
c. Internal and External Audit Reports
d. Trade Publications, Seminars, Meetings
C. Direct the Bank in a Prudent Manner
a. Establish goals, policies and strategies
b. Hire Suitable Management to Implement Goals
c. Monitor Management's Compliance with Board Directives
d. Discipline or Dismiss Management as Necessary
D. Build Business for the Bank
E. Ethical Conduct and Policy
a. Regulation O
b. Represent the Bank in Your Community

III. Director Liability

A. Can be Personally Liable for Losses Arising From
a. Legal lending Limit Violations
b. Insider Transactions
c. Bank Failures
B. Civil Money Penalties

C. Civil Suites (Shareholders) for Breaches of

a. Duty of Care
b. Duty of Knowledge
aa. Willful Ignorance is not a Defense Against Liability for Negligence
D. Board Minutes are Legal Record and Vehicle for Expressing Dissent

IV. Ongoing Regulatory Involvement

A. Pre-opening Visitation
B. New bank Visitation
C. Examinations
a. Safety and Soundness
b. IS/Other Specialty
c. Compliance

V. Why Banks Fail

A. Bad Loans – Poor underwriting, selection of risk, etc..
B. Poor Funds Management
C. Pursuit of Earnings with High-Risk Lending and Investment
D. Bad Management; Lack of Board Supervision

MANAGEMENT/DIRECTOR INTERVIEW FORM

Proposed Bank: ____

Location: ____

Director/Officer's Name: ______________________ Born:______________

FEDERAL DEPOSIT INSURANCE CORPORATION

FDIC 6510/10 (02-2002)

TABLE OF CONTENTS

This Report of Investigation consists of three major sections: Conclusions and Recommendations; Assessment; and Other Information. Investigating examiners should refer to the FDIC Statement of Policy on Applications for Deposit Insurance and Part 303 Subpart B – Deposit Insurance, of the Rules and Regulations for guidance. In considering applications for deposit insurance for a proposed depository institution, the FDIC must evaluate each application in relation to the factors prescribed in section 6 of the FDI Act. In general, the application will receive deposit insurance if all the statutory factors plus the considerations required by the National Historic Preservation Act and the National Environmental Policy Act of 1969 are resolved favorably.

CONCLUSIONS AND RECOMMENDATIONS

ASSESSMENT

OTHER

INVESTIGATION REPORT CONCLUSIONS AND RECOMMENDATIONS

Description of the Transaction

Applicant is a Federally chartered National Association in organization and as such, has no financial history. Proponent *originally* applied to the Office of the Comptroller of the Currency (OCC), its primary regulator, for permission to organize as a National Association on August 23, 2000.

However, due to the volume of substantive deficiencies in the Application, the OCC and Federal Deposit Insurance Corporation, requested additional supporting information during the Fall of 2000. In summation, these deficiencies emanated from the lack of supporting documentation regarding critical business model assumptions including but not limited to, customer acquisition rates as well as, deposit/loan growth composition and volumes. Other material weaknesses included the absence of profitability within the formative stages and independent market research supporting the feasibility of the nontraditional delivery channels proposed {non-branch kiosk}. Weaknesses emanating from the original proposal were never satisfactorily resolved and the Applicant withdrew the proposal on April 16, 2001.

Applicant, after substantive modifications to the business model and management team, resubmitted the proposal on October 9, 2001. The proposal calls for the Applicant to be part of a two-tier holding company structure. The United States (US) based holding company and initial-tier will be Holding Company-2, Incorporated, Anytown, Anystate. It will be a wholly owned subsidiary of Holding Company-1 plc, London, England, the top-tier holding company. Both holding companies are active and fully operational as of the date of application. The Applicant intends to file an application with the Federal Reserve Bank for the formation of a bank holding company.

The Applicant's business model espouses the use of multiple delivery channels (integrated model) to service its customer base including: a traditional retail bank site and supermarket branch network, as well as, a fully transactional web site and customer call center.

Financial History and Condition

The Applicant has provided reasonable support for asset and liability projections. Moreover, the proposed investment in fixed assets is within regulatory guidelines. Organizational expenses, while seemingly excessive, are fully covered by the initial level of capital. While the finding on this statutory factor is ***favorable***, one open supervisory item remains. This pertains to the submission of acceptable agreements covering the two proposed related party transactions. Said related party transactions should ensure that the resulting expenses to the insured institution are on terms prevailing in the market for similar services performed and/or due not result in any economic disadvantage or consequence. Related party transactions are summarized on page 8 of this Report.

Adequacy of the Capital Structure

The Applicant has provided for a strong initial capitalization base. Such capital is commensurate with the inherent risks of the business plan and sufficient for the projected growth of the institution. Year three proforma leverage ratio amounts to 8.82%. While the finding on this factor is ***favorable,*** it is contingent on the execution of the licensing (lease) agreements for the in store branches with Albertsons, Inc.

Future Earnings Prospects

The Applicant's business model suggests that it can attain adequate profitability. This profitability is based viable assumptions, which are comparable to various banking peer groups. The finding on this factor is ***favorable.***

General Character of Management

The general character of the proposed management team appears fundamentally sound and consistent with a rating of "2" under the Uniform Financial Institutions Rating System. Proposed management's aversion for risk is suggested by the concentration of less risky residential real estate during the formative years. While the finding on this factor is ***favorable***, one open supervisory item remains pending. To date, the Applicant has not submitted any stock benefit plans/agreements on its executive officers or directors. In light of exceptions taken during the prior proposal on the extent of option grants to certain executive officers, appropriate due diligence should be accorded prior to chartering.

Risk to the Fund

The proposal does not appear to present any undue risk to the insurance fund. This determination is based on the business model's strong initial capitalization base, seemingly conservative management team and investment philosophy, as well as, the viable and multi-faceted branch network strategy. The finding on this factor is ***favorable***.

Convenience and Needs of the Community

Given the extent of competition and available market share, the Applicant would not adversely impact competition or the delivery of financial services within the market area. The finding on this factor is ***favorable.***

Consistency of Corporate Powers

The finding on this factor is ***favorable***.

Recommendation

The Examiner has concluded that all seven statutory factors have been favorably resolved. However, three open supervisory items remain and should be satisfactorily addressed prior to chartering.

Examiner

FINANCIAL HISTORY AND CONDITION

Assess the reasonableness of asset and liability projections, and composition in relation to the proposed market. Assess the financial condition of parent company and its significant subsidiaries, if applicable. Asses the investment in fix assets. The applicant's aggregate direct and indirect fixed asset investment, including lease obligations, must be reasonable in relation to its projected earning capacity, capital, and other pertinent matters of consideration. Proposed fixed asset investments should conform to applicable State law limitations. Assess compliance with security requirements of Part 326 and with the National Historic Preservation Act. Evaluate any financial arrangement or transaction involving the applicant and an insider(s). The transaction should demonstrate that: (1) the proposed transaction is made on substantially the same terms as those prevailing at the time for comparable transactions with non-insiders, and does not involve more than normal risk or present other unfavorable features; and (2) the proposed transaction must be approved in advance by a majority of the incorporators. In addition, full disclosure of any arrangements with an insider must be made to all proposed directors and prospective shareholders. An insider is a person who is proposed to be a director, officer, or incorporator, a shareholder who directly or indirectly controls 10 percent or more of a class of the applicant's outstanding voting stock; or the associates or interest of any such person.

Summary and Findings

Proposed Retail Bank Site and Supermarket Branch Network

Retail Bank Site

Holding Company-2 (USA), the initial-tier holding company, has leased approximately 6,100 square feet of ground floor space in a five story commercial office building located at 2001 Palm Blvd., Anytown, Anystate. This site serves as the headquarters to Holding Company-2 and retail banking location of the proposed institution. It formerly served as a site for another financial institution and thus contains a vault and drop box area. The current building contains a certain amount of unoccupied space to accommodate the Applicant's future growth needs. An option on this additional space has been structured and provided for within the lease. The site is located within Metropolitan, AnyCounty, and on a heavily traveled boulevard adjacent to a major intrastate highway (I-95). The service area within the immediate vicinity, contains numerous commercial office buildings, service establishments, a shopping mall, financial institutions, as well as, nearby residential developments and condominiums.

Lease Agreement - Retail Bank Site

An office building lease was executed between 2001 Partners, L.C. and Holding Company-1 plc, London, England, the top-tier holding company. It contains an initial three-year lease provision, as well as, certain options. The tenant may extend subject lease for two (2) five (5) year periods under the same terms and conditions. In addition, tenant may also exercise an option for an additional 4,800 square feet within the building under similar terms and conditions. Rent is payable monthly and subject to annual increases based on the lesser of 5% or the percentage rise in the Consumer Price Index. The current rent within the lease includes real property taxes based on 1999 estimates. Any subsequent increases in said taxes are based on the tenant's pro rata share. No bankruptcy or dissolution clause was noted. A security deposit of $19,000 was collected.

Supermarket Branch Network

The organizers intend to operate a total of twelve supermarket branches during the first year of operation with Albertsons, Inc. as its host retailer. Eleven of the twelve branches were fully operational units that were closed July 2001 by Wachovia, NA, following its acquisition of Republic Security Bank, Anytown, Anystate. Albertsons will open the last supermarket branch (twelve) in November 2002. The proposed supermarket branch network will have seven locations in two counties, and will be located within heavily populated cities and townships.

Lease Agreement – Supermarket Branches

Albertsons and the Applicant have yet to complete and execute a contract on the twelve store locations proposed. Currently, Albertsons has submitted a proposal to the Applicant for all twelve stores. While no contract exists yet, proposed CEO Hamm has made assurances that Albertsons management has reserved said branches for the Bank and removed them from their branch availability list. All eleven existing banking facilities (one in process of construction) have been vacant since July 2001. Albertsons' legal counsel is presently preparing a License Agreement for execution, which may reportedly include the following terms and conditions.

Each License (lease) term will be for a minimum of five years, and include two five-year options. Initial license fees will be $30,500 annually ($2,541/mo.+ ATM fees of $250/mo) with modest increases for each successive option term. While the branches are essentially complete, any additional remodeling and/or modification related expenses will be borne by Applicant. All personal and real property taxes are the responsibility of the host, Albertsons.

Branch Network Host – Albertson's Inc. (NYSE: ABS)

Albertson's Inc, a national supermarket operator, is one of the world's largest food and drug retailers, with annual revenue of approximately $37 billion. The company is based in Boise, Idaho and operates more than 2,500 retail stores in 36 states. The company has a market capitalization of nearly $13 billion and holds a credit rating[1] for its outstanding senior notes and debentures of BBB+ (investment grade rating).

Recently Albertsons issued a press release (November 29, 2001) reaffirming the company's intent of preserving Anystate as a strategic market. This release was in response to securities analyst reports that the company had weak market share in many Anystate, cities and was potentially planning an exit out of the entire state. Such a decision would have serious repercussions for the Applicant's deposit assumptions considering the supermarket channel's relative importance to customer and deposit acquisition. The press release stated that the company was attempting to increase operating efficiencies by closing under-performing stores but will invest $125 million throughout the state for new store construction and remodeling. The capital expenditure represents a 25% increase over the prior year. Proposed CEO Hamm stated that company officials have not identified any of the eleven supermarket branch locations in subject proposal for closure.

Asset and Deposit Funding Projections

Deposit Growth Considerations – Prevailing Market Share, Competitive Factors & Recent Denovo Activity

Statistics delineating all FDIC insured institutions with offices located in Anycounty-1 and Anycounty-2, Anystate, suggests that there is intense competition for existing market share. Competition comes from three distinct sources; (1) retail branches within the both county's market, (2) Internet divisions of retail banks, and (3) banks/thrifts operating exclusively on the Internet.

As of June 30, 2001, there were a total of 450 banking offices located within Anycounty-1 with aggregate deposits of $22.4 billion, representing a nearly 5% year over year (YOY) deposit increase. For the same period, Anycounty-2 reflected 405 banking offices with aggregate deposits of $23.9 billion, or a 5.5%YOY increase.

The bulk of the market share within both counties is held by the branch offices of larger out of state regional and super-regional holding companies. Despite the extent of competition, the organizers believe that they can differentiate their proposed institution by delivering high quality service via multiple delivery channels. The Applicant will employ marketing strategies professing same and will stimulate growth through the strategic pricing of deposits and efficiency of service.

Denovo Institutions – Traditional

A review of denovo institutions, which have opened in Southeastern Anystate suggests that nearly all have experienced a certain degree of success in attracting funding. This has occurred despite intense competition by local and out of area institutions within those respective markets. Contributing factors to their success include all and/or a combination of the following: (1) favorable state/local economy and area demographics (2) an existing and vast deposit base (3) overall negative consumer perceptions about larger institutions and their inability to provide adequate service and (4) ability of local directors and executive officers to leverage their existing community contacts in order to attract new business.

[1] Standard and Poors Corporation; Bond Guide, December 2001.

The following table depicts the recent experience of certain Denovo institutions within select Anystate markets.

Institution Total Assets – Latest Qtr. Available 9/01- $000	Insured Date Charter Type Business Model	Volume of Total Deposits After Year 1 - $000 **v**. Projections	Volume of Total Deposits After Year 2 - $000 **v**. Projections
Grand Bank Anytown, Anystate $95,313	Feb. 1999 State Traditional Retail	$51,422 * $18,500	$65,663 $32,752
Landmark Bank, NA Anytown, Anystate $145,450	Aug. 1998 National Traditional Retail	$20,701 * $13,800	$39,930 $26,900
Marine Bank & Trust Anytown, Anystate $65,011	Jul. 1997 State Traditional Retail	$24,149 * $15,000	$36,799 $28,000
Independent Community Bank Anytown, Anystate $33,815	Oct. 1998 State Traditional Retail	$13,625 * $25,000	$27,153 $35,000
First Peoples Bank Anytown, Anystate $35,352	Apr 1999 State Traditional Retail	$18,110 * $20,000	$24,115 $27,500

Projections obtained from respective Reports of Investigation, Summary of Investigation Report, and/or supporting Regional office data when available. * Represents less than twelve months from insured date unless a later opening date is specified.

<u>Deposit Projections & Assumptions</u>

As depicted on page 12 of this Report, the Applicant projects total deposit volumes of $95.1 million, $164.5 million, and $202.8 million, within the first three years, respectively. Additional key assumptions include the following:

- Customer funding will come from the following sources: Branch network 81.5%, 13% Internet, Other (executive officer call program, customer call center, promotional/event kiosks, referrals) 5.5%.

- The distribution channels above project to achieve customer volumes of 9,124, 15,004, and 17,932 during the first three years, respectively. Within this assumption, Applicant further assumes that each customer will have two accounts. This translates to yearly total account volumes of 18,248; 30,004; and 35,864, respectively.

FINANCIAL HISTORY AND CONDITION (Continued)

- In arriving at total deposit volumes, the Applicant estimated that each account would retain an average balance of between $5.2M to $5.6M. The table on the subsequent page summarizes these calculations.

	Year 1	Year 2	Year 3
Deposit Customer Volumes – Cumulative	9,124	15,004	17,932
Account Volumes – Cumulative	18,248	30,008	35,864
@ average Balance of $5,216 Y1, $5,481 Y2, and $5,657 Y3 = Year-end Deposit Volumes	$95.1 MM	$164.4MM	$202.8 MM

With regard to the *Retail Branch* delivery channel, the Applicant assumes that its twelve supermarket branch network and traditional retail office will generate a sustainable deposit base during the formative years. The Applicant argues that eleven of the twelve proposed supermarket branch locations were profitable and viable branches when they were closed just six months ago by Wachovia Bank, following its acquisition of Republic Bank. According to proposed CEO Hamm, Wachovia's decision to close the branches, was driven primarily by philosophical differences and Wachovia's general unfamiliarity over that particular retail distribution channel.

Mr. Hamm stated that the branches are supported by Albertsons' extensive market research. As a matter of necessity and prudent retail practices, Albertsons will assess and enter new store markets only when certain favorable economic and demographic factors prevail. These factors include densely populated areas, traffic patterns, competition, and household income profiles. The favorable outcome of these studies will determine ultimate capital investment and store locations. Mr. Hamm argues that this research is critical to the proposal and a reason why the former branches were successful when owned by Republic Bank. The table below depicts the branch network's one-year history in attracting core funding. Results for December 2000 reflect nearly a 50% rise in funding from the previous period. Applicant projects that it can regenerate at least 65% {$78MM} of the balances existing at year-end 2000 during its formative first year.

Anycounty-2 Stores (7)		Dec-99	Jun-00	Sep-00	Dec-00
Total $ Mil.		**54.5**	**58.4**	**62.1**	**67.1**
Average		7.8	8.3	8.9	9.6

Anycounty-1 Stores (4)		Dec-99	Jun-00	Sep-00	Dec-00
Total $ Mil.		**25.7**	**41.8**	**47**	**53.1**
Average		6.4	10.5	11.8	13.3

Totals All 11 Branches	80.2	100.2	109.1	120.2
Average/Branch	7.3	9.1	9.9	10.9

In addition to the actual experience of the former branches, in-store branch projections have also been based on studies from two credible market sources, specializing in supermarket branches and alternative delivery systems; National Commerce Bank Services (NCBS), Memphis, TN., and International Banking Technologies (IBT) Norcross, GA. A 2000 NCBS study of 61 financial institutions covering 148 in-store branches resulted in the following average branch (NCBS owned branches) statistics below.

- Total accounts: 1,523
- Total Deposits: $11,906M
- Checking: $1,896M {16% of total – Average Balance (AB) $2,243}
- Savings/MMDA $4,532M {38% of total – AB of $10,739}
- CDs: $5,478M {46% of total – AB $21,317}

IBT, one of the largest retail consulting companies in the industry, has market data on clients ranging in size from, $21 million to $600 billion. It categorizes the performance of supermarket branches into high, median, and low. The Proposal's assumptions on the next page are compared with IBT's *median* supermarket branch performance measures (per branch). Applicant projections are also included for its one main office and traditional retail branch.

Period	IBT Median SM Branch Statistics	Applicant Projections – 12 Supermarket	Applicant Projections – 1 Main Office
Year 1	1,800 new accounts – Total Deposits $6.3MM	1,115 new accounts – TDs $5.8MM	3,346 new accounts – TDs $17.5MM
Year 2	1,440 new accounts – Total Deposits $12.7MM	672 new accounts – TDs $9.5MM	2,016 new accounts – TDs $28.3MM
Year 3	1,200 new accounts – Total Deposits $19.0MM	355 new accounts – TDs $11.8MM	1,066 new accounts – TDs $35.3MM

Actual branch history and empirical data, as well as, market research from both NCBS and IBT lend credence to the subject proposal's supermarket branch assumptions. Remaining branch assumptions for the main office appear reasonable and attainable based on recent denovo experience, relatively modest volume expectations in relation to total deposits, and intangibles such as the proposed CEO's following within the community.

With regard to the *Internet* channel, the Applicant projects an account acquisition rate of 7 per day and 12 accounts per day for years 2 and 3. As support for these assumptions, the Applicant stated that since inception, its corporate web site has averaged 184 visitors per day (well over the 31,389 reported during the previous investigation) with over 879 registered parties. It is uncertain as to whether these "hits" are attributable to the interest regarding the Applicant's pending application for Federal deposit insurance or merely concerned investors (which number in the thousands) seeking additional financial information. Notwithstanding, the projections appear plausible considering information provided by Anybank, a pure play denovo internet bank in Anytown, Anystate. According to the bank's chairman, Anybank was recently experiencing traffic of over 2,500 visitors per day and adding an average of 20 deposit accounts per day. During its first year, Anybank was adding an average of 50 accounts daily. Anybank reported recent average account balances of $5M for DDA, $40M for MMDA, and $60M for CDs. It is important to note however, that Anybank has been highly aggressive with respect to deposit pricing during its formative months. Applicant deposit projections for this channel appear reasonable based on existing site traffic and recent competitor experience.

Asset Projections and Assumptions

Applicant's loan projections are largely supported by qualitative factors including the proposed CEO's following in the community given his executive position (Chief Credit Officer) with the former Anybank, Anytown, Anystate. In addition, he reportedly knows a network of real estate and commercial lenders, many of whom were reportedly direct reports while at Anybank. Mr. Hamm stated that he has kept in close contact with several lenders who reportedly hold considerable portfolios of high-quality performing loans and are seeking other employment opportunities.

During the formative stages, the projections call for a conservatively weighted real estate portfolio. Year 1 projections assume a 77% real estate weighting with 58% comprising single family mortgage and home equity loans to prime borrowers. A meaningful portion of the residential portfolio will be purchased via established brokers known to both the proposed CEO and senior lending officer. Mr. Hamm reportedly has vast experience in purchasing mortgage pools with favorable yield and prepayment characteristics. This strategy will be important to the Applicant during the first year given its needs to deploy excess liquidity into higher yielding instruments. Commercial loans will focus on small business and SBA loans. Mr. Hamm stated that these products were successfully delivered and managed by he and the proposed senior lending officer while at Anybank. In light of the proposed CEO's experience and reputation in the market, no exceptions were taken to the loan projections scheduled.

Fixed Assets and Organizational Expenses

Capital Investments

The Applicant's investment in fixed assets is within existing OCC statutory limitations, which permit total fixed asset investment of up to 100% of total capital. The total proposed investment in fixed assets to initial capital is 15%. Two insider or related company transactions were disclosed and noted below.

Total investment in fixed assets at inception is proposed as $4,099M versus actual expenses (as of 11/30/2001) of $1,700M. Approximately 77% {$2,984M} of the net investment pertains to the Applicant's technology platform. This includes computer hardware, software, and associated networks. The remaining 27%{$1,115M} investment pertains to the Applicant's customer call center as well as associated expenses and holdings of furniture and fixtures. Capitalized assets are being depreciated utilizing the straight-line basis over a five-year schedule. The only material capital investment subsequent to opening will be the costs incurred to re-establish the in-store branches estimated at $60M per branch.

Related Party Transactions

Front-End Web Application Design and Deployment

Holding Company-1 plc, London, England (the top-tier holding company; refer to page 14 for organizational structure) will provide the insured bank with the initial front-end web application. This technology service will result in a one-time charge to the proposal of $90M and an additional investment of $20M in year one. A license agreement was not available for review during the Application process. Applicant stated that the service will be commensurate with the prevailing market, observe existing arms-length guidelines for related party transactions, and will be independent of the services provided by the Chief Technology Officer (CTO) Frank Gray.

Dual Employees

Proposed CFO Nigel Newbury and CTO Frank Gray will perform their duties in a dual capacity for both the top-tier holding company in London and the proposed national bank. During the formative years, the CFO and CTO will spend approximately 50% and 90% of their time respectively at the proposed West Palm Beach main office. A service agreement will be executed between the bank and holding company at a salary level commensurate with their roles and the exact time they allocate to the proposal. Currently, salaries allocated to the respective executives to be borne by the proposed institution are $55M per annum. A formal agreement was not yet formalized and/or submitted for review.

Organizational Expenses

The Applicant's organizational expenses are *substantial.* Problems with the original business plan, lack of initial fiscal prudence and length of time are all contributing factors. Since the original application of August 2000, which began during Q4 1999, organizers have withdrawn the Application for Deposit Insurance (April 2001), refilled a new proposal (October 2001) with a notably different business model and delivery modes, replaced various board members and certain key executives and hired new replacements. In the process, the Applicant restructured and incurred costs by reducing staff that was prematurely added by the previous CEO. During the previous application, extensive expenses were incurred for salaries (volume of staff) as well as, legal, professional and advisory fees. These fees have continued to accrue, although at a lesser extent since the arrival of proposed CEO Hamm.

The following table outlines the proposed pre-opening expenses versus actual expense items incurred in connection with the chartering process. The actual expenses from the previous submission are shown for illustrative purposes and to identify any large variances subsequent to that time. The Applicant has included expenses from the original submission inasmuch as previous costs/expenses are directly or indirectly related to the current proposal. The Applicant asserts that errors made previously have resulted in a benefit gained during the current Application.

Expense Category	**Application Projection**	**Actual Expense** 11/30/2001	**Actual Expenses @ Last Proposal – 12/31/2000**
Pre-opening Salaries & Benefits	$1,522M	$1,280M	$677M
Living/Relocation Expenses	$6M	$6M	$6M
Recruitment	$82M	$82M	$82M
Travel/Staff Related Expenses	$65M	$69M	$37M
Occupancy and Office Related	$563M	$473M	$156M
Attorneys & Professional Fees	$982M	$968M	$417M
Tax, Audit, Application, Dep, Other	$680M	$523M	$91M
Total Organizational Expenses	$3,900M	$3,401M	$1,466M

Pre-opening salaries are substantial and equal nearly 38% of total organizational expenses (year-to-date). The high volumes are attributable to the number of staff retained by the organizing group during the organizational phase, including that of certain highly compensated proposed officers. As of year-end 2000, the Applicant had hired and retained twenty employees. While this figure has since been reduced to eleven at year-end 2001, a high-level of expenses was still accruing throughout the first half of 2001 from the original higher staffing table. Since the arrival of proposed CEO Hamm, he has taken a proactive role in reducing these related expenses by releasing unwarranted and/or prematurely hired staff.

Attorneys, professional, and consulting fees are substantial and were highly criticized at the previous Corporation investigation. The criticism involved their excessive levels for the chartering of a denovo bank. It was argued that most of the expenses were discretionary and could have been controlled and managed in a more prudent and cost effective manner.

Included within the expenses are those associated with the Applicant's counsel/advisor. The Applicant retained the firm of Hodson & Hodson (HH), Washington, D.C., for legal and advisory services in connection with the chartering and application process. The engagement letter executed January 6, 2000 provides for an hourly billable rate ranging between $250 - $400. Overall fees for the chartering process were originally estimated by counsel to be between $250,000 and $300,000. In addition to this firm, the Applicant retained and incurred expenses with two other consultants that have since been discontinued under the current proposal. The high rate of legal and professional expenses billed from HH declined considerably after January 2001. Since proposed CEO Hamm's arrival, he has discontinued the previous practice of utilizing HH as regulatory liason during the current Application filing. Mr. Hamm stated that this has saved considerable monies and lowered the expense rate during Q3 and Q4 2001.

In addition to the legal and professional fees billed by HH, the pre-opening expense category includes consultancy fees billed by Holding Company-1 plc, in the amount of $428M. The fees pertain to the time commitment expended by several dual employees (employees of the holding company and proposed bank), which included the current officers (CFO Newbury, CTO Gray), certain software developers, and the former CEO and founder Casey Grant. The consulting fees constituted their salary calculated on a pro-rata basis for the amount of time expended during the organizing process, including application of an overhead component. The calculations were reportedly discussed with Holding Company-1's external auditor who assessed their reasonableness and accompanying tests for transactions with non-affitiliated parties. Documentation regarding this due diligence was not available for review during the Investigation process.

The last pre-opening expense item exhibiting a high variance was the "other" line item. Nearly the entire variance is represented by depreciation expenses associated with the Applicant's technology platform and very conservative prior depreciation schedule of three-years.

A key mitigating factor to the seemingly excessive pre-opening and organizational expenses pertains to the fact that the proposal has successfully raised capital during two separately underwritten offerings (see capital adequacy section on offerings and company structure). The holding company's equity position was recently reported at £19,137,532 or approximately $27.36 million. The proposal calls for an initial capital infusion of $26.9 million. The volume of capital from inception can absorb the high organizational expenses and support the proposed growth of the Applicant. Any actions by Regulatory Authorities to disallow certain organizational expenses above (from the previous submission) will simply result in the holding company having to absorb those costs. Considering the finite resources of the holding company and unlikely prospects of successfully executing a third capital offering, any organizational costs borne by the holding company will likely result in a lower initial capital infusion to the bank. Lower capital at inception would be offset by reduced organizational expenses, thus likely amounting to a wash or little financial impact.

Security Requirements & National Historic Matters

With regards to the proposal's security program, including compliance with Part 326 of the FDIC Rules and Regulations, organizers have committed to fully adhering to all applicable requirements. With regard to the National Historic Preservation Act, the State's Division of Historical Resources, corresponded with the Applicant on June 14, 2000. The department stated that the primary site (main office) would not interfere with any applicable historic sites and/or accompanying statutes. In regards to the retail supermarket branch network, all locations proposed are former branches of a federally insured institution. As such, no historic preservation or environmental impact concerns are anticipated.

Pending the submission of acceptable agreements covering two proposed related party transactions, the overall findings with regard to this factor is FAVORABLE.

Tier 1 Leverage Capital Ratio	16.16%	9.28%	8.03%

ADEQUACY OF THE CAPITAL STRUCTURE

Generally, initial capital should be sufficient to provide for the maintenance of an 8 percent Tier 1 capital to assets leverage ratio (as defined in the appropriate capital regulation of the institution's primary Federal regulator) throughout the first three years of operation. The institution must also maintain an adequate allowance for loan and lease losses. Determine if the institution is being established as a wholly owned subsidiary of an eligible holding company (as defined in Part 303, subpart B). Assess the adequacy of proposed capital in light of projected deposits and growth, business plan risk tolerance, and the ability of proponents or parent company to provide additional capital. Special focus depository institutions (such as Internet or credit card banks) should provide projections based on the type of business to be conducted and the potential for growth of that business. All stock of a particular class in the initial offering should be sold at the same price, and have the same voting rights. Proposals which allow insiders to acquire a separate class of stock with greater voting rights or at a price more favorable than the price for other subscribers are not acceptable. Discuss financing arrangements for directors, officers, and 10 percent or more shareholders. Financing arrangements by insiders of more than 75% of the purchase price of the stock subscribed to by one individual or more than 50% of the purchase price of the aggregate stock subscribed by the insiders as a group should be supported to be considered acceptable. Insiders should demonstrate the ability to service the debt without reliance on dividends or other forms of compensation from the applicant.

PROPOSED CAPITAL STRUCTURE

ITEM	COMMON STOCK			SURPLUS	RETAINED EARNINGS	TOTAL	THIRDYEAR AVERAGE ASSETS	CAPITAL ASSET RATIO

Summary and Findings

Initial Capitalization

The top-tier holding company (see ownership structure) has successfully executed two capital offerings totaling £22 million or approximately $35.2 million. The proposal calls for a direct infusion from said holding company.

The organizer's general consensus is that the level of proposed capital will suffice. In the event that additional capital is required, the Applicant has stated that the feasibility of a third public offering (see ownership structure) will be largely contingent upon favorable conditions within the European equity markets. Proposed CEO Hamm suggested a possible listing application to a US stock exchange may be pursued to enhance the likelihood of additional capital sources and share liquidity.

Founding directors are listed as follows: Lance Price (HC Director), Casey Grant (former director/officer), Nigel Newbury (proposed CFO), Stephen Helm (former director/officer), John Wise, Hamilton Trustees Limited.

Top-tier Holding Company – Additional Information on Capital

Shares Authorized:	750,000,000
Shares Outstanding:	350,000,000
Par Value:	@ 50p or .75¢; assumes original exchange rate @ £1.00:$1.50
Principal Shareholders:	

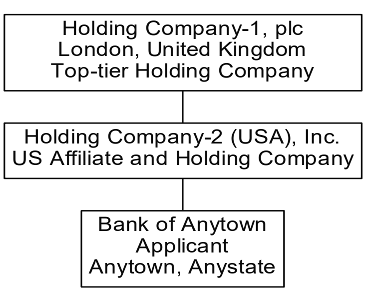
Shareholder	Category	Shares Held	Percent of Outstanding Shares
Casey Grant	Former Director	54,750,000	15.64%
Hamilton Trustees Limited	Institution	36,875,000	10.54%

Casey Grant, *former* proposed CEO of the bank and its holding company, is no longer affiliated with the proposal, other than as its single largest shareholder. Mr. Grant has requested two special board meetings to seek the voluntary dissolution of the holding company. Such proposal was soundly defeated by shareholders with over a 2:1 margin

Hamilton Trustees, Ltd. (10.5% shareholder) is reportedly a passive shareholder (no board or management representation) and trustee to certain trust funds. Hence, the beneficial owner of the shares is a trust, reportedly established to benefit certain charitable organizations. Per Mr. Newbury, no discussions have taken place with the Federal Reserve (as of January 7, 2002) to establish any element of control with respect to such party.

Ownership Structure

As depicted in the chart below, the top-tier holding company, Holding Company-1 plc, is headquartered in London and owns the Applicant via a United States (US) based holding company, Holding Company-2. The top-tier holding company, incorporated November 30, 1999, was established as a Public Limited Corporation (PLC). A PLC retains the status and functionality of a US based corporation and is the proper vehicle should the company wish to tap the country's capital markets. It is a registered entity within the UK, governed by prevailing regulations (Companies Act) including minimum capital requirements. In addition, the liability of its members is *limited* to the amount of shares held. According to proposed CFO Newbury, the top-tier holding company has no other operating subsidiaries besides the US holding company. It was reportedly evaluating other financial opportunities in the United Kingdom (UK) and elsewhere in an effort to establish alternative revenue sources. In this regard, Holding Company-1 plc, had reportedly met with officials of the UK's Financial Services Authority (FSA) with the intent on formally applying to become a UK Depository Institution. No formal applications have been made as of the Application date.



Holding Company-1 plc, is a publicly traded company, which was admitted and listed on the Alternative Investment Market (AIM – tantamount to the NASDAQ small capitalization equity market in the US) of the London Stock Exchange on December 16, 1999. It successfully completed an initial public offering during late 1999, raising £2 million (before associated expenses of £61,928) as well as, a fully underwritten secondary offering in February 2000, which raised an additional £20 million (also before associated expenses of £505,563). Total capital raised in US dollars approximated $35.2 million (before expenses).

Holding Company-1 plc – Financial Position

As of the most recent interim financial report (June 30, 2001), the entity held total assets of £19,581,817 or approximately $27.4 million. Total equity was £19,137,532 with cash representing the bulk at £18,231,943 or $25.5 million. Cash balances are invested within various European correspondents in short term, money market instruments and placements. For the same period above, operating losses after taxes totaled £1,250,942 or $1.7 million; a sharp rise (247%) over prior year losses. Reportedly, then eprime bank (in formation) incurred significant operating costs anticipating the issuance of a National Bank charter, which later failed to materialize. These higher operating costs, which included a high volume of staff were exacerbated by one-time restructuring charges related to personnel and other expense reductions programs. According to Mr. Newbury, the monthly cash "burn rate" or actual costs net of interest income was approximately $112M per month. Given the absence of dividends during the foreseeable period, the holding company will need to continue managing expenses and/or develop other revenue producing avenues to stem operating losses and its accompanying effect on capital.

According to proposed CFO Newbury, the company's stock retains five market makers and is held by over nine institutional investors (mainly mutual funds companies). In December 2001, the company possessed a market capitalization of approximately £8.75 million or approximately $12.3 million, thus representing a steep discount to June 2001's book value.

With a recent share price of 2.5p (£.03 or ¢3.57), the 52 week range consisted of 11.25p (£.11 or ¢16.09) to 2.25p (£.23 or ¢3.21). At this price, the stock was trading nearly 78% off its yearly high. The holding company's low, which it reached in October 2001, was attributable to a combination of the failed charter attempt, as well as, adverse market conditions.

Capital Adequacy Assessment

Proposed Business Model

The proposal calls for launching an integrated model leveraging technology and a traditional physical branch network. These multiple channels include one traditional retail banking office, a network of twelve convenience-driven supermarket branches, a fully transactional website and customer call center. The model attempts to focus on the efficient delivery of banking products with superior customer service. The in-store supermarket branch network will be employed within a large regional supermarket host located in heavily populated and demographically favorable service areas, cities/townships. The proposal also seeks to target the growing Hispanic community within Anycounty-1 and Anycounty-2 and will deliver products and services (Web/phone) in a bilingual format.

Projected Growth and Business Model Risks

Capital levels in light of projected growth and prevailing business model risks appears satisfactory. The business plan's overall risk assessment appears Low to Moderate.

On the asset side of the balance sheet, the proposal seeks considerable loan growth. This loan growth however, appears to be conservatively weighted towards the real estate sector in general and within products secured by primary residences (conventional/prime SFRs and HELs). Refer to the previous comments (page 8) regarding Asset Projections and Assumptions. The proposed loan mix represents a notable reduction in risk versus the previous proposal which was focusing extensively on higher yielding commercial loans. The ability to generate loans during the formative years will be partly facilitated by residential portfolio loan purchases. This is reportedly an area of expertise of the proposed CEO and SLO. Risks in these products will seemingly be limited to the premium paid given the current interest rate environment and accompanying earnings risk (write-down of premium on the asset side) should these underlying assets pre-pay (interest rate risk). The extent of loan volume appears to be coming at the expense of liquidity, which is a little lower than would otherwise characterize a denovo bank (proforma Loan to Deposit Ratios 69%, 72% and 86%, for first three years, respectively). However, given the current interest rate environment and low yields on short term Federal Funds, many institutions are attempting to minimize said holdings in order to achieve a more optimal net interest margin.

With regard to the deposit side of the growth projections, risks have been reduced considerably versus the previous proposal given the adoption of an established and more traditional funding channel. The supermarket branch network proposed in the model has a prior history and reportedly held actual deposit volumes of $120 million as of the year-end 2000[2]. This proven channel along with the main office, transactional website, and business referral prospects of the proposed CEO and select board members should provide reasonable assurances to the proposal's deposit projections.

[2] Raw data from the former Republic supermarket branches were not available for Examiner review. Proposed CEO Hamm stated that internal RSB reports (now property of Wachovia) were proprietary and thus restricted.

ADEQUACY OF THE CAPITAL STRUCTURE (Continued)

Business model risks emanate primarily from the denovo's operating environment. The operating environment is currently faced with a yield curve, which while steep and historically beneficial for financial institutions, contains a very low short-term rate base. The risk, from an asset/liability management and earnings perspective, is that short-term rates remain at historical lows. As such, any additional rate declines (Federal Funds Target Rate and resulting Prime lending rate reductions) may result in a further compression of net interest margins. Short-term rate reductions were recently implied by the 30-Day Federal Funds Futures contracts, which settle in April 2002[3]. Ensuing rate reductions could make net interest income and profitability goals for the denovo more challenging thus increasing the operating losses. Other risks with regard to the operating environment pertain to the current state of the local, state, and national economies. Any prolonged national recession could begin to more negatively impact the State and the bank's proposed service areas. This risk would occur at a time when the bank could be ramping its loan portfolio. Mitigating factors to the economic environment include the apparent strength of the new management team (CEO Hamm, SLO Well and Directors Wart and Marcotte) and the higher concentration on less risky residential mortgage lending.

In the interim, the business model risks also include the current status of the lease or licensing agreements with the retail host, Albertsons. While the organizers contend that the twelve proposed branch locations have been reserved for the denovo bank, firm agreements have yet to be executed. The failure of procuring any or all of these proposed branch locations by the organizers could have a negative impact on the applicant achieving deposit and/or loan projections. While lower growth would result in generally higher capital ratios, it might impact earnings given the sizeable fixed charges and overhead that the Applicant would need to overcome to become profitable.

While the finding on this factor is FAVORABLE, it is contingent on the execution of the licensing (lease) agreements for the in-store branches with Albertsons Inc.

[3] Chicago Board of Trade; January 11, 2002 April Contract settlement price of 98.405.

FUTURE EARNINGS PROSPECTS

Assess the reasonableness of earnings projections and supporting assumptions of the business plan in relation to the economic environment and competition. Projected interest income, expense, non-interest income and expense, and provisions for loan and lease losses should be analyzed and compared to experiences of other new banks in the trade area or in a similar market. When necessary, the examiner should make adjustments to the applicant's projections and discuss the basis for the differences. Incorporators should demonstrate through realistic and supportable estimates that, within a reasonable period (normally three years), the earnings of the proposed institution will be sufficient to provide an adequate profit.

Summary and Findings

The Applicant projected a net operating profit (loss) of ($8,429M), ($1,573M), and $893M for the initial three years of operation, respectively or a cumulative operating loss of ($9,109M). These underlying projections were based on reasonable average earning assets to average assets assumptions (what-if scenario 5) of 89%, 92%, and 94% over the respective periods. Applicant asserts that the average earning asset assumptions are on the conservative range given the proposal's technology platform and lower emphasis on costly traditional retail branches and fixed assets. The Applicant argues that the assigned average earning asset assumptions represent the most conservative scenario possible and that higher earning asset utilization during the formative years are plausible based on peer group data. Any higher utilization may result in improved net interest margins and a higher operating profit in year three.

Margin Analysis

In light of the substantial interest rate volatility during calendar years 2000 (Central Bank tightening of the money supply) and 2001 (aggressive loosening and adding of system liquidity), any meaningful comparative analysis is better served by assessing the net interest income line as opposed to individual yield and cost factors. This facilitates analysis of the proposal's assumptions over varying interest rate environments.

The table below depicts the proposal's estimates for net interest income and non-interest income to average assets during the formative years. Comparisons for reasonableness include an Examiner calculated average of denovo institutions (Banks listed on page 6 of this report) as well as, various peer group and State averages for the period ending September 30, 2001.

Institution	Net Interest Income	Non-Int. Income	AEA/AA
Examiner Denovo Sample -Mean	3.71%	0.79%	93.91%
UBPR Peer Group 9	3.91%	0.74%	94.05
UBPR Peer Group 13	3.99%	0.70%	93.47
UBPR Peer Group 25	3.72%	0.57%	91.72
Mean – All Insured Banks – Anystate.	3.91%	0.83%	92.19%

National Bank Year 1	3.94%	0.38%	89.37%
National Bank Year 2	4.41%	0.54%	92.46%
National Bank Year 3	4.70%	0.55%	93.70%

Notes: Source: Uniform Bank Performance Reports; Peer Group 9=Banks with TA of $100-$300 million within Metropolitan Area; Peer Group 13=Banks with TA of $50-$100 million within Metropolitan Area; Peer Group 25= Banks established within last 3 years<=$50 million. AEA/AA represents Average Earning Assets to Average Assets.

Comparative analysis suggests that the Applicant's Net Interest and Non-Interest Income estimates appear reasonable during the first year of operation. During years 2 and 3, the Applicant's loan mix begins to shift from lower yielding residential and home equity loans (58% year 1 versus 43% and 38% years 2/3) to higher yielding commercial real estate products. While the changes in loan mix are ramped over a two-year period, the rising emphasis on the commercial real estate (19% year 1 mix, 30% and 33% years 2-3) category is accompanied by higher asset yields ranging from 100-125 basis points. This attempts to explain part of the expansion in the subject margins. Proposed CEO Hamm argues that the proposal's ability to underwrite fundamentally sound and higher- yielding commercial real estate loans is heightened by his previous relationships with many of the former lending officers of Anybank, Anytown. Said officers reportedly have established portfolios within the proposed service areas and are seeking other employment opportunities following Anybank's consolidation into Regionalbank.

On the funding side of the balance sheet, two factors emerge which seemingly justify lower cost of funds and consequently wider margins. First, the Applicant proposes to open with $26.9 million in capital or over 2 to 2.5 times the capital typically employed by denovo banks in Southern Anystate. The higher paid-in capital effectively lowers funding costs associated with initial balance sheet activity (loan/bond purchases and origination). Secondly, the proposal would be procuring funding liabilities in a very favorable interest rate environment. This environment characterized by historically low short-term interest rates enables the Applicant to attain a lower *average* cost of funds. This lower cost, coupled with the present steep yield curve, could justify the higher margins.

Of the eight denovos listed on page 6, Grand Bank in its third year of operation achieved a 4.44% net interest income (NII) to average assets ratio. This ratio, which is in the 75th percentile, occurred during an arguably more difficult interest rate environment (negative yield curve during 2H 2000) than the Applicant would likely experience. Nonetheless, the Examiner adjusted year 3 NII to average assets ratio to 4.44% to determine the impact on year three profitability and ensuing capital ratio. Despite the decline in margin, the Applicant would still exhibit profitability and a year 3 capital ratio of 8.56%.

Sensitivity Analysis

The Applicant submitted an analysis of the impact that certain scenarios would have on proforma earnings (Year 3 stress testing). These scenarios, which were part of the base plan, appear to be well formulated and realistic based on current market conditions and inherent risks within the Applicant's operating plan. The scenarios examined include the following:

- *Loan Growth would only amount to 75% of year 3 base forecasts.* Under this scenario, projected net loans would ramp at a slower rate of growth and culminate in 75% of the base plan. In this scenario, net loans and percentage of plan figures would equate to $58 million (88%), $94 million (80%), and $131 million (75%), during the three respective years.

- *Deposit Growth would only equate to 75% of original forecasts.* In this scenario, the Applicant would stress test the outcome of a less than favorable deposit gathering event. With regard to scenario 2, total deposits would amount to $71 million, $124 million, and $152 million, during the respective three years.

- *Failure to attain a lower-cost deposit mix.* Under this event, the Applicant examines the impact of achieving a less than optimal deposit mix or a high concentration of costlier time deposits. Specifically, time deposits would increase to 53% or more throughout the first three years versus original forecasts of 40-41%. This scenario assumes that marketing/pricing strategies would fail to generate the optimal level of generally less costly MMDAs.

- *Interest rate shocks of 100 basis points*. Applicant assumes parallel shifts in rates (upward/downward) and that the bank would be able to adjust rates paid on deposits to reasonably match the change in yield bearing instruments.

Net Income / Sensitivity Analysis $000	Year 3
Scenario One – *Slower Loan Growth*	$751M
Scenario Two – *Lower Deposit Growth*	<$100M
Scenario Three – *Higher Cost Deposit Mix*	$806M
Scenario Four – *Rate Rise 100 bps*	$1,449M
Scenario Four – *Rate Drop 100 bps*	$1,090M

The Applicant projects year 3 profitability in all scenarios tested. The highest risk to the business model is presented by scenario 2, slower deposit growth. Aside from actively managing its cost structure to minimize the probability of losses in year 3, proposed management is reasonably confident that it can attain 75% or more of the deposit forecasts reflected in the plan. Supporting arguments for its claim are (1) General success of denovos in the Southern Anystate market in attracting funding at a reasonable cost, (2) The level of reported public interest in the proposal to establish depository relationships prior to conditional approval. This includes various verbal commitments reportedly made from various organizations in Anytown to the Applicant. Additional deposit referral business (in excess of $10MM for DDA/NOW) has also been alluded by the Applicant's influential Anytown board members (Wart and Marcotte). (3) The success of the supermarket branch network as it existed twelve months ago. Applicant stresses the last factor adds considerable credibility to the deposit forecasts. Despite having been in the Anytown market for less than three years, the investigating Examiner believes that proposed CEO Hamm enjoys a relatively strong reputation in the banking community. This reputation and extent of contacts should greatly assist the Applicant in garnering deposits from both the supermarket network and the retail banking office.

The finding on this factor is <u>FAVORABLE.</u>

GENERAL CHARACTER OF THE MANAGEMENT

Proposed management, including the board of directors or trustees, is evaluated against all factors necessary to operate the institution in a safe and sound manner, including the ability to identify, measure, monitor and control the internal and external risks presented by the proposed business plan. Proposed directors and officers should be evaluated on the basis of their financial institution and other business experience, duties and responsibilities in the proposed institution, personal and professional financial responsibility, reputation for honesty and integrity, and familiarity with the economy, financial needs and character of the trade area. Examiners should consider, at a minimum, proposed board oversight and support; management expertise and depth; proposed credit, funds management, interest rate risk and investment guidelines and internal and external audit programs. Comments should provide a forward-looking assessment of an institution's management team, including its operating philosophy and tolerance for risk-taking.

Summary and Findings

Meeting with Organizers

An organizer's meeting was held December 12, 2001 to discuss the application process, as well as, various other safety and soundness matters. Supervisory Examiner Ivie Smart attended on behalf of the Corporation.

Proposed Members of Active Management

Joe Hamm – Chairman/Chief Executive Officer (CEO)

Mr. Hamm's duties will include responsibilities for planning and establishing policy and ensuring all board objectives are executed. In addition, he will supervise senior officers, as well as establish parameters for profitability, business and strategic planning. While Mr. Hamm has not previously served in this capacity of an insured institution, he does possess extensive executive level leadership and credit experience. Previous roles have also included active participation on various board committees notably, strategic planning, executive, loan, and asset/liability management. His commercial credit experience in particular is viewed as a key strength within the organizing group. This experience, along with information obtained from available regulatory sources suggest that he will employ a conservative operating philosophy with regard to risk selection. Actions taken by Mr. Hamm during his brief association with the group appear to confirm this philosophy. During interviews with the undersigned examiner, Mr. Hamm stated he recognized the salient risks with the previous proposal and recommended that the operating plan be materially changed. In addition, he also recognized that HH's role in the regulatory application process should be reallocated to him as CEO. The latter has seemingly made the process more efficient from both a cost and regulatory perspective. Finally, Mr. Hamm eliminated the reliance on outside consultants (other than HH as Counsel) that were frequently employed by the previous CEO and President. He stated that it is his role to formulate a credible strategy, plan, and accompanying assumptions.

Nigel Newbury – Chief Financial Officer (CFO)

Mr. Newbury's proposed duties include supervising all internal management and financial reports, treasury function including asset allocation strategies, producing risk management and profitability reports and budgets, and participating in strategic planning. The position description defines that he will directly supervise the financial controller/treasurer. While Mr. Newbury has not served in this capacity within a commercial or community bank, he does possess a background in accounting and financial management at both a recognized public accounting firm and other large multinational corporations.

Frank Gray – Chief Technology Officer (CTO)

Mr. Gray will have direct oversight over the senior technology officer and development manager. The position's function includes overall responsibility for the design, implementation, and maintenance of all the Applicant's software, computer hardware, and technology infrastructure. Mr. Gray will also identify and recommend solutions to the Applicant's technology needs and problems. In summary, his responsibility is to manage the systems to ensure that efficient customer service is maintained. Mr. Gray appears to possess extensive experience for the proposed position. In the interview, Mr. Gray stated that the senior technology officer (his direct report) would be the US based technology officer, while Mr. Gray executes his other roles at the top-tier holding company in London.

John Well - Chief Lending Officer

Mr. Well's duties will encompass responsibility for loan growth and the preservation of asset quality. Inherent in this role will be the employment of conservative underwriting and risk management systems. His background contains considerable lending, credit administration and operations experience within both commercial and consumer portfolios, which appear compatible with the proposed Application and business model.

Proposed Board Members

The proposed board includes eight members, five of which are designated as non-executive (outside directors). The outside directors have a vast array of experience in banking and finance, law, communications, technology, and criminal investigations. A key improvement in the current management team over the prior proposal includes the addition of directors (either inside in the case of Mr. Hamm, outside with regard to Mr. Lamar) with previous commercial bank executive/board experience.

A second strength includes the addition of directors Wart and Marcotte. Both individuals appear to hold prominent roles in the community and may serve to provide meaningful business referrals for the proposal during the formative stages. Other strengths include Mr. Mason' background and appearances that he will ask the necessary questions from executive management. Based on the organizational minutes and discussion with other proponents, Mr. Mason is among the most vocal individuals on the board. In the interview, Mr. Mason stated that his residence in the Northeast would not preclude him from fulfilling his supervisory duties or attending board/committee meetings.

Proposed Operating Programs

According to information contained in the Application and Mr. Hamm, the Applicant will adopt comprehensive operating guidelines with regard to lending, funds management and interest rate risk, investments, and audit. A pre-opening visitation by the primary regulator should confirm and validate the appropriateness of these policies.

GENERAL CHARACTER OF THE MANAGEMENT (Continued)

List alphabetically, by group, all *Directors, Non-Director Officers, and Others owning 10% or more of total capital.* Indicate the status of each individual listed by checking the appropriate box *(D-Director; O-Officer; S-Shareholder).* Under "Summary and Findings" indicate *(a)* years and reputation in the community; *(b)* director or officer positions held in other banks and the names of such banks; *c)* dominant individuals and the extent, character, and effect of such domination; and *(d)* capabilities of each individual with reference to his duties and responsibilities, and the amount of time devoted to the institution.

<tr><td colspan="4">TITLE
Proposed Chief Lending Officer</td></tr>
<tr><td colspan="5">OTHER BUSINESS AFFILIATIONS OR PROFESSIONS
Career Credit and Lending Officer</td></tr>
</table>

Summary and Findings

Mr. Well was born in Middletown, Connecticut and has resided in the area since 1999. He holds an undergraduate degree in economics from Dartmouth, College, Hanover, New Hampshire. Mr. Well has over fourteen years banking experience including senior level positions in lending and credit administration. He reportedly has considerable experience within consumer and commercial loan portfolios, policy formulation, credit scoring and loan pricing strategies, as well as, auditing, operations and retail branch oversight. He has spent nearly his entire banking career working under the tutelage and supervision of proposed CEO Hamm.

Banking Experience

From 1999 until his recent appointment, Mr. Well served as SVP and Senior Credit Officer of Anybank, Anytown, Anystate. In this position, he was responsible for credit quality of the bank's consumer, mortgage, and small business portfolios. Leading a staff of seventeen, Mr. Well established a Small Business Operation which generated monthly loan volume of $5 million. In addition, he managed the credit scoring process for small business and consumer lending including, validation and oversight of system parameters. Prior to that, he served ten years at Anybank, Anytown, Anystate, in several lending and managerial roles including VP and Consumer Credit Manager, Branch Manager, and Regional Consumer Loan Officer. Notable accomplishments included managing the bank's credit scoring system, managing a large loan staff, and successfully generating nearly $100 million in new loans during a three year period.

Interview Comments

Mr. Well became associated with the proposal at the request of Mr. Hamm, whom he reported to while employed at Anybank. He stated that he brings considerable experience with regard to commercial and consumer credit underwriting, portfolio and risk management. He added that these areas have been the cornerstone to his entire banking career. Additionally, Mr. Well stated he also has a perspective in audit and controls given his experience as a staff auditor. He added that he experienced the real estate recession in the Northeast and has an understanding and aversion for speculative transactions. While Mr. Well could not estimate the volume of loan business he would attract during the formative stages, he does know many seasoned lenders who retain established and profitable relationships. He anticipates, as does Mr. Hamm, employing former lenders who are actively seeking other opportunities. Mr. Well stated he was very involved in preparing the loan projections in the proposed business plan. He stated the projections were reasonable based on the proposed development officers and their respective portfolios, as well as, the generating ability of the former supermarket branches. He added that this two pronged approach is also enhanced by his experience in selectively purchasing high-quality consumer mortgage portfolios. Such activity, he said, could be employed to fill budget shortfalls and otherwise more efficiently employ earning assets during the first year. With regard to the former supermarket branches, Mr. Well stated that the eleven branches produced monthly consumer loan volumes ranging from $100M-$500M.

Financial Information and Stock Ownership

As of November 2001, Mr. Well's primary assets consisted of $38M in cash and a personal residence valued at $175M. Liabilities consisted primarily of a $126M mortgage payable. His $5000 investment in the proposal was reportedly purchased with cash.

<tr><td colspan="5">OTHER BUSINESS AFFILIATIONS OR PROFESSIONS
Consultant. Retired executive credit officer for counterparty risk and former English trial lawyer.</td></tr>
</table>

Summary and Findings

Mr. Mason was born in Limassol, Cyprus and became a U.S. Citizen in 1989. He also holds citizenship in the United Kingdom. Mr. Mason received a Masters and Bachelor of Arts degrees in Law from Cambridge University, Cambridge, England and subsequently realized his Barrister-at-Law license in 1960. For nearly eight years prior to retiring in 1999, Mr. Mason served as Executive Vice President, Global Trading Credit Group at Anybank, Anytown, Anystate. Responsibilities included management of all counterparty credit exposure for the Derivatives Products Group. Additionally, he supervised and developed risk management systems for the trading group, and served on various committees including, Asset Liability Management, Credit Policy, and Payment Systems Risk. He held similar responsibilities for nearly five years as Managing Director while at Regionalbank, Anystate. Other notable responsibilities include various Vice President level assignments at Anybank, Anystate and London. These duties entailed the development of marketing and credit strategies, lending, and asset management, including trading assets within Europe, Pacific Rim and U.S.

Interview Comments

Mr. Mason became involved with the Applicant as a result of some consulting work he performed for Risk Management, plc, London, England, and its Chairman John Wise. Mr. Wise is also a 1.8% shareholder of Holding Company-1 and serves as a nonexecutive director. Mr. Mason stated that he has experience dealing with complex financial problems and understands how to manage risks. He stated that he would not be able to introduce many deposit or lending relationships given his lack of contacts within the market area. Mr. Mason acknowledged that he has little or no financial stake in the proposal, but views his reputation as a key contribution. In this regard, he would feel inclined to notify the Regulatory Authorities should any material supervisory issues become apparent. Mr. Mason is more enthusiastic and confident about the current proposal versus the previous model. He feels that the deposit base is better quantified given that many of the proposed branches were active and successful less than a year ago. In addition, he feels the proposal now has a more experienced board and executive management team given the addition of Messrs. Hamm (Proposed CEO) and Lamar (Outside Director).

Financial Information and Stock Ownership

As of August 2001, Mr. Mason reports no liabilities and liquid assets (bonds, equity securities and cash) of nearly $2,217M. Other material assets include his residence valued at $550M. According to Mr. Mason, his limited investment ($2,400) in the proposal was purchased with cash.

<tr><td colspan="4">TITLE
Proposed Director (nonexecutive)</td></tr>
<tr><td colspan="5">OTHER BUSINESS AFFILIATIONS OR PROFESSIONS
Vice President and General Sales Manager, BellSouth.</td></tr>
</table>

Summary and Findings

Ms. Marcotte was born in Columbus, Ohio and has resided in Anytown for over 40 years. She holds undergraduate and graduate degrees in Business Administration from University of Anystate, Anytown and SouthEastern University, Anytown, Anystate, respectively. She currently holds a senior management level position with BellSouth, a company for which she has been employed with for nearly 30 years in various marketing capacities. In her current capacity, Ms. Marcotte is responsible for BellSouth's sales and technology operations, a regional business unit accounting for nearly $700 million in total revenues. She does not have any prior commercial/community banking experience.

Interview Comments

Ms. Marcotte became associated with the proposal through her civic relationships with proposed director Wart. She appears active in local community circles and serves on the board of the Anytown Economic Development Council. She stated that her community contacts and professional longevity within the county could assist in providing meaningful business opportunities for the proposal. Given her position with a technology-based company, Ms. Marcotte stated she could provide valuable insight into the needs of the bank's target market and potential internet users. She has reportedly gained extensive experience in marketing to a comparable demographic segment within her company and knows how to serve customer's technology needs. Ms. Marcotte stated that proposed President Hamm has crafted a credible business model; integrating a traditional retail site and supermarket branch banking with an internet component, within two high growth Markets.

Financial Information and Stock Ownership

As of December 2000, Ms. Marcotte reports liquid assets (cash and listed securities) of $238M and stock options with a estimated value of $460M. A personal residence valued at $300M represents her other primary asset. Liabilities consist primarily of a $165M mortgage payable. According to Ms. Marcotte, her limited investment ($1,000) in the proposal was purchased with cash.

<tr><td colspan="4">TITLE
Proposed Chairman, President, and Chief Executive Officer</td></tr>
<tr><td colspan="5">OTHER BUSINESS AFFILIATIONS OR PROFESSIONS
Career Banker and Senior Lending Officer.</td></tr>
</table>

Summary and Findings

Mr. Hamm was born in Troy, New York and has resided in Anytown for over two years. He attended the Stonier Graduate School of Banking at the University of Delaware and State College, Antyown, Anystate. Mr. Hamm has over twenty-seven years of experience in the banking and financial services industry.

Bank Experience

Prior to joining subject proposal, Mr. Hamm served as Senior Executive Vice President and Chief Credit Officer at Anybank, Anytown, Anystate, a $3.4 billion state member bank, which was recently acquired by Regionalbank. In addition, he served as a member of the bank's Executive Committee, which was designed to establish near term strategic guidance and policy. While employed at Anybank (2-year tenure until acquisition by Regionalbank), he also served as Chairman of the Board of two of Anybank's wholly owned subsidiaries; First Financial, Inc., a national yacht finance company with annual loan volumes of $300MM. Reportedly, the company was the largest originator of yacht loans in the Nation, prior to Mr. Hamm's departure. His second Chairperson role was with Spectrum, a factoring entity generating annual receivable/inventory facilities of $120MM.

Prior to his role at Anybank, he served for eleven years as a Senior Vice President and Chief Corporate Lender and then as Executive Vice President and Chief Credit Officer at Financial Services Corp, Anytown, Anystate, the holding company for AnyNational Bank. While there, Mr. Hamm was responsible for a department of fifty credit and administrative personnel and a $1.4 billion commercial, mortgage, and consumer portfolio. Notable assignments and accomplishments during his eight year tenure was the operation and oversight of special assets and the reduction of non-performing assets from a high of 6.5% to 0.6%. Mr. Hamm also served on various board committees including, Executive, Strategic, Loan, Asset/Liability, and Human Resources. Prior to his EVP/SVP roles he served for five years as a VP and Regional Commercial Loan Officer within the same institution.

Additionally, he has approximately eight years of lending and related experience while employed by MoneyCenterBank, Anytown, Anystate. Mr. Hamm was active in the Anystate Banker's Association for nearly seventeen years and served as a member of the Association's Board of Directors. According to the association's CEO, Mr. Hamm was highly respected by colleagues and active as a Loan Quality instructor at the Anystate School of Banking.

Regulatory History and References

Available information from the Corporation's database suggests that Anybank and AnyNational Bank were fundamentally sound entity's during Mr. Hamm's tenure. Additionally, regulatory information from the Federal Reserve yielded no comments of any supervisory concern regarding his credit background or professional abilities. The undersigned examiner also contacted the State Comptroller's Office. The State's regulatory experience with Mr. Hamm was very favorable.

The undersigned examiner also interviewed the former Chairman and CEO of Anybank during Mr. Hamm's tenure. The former Chairman was very complimentary of Mr. Hamm's leadership skills and credit experience. According to him, Mr. Hamm was hired to ensure that asset quality and risk management systems were preserved during Anybank's growth phase. In this defined role, the former Chairman stated that he did an excellent job at executing and formulating policy.

Interview Comments

Mr. Hamm stated he was disenchanted with Regionalbank's methods of operation after its acquisition of Anybank and sought to pursue other opportunities. The denovo's legal counsel, Hodson & Hodson (HH), contacted Mr. Hamm about becoming an organizer shortly after the former president resigned from the group in April 2000.

Mr. Hamm stated he was skeptical about the prior proposal's business model as well as, the viability of the kiosk as a key delivery channel. His main issue with the kiosk strategy was that it had not been successfully executed within the market place. As a result, Mr. Hamm stated he recommended that the model be changed to incorporate more proven and traditional retail delivery channels. Another key change he recommended was the addition of other board members with strong community ties and/or previous banking experience (proposed director Wart, Marcotte, and Lamar). Mr. Hamm also sought to replace the previous proposed senior lending officer with one he viewed as possessing a stronger skill set and educational background.

Mr. Hamm indicated he has market intelligence over the success of the proposed supermarket branch network, inasmuch as eleven of the twelve branch sites were previous Anybank branch locations. He believes this aspect to be a key strength over the previous proposal. Mr. Hamm stated that despite his less than three years in Anytown, he has a sound foundation within the market area and has developed many contacts, which could lead to lucrative future business for the proposal. Regarding future lending, Mr. Hamm has retained a chief lender (Well) with whom he directly supervised while at AnyNational Bank and Anybank. In addition, other senior lenders have expressed a desire to join the group. Said lenders, according to Mr. Hamm, all would bring seasoned commercial and consumer portfolios generated from the former Anybank.

Financial Information and Stock Ownership

As of August 2001, Mr. Hamm reports a considerable liquid net worth, with $542M in cash and marketable securities. He reflects a personal residence with an assigned valued of $550M and deferred savings plan (401k/IRAs) assets of $420M. Liabilities consist primarily of a mortgage payable of $390M. Mr. Hamm's initial investment of $30M was reportedly purchased with his cash holdings.

	TITLE Proposed Chief Financial Officer			
OTHER BUSINESS AFFILIATIONS OR PROFESSIONS Accountant. Also serves as Financial Director and Director of Holding Company-1, London, England.				

Mr. Newbury was born in Hazelgrove Cheshire, England. He holds citizenship in the United Kingdom and also maintains temporary residency in Anystate. He attended Reading University in England and subsequently became a Chartered Accountant with the firm, Touche Ross, London.

From 1996 until his involvement with Applicant in 2000, Mr. Newbury served as Finance Director with Risk Management Systems, London, England. This firm, whose Chairman and founder John Wise is also an invester and noneceutive director of the Applicant's holding company in London, provides financial trading and risk management systems for financial institutions in Europe. They also provide training and advisory services related to risk management. For nine years prior to 1996, he served as Director and Chief Financial Officer for Knight Financial, Inc., in both London and New York, as well as, associated companies throughout Europe and Asia. In this capacity, he led the company's financial planning and accounting group. Mr. Newbury does not have any prior commercial/community banking experience in the UK or US.

Interview Comments

Mr. Newbury stated he collaborated with proposed CEO Hamm in revising the proposed business plan and accompanying financial projections. Mr. Newbury added that while he lacked direct banking experience, he attained a comprehensive finance and accounting background including financial institution auditing, while employed at Touch Ross. He indicated that he had a strong background in risk management practices and financial controls. As Mr. Newbury was one of the authors of the previous business plan and forecasts, which incorporated dubious assumptions and resulted in the Applicant's ultimate withdrawal, he was asked to compare and contrast the current proposal. Mr. Newbury stated that the revised business model emphasizes more traditional and proven delivery channels. He is especially pleased that eleven of the twelve proposed supermarket branches were viable deposit and loan production offices of the former Anybank. As such, he is more comfortable with the model's assumptions and accompanying financial forecasts.

Financial Information and Stock Ownership

As of August 2001, Mr. Newbury reported $22M in cash and $399M related to his equity holdings and warrants in the proposal. Other material assets include his residence in London valued at $1,033M as well as, pension plans and life insurance valued at $940M. Liabilities primarily consist of a mortgage payable with a balance of $163M. Mr. Newbury's investment in the proposal was reportedly purchased with cash and personal savings.

</table>

Mr. Gray was born in Shropshire, England and holds British citizenship and residency. He is a graduate of Loughborough University, United Kingdom (UK) and received a degree in Mathematics and Engineering.

From 1995 up to his involvement in the proporsal (March 2000), Mr. Gray served as the Head of Front Office Technology/Europe for InternationalBank in London. In this role, he coordinated and led the Year 2000 project as well as, the Euro currency conversion. His primary responsibility, while at the institution was the development and implementation of front office trading systems for financial derivatives and fixed income securitites. Prior to this, Mr. Gray worked for nine years on numerous IT and software design projects including remote sensing technology (satalite systems) for end users such as the European Space Agency and Defense Research Agency in the UK.

Interview Comments

Mr. Gray stated his primary emphasis thus far has been on writing the Applicant's technology plan and designing and implementing the technology infrastucture. Mr. Gray stated he has extensive software design and project management experience and successfully recruited other highly talented designers from his previous employer, InternationalBank. He feels the current proposal offers a more viable business model, given its previous success with RSB. He also added that the Board has been strentghened considerably by the additions of former commercial bankers, Messrs. Hamm and Lamar.

Financial Information and Stock Ownership

As of June 2001, Mr. Gray' reported net worth, was primarily centered in his personal residence, with an assigned value of $547M. Liabilities of $325M consist of a mortgage payable on his residence in the UK. Mr. Gray' investment in the proposal of $9,900 was purchased with personal savings.

Retired Banker.</td></tr>
</table>

Summary and Findings

Mr. Lamar was born in LaGrange, Georgia and has resided in Anytown, Anystate for approximately one year. He is a graduate of Auburn University, Auburn, Alabama. Mr. Lamar recently retired from RegionalBank, an NYSE listed entity in Anystate, following its acquisition by ForeignBank. During his twenty-six year tenure at the state member bank, he served in a variety of executive and operational capacities.

<u>Bank Experience</u>

From 1990 to 2000, Mr. Lamar served in various executive roles including, RegionalBank's Vice-Chairman of the Board and Chief Financial Officer. At the time of its acquisition by ForeignBank, RegionalBank was an $11 billion commercial bank, operating in Anystate. Prior to that, Mr. Lamar served (1975-1990) at MidsizeBank, Anytown, Anystate, which was merged into RegionalBank in 1990. While at MidsizeBank, he served as a Director as well as its President and Chief Executive Officer (1988-1990). In addition to his executive officer roles during his tenure at MidsizeBank, Mr. Lamar served as CFO, Controller and Audit Manager.

<u>Regulatory History and References</u>

Available regulatory information (from FRB, State, and OCC) suggests that the institutions were fundamentally sound and operated. Contacts at the Federal Reserve Bank confirmed his executive level experience and had no supervisory concerns to report.

<u>Interview Comments</u>

Mr. Lamar became associated with the proposal through the Applicant's legal counsel, HH, an entity with whom he collaborated with on many issues while at RegionalBank. Mr. Lamar stated that he has considerable experience within finance, asset securitization, as well as, mergers and acquisitions. Regarding the latter, he stated he was involved in the acquisition of some forty or more institutions. He also stated that his institutions had experience with the supermarket branch delivery channel. While employed at RegionalBank, they operated over 20 rural supermarket branches with a moderate degree of success. He conveyed that the branches were profitable but did not enjoy the degree of returns as other parts of the institution. According to Mr. Lamar, the supermarket branches generally achieved $4-5 million in deposits and a loan to deposit ratio of 60% within 2 years of opening. He added that he is compelled by the more favorable demographics within the Anystate market, particularly the existing deposit base and retail branch networks employed by the myriad of institutions. This was an aspect that was far less prevalent in the rural areas of Anystate. Mr. Lamar stated that his residence's distance from the main office would not preclude him from being an active director.

<u>Financial Information and Stock Ownership</u>

Mr. Lamar's personal statement dated August 2001, reflected $80M in cash and $4,266M in marketable securities. Other material assets include residential properties valued at $650M and pension plans valued at $2,806M. Liabilities consist primarily of a mortgage payable of $240M. Mr. Lamar's $5,000 investment in proposal was reportedly made with cash.

	TITLE Proposed Director (nonexecutive)			
OTHER BUSINESS AFFILIATIONS OR PROFESSIONS Retired Special Agent, Federal Bureau of Investigation (FBI).				

Summary and Findings

Mr. Miller was born in Dearborn, Michigan and has resided in Anystate since 1980. He received his Bachelors degree in Biological Sciences from Michigan Technological University, Houghton, Michigan.

Mr. Miller recently retired from the FBI in Anytown, Anystate. He has extensive experience with investigations involving white-collar crimes including, crimes against financial institutions. Particularly noteworthy is his experience regarding bank fraud, embezzlement, and Internet related financial crimes.

Interview Comments

Mr. Miller became associated with the proposal through Casey Grant's (Joe Hamm's predecessor who resigned during 1H2001) father, who resides in the same residential development. Mr. Miller stated that he has many years of experience investigating and prosecuting white-collar crimes in Anystate, particularly, money laundering, as well as, bank, mail and wire fraud. He is reportedly very knowledgeable of Internet related crimes. With regard to strengths he could bring to the Applicant, Mr. Miller stated he would add depth and experience to the audit committee. As a proposed director of the previous Application, Mr. Miller stated he is more comfortable with the supermarket branch network given it has had a proven record at Anybank.

Financial Information and Stock Ownership

As of September 2001, Mr. Miller's net worth was primarily centered in a deferred savings plan. As of the reporting period, the balance of this other asset (Federal Thrift Savings Plan) was $218M. Other material assets included his residence, with a value of $200M. Liabilities primarily consisted of a mortgage payable on his residence of $130M. Mr. Miller's investment in the proposal of about $5,500 was made with his personal savings.

Proposed Director (nonexecutive)</td></tr>
<tr><td colspan="5">OTHER BUSINESS AFFILIATIONS OR PROFESSIONS
Attorney. President and Managing Partner of the law firm, Wart, West, and West, P.A. (WWW).</td></tr>
</table>

Summary and Findings

Mr. Wart was born in Robana, Illinois and has resided in the Anytown area since 1984. He received an undergraduate degree in economics from Dartmouth College, Hanover, New Hampshire, and Juris Doctorate in law from University of Miami, Miami, Florida. Mr. Wart is a practicing attorney, specializing in corporate, real estate, banking, and securities law. Additionally, he is Chairman of the Anytown Development Board, a not for profit organization committed to advancing the county's business, technology, and educational endeavors.

Interview Comments

Mr. Wart became associated with the proposal through Joe Hamm, whom he advised on several lending transactions, while at Anybank. He stated he is an active member in the community and knows many influential business professionals who can serve as potentially lucrative deposit clients during the formative stages. In that regard, he specifically spoke of the New Technical School in Anytown. He anticipates being able to refer the School's operating account, which reportedly retains balances of $10 million.

Mr. Wart stated he has performed legal work for many financial institutions in Anystate. He was active in processing various regulatory applications for Anybank, in Anytown when he served as general counsel. Additionally, he represented Anybank on many real estate transactions. In addition to proposed CEO Hamm, Mr. Wart knows proposed director Marcotte, a fellow member of the Anytown Development Board.

With regard to the business model, Mr. Wart stated it was conceived on sound research and partly on the success of the eleven- branch supermarket network, while employed by Anybank. He cited the favorable deposit market share in AnyCounty-1 and AnyCounty-2, the depth of the Hispanic market, and relatively low cost structure of the supermarket branch vis a vis the traditional bricks and mortar retail branch site.

Financial Information and Stock Ownership

As of August 2001, Mr. Wart reported $163M in cash and marketable securities, as well as, $1,577M in residential and commercial real estate holdings. Other assets include his 43% interest in the law firm, WWW, with an assigned value of $600M. The firm WWW reported revenues of $3 million for the year ending 2000, representing a 54% increase over the previous year. Mr. Wart's liabilities consist primarily of three mortgage payables with an aggregate balance of $914M. He reports no contingent liabilities. According to Mr. Wart, his $10,000 investment in the proposal was made with cash.

GENERAL CHARACTER OF THE MANAGEMENT (Continued)

Discuss proposed board and management committees and their associated responsibilities. Assess the reasonableness of fees and other expenses associated with the application and organization, including insider involvement. Evaluate the reasonableness of stock benefit plans, including stock options, stock warrants, and other similar stock based compensation plans. The structure of stock benefit plans should encourage the continued involvement of the participants and serve as an incentive for the successful operation of the institution. Assess reasonableness of fidelity coverage. An insured depository institution should maintain sufficient coverage on its active officers and employees to conform with generally accepted industry practices.

Summary and Findings

Board Committee Structure and Fidelity Coverage

The organizers have provided for a usual and customary committee structure to assist in overseeing and managing the bank's operations. No exceptions were noted to these proposals and structures. Organizers stated that sufficient fidelity coverage would be procured and maintained.

Reasonableness of Organizational Expenses

Organizational and pre-opening expenses appear excessive for the formation of a denovo national association and do not reflect favorably on the Applicant.

Most of the responsibility for these high expenses can arguably be attributed to the previous leadership during the prior Application submission (August 2000). Casey Grant, the lead organizer and proposed Chairman/CEO displayed a lack of fiscal discipline during his tenure and was responsible for formulating the previous nontraditional and seemingly higher risk business model. This model was poorly supported and thus required extensive time to procure supporting documentaion and fesibilitiy studies. During this lengthy process, Mr. Grant relied extensively on legal cousel and consultants which added to the expense burden. Finally, Mr. Grant prematurely added a staff of twenty, including highly compensated officers, which impacted pre-chartering costs.

Since the previous management's departure and filing of the new Application, organizational expenses while high, appear to have moderated. Despite the high organizational expenses, management has been successsful, during two separaterly underwritten capital offerings, in forming a substantial amount of capital. It is believed this capital is sufficient to absorb the high costs and provide for the growth of the proposal.

Employment Agreements & Compensation

The Applicant anticipates negotiating employment agreements with several officers. The officers (to date) with corresponding annual salaries are as follows: Chairman/CEO Joe Hamm, $150M; CFO Nigel Newbury[*] $55M; CTO Frank Gray, $55M; CLO John Well, $90M. In addition, Controller Sue Herrera $65M; and Senior Technology Officer Brian Bain $110M will reportedly be under contract. The agreements generally include the following standard terms:

- Employment Term: Generally one year. Continues thereafter unless terminated by either party;
- Other Benefits: Medical, and participation in any existing stock benefit plan.
- Bonus: Sole discretion of Board of Directors
- Termination without Cause: Lump sum payment equal to the present value of the unexpired portion of the employee's term (effectively less than or equal to 1 year). Discount derived using the prevailing Federal funds rate.

<u>Stock Benefit Plan</u>

The Applicant intends to formulate a plan for certain executive officers, directors, and other employees. To date, this plan has not been formalized or submitted for Regulatory review. Organizers have committed to enacting a plan that is consistent with existing regulatory guidelines. Said plan should be scrutinized for reasonableness in light of exceptions taken by the Examiner during the prior

Messrs. Newbury and Gray' respective salaries represent the proposed bank's pro-rata expense only. Additional compensation of $55M for each will be paid by Holding Company-1, London, England. This represents compensation for services performed at the top-tier holding company level. Refer to biographical information for their respective roles.

Application. Exceptions involved excessive option grants to the proposed president, that were nearly 3x the volume of initial shares purchased.

Warrant Holders and Intrinsic Value

Based on the most recent bid of 2.5p (£0.03) per share (or ¢3.75), and existing strike price above of 2p, the intrinsic value of the Mr. Newbury's warrants is less than $50,000. Given the current pricing, this additional form of compensation does not appear unreasonable.

The overall finding on this factor is FAVORABLE, pending receipt of acceptable stock benefit plans.

RISK TO THE FUNDS

As a general matter, the FDIC interprets this factor very broadly, relying on any information available including, but not limited to the applicant's business plan. Assess the proposed institution's business plan. The business plan's goals should be commensurate with the capabilities of its management and the financial commitment of the incorporators. The business plan should demonstrate an ability to achieve a reasonable market share, reasonable earnings prospects, the ability to attract and maintain adequate capital, and demonstrate a responsiveness to community needs. The plan should also demonstrate adequate risk management policies. Business plans that rely on high risk lending, a special purpose market, or significant funding from sources other than core deposits, or that otherwise diverge from conventional bank related financial services require detailed analysis as to the suitability of the proposed activities for an insured institution.

Summary and Findings

The Applicant is proposing to execute a traditional integrated business model with respect to deposit acquisition and funding. Funding will primarily draw on two key delivery channels, a supermarket branch network and traditional retail banking office and to a lesser extent, a fully transactional web-site.

Business Model Strengths

The business model enjoys a strong initial capitalization base, a seemingly conservative management team and investment philosophy, a viable and multi-faceted branch network strategy, and a vast deposit market within its operating environment. These factors comprise the proposal's prevailing strengths.

The most integral change in the proposal versus the prior previous bank model consists primarily of the upgrade in the executive management team and secondly, the adoption of a more fundamentally sound and traditional business model. The new team is led by an executive (CEO Hamm) possessing an extensive commercial banking and lending background. Equally important has been the addition of seemingly strong outside directors, one of whom (Director Lamar) possesses previous executive and director level experience. The remaining new outside directors (Wart and Marcotte) appear to be very influential within various County economic development endeavors. By all accounts, the outside directors may be in a position to influence and stimulate the proposal's funding and business development initiatives. The proposed management's aversion for risk is best manifested in the proforma asset-mix, which is heavily weighted towards residential real estate during the first year of operation. With regard to funding, the business model is seeking to replicate the deposit generating success of the supermarket branch network once operated by Anybank. Its previous success within demographically favorable and densely populated towns and cities adds credence to the model's funding projections.

Business Model Risks

As depicted in the Applicant's sensitivity analysis and stress testing, the model is most vulnerable to a slower rate of deposit growth {Scenario 2} during the formative years. What-if scenarios depict an earnings risk should funding fall below 75% of original projections. A deposit shortfall without any commensurate and effective cost containment plans may adversely impact profitability and the model's ultimate success. In light of funding's importance during the formative stages, any shortfalls may induce management to compete more aggressively on price thereby jeopardizing margins, profitability or risk selection. Executive management's ability to attract funding at a reasonable cost will be critical to the model's success.

The finding on this factor is <u>FAVORABLE.</u>

CONVENIENCE AND NEEDS OF THE COMMUNITY TO BE SERVED

Discuss the proposed institution's primary trade area(s) including location and population. Address economic conditions, primary industries, and major employers. Assess trade area(s) population demographics and the proposed institution's willingness and ability to meet the deposit and credit needs of the community to be served. Assess the competitive dynamics of the market and how the proposed institution will compete for market share.

Summary and Findings

Proposed Service Areas

Per the Applicant, the primary trade areas are contained within AnyCounty-1 and AnyCounty-2, Anystate. A retail branch network encompassing one traditional branch (main office) as well, a supermarket branch network will form the bank's surrounding service areas. During the first year, a total of six branches (five supermarket and one main office) are planned for AnyCounty-1, while seven are envisioned for AnyCounty-2. Given the internet component of this business model, other market areas outside of the proposal could conceivably be pursued.

Community Growth and Demographic Indicators[4] – AnyCounty, Anystate - MSA

Demographic and Economic Trends – Anytown - MSA

The overall Anytown market remains moderately strong due to the County's higher per capita income and strong job growth, particularly in the services and retail trade sectors. Real Estate markets and favorable adsorption measures (residential housing demand) have been driven by population growth, in-migration from the Southern State Counties, as well as, tourism.

Key short-term risks remain the weak national economy, which has been exacerbated post September 11, 2001. These factors have negatively impacted tourism and its accompanying service industries. In addition, segments of the County, including the Anytown area, have experienced very active new commercial real estate construction activity that has reportedly impacted rental rates for new space. While current vacancy rates of around 14%, are below the 30% prevailing nearly a decade ago, any prolonged recession could make it a more difficult environment for underwriting and funding quality commercial real estate credits. Manufacturing has endured considerable layoffs and remains a weak area for the County. Motorola, State's largest Technology employer, has experienced declining revenue, weakening margins, as well as market share erosion. As a result, substantial layoffs have occurred company wide in addition to its facilities in Anytown.

Motorola, Inc.	Technology	4,000		

Demographic and Economic Trends – Anytown, Anystate - MSA

Economic trends convey strong growth despite a weaker national economy. Growth has been led by the services, wholesale trade, and finance industries.

The residential housing market is particularly active. Tourism and leisure (hotel/cruise ship lines) remains one of the MSA's key economic drivers, However, its outlook has been impacted by the general state of the economy and September 11, 2001 attack on the US. In addition, international trade with Latin American trading partners may decline somewhat considering the adverse market conditions within Argentina, South America's second largest economy. Manufacturing risks are similar to the Anytown MSA in light of Motorola's size and scale within the area. With regard to commercial real estate, vacancy rates within the Broward office market rose significantly during Q2 2001 to 16.3% versus 9.3% for the same period a year ago[6]. Robust new construction activity, an increase in sublease space, weaker demand, and a softer economy appear to be contributing factors. These trends, should they continue, will pose the same lending risks and challenges previously cited.

Competition – Financial Services

The Applicant will encounter intense competition for funding within both market areas. The FDIC's Summary of Deposits Report for June 2001, indicates that the AnyCounty MSAs hold 450 and 405 banking and thrift offices with aggregate deposit shares of $22.3 and $23.9 billion, respectively. A compelling level of the market share (over 70% for both MSAs) is held by the offices of out of state regional and super-regional bank and thrift holding companies.

The Applicant professes that its multiple delivery channels coupled with attractive rates and efficient service will enable it to compete within the proposed PSA/MSA. The organizers also contend that the recent performance of the eleven supermarket branches as well as, contacts from several directors within the community will enhance the proposal's probability for successfully acquiring deposits within these markets.

The finding on this factor is <u>FAVORABLE.</u>

[5] Source: See Supra
[6] Grubb & Ellis Research , Second Quarter 2001; <u>Vacancy Rates Increase as Construction Continues., Page 1.</u>

CONSISTENCY OF CORPORATE POWERS

Discuss trust powers or any other corporate activities contemplated by the applicant, including those covered by Section 24 of the FDI Act. Address any problems with the Articles of Incorporation or the Bylaws.

Summary and Findings

There is nothing to indicate that the proposal's activities would be inconsistent with the purposes of the Federal Deposit Insurance Act.

The finding on this factor is FAVORABLE.

OTHER PERTINENT INFORMATION

If applicable, provide a summary of comments made by bankers and other interested parties. Address problems with stock offering circular. For applicants delivering services over electronic channels (such as the Internet or wireless devices) assess the information systems infrastructure, policies and security.

Summary and Findings

Summary of Banker Comments

<u>Loren Greene, President & CEO</u> – Anybank & Trust, Anytown, Anystate

Mr. Greene stated he knew proposed CEO Hamm by reputation primarily and suggested he was a very conservative banker. He knows about the proposed bank and opined that the discontinuance of the former delivery channels appeared to be a positive development. With regard to the operating environment, Mr. Greene stated that loan demand has picked up considerably in the county since late 2000, particularly in the SBA, commercial and residential real estate sectors. Funding has been relationship driven and continues to exceed expectations. According to Mr. Greene, the failure of Anybank, which retained a branch directly across from his bank and subject proposal, will assist in reducing the cost of funding for area banks. This is the case given Anybank's aggressiveness with regards to deposit pricing.

<u>Rick Savage, Executive Vice President, Lending</u> – Anybank & Trust, Anytown, Anystate

Mr. Savage served as proposed CEO Hamm's colleague while at Anybank in Anytown. As a Senior Lending Officer, he worked closely with Mr. Hamm who retained the title of Chief Credit Officer. Mr. Savage stated that Mr. Hamm had a strong credit and special assets background. In addition, he stated that Mr. Well (proposed Senior Lending Officer) was also a very competent lender and proficient in operational matters. Mr. Savage suggested that Mr. Hamm would need strong officer support in the operational areas of the bank.

<u>James Brown, Chairman & CEO</u> – Anybank, Anytown, Anystate

Anybank is a federally chartered thrift and a second year denovo. It operates a pure internet business model.
Mr. Brown stated that market acceptance over the bank's model had been positive since the bank's inception. However, according to him, the growth rate has been purely a function of pricing. He added that premium pricing across <u>all</u> deposit categories is what attracts the higher net worth Anytown clientele. The institution is currently experiencing a transaction/CD account mix of approximately 34%/66%. His experience has been that technology for this type of business model was costlier than perceived to be in the planning stages.

<u>Doug Jones, SVP/Retail and Alternative Delivery</u> – Anybank, Anytown, Anystate

Prior to its acquisition by RegionalBank, Anybank was an established National bank which operated 32 in-store retail branches throughout Anystate. The in-store branches are hosted within Albertsons Supermarkets.

Mr. Jones stated that Anybank started this program over four years ago. It is expected to be a profit center for the bank but requires loan production to achieve that goal. Not all locations have been successful thus far. He stated that clientele is very sensitive to deposit pricing and primarily drawn to the time deposit products. He estimates time deposit/MMDA mixes of up to 60%/20%. Given the configuration of their in-store facilities, their loan production mainly caters to consumer type products such as auto and HELs. Mr. Jones stated that customer acquisition becomes a delicate balance of pricing, customer traffic, and marketing abilities of the staff. He concluded that customer traffic was very important for the success of the in store branch. Their institution currently performs studies to locate retail stores which achieve average weekly store traffic of 28,000 shoppers.

Technology Platform and Ensuing Security Risks

Overview

The Applicant plans to offer banking services via multiple electronic delivery channels including the Internet, automated telephone, Customer Call Center (telephone, facsimile, secure web message, e-mail, and regular mail), WAP (handheld wireless), and traditional retail branches.

Services that will be offered are customer identification for account opening, bill pay, check printing, fulfillments, electronic funds transfer (EFT), item processing, AS/400 mainframe hosting, ATM and Visa checkcards. Internet banking will allow account review, bill pay, transactions entry, check order, statements, printing statements, on-line applications, and wire transfers. {A schematic rendering of the operational support service is provided on a subsequent page.}

Vendors/Service Providers

Aurum Technologies (MISER III), Orlando, Florida, will provide the CBS (Comprehensive Banking System) software for processing core banking applications, EFT, Visa checkcards, item processing, network services, Internet connection, VRU as well as, interface to De Luxe check printing, and Equifax credit scoring. Aurum Technologies will host and manage the bank's AS/400 server.

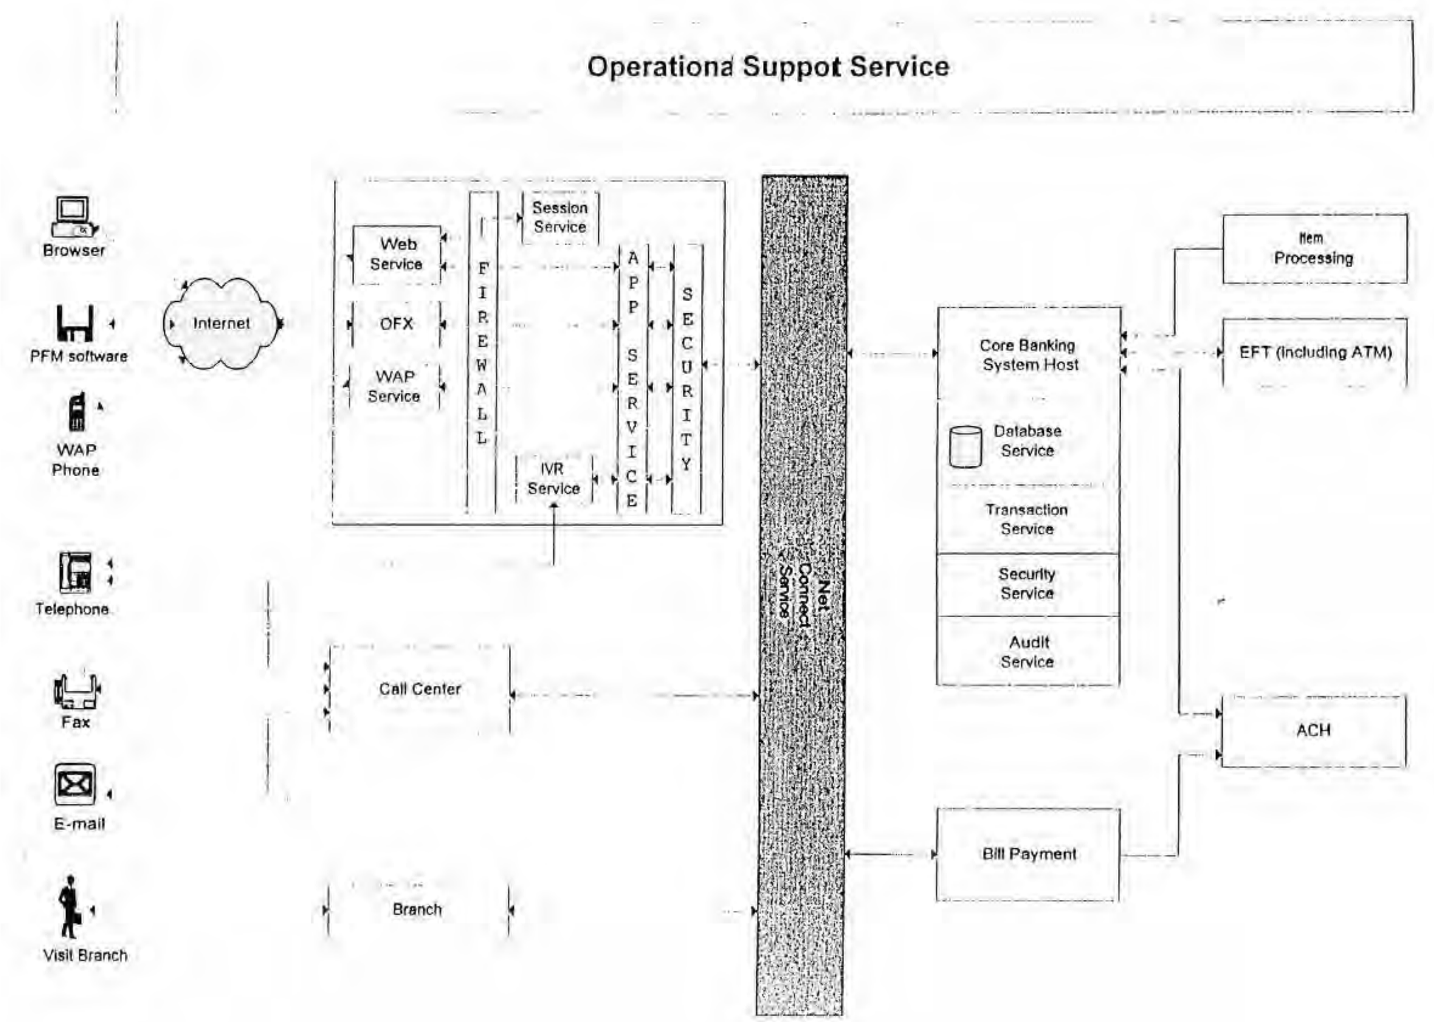
Equifax Credit Services, Inc., Atlanta, Georgia, will provide credit scoring and authentication using Decision Power and eID-Verifier, respectively. Shoreline Business Forms, Inc., Wallingford, Connecticut will provide ATM and Visa check cards. Checkpoint will provide network firewall maintenance. Princeton ecom Corporation, Princeton, New Jersey, will provide bill payments and collections.

Internet access is provided by UUNET through a 1.5 MB T1 line. Fuzion will provide a future second wireless service. There are two local area networks (LANs), located in the London office and in the Anytown office, which are to be joined by a virtual private network (VPN) connection, secured by Checkpoint network firewalls. The web site will be hosted (load balanced) jointly by Applicant and an external provider (Aurum).

According to proposed Senior Technology Officer Brian Bain, the proposed infrastructure retains the sufficient degree of scale and capacity to accommodate forecasted customer account volumes throughout the formative stages.

Facilities

The Applicant has dedicated T1 point-to-point links to Aurum Technologies, Charlotte, NC (hosting center) using redundancy circuits to ensure continuous service at all times. Disaster Recovery is with Sunguard, Philadelphia, Pennsylvania. Telecommunications connectivity was tested and the full system was restored successfully in September 2000. Additionally, the AS400 center in Charlotte is equipped with an emergency system consisting of an uninterrupted power supply (UPS), fire suppression, air conditioning and security access system.



Source: Application for Federal Deposit Insurance

<u>Audit</u>

In addition to monitoring logs; as further delineated within the Security section below, the Applicant will establish a Help Desk to catalogue and report incidents, as well as, follow-up escalation procedures when needed. A third party will be engaged to review all internal products, software and documentation, for compliance with internal standards and ensure that company procedures are implemented.

<u>Security</u>

The ability of the Applicant to provide secure data transmission over its proposed delivery channels will be of paramount importance. Its successful application and accompanying internal controls are believed critical to the success of the Internet as a proposed delivery channel and ultimately, overall customer acceptance.

OTHER PERTINENT INFORMATION (Continued)

In addition to the security measures delineated below, the Applicant is contracting with Aurum, an entity that has attained the requisite SAS 70 certification. This certification, rendered by an independent accounting firm, affirms that a provider's computer systems are being managed and operated in a manner consistent with accepted industry practices.

Security measures proposed for the fully transactional web channel include the following:

Encrypted Transactions

All banking and Internet communications will be encrypted. This will preclude sensitive financial data from being easily read and/or deciphered. Encryption will be accomplished via the use of Secure Sockets Layer Technology. This technology, considered the standard for encryption, is currently utilized by large nationally recognized web browsers. Data transmission from the Applicant's server and Aurum will be encrypted using Data Encryption Standard (DES) encryption, as further described below.

Secure Logon

To preclude the possibility of a third party downloading the Applicant's or a customer's password file, user identification and passwords will be encrypted and stored on a separate database server, not on the Internet or the web server. In addition, password parameters will be structured in a format, which makes the probability of randomly acquiring or guessing said password, extremely low.

Isolated Bank Server

The computer used to provide the Applicant's services would not be directly accessed via the Internet. It will be on a private connection, or intranet, that provides two-way communication between the isolated bank server and Internet server. Consequently, an Internet user will be prevented from accessing the computer that provides the Applicant's services. All banking services will be routed from the Internet server through a firewall. The firewall is a combination of software and hardware devices that specifically defines, controls, and limits access to internal computers from outside computers across a network. The firewall framework means that only authenticated bank customers or administrators may send or receive transactions through it. The firewall will also be immune to penetration from within the network. All messages transmitted or received between the Internet server and the operating server will be encrypted using DES encryption.

This consists of a symmetric key algorithm. Such technology is highly secure as it is not vulnerable to standard ciphertext attacks. Therefore, even if an individual was to route a message to the Applicant's server and through the firewall, the message could not be encrypted in a manner, which would be considered valid by the server. Consequently, the Applicant's server would reject the message.

Authenticated Session Integrity

An authenticated user pertains to any user who signs onto the Applicant's web site with a valid user ID and password. The Applicant's server will be configured to limit exposure to authenticated users who attempt to defraud it. If an authenticated user alters a command (URL), which is sent from the web browser to the server, in any way in an attempt to gain access to another user's account, the Applicant's server immediately detects that the session integrity variables have been violated. Once detected, the Applicant's server will terminate the session and record the unsuccessful attempt in a log so that staff can investigate.

Physical Security & Secure Modem Access

All servers and network computers will reside in secure facilities. Computer operations supporting the Applicant's internet access will also reside in secure back-up facilities. Only employees with a valid access card may enter the physical premises. Access to server systems will require further password authentication. A private line, which is not accessible by or from the public, will connect the Applicant's server with Aurum. A dial-up maintenance port will also permit access to the server. The modem that provides the only access to this port will be specially protected and will only be enabled when necessary.

Service Continuity & Monitoring

The Applicant's server will be "mirrored" so that any existing software and/or hardware bugs should cause no more than a few minutes of service outage. "Mirroring" means that the Applicant's server is backed up continuously so that all data is stored in two distinct physical locations. This level of redundancy is necessary to ensure that access to the Applicant's systems will be reliable. All customer transactions utilizing the Applicant's server will produce one or more entries within a transactional log. The Applicant will regularly review these logs, along with Aurum, to ascertain whether any unusual transactions have occurred.

Examiner Comments

None.

INTRODUCTION

This section describes the long standing philosophy and methods of the FDIC for examining institutions using a risk-focused, forward-looking approach. Each supervised institution is unique, based on its business model, complexity, and risk profile. Accordingly, examiners and case managers are expected to apply the instructions in this policy, as well as related instructions elsewhere in the FDIC's Risk Management Supervision Manual of Examination Policies (Manual) consistent with each institution's unique circumstances. The instructions set forth in this section are directed to FDIC supervisory personnel[1] in the conduct of supervisory activities and do not require action on the part of insured institutions. The principles discussed herein apply to both point-in-time and continuous examination approaches, though some specific activities discussed may differ.

Purpose of Examinations

An examination is the process whereby supervisory personnel of a regulatory agency evaluate financial institutions' conditions, management processes,[2] and future prospects; identify deficiencies that may threaten their soundness; assess their compliance with applicable laws and regulations; and develop recommendations for corrective action, as appropriate.

Consistent with its mission, the FDIC conducts financial institution examinations to ensure public confidence in the financial system and to protect the Deposit Insurance Fund. Maintaining public confidence in the financial system is essential because customer deposits are a primary funding source that depository institutions use to meet fundamental objectives such as providing financial services. Safeguarding the integrity of the Deposit Insurance Fund is necessary to protect customers' deposits and resolve failed institutions.

On-site examinations help ensure the stability of insured depository institutions by identifying undue risks and weak risk management practices. Additionally, examinations play a key role in the supervisory process by helping the FDIC identify the root cause and severity of problems at individual institutions and emerging risks in the financial-services industry. Accurately identifying existing problems and emerging risks helps the FDIC develop effective corrective measures for individual institutions and broader supervisory strategies for the industry.

Uniform Financial Institutions Rating System

The federal financial institution supervisory agencies endeavor to ensure that all financial institutions are evaluated in a comprehensive and uniform manner, and that supervisory attention is appropriately focused on the financial institutions exhibiting financial and operational weaknesses or adverse trends. To promote this goal, the Federal Financial Institutions Examination Council (FFIEC) adopted the Uniform Financial Institutions Rating System (UFIRS) on November 13, 1979. The original rating system was designed to reflect, in a comprehensive and uniform fashion, an institution's financial condition, compliance with laws and regulations, and overall operating soundness.

The FFIEC revised the UFIRS on December 19, 1996, effective January 1, 1997.[3] The revised rating system, known as CAMELS,[4] reflects an increased emphasis on risk management processes. The Federal supervisory agencies historically considered the quality of risk management practices when applying the UFIRS, particularly in the management component; however, by 1996, changes in the financial services industry had broadened the range of financial products offered by institutions and accelerated the pace of transactions. Those trends reinforced the importance of institutions having sound risk management systems. Accordingly, the revised rating system added an explicit reference to the quality of risk management processes in the management component, and the identification of risk elements within the composite and component rating descriptions.

Management practices, particularly as they relate to risk management, vary considerably among financial institutions depending on their size and sophistication, the nature and complexity of their business activities, and their risk profile. Each institution must properly manage its risks and have appropriate policies, processes, or practices in place that management follows and uses. Activities undertaken in a less complex institution engaging in less sophisticated risk-taking activities may only need basic management and control systems compared to the detailed and formalized systems and controls needed for the

[1] This term includes Risk Management Supervision staff such as examiners, field managers, case managers, and regional office management and is used throughout this document when a responsibility may be handled by varying parties based on regional management discretion.

[2] Management processes include an institution's corporate governance structure, policies, and procedures.

[3] See 62 Fed. Reg. 752, *January 6, 1997, effective January 1, 1997.*

[4] Under the UFIRS, each financial institution is assigned a composite rating based on an evaluation of six financial and operational components, which are also rated. The component ratings reflect an institution's capital adequacy, asset quality, management capabilities, earnings sufficiency, liquidity position, and sensitivity to market risk (commonly referred to as the CAMELS ratings).

broader and more complex range of activities undertaken at a larger and more complex institution.

The UFIRS takes into consideration certain and compliance factors that are common to all institutions. Compliance with laws and regulations is considered under the management component. Specialty examination findings (Compliance, Community Reinvestment Act, Government Security Dealers, Information Technology, Municipal Security Dealers, Transfer Agent, and Trust (or Fiduciary)) and the ratings assigned to those areas are taken into consideration, as appropriate, when assigning a composite rating and component ratings under UFIRS.

Peer comparison data are not included in the rating system. The principal reason is to avoid over reliance on statistical comparisons to justify the component rating being assigned. Examiners are encouraged to consider all relevant factors when assigning a component rating. The rating system is designed to reflect an assessment of the individual institution, including its size and sophistication, the nature and complexity of its business activities, and its risk profile.

Over the years, the UFIRS has proven to be an effective internal supervisory tool for evaluating the soundness of financial institutions on a uniform basis and for identifying those institutions requiring special attention or concern.

Risk-Focused Approach to Examinations

Risk-focused supervision was adopted by the FDIC, the Board of Governors of the Federal Reserve System, and the Conference of State Bank Supervisors on October 1, 1997, as a framework for carrying out examination activities. The FDIC described the then new framework as employing a tiered approach to supervision to assist examiners in establishing an appropriate examination scope and managing resources by focusing those resources on the areas in an institution presenting the greatest risks.[5]

The objective of a risk-focused examination is to evaluate the safety and soundness of the financial institution by assessing its risk management systems, financial condition, and compliance with applicable laws and regulations, while focusing on the bank's highest risks. The risk-focused examination process seeks to strike an appropriate balance between evaluating the condition of an institution at a certain point in time[6] and evaluating the soundness of the institution's processes for managing risk in all phases of the economic cycle. By evaluating an institution's risk management practices, examiners look beyond the financial condition of a bank at a point in time, to how well it can respond to changing market conditions given its particular risk profile. The UFIRS emphasizes the importance of sound risk management processes by including them as a significant factor in the definition for each component rating and the overall composite rating.

To achieve the risk-focused examination objective, FDIC supervisory personnel are expected to adhere to the following risk-tailoring principles and practices:

- Recognize there are financial institutions, or areas within institutions, that present low risk, and in those cases, minimum (or baseline) examination procedures are generally sufficient to assess the institution's condition and risks.
- Allocate more examination resources to higher risk areas and fewer resources to lower risk areas.
- Use data from the quarterly Call Report filings and other available information to monitor changes to the institution's business model, complexity, and risk profile between examinations.
- Leverage available information, including analyses and conclusions from ongoing off-site monitoring and previous examinations, to determine the financial institution's risk profile and the scope of the next examination or examination activity.
- Consider the financial institution's ability to identify and control risks when risk-focusing examinations.
- Tailor the pre-examination request list to the institution's business model, complexity, and risk profile.
- Contact the institution between examinations or prior to finalizing the scope of the examination to help inform an examiner's assessment of an institution's risk profile.
- Follow up between examinations on the institution's actions taken to address areas in need of improvement.

Further, FDIC personnel are expected to adhere to the following communication principles:

- Provide appropriate prior notification of the upcoming examination and address staffing and logistical issues.
- Tailor the examination request list and scope to the unique risk profile and business model of the institution.

[5] See FDIC 1997 Annual Report.

[6] In addition to point-in-time examinations, the FDIC utilizes targeted reviews conducted under a supervisory plan, guiding a continuous examination program for certain institutions. These other programs are generally warranted to ensure effective monitoring and examination activity related to larger and more complex institutions. While the supervisory plan and continuous examination processes and procedures may differ in some respects from the point in time approach, the principles contained within this section are applicable to examination activities for all institutions supervised by the FDIC.

- Facilitate the secure exchange of information between institution management and examiners.
- Inform institution management of areas under review and provide management the opportunity to communicate any additional information or clarification before the conclusion of the examination.
- Establish clear expectations regarding items and examination findings that the financial institution is expected to address.[7]

←

RISK-FOCUSED, FORWARD-LOOKING EXAMINATION PROCEDURES

Section 10(b) of the FDI Act requires the FDIC to conduct full-scope, on-site safety and soundness examinations of its supervised institutions.[8] Risk-focused, full-scope examinations assess the types and extent of risks to which a banking organization is exposed, evaluate the organization's methods of managing and controlling its risk exposures, ascertain whether management and directors fully understand and are actively monitoring the organization's exposure to these risks, and evaluate compliance with banking laws and regulations. Risk-focused, full-scope examinations are forward looking in that they address weaknesses in risk management practices before they lead to financial deterioration or operational problems.

The risk-focused supervision approach to examinations is not composed of a fixed set of routine procedures. Rather, the procedures that constitute a full-scope examination depend on the nature and complexity of the institution's business activities, and its risk profile. At a minimum, however, full-scope examinations must include sufficient procedures to reach an informed judgment on the financial, managerial, operational, and compliance factors rated under the CAMELS rating system.[9] An examination meeting those requirements would meet the FDIC's definition of a full-scope examination.

Understanding the Institution

To conduct a risk-focused examination, examiners must understand the nature, scope, and risk of an institution's activities. The nature and scope of an institution's activities are commonly referred to as the institution's business model. The examiner will develop a written description of the bank's business model by identifying the activities in which a banking organization has chosen to engage.

The risk associated with an institution's business model is commonly referred to as the risk profile. The examiner will develop a written description of the bank's preliminary risk profile by determining the types and quantities of risks inherent in the bank's business model and the quality of the risk management practices used by bank management to control these risks.

A key component of both an institution's business model and risk profile is the complexity of its operations. The examiner will develop a written description of the complexity of an institution's operations through a review of its balance sheet structure and scope of operations.

Business Model – To evaluate and develop a written description of an institution's business model, an examiner will consider:

- The primary market area and customer base served;
- The organizational/ownership structure, strategic plan/focus, and philosophical approaches/risk appetite management is using to pursue its objectives;
- The primary lending activities and funding sources, including any concentrations;
- Any product line, activity, or service that represents a significant portion of assets or revenue;
- Any unique or niche characteristics;
- Any significant third-party relationships, including technology service providers; and
- Any significant use of new or emerging technologies to support customer products or bank operations, whether offered alone by the institution or offered with a third party.

Risk Profile – To evaluate and develop a written description of an institution's preliminary risk profile, the examiner reviews the bank's business model, its current financial condition, and trends in its financial condition.

---

[7] The FDIC participated in the FFIEC Examination Modernization project to identify and assess ways to improve the effectiveness, efficiency, and quality of financial institution safety and soundness examination processes, with the expectation to help reduce unnecessary regulatory burden. Expectations for examiners to adhere to risk-tailoring and clear communications practices are part of the project. See FFIEC press releases related to Examination Modernization dated March 22, 2018 and November 27, 2018.

[8] Federal Deposit Insurance Act.

[9] This could include, as appropriate, risk management for Information Technology (IT), Bank Secrecy Act (BSA)/Anti-Money Laundering (AML)/Office of Foreign Assets Control (OFAC) reviews, Trust, Registered Transfer Agent, Municipal Securities Dealer, and Government Securities Dealer examination programs. These specialty examination areas are incorporated into CAMELS through the Management component rating, as outlined in the UFIRS. See 62 Fed. Reg. 752*, January 6, 1997, effective January 1, 1997.*

The examiner reviews information available within the FDIC, including prior Reports of Examination and workpapers, correspondence, applications and other filings, the Uniform Bank Performance Report, interim contacts, and off-site review reports. Further, the examiner communicates with the case manager and other FDIC stakeholders to obtain additional information.

The examiner also considers the quality of institution management's policies, practices, and processes in determining the risk profile of an institution. Such policies, practices, and processes are indicators of an institution's governance and risk management framework, and can provide information to evaluate the institution's ability to withstand and respond to internal and external challenges, including unforeseen scenarios (e.g., competition, adverse economic conditions).

The nature and scope of an institution's activities influence the robustness of risk management practices for mitigating credit, market, operating, or transaction, strategic, compliance, legal, liquidity, and other risks. The examiner considers the inherent risks of the bank's activities and the strength of risk mitigation practices when developing and documenting the current risk profile of the bank. This process enables the examiner to identify areas of greater risk that will be emphasized in conducting the examination.

Risk management practices are primarily assessed considering the guidelines for the safe and sound operation of banks set forth in Section II of Part 364 of the FDIC Rules and Regulations, Appendix A,[10] though other regulations are also considered These guidelines set out safety and soundness standards that the agencies use to identify and address problems at institutions before capital becomes impaired.[11] The guidelines are qualitative rather than quantitative; they establish the objectives of proper operations and management, but leave the specific methods of achieving those objectives to each institution. They are also designed to be flexible based on the nature of activities at the bank. The guidelines cover the following areas:

- Internal controls and information systems;
- Internal audit systems;
- Loan documentation;
- Credit underwriting;
- Interest rate exposure;
- Asset growth;
- Asset quality;
- Earnings; and
- Compensation, fees, and benefits.

Complexity – A key component of both the institution's business model and risk profile is the complexity of its operations. To determine complexity within an institution's products, services, and delivery channels, the examiner evaluates a combination of factors, including, but not limited to, the sophistication of a particular activity or business line, risk presented by the activity, volume and scope of the activity, and interconnectedness among various activities and business lines within the institution. The examiner also considers strategic initiatives of the institution that impact the business model, risk profile, and complexity of the institution. In describing complexity, the examiner considers:

- Structure – balance sheet composition, off-balance sheet activities, asset and funding concentrations, organizational and management structure, branching activities, merger and acquisition activities, and geographic footprint; and
- Operations – business lines, customer base, product and service offerings, number and type of deposit and lending transactions, delivery systems, international exposure, operational risk,[12] and specialty areas.[13]

Planning the Examination[14]

Section 21.1 entitled Examination Planning provides information in relation to preparing for a Risk-Focused, Forward-Looking Safety and Soundness Examination. This section notes that the purpose of the examination planning process is to ensure that the institution's operations and activities are understood prior to the start of

[10] See *Appendix A to Part 364 - Interagency Guidelines Establishing Standards for Safety and Soundness*.

[11] If an institution fails to meet a standard prescribed by guideline, the FDIC may request the institution to submit an acceptable plan to achieve compliance with the standard. The FDIC generally expects to request submission of a compliance plan from an institution whose failure to meet one or more standards is of such severity that it could threaten the safe and sound operation of the institution. In other situations, the FDIC may elect to rely on an existing plan or enforcement action to ensure that an institution achieves compliance with the guidelines, rather than requiring the submission of a separate safety and soundness compliance plan. The FDIC may also seek corrective action through a Matter Requiring Board Attention.

[12] Includes BSA/AML and IT, including cybersecurity.

[13] Includes trust and asset management, consumer compliance, Community Reinvestment Act, registered transfer agent, government-securities dealers, and municipal-securities dealers.

[14] For the purposes of this discussion, planning of targeted reviews conducted as part of a continuous examination approach focuses on the subject of the review, where the point-in-time examination would encompass all aspects of a full scope examination.

the examination, so that examination procedures can be appropriately tailored to the institution.

The Examination Planning process includes several key activities, including contacting the institution, developing an understanding of the risks, tailoring the request list, identifying on-site and off-site procedures, and developing a written examination plan.

Refer to Section 21.1 for additional details regarding examination planning.

Conducting the Examination

Prior to the on-site portion of the examination, the examination team conducts off-site examination activities to review and analyze available information, including materials provided by the bank. During this timeframe, the EIC updates the examination plan, factoring in the review of requested materials, and submits the plan to field management for final approval.

During the off-site examination process, or on the first day of the examination, the EIC invites board members to attend any or all meetings conducted during an examination. Their attendance often improves communication with outside directors and increases director knowledge of the examination process. These meetings also provide an opportunity for directors to discuss their views with examiners on bank-related matters, and give examiners the opportunity to gain further insight into the experience levels and leadership qualities of bank management. While encouraging participation in these meetings, the EIC should emphasize that attendance is voluntary and that a lack of participation will not be viewed negatively.[15]

As soon as practicable, on or after the first day of the on-site portion of the examination, the EIC and on-site portion of the examination team meet with appropriate institution management to open lines of communication, develop plans for ongoing communication during the examination, and discuss any other informational needs or other issues. The EIC describes how document request materials obtained from the institution are being used during the examination. Informal meetings are held as needed throughout the examination to discuss various topics, including but not limited to following up on previous examination issues, discussing strategic and business plans, discussing loan review results, and discussing other material preliminary findings.

The EIC is expected to coordinate regular communication among examination team members, such as examination team meetings, conference calls, or group emails, so that team members may share and discuss observations and findings. Team communication should occur at least once per week; more frequent communication may be appropriate if examination teams are dispersed.

Based on the risk presented by the institution, examiners are expected to perform an appropriate level of transaction testing to verify: the adequacy of and adherence to internal policies, procedures, and limits; the accuracy and completeness of management reports and financial reports; the adequacy and reliability of internal control systems; the effectiveness of the bank's risk management processes and practices; and compliance with laws and regulations.

Examiners have the flexibility, subject to appropriate concurrence, to adjust the examination scope at any point during the examination based on findings to date. The rationale for changes in the examination plan will be clearly communicated to institution management, along with any significant adjustments to the breadth or depth of procedures, personnel, and examination schedule.

Communicate Preliminary Findings

Sufficiently in advance of exit meetings with institution management, the EIC provides and discusses preliminary findings, ratings, and supervisory recommendations with the Field Supervisor and Case Manager.

Prior to the conclusion of the examination, examiners thoroughly discuss the tentative findings and supervisory recommendations with senior institution management, including the tentative CAMELS ratings assigned under the UFIRS, clearly indicating that ratings are subject to FDIC regional office review. Such meetings are critical in communicating tentative examination findings to institution management and providing management an opportunity to respond.

During exit meetings, the EIC fully apprises institution management of examination findings and conclusions, including explaining the reasoning for proposed ratings and supervisory recommendations that will be cited in the ROE. Examiners also describe how document request materials obtained from the institution were used during the examination to support findings.

Prepare the Report of Examination[16]

[15] See Risk Management Manual of Examination Policies, pages 1.1-14 -15.

[16] For targeted reviews where a full ROE is not to be issued, these concepts apply similarly to a supervisory letter.

The EIC prepares the ROE in accordance with the FDIC's ROE Instructions[17] contained within the Risk Management Supervision Manual of Examination Policies (Manual). Consistent with the forward-looking aspects of the risk-focused examination process, the ROE is designed to clearly convey issues that are cause for concern, explain the risks to the institution's operations or financial performance if not addressed in a timely manner, and recommend appropriate corrective/remedial action.

Within the ROE, supervisory recommendations are used to inform the institution of the FDIC's views about changes needed in the bank's practices, operations, or financial condition. Matters Requiring Board Attention (MRBA) is a subset of supervisory recommendations that need prompt action by the board of directors and senior management. The intent of supervisory recommendations and MRBAs is to establish clear expectations regarding items the institution should address in order to correct deficiencies before they cause deterioration in the bank's financial condition.

Meet with the Institution's Board of Directors

The FDIC conducts meetings with boards of directors to encourage director involvement in, and enhance director awareness of, FDIC's supervisory efforts and to increase the effectiveness of such efforts.[18] Such meetings also provide an opportunity to discuss and exchange views on bank specific and industry related issues that may be outside the scope of the examination, but are important for promoting safe and sound operations; examples include planned bank initiatives or new or proposed banking regulations.

The EIC meets with the board or a board committee during or subsequent to the examination when 36 months or more have elapsed since the last such meeting; the management component of the CAMELS rating is 3, 4 or 5; any other CAMELS performance rating is 4 or 5; or any two performance ratings are 3, 4 or 5. Other factors that may be relevant to the decision of holding a board meeting include whether:

- The ROE contains MRBAs;
- The institution has undergone a recent change in control, ownership, or top management;
- The institution is operating in adverse economic conditions;
- The institution's management or board has requested a meeting; or
- There exist any other unique conditions or trends pertinent to the institution.

An institution's composite rating is an important variable in determining regional office participation in a board meeting. While regional office participation in meetings with banks rated composite 1, 2, or 3 is at the regional director's discretion, the regional director or designee will participate in the board meeting of a bank with a composite rating of 4 or 5.

Submit the ROE for Regional Office Review and Issuance to the Institution

The EIC notifies institution management when the draft report is submitted to the assigned regional office case manager for review. The assigned case manager is expected to ensure that the ROE clearly identifies areas of risk and contains appropriate supervisory recommendations to mitigate those risks, supervisory recommendations address the causes of deficiencies, supervisory recommendations that warrant board attention are scheduled as MRBAs in accordance with existing Manual instructions, and CAMELS ratings are supported and are consistent with UFIRS definitions.

Supervisory personnel keep institution management informed of any changes made to the ROE findings that differ significantly from the initial findings disclosed at the exit meetings with institution management. Examples of significant changes include, but are not limited to, a revision to any rating or the addition or deletion of a supervisory recommendation or an apparent violation. FDIC supervisory personnel will explain the reasons for the changes to initial examination findings, and institution management will be given a reasonable amount of time to re-confirm or change responses and commitments, as appropriate.

The FDIC has established internal goals to ensure the timely sharing of information with financial institutions. These goals include transmitting Safety and Soundness ROEs to financial institutions within a median 75 days from the on-site examination start date and concluding regional office processing of Safety and Soundness ROEs within a median 45 days from the EIC's submission of the ROE to the regional office. The FDIC reports its performance relative to these goals on the FDIC's *Trust through Transparency* webpage. The case manager keeps institution management informed should unusual processing delays occur and provides the reasons for such delay.

The regional office transmits the ROE to the institution's board of directors with a letter summarizing the examination findings. In some cases, the transmittal letter

[17] See Risk Management Manual of Examination Policies, Section 19.1.
[18] Risk Management Manual of Examination Policies, page 1.1-16.

will also request that the board provide a written response to the examination. Institution management is also invited to complete a post examination survey after each examination.[19] The survey is part of the FDIC's continuing effort to improve the quality and efficiency of the examination process. Institution management is invited to complete the survey via a secure FDIC Website using an access code. The access code is included with an invitation letter accompanying each final ROE. All responses are submitted directly to the FDIC's headquarters office and will be confidential. The FDIC uses the survey results to identify ways to improve the examination process.

Post-Examination Responsibilities

Safety and soundness supervision is an ongoing process of planning and conducting examinations, following up on the resolution of supervisory findings and supervisory recommendations, and monitoring institutions between examinations.

Enforcement Actions

Should an enforcement action be deemed necessary to address deficiencies identified during the examination, regional office personnel, with input from the EIC, develop the appropriate level of supervisory action (formal or informal) and engage the board of directors and management to ensure understanding and procure adoption. Once an enforcement action has been adopted, case managers review implementation progress reports submitted under the enforcement action to monitor the institution's corrective actions.

Following up on Examination Findings

The institution's assigned case manager reviews institution management's response to the ROE, as applicable, and follows up on the disposition and resolution of MRBAs. Staff assigned to the Division Director will contact institution management in response to any request for post-examination contact within the post examination survey.

Ongoing Monitoring and Interim Contacts

The assigned case manager serves as the institution's point-of-contact within the FDIC and will conduct ongoing monitoring of the institution's risk trends and financial condition between examinations. Should the institution be flagged on any internal FDIC reports as an outlier based on quarterly Call Report data, the case manager reviews the data that caused the flag and may contact institution management, if needed, to obtain any additional information needed to review the matter. Further, the assigned case manager or field supervisor contacts institution management between examinations to inquire about any changes in institution operations, discuss topics of interest such as regulatory changes or industry trends, and answer questions from bank management.

[19] Post-Examination Survey.

Contents

PURPOSE OF PLANNING A RISK-FOCUSED, FORWARD-LOOKING SAFETY AND SOUNDNESS EXAMINATION

As described in Section 20.1 of the Risk Management Manual of Examination Policies - Risk-Focused, Forward-Looking Safety and Soundness Supervision, the objective of a risk-focused examination is to evaluate the safety and soundness of the financial institution by assessing its risk management systems, financial condition, and compliance with applicable laws and regulations, while focusing on the institution's highest risks. The risk-focused examination process seeks to strike an appropriate balance between evaluating the condition of an institution at a certain point in time and evaluating the soundness of the institution's processes for managing risk in all phases of the economic cycle. By evaluating an institution's risk management practices, examiners look beyond the financial condition of an institution at a point in time, to how well it can respond to changing market conditions given its particular risk profile.

Risk-focused supervision involves employing a tailored approach to each examination. The risk-focused supervision approach to examinations is not comprised of a fixed set of routine procedures. Rather, the procedures that constitute a full-scope examination depend on the nature and complexity of the institution's business activities and risk profile. At a minimum, full-scope examinations must include sufficient procedures to reach an informed judgment on the financial, managerial, operational, and compliance factors rated under the CAMELS rating system.[1] An examination meeting those requirements would meet the FDIC's definition of a full-scope examination.

The purpose of the examination planning process is to ensure that the institution's operations and activities are understood prior to the start of an examination, so that examination procedures can be appropriately tailored to the institution. By understanding the unique nature of each institution, examiners can evaluate fundamental risks of the institution's activities and the strength of management practices in mitigating those risks, and focus examination activities and procedures on risks that are not as well-mitigated or that have not been previously assessed because they are new.

Three Phases of Examination Planning

The examination planning process can be broken into three phases: initial contact, initial examination planning, and final examination planning and conducting off-site work.[2] Each of these phases is discussed below.

Phase 1: Initial Contact

The field supervisor (FS)/supervisory examiners (SE)[3] must develop a timeline of examination activities for the upcoming examination at least 90 days ahead of the projected start date of the examination. At this time, the FS/SE must contact institution management to inform them of the upcoming examination date. During this contact, the FS/SE will provide notice that profile scripts for general safety and soundness, which includes Bank Secrecy Act (BSA), and Trust (when applicable), and Information Technology will be sent to the financial institution. The FS/SE will explain that these scripts will help plan examination procedures based on the financial institution's business model, risk profile, and complexity and help to tailor a document request list for the institution. In addition, the FS/SE needs to ask institution management for the names and contact information (phone/email) of the institution's points of contact for BSA, IT, and Trust (if applicable) in order to facilitate the completion of required complexity tools. The FS/SE will then ensure that the start date is entered into the FDIC's database, which will initialize the request list and examination workpaper systems.

Immediately after contacting management, the FS/SE will generate an Examination Profile Script (EPS) and an Information Technology Profile (ITP). The EPS and ITP will be transmitted under the same cover letter to avoid creating burden and confusion for financial institution management via the FDIC's secure system of information exchange between institution management and the FDIC. Institution management will have approximately two weeks to complete the EPS[4] and ITP. Providing management with

[1] This could include, as appropriate, risk management for Information Technology, Bank Secrecy Act (BSA)/Anti-Money Laundering (AML)/Office of Foreign Assets Control reviews, Trust, Registered Transfer Agent, Municipal Securities Dealer, and Government Securities Dealer examination programs. These specialty examination areas are incorporated into CAMELS through the Management component rating, as outlined in the Uniform Financial Institutions Rating System. See *62 Fed. Reg. 752, January 6, 1997, effective January 1, 1997*.

[2] The principles discussed herein apply to both point-in-time and continuous examination approaches, although some specific activities discussed may differ.

[3] The FS/SE are responsible for scheduling, approvals, and the ordering of a digital circuit and thus responsible for the initial 90-day call. Other FS/SE duties can be delegated to other appropriate RMS staff, such as setting up the secure exchange of information with the institution.

[4] The FS/SE may provide institution management with the option of discussing the EPS items with the FS/SE, who then may complete the EPS on the institution's behalf.

the EPS and ITP well before developing the actual request list facilitates a more tailored request list.

Section 1 of the EPS is designed to collect information necessary to help the examiner understand material changes to the business model, risk profile, and complexity of the institution since the previous Safety and Soundness examination. Section 2 of the EPS is tied to scoping questions in the request list tool and helps examiners understand which products and services are applicable to the financial institution. Sections 3 (BSA) and 4 (Trust) of the EPS relate to the specialty examination scoping questions and help examiners understand the complexity of these activities. Similarly, the ITP identifies applicable IT activities, while also gathering information about the complexity of the institution's IT operations.

Sections 2, 3, and 4 of the EPS can be adjusted based on scoping questions within the request list tool. If examiners are already aware that an institution does, or does not, have a particular product or service, the examiner should answer the scoping question by selecting yes or no, and the item will not be added to the EPS. This is particularly important for Sections 3 and 4 of the EPS, as community institutions typically do not have complex BSA or Trust operations.

The information gathered from the completed EPS will then help examiners develop an examination plan and request list tailored specifically to the activities of the institution.

An example of a cover letter and EPS is available as Appendix A of this section.

The FS/SE will also evaluate options at the institution regarding remote connectivity. If it appears the connectivity options available will not be sufficient for a particular examination's needs, FDIC field management should request a digital circuit from FDIC technical staff.

The FS/SE should also inquire about loan imaging and various off-site loan review options. If institution management is willing and able to provide off-site access to loan files, the FS/SE should begin the coordination of logistical and technical arrangements between the institution and the FDIC well ahead of the examination start date in order to facilitate off-site loan review activities.

Lastly, the FS/SE will schedule examiners for Phases 2 and 3 of examination planning. In particular, the FS/SE will select the Examiner-in-Charge (EIC) and schedule the EIC for sufficient dedicated time in the field office to conduct all activities of Phase 2 (Initial Examination Planning) six to eight weeks prior to the start date of the examination. Additionally, appropriate personnel should be scheduled and provided sufficient dedicated time to perform specialty area examination planning activities,[5] including assessing specialty examination complexity, so that the results are finalized and ready for the EIC's review and consideration at the start of the initial Examination Planning. The EIC is to use the information on the institution's complexity to assist with the completion of the Examination Planning Memorandum (EP Memo) and tailoring the specialty area request lists.[6]

<u>Phase 2: Initial Examination Planning</u>

The goal of completing the initial planning six to eight weeks ahead of the examination start date is to allow the EIC sufficient time to learn about the institution and prepare an examination plan tailored to the institution's areas of greatest risk.[7] Attention to these activities at an early stage allows the examiner to make a more targeted information request to institution management, thereby reducing burden on the financial institution while ultimately providing for a more efficient and effective examination.

Understanding the Institution

To conduct a risk-focused examination, examiners must understand the nature, scope, and risk of an institution's activities. The nature and scope of an institution's activities are commonly referred to as the institution's business model. The risk associated with an institution's business model is commonly referred to as the risk profile. A key component of both the business model and the risk profile is the complexity of the institution's operations.

In order to get an understanding of the business model, risk profile, and institution's complexity, the EIC will review the institution's responses to the EPS and ITP; read prior Reports of Examination (ROEs); review correspondence, FDIC databases, and economic data; and review specialty area information and complexity assessments. Further, the EIC should contact the case manager (CM), the FS/SE, and the external auditor to gain additional insight and perspective on the institution.

[5] Refer to examiner instructions on each of the specialty complexity tools. Optimally, the FS/SE should assign the complexity tool responsibilities to the same individuals reviewing the specialty areas at the upcoming examination.

[6] FS/SEs are to schedule examination planning time for specialty area examiners.

[7] For the purposes of this discussion, planning of targeted reviews conducted as part of a continuous examination approach focuses on the subject of the review, where the point-in-time examination would encompass all aspects of a full-scope examination.

Based on the review of available information and discussions with others, the EIC will then develop (or update) preliminary written descriptions of the institution's business model, risk profile, and complexity following the considerations outlined in the Risk-Focused, Forward-Looking Safety and Soundness Supervision section of the manual.

Discussion with Institution Management/Tailoring the Request List

The EIC then contacts institution management to discuss the preliminary descriptions of the institution's business model, risk profile, and complexity, and to describe how those definitions are being used to determine the planned examination scope and request list content. The EIC should seek management's views regarding recent changes in operations, economic conditions, or competition, and answer any questions that institution management may have.

The EIC is expected to tailor the information request letter to include only those materials necessary to examine the institution based on its unique business model, risk profile, and complexity. The EIC sends the information request letter to institution management sufficiently in advance of an upcoming examination to allow ample time for management to compile and submit requested documents. The EIC establishes a due date for the materials sufficiently in advance of the anticipated start date of the examination to allow for off-site examination work prior to the on-site start date. Further, the EIC facilitates the secure exchange of information between institution management and the FDIC, by ensuring that the delivery method(s) used meet the security measures discussed in the FDIC's policies for the exchange, use, and storage of electronic information.

Identifying Off-site/On-site Procedures

During the examination planning stage, the EIC is expected to identify examination activities that are appropriate for off-site review and those that are better suited for on-site review. The EIC discusses these activities with field management and incorporates them into the written examination plan. The determination of the extent of off-site or on-site for each examination activity will depend, in part, on the type and extent of electronic information available and whether the activity requires interaction with institution personnel. Examiners are expected to consider conducting examination procedures off-site, to the extent reasonably possible, in order to minimize disruptions to an institution's normal business activities.

Examiners are encouraged to conduct the following portions of a financial institution examination off-site:

- Determine the scope of the examination and identify the loan review sample;
- Review historical financial and supervisory data and perform initial analysis of capital, earnings, liquidity, and sensitivity to market risk;
- Review the institution's internal reports;
- Review the institution's written policies and procedures;
- Review independent audits/reviews; and
- Complete financial schedules and certain other pages of the ROE.

Regarding credit review, typically the most labor intensive part of a financial institution examination, the examiner may conduct the following off-site:

- Review loan policies;
- Review performance report ratio data and management reports;
- Preliminarily review the methodology used for estimating loan losses;
- Determine the areas to be emphasized in the on-site review;
- Determine the loan sample to be reviewed, and select and assign individual credits;
- Group loans to related obligors; and
- Review credit and investment files for quality, documentation, and compliance with institution policy and laws and regulations, if information is available in a format for off-site review.

Examiners are expected to conduct the following examination activities on-site:

- Conduct in-depth discussions with management;
- Verify financial information;
- Observe and assess institution operations and internal controls;
- Collect follow-up documentation to complete the financial analysis;
- Review documents that would be inappropriate or impractical to provide off-site; and
- Conduct exit meetings with management.

Drafting the Examination Planning (EP) Memorandum

During Phase 2, the EIC is responsible for drafting an EP Memo. The EP Memo template and instructions for its preparation are included in Appendix B. The EP Memo outlines the examination activities and procedures deemed necessary to fulfill the statutory requirement to complete an on-site, full-scope examination of the institution, given the institution's business model, risk profile, and complexity. Further, as described in the attached instructions, the EP Memo will also outline the EIC's plans for loan review.

Discussing the Draft Examination Plan with the FS/SE and CM

Once the draft EP Memo is written, the EIC will provide the draft to the FS/SE and CM for discussion of the initial assessments of risk, anticipated procedures, and initial information requests. The EIC will provide an estimate to the FS/SE regarding projected examination hours (inclusive of anticipated training hours), staffing needs (addressing the need for specialists or subject matter experts), and the plan for on-site/off-site activities. The FS/SE and CM are to provide feedback on the draft examination plan to assist the EIC with finalizing the examination plan.

Based on discussions and review of the draft examination plan, the FS/SE will assign appropriate staff to the examination, including specialty areas.

Phase 3: Final Examination Planning and Conducting Off-Site Work

Supervisors are required to allocate appropriate time for the examination team to complete all examination planning activities, including the downloading, electronic filing, and reviewing of materials provided by the institution.[8] These other examination activities should begin at least one to two weeks prior to the on-site examination start date. In particular, the EIC must be scheduled sufficient time prior to the start date of the examination to review the request list response and finalize the Examination Plan and EP Memo. The finalization of the EP Memo includes determining staff assignments, as well as identifying any benchmark training needs of pre-commissioned team members. The EIC will submit the final EP Memo to the FS/SE for approval prior to the start date of the examination. Once approved, the EIC distributes the EP memo to the CM and the examination team.

In addition to examination planning, off-site work prior to the on-site start date will include the activities discussed previously in Phase 2. The FS/SE will provide additional staff, as available, prior to the start date to conduct off-site examination procedures. This additional staff, which can include both key roles such as Operations Manager and/or Asset Manager, as well as other staff, allows the examination team to become knowledgeable of the institution and begin their analysis prior to arriving on-site.

The FS/SE is expected to be mindful of an institution's space and personnel limitations when scheduling the number of examiners working on institution premises.

[8] The Phase 3 principles discussed herein also apply to specialty area EICs/examiners, including need for sufficient examination planning time and availability of performing some work off-site.

Contacting the Institution

After the EIC has reviewed the requested materials provided by the institution, the EIC contacts institution management again to discuss examination logistics, including the size of the examination team. The EIC also shares plans for work to be completed off-site and on-site. For example, the EIC could advise management that four examiners will review electronic loan files off-site for the first week and then come to the financial institution for loan discussions during week two of the examination.

Joint/Concurrent Examination Considerations

When examinations are conducted in a joint or concurrent capacity with the State authority, examiners are expected to coordinate and collaborate with the State EIC to ensure open and consistent communication throughout the examination planning process. The lead agency will guide the examination planning activities and process. The lead agency is determined through agreements between the State authority and FDIC managers. The FDIC EIC will work with the State EIC in accordance with their defined processes to ensure the planning and resource needs of each agency are being met, while being mindful that the non-lead agency may assist in the process, but may not provide the same level of resources as the lead agency.

State-Led Joint/Concurrent Examinations

For joint or concurrent examinations where the State is the lead agency, if the State has adopted Examination Planning as outlined in this chapter, then the FDIC and State should collaborate to accomplish the various tasks.

If the State in in the lead, but has not adopted Examination Planning (in whole or in part), the state agency will guide the examination planning activities and process. In such cases, the FDIC would still be responsible for collaborating with the State to ensure that certain Examination Planning activities are conducted, as follows:

Phase 1 (done in conjunction with, or soon after, the initial contact with the institution)

- Entering the start date into the FDIC's database;
- Ensuring a secure method is established for transmission of institution-requested materials;

- Scheduling appropriate personnel and providing sufficient dedicated time to perform examination planning activities;
- Obtaining the names and contact information (phone/email) of the institution's points of contact for BSA, IT, and Trust (if applicable) in order to facilitate the completion of required complexity tools; and
- Ensuring the ITP is sent to the institution.

Specialty Exam complexity tools

- Ensuring that the complexity tools for BSA/AML, IT and Trust (if applicable) are completed, with the results considered within the risk scoping process.

Phase 2:

- Reviewing available information;
- Discussing the upcoming examination with the case manager and field supervisor/supervisory examiner;
- Developing descriptions of the institution's business model, risk profile, and complexity;
- Ensuring the request list is tailored to the institution; and
- Identifying activities available for on-site and off-site work.

Phase 3:

- Reviewing institution-provided materials;
- Conducting off-site examination work prior to the start date;
- Participating in discussions with institution management;
- Finalizing an examination planning memorandum; and
- Providing finalized business model, risk profile, and complexity descriptions to the case manager (either via the examination planning memorandum or other means).

Other Exam Planning tasks not included above should still be conducted if these activities align and can be coordinated with the State-led examination planning process.

APPENDIX A -EXAMINATION PROFILE SCRIPT (EPS)

FDIC

DATE

CEO xxxxxxxx
Institution Name
Street Address
City, State Zip

Dear CEO **xxxxxxxxxx**:

A Safety and Soundness Examination of your institution is scheduled for DATE **20xx**. A concurrent Information Technology (IT) Risk Examination [and Trust Examination] will also be conducted.

The attached Examination Profile Script (EPS) and Information Technology Profile (ITP) have been developed to help examiners tailor their examination procedures to your institution's operations.

Comment boxes are available for items marked "yes" if you wish to provide additional information. Examiners will tailor the request list to exclude materials specific to items marked "no."

On March 13, 2020, the FDIC issued a statement entitled *Working with Customers Affected by the Coronavirus*, and on April 7, 2020, the FDIC, along with other regulators, issued a statement entitled *Interagency Statement on Loan Modifications and Reporting for Financial Institutions Working with Customers Affected by the Coronavirus (Revised)*. Both of these statements encourage financial institutions to work prudently with borrowers who are or may be unable to meet their contractual payment obligations because of the effects of COVID-19. The statements indicate that the FDIC and the other agencies will not criticize institutions for working with borrowers in a safe and sound manner. The statements go on to indicate that agencies' examiners will exercise judgment in reviewing loan modifications and will not automatically adversely risk rate credits that are affected by COVID-19, and even if modified loans are adversely classified, examiners will not criticize prudent efforts to modify the terms on existing loans to affected customers. Examiners will be reviewing risk management practices and policies regarding modifications during the examination as part of the FDIC's general review of loan administration policies and practices.

Supporting documentation is not needed at this time but will be requested via a risk-focused information request list that will be sent to your institution approximately six to eight weeks before the on-site examination.

Please submit your responses via FDIC*connect* by **XX/XX/XXXX**.

If you have any questions, please call me at the **xxxxxxxx** Field Office at **xxxxxxxxxx** or e-mail me at **xxxxxxxxx**.

Sincerely,
Name
Title
Federal Deposit Insurance Corporation

Enclosure

EPS SECTION 1

Please indicate 'yes' or 'no' if there have been material changes to the following items since the previous regulatory Safety and Soundness examination dated XX/XX/XXXX. If 'yes' is selected, please provide an explanation in the Comments box. The answers will help us tailor our list of items that we will request for the examination.

Organizational, Background, and Operating Environment	Yes	No
1. Organizational structure of the financial institution or holding company		
2. Strategic direction/plan or business model, including new or expanded products or services (e.g. loans, investments, deposits, funding)		
3. Ownership (shareholders owning 5% or more of controlling stock)		
4. Competitive factors impacting the financial institution		
5. Local economic factors (that impact or could impact financial institution performance)		
6. Local businesses or industries affecting a significant part of the financial institution's deposit or loan customer base		
7. Key role managers or Board composition		
8. Governance structure and authority levels		
9. Major policies or procedures		
10. Auditors or audit programs		
11. Management information systems		
12. Asset and/or liability structure		
13. Loan review programs		
14. Emerging technology or fintech initiatives (such as digital lending, digital-only deposit accounts, artificial intelligence/machine learning, application programming interfaces, distributed ledger technology, or digital tokens).		

Section 1 Comments:

EPS SECTION 2 – Safety & Soundness[9]

Please indicate 'yes' or 'no' if the financial institution has the following items or is involved in the following activities. If 'yes' is selected, please provide an explanation in the Comments box. The answers will help us tailor our list of items that we will request for the examination.

Lending Areas	Yes	No
1. Loans with delinquent real estate taxes or loans with negative balance escrow accounts		
2. Interest only or payment option residential mortgage loans		
3. Construction loans with cost overruns or insufficient funds to complete construction		
4. Floor plan lending		
5. Loan participations purchased and sold		
6. Loans made to facilitate the sale of bank owned other real estate		
7. Loans made to facilitate the purchase of the financial institution's stock or the financial institution's holding company stock		
8. Credit concentrations warranting portfolio level or portfolio segment stress tests or sensitivity analysis		
9. Government or guaranteed lending programs (e.g. USDA or SBA)		
10. Lease financing loans serviced or collected by the financial institution for other parties		
11. Please indicate whether the institution has engaged in loan modifications, extensions, or deferrals related to borrowers impacted by the COVID-19 pandemic (Y/N)		
Employee Incentives & Compensation	Yes	No
12. New employment contracts and/or deferred compensation agreements		
13. Incentive compensation programs		
14. Financial institution sponsored employee benefit plan		
Asset/Liability Management Items	Yes	No
15. Deposits accepted by the financial institution or its affiliate through third party (such as "affinity" groups) marketing arrangements		
16. Large depositors (greater than 2% of total deposits)		
Supplemental Activities	Yes	No
17. Third Party Payment Processing		
18. Related Organizations		

Section 2 Comments:

[9] Information Technology specific items will be covered in the separate Information Technology Profile script.

EPS SECTION 3 – Bank Secrecy Act/Anti-Money Laundering

Please indicate 'yes' or 'no' if the financial institution has the following items or is involved in the following activities for Bank Secrecy Act. If 'yes' is selected, please provide an explanation in the Comments box. The answers will help us tailor our list of items that we will request for the examination.

Most items will not be applicable for the typical BSA operations at community financial institutions. **All items checked "no" will be deleted from the tailored request list.**

Refer to FFIEC BSA/AML Glossary for definitions and explanations of BSA/AML terms.

Bank Secrecy Act/Anti-Money Laundering (BSA/AML) Complex Areas	Yes	No
1. Correspondent Accounts – Domestic (Institution acts as correspondent)		
2. Correspondent Accounts – Foreign		
3. Sale of Insurance Products		
4. Concentration Accounts (Accounts established to facilitate the processing and settlement of multiple or individual customer transactions)		
5. Private Banking		
6. Professional Service Providers (Acting as liaisons for clients)		
7. Private-owned ATMs		
8. Nondeposit Investment Products		
9. Nonresident Aliens and Foreign Individuals		
10. Non-Bank Financial Institutions (includes Money Service Businesses)		
11. Business Entities as Customers (Including limited liability companies, corporations, trusts, and other entities that may be used for many purposes, such as tax and estate planning)		
12. Prepaid Access Products (including prepaid access cards or acting in concert with another party to provide prepaid access, such as for travel or public transportation programs)		

Section 3 Comments:

EPS SECTION 4 – Trust

Please indicate 'yes' or 'no' if the financial institution has the following items or is involved in the following activities for Bank Secrecy Act and Trust. If 'yes' is selected, please provide an explanation in the Comments box. The answers will help us tailor our list of items that we will request for the examination.

Refer to FDIC Trust Examination Manual Glossary for definitions and explanations of Trust terms.

Trust	Yes	No
1. Bank Sponsored Employee Benefit Plans		
2. Irrevocable Life Insurance Trusts (ILITs)		

Comments:

EPS SECTION 5 – Off-site Loan Review Options

For institutions that have imaged loan files, and are interested in having FDIC examiners review these files remotely, the FDIC has several potential options for such off-site review. Such options include Imaging Service Provider's Standardized Export of Image Data*, screen sharing/remote control capabilities, or an institution's own internal solution.

Please indicate 'yes' or 'no' to the following questions, or leave blank if not applicable. The Comments box may be used to indicate which option(s), if any, are preferred by institution management.

For more information on this option, please see Financial Institution Letter (FIL)-22-2018: Advisory: FDIC Conducting Testing of the Standardized Export of Imaged Loan Documents, and FIL-4-2019: Banker Webinar: Update on the Standardized Export of Imaged Loan Documents Initiative.

Off-site Loan Review	Yes	No
1. Are the institution's loan files imaged?		
2. If yes to #1, is management interested in having the FDIC conduct a portion of the loan review off-site?		

Comments:

EPS SECTION 6 – Examiner Connectivity to Internet

The FDIC relies significantly on Internet Connectivity to conduct examinations. The FDIC has several authorized potential options to support connectivity.

Please indicate 'yes' or 'no' regarding connectivity options, or leave blank if not applicable. The Comments box may be used for additional information.

Connectivity	Yes	No
1. Is strong cellular coverage available in the examination work room location(s)? (if yes, please indicate in the Comments section on what cellular provider(s) have strong coverage, if known)		
2. If no to #1, does the institution have a guest WiFi connection that the institution would like to make available to the examination team for examination-related activities?		
3. If no to #1 and #2, is the institution willing to allow the FDIC (at FDIC's expense) to have a temporary digital circuit (Internet line) installed for examination team use? (if yes, please indicate, in the Comments below, a contact person from your institution)		

Comments:

APPENDIX B -INSTRUCTIONS FOR COMPLETING THE EXAMINATION PLANNING MEMORANDUM

Examination Planning Memorandum (EP Memo). Insert institution-specific data and examination information.

Examination Ratings and Data. Document the ratings and data for the most recent examinations.

Examination Planning Ratios. List the specified ratios from the Uniform Bank Performance Report for the most recent quarter and the previous two year-ends.

Other Risk Measures. Briefly comment on each listed risk flag.[10] If elevated risk is identified in any of the below areas, these risks should be discussed in the Overview section. Additionally, comment on any other significant risk factors identified within internal FDIC outlier reports, tracking systems, and watch lists.

REST Score. Real Estate Stress Test (REST) is an estimate of the institution's potential vulnerability to a downturn in the real estate market. Comment on the risk level and driving factors for the score. Consider the REST score when scoping the asset review.

Internal Control Assessment Rating System (ICARuS). ICARuS provides a measure of a financial institution's potential susceptibility to fraud by assigning points to various identified risk indicators and calculating an institution's fraud risk-profile on a scale of 0.00 to 5.00. Certain risk-focused examination procedures are suggested to assess those risk indicators that generate an ICARuS score of 2.50 or higher. Comment on any ICARuS related activities to be performed.

IRRSA Red Flags. Interest Rate Risk Standard Analysis (IRRSA) produces a report that focuses on an institution's interest rate risk exposure. IRRSA calculates financial analysis measures derived from Call Report data and historical market interest rate information. Comment on any red flags noted for institution ratios that are outside benchmarks set within IRRSA. Consider any IRRSA Red Flags when scoping the examination.

SCOR. The Statistical CAMELS Off-site Rating (SCOR) system is designed to identify institutions that have experienced noticeable financial deterioration. Comment on any rating that has a significant probability for downgrade.

Preliminary Risk Assessment

Overview of the institution's business model, risk profile, and complexity. To conduct a risk-focused examination, examiners must understand the nature, scope and risk of an institution's activities. The nature and scope of an institution's activities are collectively commonly referred to as the institution's "business model." Develop a written description of the business model by identifying the activities in which a financial institution has chosen to engage.

The risk associated with an institution's business model is commonly referred to as the "risk profile." Develop a written description of the financial institution's preliminary risk profile by determining the types and quantities of risks inherent in the financial institution's business model and, based on past examinations and supervisory activities, the quality of the risk management practices used by financial institution management to control these risks.

A key component of both an institution's business model and risk profile is the complexity of its operations. Develop a written description of the complexity of an institution's operations through a review of its balance sheet structure and scope of operations.

Within the overview, briefly summarize significant discussions with institution management during Examination Planning. This summary should cover key topics such as: significant risk areas, management's concerns regarding economic conditions, and any other information meaningful to the planning process. Include the name and title of the institution official and the date on which the discussion was held.

Also within the overview, briefly summarize discussions with the case manager (CM), field supervisor (FS)/supervisory examiner (SE), and the institution's external auditor. The CM discussion should cover the areas of perceived risk, enforcement

[10] REST scores, ICARuS, and IRRSA Red Flags are available in FDIC's confidential internal supervisory data systems.

actions, application activity, and loan review scoping. Note that during this initial examination contact, the EIC and CM should establish a plan for discussing examination findings prior to the exit meeting. The FS/SE discussion should cover hours, staffing, and scheduling items including anticipated training, on-site/off-site activities, and any specialists/subject matter experts needed for the examination. The external auditor contact should summarize information gained on the institution's operations and condition and any recommendations to management.[11]

If the examination involves a Minority Depository Institution, a comment should be included noting that examiners will inform institution management of the availability of technical assistance.

Examination Areas and Planned Procedures. Comment on each CAMELS component, specialty examination area, and any other areas based on the preliminary review of available information (such as the UBPR, risk profile, and request list items) and discussions with the CM, FS/SE, and institution management. Provide direction to examiner(s) reviewing the area on the procedures to be performed to address identified risks. Note if additional procedures are being performed for training purposes.

Under the Asset Quality subheading, comment on the plan for loan review. Document the date of the asset review and the number of loans and credit relationships to be reviewed. The comment should describe the specific types of loans and/or risk characteristics planned for review based on the institution's business model, risk profile, complexity, and lending activities. Loan review should emphasize meaningful loan sampling for new or higher risk lending activities, notable concentrations, a review of the appraisal program, and follow-up on any previously identified underwriting deficiencies.

The Other subheading should include the examination plan for any specialized business lines or characteristics, as applicable. Such areas may include the following:

- Concentrations
- Dominant Management
- Mortgage Banking, particularly if coupled with rapid growth
- Subprime/Nontraditional Lending
- Securitization Activities
- International Banking
- Related Organizations
- Credit Card Related Merchant Activities
- Third Party Arrangements
- Government Assistance Programs (for example: TARP, SBLF, or loss share agreements)
- Commercial Real Estate (if workprogram being used)
- De novo Institution (Planned procedures should evaluate the institution's adherence to continuing conditions or requirements imposed through the order approving deposit insurance)
- Foreign Ownership (e.g. Foreign Banking Organization, Parallel Banking Organization)

Consider prior specialty examination or review findings (and ratings, when applicable), and complexity assessment scores during the Examination Planning process. In addition, include relevant comments for each type of specialty examinations or review being conducted concurrently. Refer to specialty examination or review instructions for required procedures to be performed. Also identify any specialty subject matter expertise needed to address notable risk areas listed in the business model/risk profile review.

Briefly discuss any outstanding supervisory action (formal or informal), including type, date, and provisions within the action. Also note any outstanding Matters Requiring Board Attention. Describe management's progress to date in addressing the action/MRBAs.

Staffing and Assignments. List examiners, their assigned roles, and location of examination work (on-site, off-site, or both). Briefly describe activities identified for off-site work. Note whether other agencies or divisions are involved.

[11] If the institution's management has not provided a copy of a management letter issued by the auditor in connection with the most recent financial statement audit and/or internal control attestation, confirm with the auditor whether a letter was issued. Regardless of the type of auditing work performed, if no management letter was issued, discuss any other type of verbal or written recommendations that the auditor may have provided to management.

Training. List pre-commissioned examiners, trainers, and the training benchmarks being addressed during the examination.

Logistical Information. Communicate key information to examination staff regarding location, work hours, dress code, connectivity, key management absences, and other examination logistics.

PRELIMINARY RISK ASSESSMENT
• *Provide a brief description of the institution's business model, risk profile, and complexity.* • *Summarize discussions held with institution management and case manager.* • *Briefly comment on risk for each examination area.* • *Discuss planned procedures and workpaper documentation, commensurate with the risk presented for each examination area.*

Overview of the institution's business model, risk profile, and complexity: ***Describe the institution's business model, including identification of the financial activities in which the institution has chosen to engage. Describe the risk profile through a determination of the types and quantities of risks to which the institution is exposed and the quality of the risk management practices used by institution management to control these risks. Describe the complexity of the institution's operations, including a review of its balance sheet structure and scope of the business lines, customer base, and product and service offerings.***

BUSINESS MODEL

This $80 million community bank is a locally owned, full-service commercial Bank offering traditional deposit and credit products with a particular focus on customers directly and indirectly reliant upon maritime-related businesses. The trade area is centered in Anytown, Anystate, and is a regional economic area that is heavily dependent upon a depressed fishing industry.

RISK PROFILE

Credit risk is elevated at Bank of Anytown; weak underwriting and poor loan administration practices have led to a large volume of classified credits. Credit risk problems have been exacerbated by significant and increasing weaknesses in the local economy. Additionally, management has struggled with operational and governance issues, such as problems with filing accurate call reports and failure to monitor President Lincoln's lending authority limits. Primarily as a result of asset quality issues, revenues and earnings have been weak and have not been sufficient to build capital. Loan growth has subsided as management has worked on problem asset resolution, and compliance with the outstanding Memorandum of Understanding (MOU)[1] has been progressing, although several provisions have not been met.

COMPLEXITY

Assets consist primarily of commercial and real estate loans to small, local businesses. The bank has attempted to diversify away from the maritime-related businesses that dominate the local economy by buying commercial loan participations, primarily from Other Bank, Othertown, Other State. Bank of Anytown's level of other real estate (ORE) has been increasing, as the bank has been working its way through loan problems. The securities portfolio is invested in mortgage-backed securities issued by government sponsored entities (GSEs) with various maturities. Deposits are gathered from business loan customers and local retail depositors, and the bank has one branch on the west end of Anytown. The trust department manages approximately $3.3 million in assets, most of which is in non-discretionary accounts. Information technology services are provided by Existing Service Company, and President Allie Lincoln indicated that no changes in the agreement or services have occurred since the previous examination.

Discussions: ***Include the date, names, and summary of discussions held with management. Also include the date, name, and summary of key risk discussions with the case manager, field supervisor(FS)/supervisory examiner(SE), and institution's external auditor.***

Bank Management: A discussion with President Lincoln was held on July 5, 20x6 to discuss the FDIC's views regarding the Bank's business model, current risk profile and any changes to the complexity of the organization. President Lincoln also indicated the following:

- Significant progress had been made in addressing previous examination findings and the outstanding MOU.
- Bank management remains concerned about the level of classified assets, and its ability to manage problem assets has been challenged by the increased level of ORE, which requires different skill sets.

[1] The Bank was placed under an MOU on January 21, 20x6 based on findings from the October 21, 20x5 examination. This MOU replaced a January 20x4 MOU that was issued to address problems noted at the October 20x4 examination.

- Challenges continue in the local economy, and a moderately large employer, Blue Boat Building, Inc., recently filed for bankruptcy. While Blue Boat is not a Bank customer, many of its customers and suppliers are bank customers.
- A desire for examiners to keep Chairman of the Board (COB) Roger White informed of examination findings and include him in meeting invites during the examination.

Case Manager: A discussion with Case Manager Melinda Gary was held on June 24, 20x6. She indicated the following:

- President Lincoln and COB White continued to dominate the management team of the Bank and she was concerned that the Board may not be effectively challenging the decisions made by those two individuals.
- President Lincoln had been very communicative since the prior examination and had been keeping the regional office updated on progress in complying with the MOU.
- Progress reports provided to the regional office are in RADD and should be reviewed off-site to identify the steps that management has taken to address outstanding issues.
- EIC Smart provides her updates on a weekly basis, given the risk profile of the institution. She also asked that she be provided ample notice about any exit meetings, as she would like to attend them telephonically.

External Auditor: On July 14, 20x6, EIC Smart held a phone conversation with CPA Michael Jones of Michael P. Jones and Associates, LLP. Mr. Jones indicated that although the Bank has had problems in the past with financial reporting, he believed that all of those issues had been corrected.

Field Supervisor: On June 20, 20x6, EIC Smart discussed the risk profile, examination plan, and staffing needs with FS Paul Roberts, Jr. FS Roberts and EIC Smart agreed that an allocation of 610 hours should be sufficient to examine the Bank given the risk profile. FS Roberts noted that pre-commissioned examiner George Woods had recently completed loan school and would need additional loan review and ALLL training. He also stated that the loan review scope should target new credits, as well as problem credits, given the history of poor credit underwriting and administration. He indicated that an examiner from another office would be requested to perform the trust examination due to limited trust experience in the office. FS Roberts confirmed that the State would not be joining the examination, but will participate in either the exit meeting or Board meeting at the conclusion of the examination.

Examination Areas and Planned Procedures: ***Comment on CAMELS, specialty, and other areas based on the preliminary review of the UBPR, risk profile, request items, etc., and discussions with case manager, FS, and institution management. Evaluate risk for each examination area. Provide direction on planned documentation procedures, and describe procedures being conducted for training purposes, if applicable.***

ASSET QUALITY (INCLUDING LOAN SCOPE)

Asset review date: June 30, 20x6
Relationships reviewed / number of loans: 57 / 100

Asset Quality will be the primary review area, due to negative portfolio performance metrics noted in the UBPR and adverse findings at the previous two examinations. During the previous FDIC examination, the loan scope was expanded during the examination due to significant administration and control problems that became evident during the loan review. At the current examination, the focus will be on newer originations, outstanding credits that could be impacted by the bankruptcy of Blue Boat Company, Inc., a sampling of larger loans and participations, and a review of all loans to insiders. Additionally, due to previous examination concerns with the credit rating system, internally classified loans of various sizes and grades will be sampled. Although the Loan Portfolio Audit Tool (LPAT) did not identify potential irregular and outlier credits, a sampling of loans originated by President Lincoln will be reviewed due to previous issues related to her lending authority. Additionally, the proceeds will be traced for those loans in President Lincoln's portfolio that recently paid off. Larger ORE properties and newly acquired parcels will be sampled. The Bank does not have loan file imaging, so all loan and ORE files will be reviewed on-site.

President Lincoln indicated that the loan policy has been updated, so a thorough review of each change will be completed. Although President Lincoln indicated a level of comfort with the level of the ALLL (3.67% of TL), the ALLL methodology and calculation will be subjected to in-depth review, due to problems consistently being noted in this area. The concentration in loans to borrowers in the shell fishing industry will be reviewed to assess risk management, monitoring, and control processes. Since the securities portfolio is entirely comprised of investments in GSE securities, investment policies have not changed, and adequate monitoring is evident in reports reviewed, no additional examination work will be performed in this area.

MANAGEMENT
The history of poor administration, controls, and governance at this institution warrants significant review of policies, procedures, and overall risk management practices for each of the CAMELS component areas, as well as transaction testing of internal controls. In particular, examiners will test the accuracy of several Call Report schedules. Since President Lincoln and Chairman White tend to dominate the affairs of the bank, all Board minutes since the previous examination will be reviewed off-site to determine the involvement and level of Board oversight. Examiners will review the strategic plan and all internal audits completed since the previous examination off-site. Additionally, an assessment of efforts to address the provisions of the MOU will be a priority of the examination.

EARNINGS
Poor asset quality has caused earnings performance to be less than satisfactory, though there are some improving trends. The ROAA has returned to a positive, albeit low level, and the NIM is also trending upward. Overhead expense has increased due to ORE holding costs and new loan workout staff hired to address problem credits. President Lincoln does not expect overhead expense to decline in the near term due to continued asset quality challenges, and the bank is considering closure of the west-end branch to reduce overhead. The budget and profit plan will be reviewed off-site. Additionally, given past call report errors regarding income and expense items, Call Report Schedule RI will be reconciled off-site. On-site follow-up of specific accounts will be performed if necessary.

CAPITAL
Capital levels have been declining, although they currently comply with the provisions of the MOU; the decline has been the result of the slight increase in assets and losses in 20x5. President Lincoln indicated that since issuance of the MOU, the Bank has focused on reducing loan levels and was taking a more conservative approach to growth. A thorough assessment of capital will be conducted to determine whether capital is sufficient to support the level of asset quality issues at the Bank. Policies regarding capital maintenance and strategies for capital augmentation will be reviewed along with the Board's monitoring of capital. Examination procedures related to capital will primarily be conducted off-site.

LIQUIDITY
On-balance sheet levels of liquidity total approximately 15 percent of total assets. A review of how management calculates and reports on-balance sheet liquidity will be completed along with a review of sources and uses of funds. While the bulk of the funding comes from local commercial and retail depositors, the bank also relies on borrowings from the Federal Home Loan Bank of Anyregion and draws on a commitment from Other Bank, Otherstate. Usage of these borrowings will be reviewed, along with policies, procedures, and risk management around liquidity and funds management, including contingency funding plans. Most of the review of this area can be conducted off-site.

SENSITIVITY TO MARKET RISK
The bank's balance sheet is fairly well matched. Examination procedures will focus on a review of the minutes of the Asset Liability Management Committee minutes, a review of the economic value of equity model used by the bank, as well as the reasonableness of the assumptions used in the model. This review will be conducted off-site.

BANK SECRECY ACT (INCLUDING COMPLEXITY LEVEL)
The BCAT completed on June 15, 20x6 indicated a score of 60 or Low Complexity. As such, the lack of complexity in bank operations, coupled with satisfactory BSA/AML program performance noted at the prior examination and lack of new initiatives or products, indicate a lower risk profile for BSA/AML. Examiners will work off-site and focus on determining the adequacy of the five pillars of the program. Examiners will utilize the FFIEC BSA/AML Examination Manual and the related electronic workprograms to document the review.

INFORMATION TECHNOLOGY (INCLUDING COMPLEXITY LEVEL)
The IT Profile completed on June 3, 20x6, resulted in a Technology Profile Score of 60, indicating a "Level C – Low Complexity". The Bank is serviced and primarily relies on third parties for its IT infrastructure and oversight. As discussed with FS Roberts, the IT examination will be allotted 60 hours and commence on-site on the same date as the Safety and Soundness examination. The IT examiner is expected to be at the Bank for the first week and then finish off-site.

In the prior examinations, the overall IT program was rated satisfactory. The review will review actions to address prior recommendations and assess the overall IT posture, based on the Information Technology Risk Examination (InTREx) program. Conformance with Appendix B of Part 364, Interagency Guidelines Establishing Information Security Standards, will also be evaluated, as well as cybersecurity preparedness. Findings of the IT examination will be embedded in the Safety and Soundness ROE.

TRUST (IF APPLICABLE) (INCLUDING COMPLEXITY LEVEL)
The Bank has a small trust department and scored a 40 on the Trust Profile Scoring Matrix. Trust Department assets total $3.3 million, held in 8 personal trust accounts, 44 burial trust accounts, and 1 farm management agency account. The review will include a review of policies, practices, and procedures, trust-related comments in Board minutes, and the last external audit to be performed off-site, and selected accounts, compliance with applicable laws, follow-up on matters criticized at previous examinations, and management discussions to be conducted on-site. The Trust examination will be allotted 50 hours.

OTHER (IF APPLICABLE, INCLUDING ANY SPECIALIZED BUSINESS LINES OR CHARACTERISTICS)
Not applicable.

SUPERVISORY ACTIONS OR OUTSTANDING MRBAs (including dates, requirements, and progress in addressing those items)

January 21, 20X5 MOU – The institution has 6 ongoing provisions in its MOU:

1. The Bank shall maintain an allowance for Loan and Lease Losses at an appropriate level.
2. The Bank shall maintain a Leverage Capital ratio equal to or greater than 7 percent.
3. The Bank shall maintain a Total Capital ratio equal to or greater than 10 percent.
4. The Bank shall file accurate Call Reports
5. The Bank shall not extend or renew, directly or indirectly, credit to, or for the benefit of, any borrower who has a loan or other extension of credit with the Bank that has been charged off or classified, in whole or in part, Loss, Doubtful, or Substandard, unless rationale for the extension is noted in the official Board minutes and the appropriate credit file.
6. The Bank shall not declare or pay any dividends without the written consent of the FDIC.

A review of each of the provisions will be completed within each of the respective component reviews.

STAFFING AND ASSIGNMENTS

Examiner	Assignment	Location (On-site/Off-site)
1. Sandra Smart	**EIC, Capital, Management**	Will be on-site for two weeks beginning on August 1. One week off-site prior and after.
2. Melissa Johnson	**OM, (all operations items not assigned to others)**	Review policies off-site. On-site beginning on August 3.
3. Bill Wilson	**AM, Loan Policy, Concentrations**	Will be on-site for two weeks beginning on August 1.
4. Bob Franks	**IT**	On-site the week of August 1st and off-site 2nd week.
5. Todd Marks	**BSA**	On-site for kick-off meeting on August 1, then off-site. Will return for transaction testing and exit meeting second week.
6. George Woods	**Loan Review/ALLL**	On-site beginning August 1 until loan review is finished, will review ALLL off-site.
7. Pauline Justice	**Loan Review/ALLL**	On-site beginning August 1 until loan review is finished, will review ALLL off-site.
8. Mark Jacobs	**Trust Review**	Week of August 1 off-site. On-site August 8 and 9.

Other Staffing Notes: All Request List items have been provided electronically and placed in appropriate electronic workpaper files.

Examination Documentation Modules

The Examination Documentation (ED) Modules are an examination tool used by FDIC examiners since 1997 to carry out the forward-looking, risk-focused examination program. The program includes a set of Primary and Supplemental Examination Documentation Modules (ED Modules) that address the major functional areas of a financial institution. Primary ED Module procedures, and most Supplemental ED Module Procedures, are separated into three distinct tiers: Core Analysis, Expanded Analysis and Impact Analysis.

The Core Analysis includes procedures to be considered, but not necessarily performed at a given examination, based on the applicability of the ED Module to the institution's business model, risk profile, and complexity of operations. The Expanded Analysis includes procedures to be considered for the areas that present the greatest degree of risk to the institution when the Core Analysis review identifies significant deficiencies or weaknesses. If the Expanded Analysis shows that risks are material or the activity is not adequately managed, then examiners consider the Impact Analysis to assess the financial impact of the deficiencies or weaknesses and to determine whether any enforcement action may be necessary.

Reference Modules are also available for examiners use in evaluating significant business lines or conducting technical reviews. Reference Modules contain only one tier: Core Analysis.

Examination Procedures in ED Modules may not address every risk consideration. Examiners have the discretion to perform and document additional examination procedures to assess risk.

CAPITAL ADEQUACY

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

C.1. **Is the capital level sufficient in relation to the risk profile of the bank?** ***Refer to Core Analysis Procedure #19.***

C.2. **Is earnings retention sufficient to provide for future growth, capital maintenance, and potential losses?** ***Refer to Core Analysis Procedure #18.***

C.3. **Are the bank's operating policies, procedures, and risk limits regarding capital preservation adequate?** ***Refer to Core Analysis Procedure #6.***

C.4. **Are information, communication, and regulatory reporting systems adequate and accurate?** ***Refer to Core Analysis Procedures #13-15.***

C.5. **Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedures #11-12.***

C.6. **Are internal controls adequate?** ***Refer to Core Analysis Procedures #8-10.***

C.7. **Do the Board and senior management effectively supervise this area?** ***Refer to Core Analysis Procedures #20-23.***

CAPITAL ADEQUACY

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Note: **Revised regulatory capital rules* for most insured depository institutions, other than large institutions that are subject to *advanced approaches*, generally became effective on January 1, 2015. The new requirements mandate significant changes to regulatory capital components, risk-weight calculations, minimum regulatory capital ratios, and Prompt Corrective Action thresholds. The revised rules also require institutions to hold a capital-conservation buffer in order to avoid limitations on capital distributions and discretionary bonus payments.**

As the revised rules are phased in (and through full implementation in 2022), financial institutions should be meeting or preparing to meet the new capital requirements. Such steps may include:

- **Evaluating the permissibility of Tier 1 and Tier 2 capital instruments,**
- **Modifying information systems and related procedures to ensure the accurate risk-weighting of assets and other exposures, and**
- **Assessing prospective capital positions and dividend plans relative to minimum regulatory capital ratios and the capital-conservation buffer.**

Examiners should work with bankers to ensure they are appropriately prepared for full implementation of the revised regulatory capital rules. Accordingly, examiners should assess the bank's compliance with applicable (phased-in) capital requirements and the bank's plans and efforts to comply with revised (fully phased-in) regulatory capital requirements. Such assessments may include reviewing the institution's:

- **Understanding of the revised regulatory capital rules and definitions,**
- **Regulatory capital calculations,**
- **Risk-weighted assets calculations,**
- **Capital ratios in relation to the revised Prompt Corrective Action (PCA) standards, and**
- **Capital levels, capital distributions, and discretionary bonus payments in relation to any capital conservation buffer requirements.**

Note: This module is to be used at institutions that do not use the advanced approach.

**** The rules are codified at Title 12 of the Code of Federal Regulations (CFR) for the FRB in Part 217 and codified at Title 12 of the CFR for the FDIC in Part 324.***

Preliminary Review

1. **Review prior examination reports, prior examination work papers, pre-examination memorandum, and file correspondence for an overview of any previously identified capital deficiencies and identification of any government-sponsored capital programs, such as Troubled Asset Relief Program (TARP) and Small Business Lending Fund (SBLF).**

2. **Assess management's preparation for phased-in requirements of the capital rules.**

3. **Review internal and external audits for capital concerns. Review remedial action taken by management to correct prior audit and examination findings.**

4. **Analyze capital levels and trends in the Uniform Bank Performance Report. Consider loan losses, provisions to the allowance for loan and lease losses (ALLL), problem asset levels, loan growth, material concentration levels, and any operating losses.**

5. **Determine whether there have been any changes to the corporate or capital structure since the previous examination, such as Sub Chapter S reorganization or new capital offerings.**

Policies and Procedures

6. **Determine whether policies and practices promote capital preservation and address future capital needs. Consider the following:**
    - **The strategic plan and its underlying assumptions, projected asset growth, dividend plans, asset quality, income, liquidity, funds management, deposit structure, parent-company relationship, contingent liabilities, expansion plans, competition, economic conditions, etc.;**
    - **Findings from interviews with management regarding the strategic planning process (including any potential issues due to a change in PCA designation);**
    - **Internal risk-monitoring policies and procedures;**
    - **The availability of additional capital sources (such as funding provided by insiders, external sources, or additional debt at the parent level); and**
    - **The permissibility of current or planned components of capital to qualify as Common Equity Tier 1 Capital or Additional Tier 1 Capital.**

(Note: Coordinate with examiners completing the Management and Internal Control Evaluation Modules)

7. **Review historical and planned dividend payout ratios and other planned capital reductions. For planned capital stock retirements, ensure management requested prior regulatory approval.[1] Also, determine whether management evaluated the impact of the capital conservation buffer.**

[1] An FDIC-supervised institution must obtain prior FDIC approval for any dividend payment involving a reduction or retirement of capital stock in accordance with Section 324.20 (FDIC); FRB, 12 CFR 303.241.

Internal Controls

8. Determine whether entries to capital accounts are appropriate and properly authorized.

9. Assess controls over off-balance sheet items (Schedule RC-L) and their overall impact to sufficiency of capital levels and needs.

10. Review board and management's procedures to prevent, detect, and respond to policy exceptions that may affect capital.

Audit or Independent Review

11. Determine whether the audit function verifies the accuracy of the capital accounts and regulatory reports; assesses the appropriateness, accuracy, and timeliness of reports produced for the board and executive management; and evaluates the reasonableness of capital planning.

12. Determine whether audits or independent reviews include an assessment of compliance with policies, procedures, and regulatory requirements related to capital issues.

Information and Communication Systems

13. Determine whether board and management reports provide sufficient, timely, and accurate information.

14. Review the accuracy of the bank's calculation of Common Equity Tier 1 Capital, Additional Tier 1, and Tier 2 Capital. Reviewing the bank's calculations may involve some of the following procedures:

- **Review Call Report Schedule RC-R and supporting documentation.**
- **Determine whether the bank has chosen to opt-out of the inclusion of accumulated other comprehensive income (AOCI).**
- **Review applicable deductions and adjustments for each tier of capital, including phase-in and phase-out provisions (refer to 324.22 (FDIC) and 217.22 (FRB) for capital adjustments and deduction rules and 324.300 (FDIC) and 217.300 (FRB) for transition provisions).**

- **Consider whether the bank has non-qualifying capital instruments or non-qualifying minority interests subject to phase-out (refer to 324.20 (FDIC) and 217.20 (FRB) for criteria for capital instruments for each tier of capital, 324.21 (FDIC) and 217.21 (FRB) for minority interest rules, and 324.300 (FDIC) and 217.300 (FRB) for transition provisions).**

15. Review the accuracy of the bank's calculation of risk-weighted assets reported on Schedule RC-R, Part II. Review the bank's supporting documentation as appropriate. Reviewing the bank's calculations may involve some of the following procedures:

- **Determine whether risk weights for most assets conform with applicable requirements (FDIC: Part 324.32, FRB: Part 217.32).**
- **As applicable, review risk weights for other categories of exposures, such as:**
  - **Off-balance sheet exposures (FDIC: Part 324.33 and FRB: part 217.33),**
  - **Over-the-counter derivative contracts (FDIC: Part 324.34 and FRB: Part 217.34),**
  - **Cleared transactions (FDIC: Part 324.35 and FRB: Part 217.35),**
  - **Guarantees and credit derivatives (FDIC: Part 324.35 and FRB: Part 217.35),**
  - **Collateralized transactions (FDIC: Part 324.37 and FRB: Part 217.37)**
  - **Securitizations (FDIC: Part 324.41-45 and FRB: Part 217.41-45),**
  - **Equity exposures (FDIC: Part 324.51-52 and FRB: Part 217.51-52),**
  - **Equity exposures to investment funds (FDIC: Part 324.53 and FRB Part 217.53), and**
  - **Other aspects of the revised capital rules.**

16. Review the bank's capital ratios under the revised PCA standards. If the bank is less than well capitalized under the revised standards (or appears that it could become less than well capitalized due to the phase-in of deductions or other aspects of the new capital rules) consider whether the bank has a reasonable strategy to meet the fully phased-in requirements over the transition period.

17. Review the bank's capital conservation buffer and the appropriateness of any distributions and discretionary bonus payments.

Earnings Considerations

18. Determine whether earnings performance enables the bank to fund growth, compete in the marketplace, and support the overall risk profile. Consider the level and trend of equity capital in relation to asset levels, quality, and growth rates.

- **Assess the impact of current and projected provisions to the ALLL on capital retention and growth.**
- **Review whether the bank is relying on core earnings or non-recurring income.**
- **Determine whether dividends are excessive compared to current earnings. (Consider applicable state and federal laws and regulations.)**

Risk Profile Considerations

19. Determine whether the existing capital level is adequate for the bank's risk profile when considering the following items:

- **The adequacy of capital-management policies and controls;**
- **The level, type, and trend of adversely classified assets;**
- **The adequacy of the ALLL;**
- **The volume and trends of charged-off loans and recoveries;**
- **The balance sheet structure and liquidity needs;**
- **The level, type, and trend of concentrations;**
- **The vulnerability of assets and liabilities to adverse events;** ***(Note: While not required for most institutions, stress testing or sensitivity analysis is considered a prudent practice to assist in the identification, measurement, and mitigation of risks.)***
- **The volume of unrealized gains or losses on available-for-sale securities;** ***(Note: Examiners should closely review this area if an institution has not opted-out of the AOCI treatment for certain securities gains and losses.)***
- **The degree of interest rate risk exposure assumed by the bank;**
- **The reasonableness of booked, future tax benefits;**
- **The accounting treatment and valuation of intangible assets;**
- **The extent of contingent liabilities associated with trusts or other activities;**
- **Dividend/repayment requirements for government capital programs (e.g. TARP or SBLF);**
- **The extent of any other liabilities not shown on the bank's books, including contingent liabilities;**
- **The existence of pending litigation against the bank (and its subsidiaries) and the potential and estimated loss exposure;** ***(Note: This information should be disclosed on the responses to the Officer's Questionnaire or First Day Letter.)***
- **The volume and risk characteristics of new business initiatives and higher risk investment or lending strategies (e.g., subprime lending or mobile banking), or involvement in nontraditional activities such as non-deposit products, insurance sales, or discount brokerage services;**
- **The extent to which higher-risk loans or investments may require additional capital under the revised regulatory capital rules' risk-weights (for example, high-volatility commercial real estate loans, equity exposures, or certain structured or securitized investments);**
- **Compliance with state and federal laws and regulations regarding capital levels; and**
- **The level of operational and reputational risk.**

Managerial Effectiveness

20. Assess the adequacy of management's actions to correct criticisms related to capital in previous examination reports and recent internal or external audits.

21. Evaluate management's effectiveness at preparing for and reacting to changes in economic, industry, and regulatory environments.

22. Determine whether management effectively identifies and manages: • **The institution's overall risk profile,** • **Factors that may change the institution's risk profile, and** • **How a change in the risk profile will affect the sufficiency of capital levels.**
23. Determine whether management adequately prepared for full implementation of the revised regulatory capital rules by: • **Evaluating its prospective capital position pursuant to the new rule;** • **Adopting ways to measure capital (including capital components and deductions, risk-weighted assets, and minimum capital ratios); and** • **Ensuring that the board is aware of these changes.**
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

EARNINGS

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. Are profit planning and budgeting practices adequate? *Refer to Core Analysis Procedures #8-13.*

C.2. Are internal controls adequate? *Refer to Core Analysis Procedures #14-18.*

C.3. Are the audit or independent review functions adequate? *Refer to Core Analysis Procedure #19.*

C.4. Are information and communication systems adequate and accurate? *Refer to Core Analysis Procedures #20-22.*

C.5. Are earnings sufficient to support operations, provide for funding of the allowance for loan and lease losses (ALLL) (or allowance for credit losses (ACL)[1], when applicable) and augment capital? *Refer to Core Analysis Procedures #23-33.*

C.6. Are earnings sustainable? *Refer to Core Analysis Procedures #34.*

C.7. Do the board and senior management effectively supervise this area? *Refer to Core Analysis Procedures #35-36.*

[1] ACL replaces the term ALLL for those banks that adopted ASU 2016-13.

EARNINGS
Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review
1. Review previous reports of examination, prior examination work papers, and file correspondence for an overview of any previously identified earnings concerns, strengths, or other considerations.
2. Review recent audits and independent reviews to identify deficiencies concerning the reliability of management information systems (MIS) that may affect the quality and reliability of reported earnings.
3. Review management's remedial actions to correct examination and audit deficiencies.
4. Discuss with management any recent or planned changes in strategic objectives and their implications for profit plans.
5. Review board and committee minutes along with management reports to determine the adequacy/quality of MIS systems and reports.
6. Review recent Uniform Bank Performance Reports (UBPR) to develop an initial assessment of overall earnings performance. Consider the impact of Subchapter S tax filing status when selecting performance ratios to review.
7. Compare financial statements, UBPRs, and Consolidated Reports of Condition and Income (Call Reports) to determine whether there have been any significant changes that could materially affect earnings performance.

Profit Planning and Budgeting Practices

8. Review the strategic plan to determine the board's goals and objectives over the near- and moderate-term, including consideration of local and national economic conditions, new products or services, and growth.

9. Assess the potential impact of new strategic initiatives on future earnings performance. Consider the following:

- **Branching activities;**
- **Acquisition/merger activity;**
- **New products and services; and**
- **Anticipated outlays (e.g., technological upgrades).**

10. Determine whether profit plans and budgeting practices are realistic, consistent with the strategic plan, and address the following areas with detail appropriate for the business model, size, complexity, and risk profile:

- **Local and national economic conditions,**
- **Competitive environment,**
- **Strategic plans,**
- **New or changing products and business lines,**
- **Growth objectives,**
- **Capital requirements,**
- **Managerial resources,**
- **Asset and liability mix and pricing,**
- **Funding strategies,**
- **Anticipated level and volatility of interest rates,**
- **Interest rate and maturity mismatches, and**
- **Anticipated funding of the ALLL (or ACL, when applicable).**

11. Determine whether profit plans realistically assess the costs associated with the risk management processes needed for new initiatives, changes in risk appetite, and potential deterioration in asset quality or market conditions.

12. Assess the timeliness of preparing and approving the profit plans and budgets.

13. Compare earnings performance to budget forecasts. Determine whether management compares

budgeted performance to actual performance on a periodic basis, modifies projections when interim circumstances change significantly, and evaluates budget forecasts under multiple stress scenarios.

Internal Controls

14. Review management's procedures to prevent, detect, and correct errors with respect to MIS.

15. Determine whether the income and expense posting, reconcilement, and review functions are independent.

16. Consider testing selected income, expense, and balance sheet items to observe the flow of transactions and to identify internal control weaknesses. Areas commonly selected for review are:

- **High levels of other income in miscellaneous-income, service-fee, or unusual accounts;**
- **Proper amortization of loan origination fees;**
- **Insider expense accounts;**
- **Management fees or other payments to affiliates or insiders;**
- **Significant legal or consulting fees;**
- **Prepaid accounts;**
- **Stale items; and**
- **Expenses accrued and unpaid.**

17. Determine whether significant or non-recurring income, expenses, and capital charges are reviewed and authorized by senior management and the board.

18. Determine whether insider or affiliate-related income and expense items are routinely reviewed for authorization, appropriateness, and compliance with laws and regulations.

Audit or Independent Review

19. Determine whether the audit or independent review program provides sufficient coverage of earnings activities relative to the bank's business model, size, complexity, and risk profile. Determine whether these programs:

- **Assess compliance with profit planning objectives, accounting standards, and Call Report Instructions;**
- **Include sufficient transaction testing to assure income and expenses are accurately recorded;**

- **Assess separation of duties and internal controls;**
- **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board;**
- **Recommend corrective action when warranted; and**
- **Verify implementation and effectiveness of corrective action.**

Information and Communication Systems

20. Determine whether managerial reports provide sufficient information relative to the business model, size, complexity, and risk profile of the bank.

21. Evaluate the accuracy and timeliness of reports produced for the board and executive management. Reports may include:

- **Periodic earnings results,**
- **Budget variance analyses,**
- **Income and expense projections,**
- **Nonrecurring or cyclical items,**
- **Exposure to interest rate/market risk,**
- **Large item reviews,**
- **Insider related transaction disclosures, and**
- **Tax planning analyses.**

22. Validate the accuracy of Call Reports as appropriate. Review bank work papers, the general ledger, and downloaded exception reports; and interview bank personnel to verify the accuracy of Call Report schedules RI, RI-A, RI-B, RI-C, RI-D, RI-E, and RC-K.

Ratio and Trend Analysis

23. Assess the level and trend of the return on average assets (ROAA) relative to historical performance, peer comparisons, the organization's business model, risk profile, balance sheet structure/composition, and local and national economic conditions. Consider the amount and volatility of income from high-risk assets, asset concentrations, non-recurring items, and accounting practices subject to management discretion (which could manipulate earnings). Identify and assess areas needing further investigation.

24. Evaluate the level, trend, and stability of the net interest margin (NIM). Discuss with credit, market, and liquidity risk examiners the impact to present and future earnings performance from potential changes in asset quality, market fluctuations, and interest rates.

25. Evaluate the level and trend of overhead in relation to operational activities. Consider the effect of strategic initiatives (such as, new products/services, branch openings/closings, and staffing increases/decreases).

26. Evaluate the level, trend, and sources of non-interest income. Discuss with management any projections for changes in fee structures. Consider the impact of changes in interest rates and market conditions on mortgage banking income, securities gains, or other non-interest revenue sources.

27. Review the level and trend of provisions to the ALLL (or ACL, when applicable) and the relationship to actual loan losses to determine the impact of asset quality on earnings. Discuss with the examiner(s) responsible for loan review the potential need for additional provision expenses resulting from examination findings.

28. Review the level, trend, and expected frequency of non-operating gains and losses and their impact on earnings.

29. Consider the impact to earnings from purchased-impaired accounting practices, and if applicable, discuss with an accounting specialist.

30. Determine whether there have been or are expected to be any non-recurring events and consider their impact to earnings performance. If necessary for comparison purposes, evaluate this impact on a tax-equivalent basis.

31. Evaluate the level and trend of income tax payments recognizing the bank's basis for filing taxes. (e.g., Subchapter S, tax allocation agreement)

32. Determine whether transactions between affiliated organizations and subsidiaries have an impact on the bank's earnings.

33. Assess the ability of earnings to support capital growth under current, projected, and stressed conditions. Review the earnings retention rate in comparison to past and forecasted growth rates.
Sustainability
34. Determine whether the current level of earnings is sustainable. Consider the following: • **Level and trend of the ROAA, NIM, overhead, fee income, and ALLL (or ACL, when applicable) provisions;** • **Asset quality trends;** • **Management's ability to forecast or control funding and operating expenses;** • **Strategic plans, including new initiatives;** • **Competitive and economic conditions; and** • **Vulnerability to adverse events.**
Board and Senior Management Supervision
35. Review relevant documentation to determine whether the board assesses bank earnings and responds to significant budget deviations.
36. Assess compliance with bank policies, applicable regulations, and governing accounting standards. If applicable, determine compliance with outstanding formal or informal enforcement actions.
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

INTERNAL AND EXTERNAL AUDIT EVALUATION

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. This module should incorporate and summarize audit findings from all of the completed ED Modules for a given examination. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

Note: If, after completing this module, examiners answer this question no, continue to the Management and Internal Control Evaluation (MICE) Expanded Analysis module.

C.1. **Has the board of directors established an audit committee that monitors and provides effective oversight of audit activities?** ***Refer to Core Analysis Procedures #1-8 & Procedure #12.***

C.2. **Has management established audit policies and procedures that are adequate for the size, complexity, activities, and risk profile?** ***Refer to Core Analysis Procedure #11.***

C.3. **Is the internal audit function independent from all functional areas?** ***Refer to Core Analysis Procedure #10.***

C.4. **Is the internal audit program sufficient for the risk profile?** ***Refer to Core Analysis Procedures #11-13.***

C.5. **Are internal audit record keeping and reporting processes sufficient?** ***Refer to Core Analysis Procedures #14-15.***

C.6. **Is the internal audit function adequately staffed with auditors who possess an appropriate level of experience and expertise?** ***Refer to Core Analysis Procedure #12.***

C.7. **Do the internal auditors adequately identify, document, and report key risks in the organization?** ***Refer to Core Analysis Procedures #15-16.***

C.8. **If the internal audit function is outsourced, do the board and senior management provide sufficient oversight of the relationship?** ***Refer to Core Analysis Procedure #9.***

C.9. **Is the organization's external audit program effective and in compliance with applicable laws and regulations?** ***Refer to Core Analysis Procedure #17.***

INTERNAL AND EXTERNAL AUDIT EVALUATION

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every institution. Examiners should complete only the procedures relevant for the institution's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Resources: FDIC: 12 CFR Parts 363 and 364, and the Interagency Policy Statement on Internal Audit Function and its Outsourcing FIL 21-2003; FRB: 12 CFR Part 208 - Appendix D, SR 03-5 Amended Interagency Guidance on the Internal Audit Function and its Outsourcing, SR 13-1 Supplemental Policy Statement on the Internal Audit Function and its Outsourcing, and AD 13-2 Examiner Guidance Relating to the Internal Audit Function at Supervised Institutions.

Preliminary Review

1. Identify previous concerns by reviewing prior examination reports, file correspondence, audits and audit or board committee minutes.

2. Determine the general structure and primary responsibilities of the board of directors, board committees, and executive management relating to audit activities.

3. Determine whether any material changes occurred or are expected that may affect this area. Discuss the changes and implications with management.

Audit and Other Independent Reviews

4. Determine whether an audit committee has been established, and evaluate the composition of the committee. Consider the following:

- **Number of members,**
- **Number of outside directors,**
- **Independence from management, and**
- **Presence of financial experts, if required.**

5. Determine whether the audit committee operates under an appropriate charter. Satisfactory charters generally address topics such as:

- **Requirements for audit committee membership;**
- **Frequency of committee meetings;**

- **Responsibility for engaging independent accountants and appointing the internal auditor;**
- **Responsibility for reviewing internal audits, the annual external audit, and the quarterly and annual financial statements;**
- **Requirements and responsibilities for supervision of the internal audit program;**
- **Guidelines for establishing open communication among the audit committee, the internal auditor, the independent accountant and the board of directors; and**
- **Authorization for the audit committee to obtain outside legal counsel and conduct investigations.**

6. Determine whether the board or audit committee reviews the effectiveness of the institution's internal audit systems. Appropriate reviews[1] generally consider items such as:

- **The internal audit charter, budget and staffing levels, and overall risk-assessment methodology;**
- **The audit organizational structure, including the selection, termination, and compensation of external auditors and outsourced internal auditors, and placement of the internal audit function and the internal audit manager within the institution's organizational and management structure, as applicable;**
- **Annual audit plans and updates;**
- **The internal auditor's progress in completing the audit schedule;**
- **Internal audit reports and management's response;**
- **Status reports on management's actions to correct control weaknesses and violations of laws and regulations identified in internal and external audit reports as well as examination reports;**
- **The integrity of internal and external financial-reporting processes (reviews may involve discussions with independent accountants and internal auditors);**
- **The organization's annual financial statements and reports or other financial information submitted to any governmental body, or made public (including certifications, reports, opinions, or reviews rendered by the independent accountants); and**
- **Significant disagreements between management and the independent accountants or the internal auditing department in the preparation of the financial statements.**

7. Determine whether audit committee responsibilities are commensurate with the size, complexity, activities, and risk profile. Responsibilities generally include:

- **Establishing an internal audit function that operates adequately, independently, and has sufficient resources to effectively oversee the audit function;**
- **Evaluating all significant vendor arrangements, including the independence of internal and external auditors, and the effectiveness of the internal audit program;**
- **Retaining auditors who are qualified to audit the organization's activities. (Note: The committee typically hires the senior auditor, sets his or her compensation, and evaluates his or her performance.);**
- **Establishing schedules and agendas for regular meetings with internal and external auditors;**
- **Interacting with the auditor, separate from formally scheduled meetings, to remain current on**

[1] Generally, institutions perform reviews at least annually, with reviews correlated to the risks in activities reviewed.

internal audit department, organizational, or industry concerns;

- **Considering the independent accountants' judgments about the quality and appropriateness of the organization's accounting policies as applied in its financial reporting; and**
- **Considering and approving, if appropriate, all major changes to the institution's auditing and accounting principles and practices as suggested by the independent accountants, management, or the internal auditing department; and**
- **Fostering forthright communication and maintaining processes in which employees or other stakeholders can submit confidential and anonymous concerns to the committee about questionable accounting, internal accounting controls, and other auditing matters.**

8. Determine whether committee minutes note significant actions, such as:

- **Reviewing and approving the code of ethics and audit charter;**
- **Recommending selection and approval of the certified public accountant (CPA) firm to serve as external auditor;**
- **Discussing and validating the CPA firm's independence;**
- **Approving the internal auditor's salary and the audit department's budget;**
- **Reviewing the annual internal audit plan and conformity with the plan;**
- **Discussing internal audit staffing levels and training needs;**
- **Discussing with the CPA firm the quality of the application of accounting principles;**
- **Reviewing and approving the annual and quarterly financial statements prior to issuance; and**
- **Reviewing and approving, if applicable, attestation letters for internal control reports and compliance with Section 36 of the FDI Act, 12 U.S.C. 1831m, and 12 CFR Part 363.**

9. If portions of the internal audit function are conducted by outside vendors, consider whether:

- **An internal audit conducted by the same vendor that conducts the financial statement audit meets independence considerations;**
- **Due diligence is adequate, performed prior to entering the outsourcing arrangement, and considers vendor competence, independence, and objectivity;**
- **The outsourcing contract and engagement letter between the organization and the vendor appropriately detail each party's responsibilities;**
- **The scope of outsourced audit work[2] is adequate, documented, and revised when the institution's environment, activities, risk exposures, or systems change significantly;**
- **Findings are appropriately and effectively communicated; and**
- **Contingency planning is adequate to mitigate audit coverage discontinuity if the outsourcing arrangement is terminated.**

[2] For institutions with formal internal audit departments, refer to the Interagency Policy Statement on the Internal Audit Function and Its Outsourcing for additional information.

10. **Determine whether the internal audit function is sufficiently segregated from operations. Appropriate segregation is generally evidenced by the following items:**
    - **The audit department does not report to an operational function in the organizational structure.**
    - **The audit staff is prohibited from performing operational duties such as preparing general ledger tickets and daily reconcilements, or performing a procedure under dual control.**
    - **Reporting procedures are independent of the influence of operating personnel.**
    - **The auditor reports directly to the board of directors or the audit committee and meets with them to review reports.**

Policies

11. **Determine whether internal audit policies and procedures are adequate for the institution's size, complexity, activities, and risk profile. Items to consider include, but are not limited to:**
    - **Risk analysis and assessments,**
    - **Internal control questionnaires or narratives,**
    - **Audit frequency commensurate with risk,**
    - **Audit schedule,**
    - **Audit work programs,**
    - **Account confirmations,**
    - **Workpapers,**
    - **Reporting standards,**
    - **Corrective-action tracking standards, and**
    - **A comprehensive quality assurance program that:**
        - **Includes both internal and external quality assessments,**
        - **Ensures internal audit activities consider The Institute of Internal Auditors (IIA) professional standards, and**
        - **Ensures audit practices conform with internal audit policies and procedures.**

12. **Determine whether the size and qualifications of the audit staff are appropriate based on the institution's activities, assets, and complexity. Consider the audit staff's academic backgrounds, experience, competency, and ongoing training initiatives.**

13. **Consider whether the internal audit schedule is based on a risk assessment. General considerations include the following items:**
    - **All institution functions and services are reflected.**
    - **The audit schedule is reviewed and approved by the audit committee at least annually.**
    - **The auditor periodically reports progress in completing the schedule to the audit committee.**
    - **The audit committee approves changes to the schedule.**
    - **Audit plans and frequencies are reasonable and completed as scheduled.**
    - **Audit schedules use varied starting dates and time intervals between audits to avoid anticipation by**

those subject to audit.

14. Assess the adequacy of audit workprograms and the maintenance of corresponding audit workpapers. Items to consider include:

- **A reasonable record retention schedule is maintained for audit records.**
- **Audit workprograms are sufficiently detailed to allow for effective audits.**
- **Workprograms are updated to keep pace with changes (such as new products, accounting guidelines, and regulations).**
- **Workpapers document approval of all deviations from established audit procedures.**
- **Workpapers contain evidence that audit managers reviewed the workpapers for conclusions and recommendations.**
- **All significant and unresolved exceptions are noted in workpapers and included in audit reports.**
- **Workpapers are well organized and support conclusions and recommendations.**
- **Workpapers are cross-referenced to procedures and institution reports.**

15. Determine whether the internal audit department's reporting procedures are adequate. Consider if:

- **The auditor submits formal reports directly to the board of directors or audit committee.**
- **Audit reports include an overall opinion and an assessment of the effectiveness of internal controls and compliance with established procedures.**
- **The board or audit committee supports the audit staff in resolving audit matters.**
- **Audit reports record departmental managers' commitment to resolve reported matters.**
- **Audit reports include a summary of the effectiveness of all controls reviewed.**
- **The auditor maintains a formal record of all unresolved audit or regulatory exceptions and recommendations.**
- **Changes to the audit schedule are approved.**

16. Assess the adequacy of work performed by the internal auditors. Items to consider include:

- **Examination findings,**
- **Time elapsed since the previous audit,**
- **Scope and relevance of internal auditors' work, and**
- **Testing performed by internal auditors.**

17. Review the institution's external audit program. Refer to the *Review of External Auditor Workpapers* ED Module as needed.

- **If the institution is covered by Part 363 of the FDIC Rules and Regulations, or Part 208, Appendix D-1 of FRB Regulation H and has $1 billion or more in total assets, determine whether management, at least annually, assesses the effectiveness of its internal control structure and**

procedures for financial reporting and compliance with designated laws. Review the documentation maintained to determine whether management adequately assesses the institution's internal control structure and compliance with laws.

- **Determine whether publicly-owned institutions or those covered by Part 363 that have $1 billion or more in total assets have an external auditor attest to management's assessment of its internal control structure and procedures for financial reporting.**
- **If the institution chose not to obtain an external audit, review the board of director's documentation of its reasons, including whether the auditing program provides sufficient coverage of areas of potential concern or unique risk. Review the minutes describing the board's consideration of this audit issue at each examination.**
- **Determine whether the audit program conforms with FR Appendix D of Regulation H or FDIC Part 363.**
- **Determine whether the external audit engagement letter contains any limitation of liability provisions. Refer to the Interagency Advisory on the Unsafe and Unsound Use of Limitation of Liability Provisions in External Audit Engagement Letters, February 9, 2006. (FDIC: FIL 13-2006, FRB: SR 06-4.)**
- **Determine whether issues presented in the CPA management letter have been addressed.**
- **Review any additional CPA reports and follow up on issues presented.**

End of Core Analysis. If needed, Continue to the MICE Expanded and Impact Analyses.

LIQUIDITY

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Are policies, procedures, and risk limits adequate?** ***Refer to Core Analysis Procedures #5-7.***

C.2. **Are internal controls adequate?** ***Refer to Core Analysis Procedures #8-10.***

C.3. **Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedures #11-13.***

C.4. **Are information and communications systems adequate and accurate?** ***Refer to Core Analysis Procedures #14-17.***

C.5. **Are the management and use of alternative and rate sensitive funding sources reasonable?** ***Refer to Core Analysis Procedures #18-25.***

C.6. **Does the overall assessment of liquidity, including cash flow analysis and contingency funding plans, indicate liquidity needs can be met without adversely affecting operations or financial condition?** ***Refer to Core Analysis Procedures #26-40.***

C.7. **Do the board and senior management effectively supervise this area?** ***Refer to Core Analysis Procedure #7; Procedures #9-10; Procedure #14-17; & Procedures #41-48.***

LIQUIDITY

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. **Identify previous liquidity and funds management concerns by reviewing prior examination reports, file correspondence, and audits.**

2. **Review Uniform Bank Performance Reports (UBPRs), financial statements, and other applicable data to develop a preliminary assessment of liquidity trends and risk.[1] Identify significant trends or changes in source and use of funds that may require further analysis. For banks with moderate to significant asset or loan growth, identify specific funding sources that may require further analysis.**

3. **Review board or committee minutes and information packets presented to the directorate for evidence of oversight, responsibility, routine management reports, and any identified liquidity concerns.**

4. **Determine whether there are recent or planned changes in operations, management, oversight, or strategic direction relating to liquidity and funds management (such as growth, new products, mergers, or acquisitions). Discuss these items with management as necessary and consider the potential liquidity risks and benefits.**

Policies, Procedures, and Risk Limits

5. **Review liquidity and funds management policies to ensure the guidelines include sufficient management guidance and reflect the board's risk tolerances and oversight responsibilities. Prudent liquidity guidelines, which may also be found in investment, loan, or other policies, typically:**
   - **Authorize an individual(s) or committee to conduct activities and delineate planning, management, and reporting responsibilities;**
   - **Describe diversification targets for funding sources and address acceptable terms for each funding source. Such targets may be segmented to address short-, medium-, and long-term funding needs and limit exposures to, or concentrations in, single providers, market segments, wholesale funding types, investment securities, marketable loans, other assets, etc.;**

[1] Average balances may provide useful indicators of operating liquidity levels.

- **Emphasize the importance of cash flow forecasting as a primary measurement and monitoring tool;**
- **Define and place limits on funding sources and uses, such as:**
  - **Maximum loan-to-deposit ratio or loan-to-asset ratio,**
  - **Reliance on less stable funding of longer-term assets,**
  - **Individual and aggregate limits on wholesale and rate sensitive funds by type and source,**
  - **Target amounts of unpledged liquid assets,**
  - **Maximum level of illiquid asset concentrations such as complex financial instruments or bank owned life insurance (BOLI)[2], and**
  - **Off-balance sheet positions;**
- **Require monitoring of bank policy compliance and policy-exception handling and reporting;**
- **Set targets for unencumbered, liquid asset reserves;**
- **Provide contingent liquidity plans for unexpected cash flow mismatches, including periods when unsecured borrowing lines, brokered and high-rate deposits, and other similar funding sources may be unavailable or cost prohibitive;**
- **Include risk limits and funding strategies for material activities (such as securitizations, derivatives, trading, international activities, or backstop-lending for commercial paper) that are subject to adverse financial market events;**
- **Emphasize the importance of comprehensive and timely reports to management and the directorate that address current conditions and stressed scenarios; and**
- **Include a framework for stress testing liquidity risk commensurate with the risk profile and activities of the bank.**

6. Determine whether funds management policies, procedures, and risk limits are reasonable in relation to management abilities, risk appetite, strategic plans, current economic conditions, and the complexity, and overall financial condition of the bank.

7. Evaluate the frequency and timeliness of policy reviews and updates by the board.

Internal Controls

8. Determine whether sufficient separation of duties (or comparable controls) exists over the preparation of reports used in managing the liquidity function.

9. Determine whether reports concerning liquidity sources and uses are prepared and reviewed with appropriate frequency.

[2] Refer to the BOLI ED Module for more information.

10. Determine whether policy exceptions are appropriately identified, reported, tracked, and approved.
Audit or Independent Review
11. Determine whether the scope of audits or independent reviews is sufficient to identify policy, reporting, internal control, and compliance deficiencies.
12. Determine whether audits or independent reviews are properly reported to the board and appropriate operating committee.
13. If recent reviews disclosed deficiencies, determine whether management responses and corrective actions are reasonable and promptly implemented.
Information and Communication Systems
14. Determine whether internal management reports provide accurate and timely information (regarding funding sources and uses) to support ongoing liquidity-management decisions and for monitoring the results of those decisions.
15. Determine whether board and senior management reports provide sufficient and appropriately tailored information to monitor compliance with board policies.
16. Determine whether management performs adequate analysis of funding sources and uses to assure ample funding capacity.
17. Determine whether liquidity needs and risks are effectively communicated to all affected areas.
Analysis of Funding Sources and Uses
18. Compare current liquidity levels and prospective sources of liquidity to present and future funding needs. Consider:

- **Adequacy of funds management reporting and planning;**
- **Stability and diversification of funding sources; and**
- **Financial condition and performance.**

19. Assess the composition and stability[3] of the deposit funding structure, considering:

- **Out of area deposits, including national CDs, internet deposits, money desk operation, and deposit listing services;**
- **Brokered deposits;**
- **Reciprocal deposits;[4]**
- **Public deposits, uninsured deposits, or other large deposit relationships;**
- **Deposits obtained from deposit management programs, such as CD specials, deposit account rate incentives, and internet banking initiatives;**
- **Potential surge deposits;**
- **Maturity distribution; and**
- **Potential deposit rate sensitivity in various market environments.**

20. Assess the composition of the non-deposit funding structure. Identify sources of all significant borrowings or market instruments (e.g., FHLB advances, repos, Fed funds, FRB Discount Window, asset securitization, and complex wholesale borrowings). Review agreements; consider the terms, structure, and collateral requirements of borrowing arrangements; and determine the extent and use of those funds, considering the following factors:

- **Trends in use of such funds, either seasonally or as a more permanent funding vehicle;**
- **Stability and diversification of those sources;**
- **Use of those funds relative to strategic plans, controls, and alternate funding sources;**
- **Remaining borrowing capacity under both secured and unsecured borrowing lines; and**
- **Compliance with collateral eligibility guidelines of each agreement, particularly concerning electronic notes and signatures.**

21. Compare the rates paid for deposits and other funding sources with published indices and local market rates. Determine the cause of any significant variances.

22. Review UBPR aggregate cost data and determine reason(s) for any significant variances or adverse trends in cost of funds, relative to peer data.

[3] Refer to the Brokered and High-Rate Deposits ED Module for further analysis of material exposure to brokered deposits and less stable or rate-sensitive funding sources.
[4] Refer to 12 CFR 337.6(e) for details regarding the limited exception for treating certain reciprocal deposits as brokered deposits.

23. Determine whether management practices or strategies resulted in a funding concentration. If so, determine the use of the funding and whether funding concentrations present elevated risks.

24. Assess the extent of liquidity provided by the securities portfolio and other investments considering:

- **The availability of highly liquid assets that could be sold or pledged to obtain funds under a stress scenario (highly liquid assets include unpledged US Treasury and agency securities);**
- **The volume of assets with limited marketability (e.g., municipals from small issuers, complex financial instruments, BOLI);**
- **The maturity structure, marketability, and vulnerability to market stress (i.e., price risk);**
- **Portfolio depreciation (ensure valuations conform to relevant reporting standards);**
- **Pledging requirements and the availability of unpledged securities;**
- **Significant changes or trends in composition and maturity; and**
- **Legal, regulatory, or operational impediments.**

25. Assess the extent of liquidity provided by the loan portfolio, including pledged assets and cash flows from loan payments or sales.

26. Assess the impact of any other asset pledging and off-balance sheet arrangements (e.g., FHLB standby letters of credit used to collateralize public deposits) on liquidity and contingency funding. Determine whether off-balance sheet liabilities are reported appropriately on Call Report Schedule RC-L, if applicable.

27. Assess the potential impact on liquidity of asset sales that include recourse provisions.

28. Review the use of asset sales or secondary funding sources that were prompted by unplanned liquidity needs and determine whether there were any adverse effects on operations or financial performance.

29. Evaluate management provisions for anticipated but unusual liquidity needs, such as large unfunded loan commitments, maturity of significant volumes of time deposits or borrowed funds, branch closings, new products, mergers, litigation, or growth initiatives.

30. Assess the effect of any other identified trends or material changes in sources and uses of funds.

31. Review historical and projected off-balance sheet funding requirements, and assess the bank's ability to respond to potential funding needs.

Cash Flow Analysis

32. Determine whether the bank has effective methods for projecting cash flows arising from assets, liabilities, and off-balance sheet items over an appropriate set of time horizons (e.g., weekly, monthly, quarterly, and annually).

33. Determine whether internal liquidity and funds management analyses identify primary sources of funding for meeting daily cash outflows, as well as seasonal and cyclical cash flow fluctuations.

34. Assess management's process for establishing and maintaining a level of liquid assets that supports day-to-day operations and includes an additional buffer to address unforeseen circumstances.

35. For banks engaged in significant payment and settlement activities, determine whether internal liquidity monitoring captures intraday liquidity risks associated with derivative activities.

36. Determine whether liquidity stress scenarios are conducted across multiple time horizons, use reasonable modeling assumptions under various stress scenarios, and are commensurate with the bank's complexity and level of risk exposure. Typical liquidity stress scenarios consider the realistic availability of liquidity, given potential haircuts on borrowings, FHLB restrictions, deposit runoff, and likely market conditions during stress events. Possible stress scenarios include:

- **Unexpected loan growth;**
- **Loan losses or reduction in loan repayments:**
- **Changes in economic conditions, market perception, or disruptions in financial systems;**
- **Price fluctuation in the securities portfolio;**
- **Inability to renew or replace maturing funding liabilities;**
- **Unexpected deposit withdrawals or draws on off-balance sheet credit commitments;**
- **Disruptions in payment and settlement systems due to operational failures or local disasters;**
- **Increased FHLB collateral requirements;**

- **Restrictions imposed by correspondents on borrowing availability or terms;**
- **Prompt Corrective Action downgrades, and statutory and regulatory restrictions on brokered deposits and interest rates paid on deposits;**
- **Downgrades of the bank's investment rating by a Nationally Recognized Statistical Rating Organization (for larger organizations) or other rating agency (for smaller organizations); and**
- **Reaching early amortization triggers on pools of assets securitized by the bank.**

Contingency Funding Plan (CFP)

37. Review the CFP to determine whether it provides adequate funding under stressed operating environments, including situations that, while relatively infrequent, could significantly affect the bank. Appropriate plans address shortfalls in emergency situations, including systemic adverse financial market events and reflect the complexity, risk profile, activities, and scope of the bank's operations. Consider whether the CFP:

- **Identifies stress events that could harm the liquidity position;**
- **Addresses levels of severity and timing during a contingent liquidity event by identifying temporary, intermediate, or longer-term disruptions;**
- **Establishes a monitoring framework, such as triggering mechanisms and early warning indicators;**
- **Addresses funding sources and needs during a stress event through a quantitative projection of funding needs and funding capacity;**
- **Identifies potential sources of contingency funding and considers the time needed to establish them;**
- **Assesses the reliability of contingency funding (e.g., irrevocable, as available, revocable);**
- **Identifies terms and conditions of alternative or contingency funding arrangements; and**
- **Establishes a crisis management team, realistic action plans, and provisions for more frequent and detailed liquidity reporting if stress situations intensify.**

38. Confirm whether the CFP is regularly tested, updated, and operationally sound. Consider the following:

- **Maintaining and updating the liquidity event management process, including roles and responsibilities;**
- **Frequency of testing the operational components of the contingency funding plan;**
- **Assessing the mobility of cash and collateral when needed;**
- **Stress testing for collateral devaluations;**
- **Identifying the availability of contingent funding lines of credit when needed;**
- **Maintaining and updating the monitoring framework for contingent events; and**
- **Testing various elements of the contingency funding plan, including standby liquidity sources that are rarely used, such as:**
    - **The sale or securitization of loans,**
    - **Repurchase agreements (repos), and**
    - **FRB Discount Window borrowings.**

39. Determine whether the board and senior management have contingency plans to assist management in taking appropriate and prompt action if the bank becomes less than well capitalized.[5] Consider: • **Statutory and regulatory restrictions on rates paid for deposits;** • **The need to seek approval from the FDIC to accept and renew brokered deposits for adequately capitalized banks; and** • **The inability to accept brokered deposits for less than adequately capitalized banks.**
40. If the bank originates or purchases loans for asset securitizations, determine whether the liquidity risk monitoring system includes contingency plans for possible liquidity strains because of early amortizations.
Board and Senior Management Oversight
41. Determine whether the board and senior management adequately plan and articulate the future direction of the organization, noting projected growth levels, the source of funding for the growth, and associated changes in the overall asset and liability mix.
42. Determine whether the board and senior management have a defined funds management strategy or programs for gathering deposits, and assess the process for developing the strategy or programs. Assess the purpose of the funding strategies or programs and determine how those funds are being used, such as funding normal operations or targeted asset growth.
43. Evaluate the effectiveness of the oversight and control structure for the organization's liquidity practices.
44. Determine whether the board has allocated sufficient resources to liquidity management.
45. Evaluate the technical and managerial expertise of individuals involved in liquidity management.
46. Determine whether the board and senior management established clear lines of authority and

[5] Refer to Prompt Corrective Action Guidelines (Section 38 of the FDI Act, 12 USC 1831) and the Brokered and High Rate Deposits ED Module as needed.

responsibility for monitoring adherence to policies, procedures, and limits.
47. **Determine whether senior management effectively monitors liquidity risk for subsidiaries and other affiliates on an ongoing basis.**
48. **Determine whether organizational practices are consistent with established bank policy.**
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

LOAN OPERATIONS REVIEW

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are loan policies, approval procedures, and asset concentration limits adequate? *Refer to Core Analysis Procedure #4, Procedures #8-17, & Procedure #32.***
C.2.	**Are loan documentation, review procedures, and internal controls adequate? *Refer to Core Analysis Procedure #9, Procedures #18-23, Procedures #26-27, Procedure #30, Procedure #33, & Procedure #35.***
C.3.	**Are the audit and independent review functions adequate? *Refer to Core Analysis Procedures #40-41.***
C.4.	**Are collateral controls adequate? *Refer to Core Analysis Procedure #28.***
C.5.	**Are management reporting and communication systems adequate and accurate? *Refer to Core Analysis Procedure #7 & Procedure #42.***
C.6.	**Does management accurately identify and monitor policy exceptions? *Refer to Core Analysis Procedure #3, Procedure #20, Procedure #32, & Procedures #43-44.***
C.7.	**Is the process for loan disbursement, booking, and reconcilement adequate? *Refer to Core Analysis Procedure #20, Procedures #24-25, & Procedure #29.***
C.8.	**Does senior management effectively supervise this area? *Refer to Core Analysis Procedure #36-39 & Procedure #45-46.***

LOAN OPERATIONS REVIEW

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. **Review prior examination reports, prior examination work papers, pre-examination memorandum, and file correspondence to identify any previous deficiencies.**

2. **Review internal and external audit reports to identify areas of concern and significant loan operation deficiencies. Review current loan review reports and assess any documentation deficiencies or unsatisfactory practices.**

3. **Review remedial actions taken by management to correct audit and examination deficiencies.**

4. **Review all loan operation policies and procedures. Consider board approvals and last-reviewed date. Appropriate policies generally address items such as roles, responsibilities, lending authorities, underwriting processes, application and document flows, approval processes, and loan funding methodologies.**

5. **Discuss with management any significant changes in loan operations personnel, service providers, software, operating procedures, or new loan products planned within the next 18 months.**

6. **Review board and loan committee minutes for relevant discussions on loan operations.**

Policy Considerations

7. **Determine whether lending policies are appropriate for the lending activities of the bank. Evaluate the frequency and timeliness of reviews and updates by the board of directors. Appropriate policies generally address items such as:**

- **General fields of lending that the bank engages in and the types of loans within each general field;**
- **Limitations on the maximum volume of loans in relation to total assets;**
- **Description of the bank's normal trade area and circumstances under which the bank may extend credit outside the area;**
- **Guidelines that address the goals for portfolio mix and risk diversification and cover the bank's plans for monitoring and taking appropriate corrective action on any existing concentrations to individual borrowers and their related interests and industries;**
- **Guidelines regarding loans to insiders;**
- **Guidelines for purchased and sold loans, including loan participations;**
- **Lending authority of each loan officer;**
- **Lending authority of a loan committee or executive committee;**
- **Responsibility of the board of directors in reviewing, ratifying, and approving loans;**
- **Guidelines under which unsecured loans will be granted;**
- **Limitations on the extension of credit through overdrafts;**
- **Guidelines for collateral requirements, pricing, and the terms of repayment for various types of loans offered;**
- **Limitations on the amount advanced in relation to the value of the collateral for various loan types, considering the Interagency Real Estate Lending Guidelines and the related documentation for valuing the collateral by loan type. (FDIC: Rules and Regulations, Part 365, Appendix A; FRB: 12 CFR 208, Appendix C);**
- **Documentation required by the bank for each type of secured loan;**
- **Guidelines on the use of interest reserves;**
- **Guidelines for obtaining and reviewing appraisals and evaluations of real estate or other collateral as well as for ordering new appraisals and evaluations;**
- **Guidelines for adequate safeguards to minimize potential environmental liability;**
- **Limits and guidelines on off-balance sheet credit exposures;**
- **Standards for loan presentation sheets and credit memoranda;**
- **Standards for proper underwriting and credit file documentation by loan type;**
- **Guidelines for ongoing documentation review and maintenance of complete and current credit files on each borrower;**
- **Guidelines addressing the bank's loan review and grading system (watch list);**
- **Guidelines addressing the bank's determination, assessment, and review of the appropriate level for the Allowance for Loan and Lease Losses (ALLL) (or allowance for credit losses (ACL),[1] when applicable);**
- **Guidelines addressing loan modifications and the resultant accounting consequences including whether the modification meets the definition of a troubled debt restructuring (TDR);**
- **Guidelines addressing collection and workout procedures;**
- **Guidelines addressing charge-off practices and appropriate follow up for potential recovery;**
- **A process for approving, tracking, and reporting exceptions to policies; and**
- **The time interval for the board’s periodic review of the loan policy for its adequacy.**

8. Determine whether the loan policy establishes appropriate underwriting standards for each loan type made by the bank. Appropriate underwriting standards generally address items such as:

[1] **ACL replaces the term ALLL for those banks that adopted ASU 2016-13.**

- **Loan-to-value limits;**
- **The borrower's business or occupation;**
- **The borrower's past and current financial condition, income, and cash flow;**
- **The purpose of all loans granted to the borrower, the source of repayment, loan terms, and repayment period; and**
- **The collateral, its value, and the source of valuation.**

9. Determine whether incentive compensation programs promote behaviors that are inconsistent with the bank's strategic portfolio objectives and risk tolerances or with safe and sound banking practices.

10. Determine whether repossessed asset and ORE policies are sufficient for the needs of the bank.

11. Review the bank's charge-off policy. Consider the consistency with regulatory and accounting definitions, adherence to policy, timeliness, and senior management and board review.

12. Review the bank's appraisal policies to determine whether they conform with outstanding regulatory requirements.

13. Determine whether the appraisal policy describes the conditions under which the bank will obtain a new or updated appraisal or evaluation of the real estate collateral on an existing commercial real estate (CRE) loan (e.g., movement into workout or material deterioration in real estate market conditions.)

Internal Controls

14. Determine whether appropriate separations of duty are in place. Consider items such as:
- **Preparation of loan documents,**
- **Posting of subsidiary loan records to the core loan application, and**
- **Disbursement of loan proceeds.**

15. Evaluate the adequacy of the loan documentation process. Satisfactory loan documentation systems generally address items such as:

• Assignment of responsibility for assembling loan documents, • Reviews of loan documentation to ensure that all required documents and signatures on applications are present prior to loan approval, • Documentation is reviewed by an independent party after closing to verify that proper procedures are followed, and all required information is on file and properly executed, and • Loan documents are secured during business hours and locked in a fireproof vault overnight.
16. Determine how new and renewed loans are approved and booked and whether loan officers are able to renew and extend loans without an independent review.
17. Determine whether controls are in place to ensure loans are booked with the same terms as those approved.
18. Determine whether the code of ethics governs loan officers lending to relatives or other related parties.
19. Review management's procedures to prevent, detect, and respond to lending policy exceptions. In addition, determine whether deviations from the loan policy are properly approved and documented in accordance with internal loan policy guidelines.
20. Determine the adequacy of reconciliations between subsidiary loan records and the general ledger. Consider the frequency of reconciliations, the disposition of reconciling amounts, and the separation of duties for personnel involved.
21. Evaluate the adequacy of controls over loan closings and disbursements. Consider the following: • Documentation is complete and appropriate waivers are obtained before loans are funded, • Use of documentation waivers is not excessive, • Funds are disbursed in accordance with loan terms, and • Loan proceed disbursements and general ledger entries are properly controlled.
22. Ascertain whether items held in suspense accounts clear in a timely manner.

23. Evaluate the adequacy of controls over off-balance sheet lending activities.

24. Verify if commitments are limited in amount, cover a specific period, and indicate the conditions that must be satisfied before draws will be honored.

25. Evaluate the adequacy of controls over loan participation activities, such as independent credit analysis (prior to purchase and ongoing).

26. Evaluate the adequacy of loan participation agreements. Appropriate agreements generally:

- **Meet the definition of a participating interest* as defined by ASC Topic 860,**
- **Address the timely exchange of information,**
- **Establish expectations involving participants' consultation with each other prior to taking action on defaulted loans, and**
- **Specify the rights and remedies of the lead bank and participant(s).**

**** Refer to the definition of Transfers of Financial Assets in the Call Report Glossary for additional information.***

27. Evaluate the adequacy of controls over loan renewals and extensions. Consider the following:

- **An independent credit analysis is performed prior to renewal or extension;**
- **The number of loan renewals or extensions is compliant with internal loan policy limits; and**
- **The use of interest-only terms is limited.**

28. Evaluate controls regarding collateral held at the bank. Consider the following:

- **Collateral held at the bank is documented with pre-numbered forms that provide a customer's receipt, ledger record, and loan file copy;**
- **Physical or negotiable collateral held at the bank is under joint custody; and**
- **Controls to ensure holds on deposit accounts are maintained.**

29. Evaluate the process for reconciling loan accounts to the general ledger. Consider the following:

- **The frequency that subsidiary loan accounts are reconciled to the general ledger;**
- **Persons involved in approving loans, disbursing proceeds, accepting payments, or posting transactions do not have reconciliation authority;**
- **Reconcilements are reviewed and signed by senior officers; and**
- **The bank has adequate procedures and timeframes for disposing of stale items.**

30. Evaluate controls regarding capitalization of interest.

- **Determine whether there are loans on which interest is not being collected in accordance with the terms of the note, such as loans that have been renewed without full collection of interest, with interest being rolled into principal, or interest paid from the proceeds of a separate note.**
- **Determine whether there are any loans in which the terms have been modified by reducing the interest rate or principal payment, by deferring interest or principal, or by restructuring of repayment terms. Consider any formally restructured loans that were returned to accrual status after a partial chargeoff or before collection of interest in arrears.**

31. Determine whether management appropriately identifies, measures, monitors, controls, and reports concentration risks of credit by industry, type, person, product type, and related borrowers, etc.

32. Determine whether loan approvals are properly documented, and verify that loan terms are consistent with officer, committee, and board approvals.

33. Determine whether credit-scoring models are regularly tested and evaluated to ensure that actual performance approximates initial projections.

34. Determine whether the appraiser selection and appraisal review processes are independent from the lending function.

35. Determine how appraisers are added to the approved appraiser list and how appraisers are selected for assignments.

Credit Administration

36. Determine whether appropriate lending authorities exist at the loan officer and committee levels.

37. Determine whether the lending and credit administration staff is appropriate given the size and nature of current and planned lending activities.

38. Evaluate the effectiveness of the organization's collection and workout procedures.

39. Determine the extent and adequacy of training and continuing education provided to lending personnel.

Audit or Independent Review

40. Determine whether the audit program is sufficient to obtain reasonable assurance that:

- **Loans exist and are owned by the institution as of the balance-sheet date;**
- **The level of the ALLL (or ACL, when applicable) is appropriate and is determined in accordance with generally accepted accounting principles (i.e., the ALLL (or ACL, when applicable) covers estimated credit losses on individually evaluated impaired loans and estimated credit losses inherent in the remainder of the loan portfolio);**
- **Loans are properly classified, described, and disclosed in the financial statements, including fair values and concentrations of risk;**
- **Recorded loans include all such assets of the institution and the financial statements include all related transactions during the period;**
- **Loan transactions are recorded in the proper period;**
- **Loans held for sale are properly classified and are stated at the lower of cost or fair value;**
- **Interest income, fees, and costs and the related balance-sheet accounts (accrued interest receivable, unearned discount, unamortized purchase premiums and discounts, and unamortized net deferred loan fees and costs) have been properly measured and recorded;**
- **Gains and losses on the sale of loans have been properly measured and properly recorded; and**
- **Credit commitments, letters of credit, guarantees, recourse provisions, and loans that collateralize borrowings are properly disclosed in the financial statements.**

(Note: Coordinate with the examiners reviewing the internal audit function.)

41. Determine whether the audit or independent review program provides sufficient coverage relative to the institution's size, scope of lending activities, and risk profile. Appropriate programs often:

- **Recommend corrective action when warranted;**

- **Verify that corrective action commitments have been implemented;**
- **Assess separation of duties, internal controls, and supervision of lending activities;**
- **Determine compliance with internal policies and procedures, and applicable laws and regulations; and**
- **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board.**

(Note: Coordinate with the examiners reviewing the internal audit function.)

Information and Communication Systems

42. Determine whether managerial reports provide sufficient information relative to the size and risk profile of the organization and evaluate the accuracy and timeliness of reports produced for the board and executive management. Reports may include the following types of information:

- **Analysis of the appropriateness of ALLL (or ACL, when applicable);**
- **Chargeoffs and recoveries;**
- **Concentrations;**
- **Insider borrowings;**
- **Kiting suspects;**
- **Legal lending limits;**
- **Loan extensions and modifications;**
- **Loan renewals and new loan approvals/denials (above certain dollar amounts);**
- **Non-conforming loans;**
- **Non-sufficient funds;**
- **Out-of-territory lending;**
- **Overdrafts;**
- **Participations;**
- **Policy exceptions;**
- **Results of internal/external audits;**
- **Results of loan review;**
- **Suspense accounts (contents and reconcilements);**
- **Technical exceptions; and**
- **Unfunded commitments.**

Managerial Effectiveness

PROCEDURES AND PRACTICES

43. Determine how management monitors for compliance with internal policy and limits.

44. Review audits and examinations performed to determine the effectiveness of internal audit in identifying and reporting internal control weaknesses.

45. Determine whether management has addressed and corrected deficiencies cited by internal/external auditors, loan review, and regulatory agencies.
46. Review board, loan, and audit committee minutes to determine whether relevant issues and audit findings are being addressed.
End of Core Analysis.

LOAN PORTFOLIO REVIEW
Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Note: This module should be used for reviewing the asset quality of the loan portfolio. Refer to the Loan Operations Review module for evaluating loan operations and credit administration.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. Are the audit or independent review functions adequate? ***Refer to Core Analysis Procedures #2-3, Procedures #10-11, & Procedure #61.***

C.2. Are information and communication systems adequate and accurate? ***Refer to Core Analysis Procedure #6 & Procedures #12-18.***

C.3. Does management accurately identify, monitor, and reserve for credit risk? ***Refer to Core Analysis Procedures #19-34.***

C.4. Is portfolio quality satisfactory, considering trends in adverse classifications and the overall risk profile? ***Refer to Core Analysis Procedure #7 & Procedures #35-42.***

C.5. Is the volume of ORE and repossessed assets manageable and the ORE portfolio adequately administered and controlled? ***Refer to Core Analysis Procedures #8-9, Procedures #56-59, & Procedure #62.***

C.6. Do the board and senior management effectively supervise this area? ***Refer to Core Analysis Procedure #1, Procedures #3-6, & Procedures #43-55.***

LOAN PORTFOLIO REVIEW

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review
1. Review prior examination reports, prior examination work papers, pre-examination memorandum, audit reports, and file correspondence for an overview of any previously identified lending deficiencies. In addition, determine whether there were any prior concerns related to the Allowance for Loan and Lease Losses (ALLL) (or allowance for credit losses (ACL),[1] when applicable), repossessed assets, or ORE.
2. Review internal and external audit reports, and assess the adequacy of the audit scope.
3. Review internal and/or external loan review reports as well as other reports provided by third parties.
4. Discuss with management any planned changes in lending philosophy, portfolio composition, new products, pricing strategies, etc. Determine whether current and planned lending strategies are consistent with the bank's overall strategic plan.
5. Review and assess the adequacy of loan committee and board minutes.
6. Obtain and analyze data used by management to supervise the loan portfolio. This data may include: • **Organizational charts;** • **Written policy and procedures manual;** • **Problem loans and watch list reports;** • **Delinquency and nonperforming asset reports;** • **Concentration reports;** • **Allowance for Loan and Lease Losses (ALLL) (or ACL, when applicable) analysis;** • **Significant and/or concentrations of charge-offs (by industry or types of borrowers) since the prior**

[1] **ACL replaces the term ALLL for those banks that adopted ASU 2016-13.**

examination; and
- Portfolio stress test reports and documentation, if applicable.

7. Review the composition of the loan portfolio by type, dollar volume, and percentage of capital. Determine whether specialty-lending areas exist and assign responsibility for completing appropriate reviews. Refer to individual Loan Reference modules for additional procedures.

8. Determine the volume of other real estate and the change in volume since the prior examination.

9. Determine the volume of repossessed assets and the change in volume since the prior examination.

Audit or Independent Review

10. Determine whether the audit program is sufficient to obtain reasonable assurance that:

- **Loans exist and are owned by the institution as of the balance-sheet date;**
- **The level of the ALLL (or ACL, when applicable) is appropriate and is determined in accordance with generally accepted accounting principles (i.e., the ALLL (or ACL, when applicable) covers estimated credit losses on individually evaluated impaired loans and estimated credit losses inherent in the remainder of the loan portfolio);**
- **Loans are properly classified, described, and disclosed in the financial statements, including fair values of loans and concentrations of risk;**
- **Recorded loans include all such assets of the institution and the financial statements include all related transactions during the period;**
- **Loan transactions are recorded in the proper period;**
- **Loans held for sale are properly classified and are stated at the lower of cost or fair value;**
- **Interest income, fees, and costs and the related balance-sheet accounts (accrued interest receivable, unearned discount, unamortized purchase premiums and discounts, and unamortized net deferred loan fees and costs) have been properly measured and recorded;**
- **Gains and losses on the sale of loans have been properly measured and properly recorded; and**
- **Credit commitments, letters of credit, guarantees, recourse provisions, and loans that collateralize borrowings are properly disclosed in the financial statements.**

(Note: Coordinate with the examiners reviewing the internal audit function.)

11. Determine whether the audit or independent review program provides sufficient coverage relative to the institution's size, scope of lending activities, and risk profile. Appropriate programs generally include:

- **Recommend corrective action when warranted;**
- **Verify that corrective action commitments have been implemented;**
- **Assess separation of duties, internal controls, and supervision of lending activities;**
- **Determine compliance with policies, procedures, and regulatory requirements; and**
- **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board.**

(Note: Coordinate with the examiners reviewing the internal audit function.)

Information and Communication Systems

12. Determine whether managerial reports provide sufficient information relative to the size and risk profile of the organization and evaluate the accuracy and timeliness of reports produced for the board and executive management. Reports may include the following types of information:

- **Analysis of the appropriateness of ALLL (or ACL, when applicable);**
- **Chargeoffs and recoveries;**
- **Concentrations;**
- **Insider borrowings;**
- **Kiting suspects;**
- **Legal lending limits;**
- **Loan extensions and modifications;**
- **Loan renewals and new loan approvals/denials (above certain dollar amounts);**
- **Non-conforming loans;**
- **Non-sufficient funds;**
- **Out-of-territory lending;**
- **Overdrafts;**
- **Participations;**
- **Policy exceptions;**
- **Results of internal/external audits;**
- **Results of loan review;**
- **Suspense accounts (contents and reconcilements);**
- **Technical exceptions; and**
- **Unfunded commitments.**

13. Review the effectiveness and accuracy of management's system for aggregating related credit exposures.

14. Analyze growth trends by total and loan type, and determine whether actual data satisfactorily mirrors budgeted growth or strategic plans.

15. **Review the accuracy of accounting for loans sold and participations. Consider partial sales and recourse arrangements.**

16. **Determine whether the bank's procedures and practices for placing loans on nonaccrual status are in agreement with Call Report Instructions.**

17. **Determine whether the bank's procedures and practices regarding troubled debt restructurings (TDR) are in agreement with Call Report Instructions.**

18. **Validate the accuracy of Consolidated Reports of Condition and Income where necessary.**

Identifying, Monitoring, and Reserving for Credit Risk

LOAN REVIEW

19. **Consider whether loan review practices are appropriate for the size and complexity of the bank and whether loan reviews are conducted by individuals independent from loan origination and approval processes. Appropriate loan review practices generally meet the following objectives:**
    - **To promptly identify loans having potential credit weaknesses, and appropriately classify loans with well-defined credit weaknesses that jeopardize repayment so that timely actions can be taken and credit losses minimized;**
    - **To project relevant trends which affect the collectability of the portfolio and isolate potential problem areas;**
    - **To provide essential information to determine the appropriateness of the ALLL (or ACL, when applicable);**
    - **To assess the adequacy of and adherence to internal credit policies and loan administration procedures, and to monitor compliance with relevant laws and regulations;**
    - **To evaluate the activities of lending personnel; and**
    - **To provide senior management and the board with an objective and timely assessment of the overall quality of the loan portfolio.**

20. **Determine whether the watch list is regularly updated by management and reviewed by the board.**

21. **Assess the accuracy of the loan review system and internal risk ratings. Also, review any**

documentation exception reports and written classification summaries, and evaluate the scope, frequency, and timeliness of reviews and updates to the board of directors.

Allowance for Loan and Lease Losses

METHODOLOGY ***(When appropriate, refer to the Subprime Lending, Credit Card Activities, and TDR Reference Modules for additional information on assessing whether the level of the ALLL (or ACL, when applicable) is appropriate.)***

22. **Assess the methodology for determining the appropriate ALLL (or ACL, when applicable) level and consider whether it includes portfolio segmentation and impairment analysis for individually evaluated loans.** ***(Refer to ASC Topic 450 and ASC Topic 310.)*** **Determine whether the complexity and scope of the ALLL (or ACL, when applicable) evaluation process and loan review system are appropriate given the risk profile of the bank and the complexity of lending activities. Consider the following:**
    - **The effectiveness of the bank's loan review system and controls.**
    - **The ability of internal data-capture and loan-reporting systems to provide robust and meaningful information regarding portfolio risks.**
    - **Management's ability to evaluate loss-estimation models before they are implemented (when applicable) and to modify model assumptions as needed.**
    - **The bank's methodology is based on a comprehensive, adequately documented, and consistently applied analysis of the bank's loan and lease portfolio.**
    - **Management promptly charges off loans, or portions of loans, that are uncollectible.**
    - **An independent third party periodically reviews and validates the ALLL (or ACL, when applicable) methodology.**

23. **Evaluate the criteria management uses to select loans for individual evaluation under ASC Topic 310. For example, assess:**
    - **Loans or relationships that are above dollar thresholds. If management uses a dollar threshold, assess the threshold in relation to average loan balance, concentrations, or other factors that would cause the loans to be more significant to the institution;**
    - **Loans or relationships that are on the bank's Watch List or that are adversely classified Substandard or Doubtful. If selection criteria do not include loans rated Substandard or Doubtful, explain the rationale for the decision; and**
    - **Loans or relationships that are past due or on nonaccrual status.**

24. **Determine the methodology used by the institution to measure impairment on loans (within the scope of ASC Topic 310) that are individually evaluated and determined to be impaired, and consider whether the institution maintains supporting documentation for the assumptions and estimates used. Consider whether the methodology used is based on:**
    - **The present value of expected future cash flows for individually evaluated impaired loans that are not collateral dependent;**
    - **Observable market price for individually evaluated impaired loans that are not collateral**

dependent; or

- **The fair value of collateral method.** ***(Note: For purposes of the Consolidated Reports of Condition and Income, the impairment of an impaired collateral dependent loan must be measured using the fair value of collateral method.)***

25. Evaluate the reasonableness of and support for management's assumptions, valuations, and judgments used in the analysis of those loans individually evaluated for impairment under ASC Topic 310 and determined to be impaired.

26. Determine how the institution treats:

- **Loans that are individually evaluated for impairment under ASC Topic 310 and are determined not to be impaired; and** ***(Note: These individual loans should be regrouped with loans having similar risk characteristics and assessed collectively for impairment under ASC Topic 450.)***
- **Individually evaluated loans that are determined to be impaired, but there is zero impairment and no allowance is established when measured for impairment under ASC Topic 310. (*****Note: Examiners should determine that the bank is appropriately defining impaired loans (i.e. where collection of the full principal and interest is not expected per original contractual terms). If a loan is being evaluated under ASC Topic 310 but is not impaired by definition, it should instead be included in the ASC Topic 450 evaluation. Once a loan is determined to be impaired and is measured for impairment under ASC Topic 310, it cannot be included in a group of loans collectively assessed for impairment under ASC Topic 450, even if no ASC Topic 310 allowance is established.*****)**

27. Determine the basis for evaluating groups of loans under ASC Topic 450.

- **Ensure that assets are adequately stratified into groups based on one or more predominant risk characteristic.**
- **Evaluate the calculation of historical loss rates for each segment.**
  - **Review the time period and the method of calculation (e.g., simple average, weighted average) for reasonableness and consistency.**
  - **Consider the effect of new loan products or newly expanded markets.** ***(Note: Historical loss rates for a general segment may not be accurate for new products, or loans in a new market, that are included within the general segment.)***
- **Consider how segmentation methods and historical loss-rate calculations reflect qualitative or environmental factors necessary to reflect current conditions and expectations.**

(Note: Adjustments for qualitative or environmental factors, which may be positive or negative, should be made to reflect current conditions and expectations if not otherwise captured in historical loss analysis. The granularity of segmentation and the method used to calculate loss rates would affect the amount of adjustment, if any, necessary to appropriately estimate credit losses in a segment as of the evaluation date. For example, a loss rate calculated using a simple five-year average may require a larger adjustment in response to changes in the credit cycle than would a loss rate calculated using a recently weighted quarterly average.)

28. Determine whether management considers all relevant qualitative and environmental factors and maintains documentation sufficient to support all material adjustments. Appropriate documentation generally addresses all material factors that are likely to cause estimated losses to differ from historical losses. Qualitative or environmental factors include, but are not limited to:

- **Changes in lending policies and procedures, such as underwriting standards and collection, charge-off, and recovery practices;**
- **Changes in national and local economic business conditions and developments, including the condition of various market segments; (*Note: Credit-loss and recovery experience may vary significantly depending upon the business cycle.)***
- **Changes in the nature and volume of the portfolio and in the terms of loans;**
- **Changes in the experience, ability, and depth of lending management and staff;**
- **Changes in the volume and severity of past due and adversely classified loans and in the volume of nonaccrual loans;**
- **Changes in the quality of the loan review system;**
- **Changes in the value of underlying collateral for collateral-dependent loans;**
- **The existence, level, and effect of any concentrations of credit; and**
- **The effect of external factors such as competition or legal and regulatory requirements.**

29. Determine how the institution estimates credit losses on a group of loans with similar risk characteristics when the institution does not have any loss experience of its own for such a loan group.

(Note: An institution may not have a loss history if the product is new or the institution is a de novo organization).

30. Confirm that the bank does not include loans that were determined to be impaired and measured for impairment under ASC 310 in the estimated credit losses under ASC 450, even if the ASC 310 impairment measurement was zero.

31. Determine whether the bank has an *unallocated* allowance for loan and lease losses. If so, determine whether it was calculated in accordance with GAAP and is properly documented and supported.

32. Where appropriate, ensure that the assessment of an appropriate level for the ALLL (or ACL, when applicable) includes an estimate of losses from transfer risk associated with the institution's cross-border lending activities.

33. Determine whether the ALLL (or ACL, when applicable) evaluation process is completed at least quarterly and ensure that appropriate documentation is maintained to support management's assumptions, valuations, and judgments. (Refer to the 2001 Final Interagency Policy Statement on ALLL Methodologies and Documentation for Banks and Savings Institutions; and the 2006 Interagency Policy Statement on ALLL.)

LEVEL OF THE ALLL (or ACL, when applicable)

34. Evaluate the overall level of the ALLL (or ACL, when applicable) for appropriateness and reasonableness.

- **Determine whether the ALLL (or ACL, when applicable) is at an appropriate level based on a review of the bank's methodology coupled with examination findings as they relate to:**
  - **Loan classifications;**
  - **Effectiveness and reliability of the bank's loan review system including differences in level and severity of examiner classifications and that of Watch List Loans (internally classified loans);**
  - **Level and trend of past due and nonaccrual loans (reserve levels should normally be proportionately and directionally consistent with the level and trend of problem loans as reflected in examination classifications), internal watch list ratings;**
  - **Historical recovery of loan charge-offs; and**
  - **Changes in the business cycle that necessitate qualitative or environmental factor adjustments to the institution's historical loss rates.**
- **Consider reviewing applicable ratios as a preliminary check on the reasonableness of the ALLL (or ACL, when applicable).** ***(Note: Ratio analysis, when used prudently, can be a supplemental check on the reasonableness of management's assumptions and analysis. It is not a sufficient basis for determining an appropriate level for the ALLL (or ACL, when applicable).)***
  - **Evaluate trends as compared to an institution's peer group and its own historical experience. For example, the relationship of the ALLL (or ACL, when applicable) to adversely classified or graded loans, past due and nonaccrual loans, as well as historical gross and net charge-offs.**
  - **Analyze changes in key ratios from prior periods, assess the directional consistency of the ALLL (or ACL, when applicable) in relation to these changes, and assess the appropriateness and reasonableness of the ALLL (or ACL, when applicable) based on the collectability of the institution's loan portfolio in the current environment.**
- **If the bank's loan review system is effective and its method for determining an appropriate ALLL (or ACL, when applicable) level is acceptable, compare the result of the bank's methodology to the actual ALLL (or ACL, when applicable) balance. Ensure that the ALLL (or ACL, when applicable) amount reported in the institution's regulatory reports and financial statements reconciles to the ALLL (or ACL, when applicable) analysis. Assess the reasons for any material differences.**
- **Assess management's estimated credit losses, and if necessary, consider the need for additional provision expenses based on examination findings. Consider the following:**
  - **The bank's loan review system is substantially inaccurate, or**
  - **The bank is lending in stressed market conditions,**
  - **Credit administration weaknesses have not been timely identified or addressed, or**
  - **Examination results reflect significant loan quality deterioration.**

Portfolio Quality
35. Evaluate loan commitments, letters of credit, and other contingent liabilities for creditworthiness.
36. Review overdraft protection, large items, uncollected funds, and check kiting reports for irregular activity. Pay particular attention to overdrafts of bank insiders and insiders of other banks.
37. Evaluate the current level and trend of past due ratios for each type of credit and determine which loan categories pose elevated risk.
38. Review and analyze purchased loan participations for appropriate accounting* treatment, due diligence, creditworthiness, underwriting quality, and recourse provisions. Consider: • **Whether these credits are <u>internally</u> classified at the originating bank or other participation holders (when the information is available); and** • **Whether these credits are adversely classified in regulatory examination reports at the originating bank and other participation holders. *(Note: This information <u>cannot</u> be shared with management.)*** **** Refer to the definition of Transfers of Financial Assets in the Call Report Glossary for additional information.***
39. If the bank has acquired other institutions or loan portfolios, analyze the effect these purchases have had on the bank's portfolio composition and risk profile.
40. Determine whether it appears any loans were sold prior to the examination to another bank or to the holding company to avoid criticism by examiners.
41. Determine whether the bank has any borrowing relationships that qualify as Shared National Credits and assign classifications accordingly.
42. Evaluate the level and trend of classified loans and its effect on the bank's credit risk profile.

Managerial Effectiveness

PROCEDURES AND PRACTICES

43. Determine whether loan and executive officers consistently follow the bank's lending policies and practices.

44. Review the bank's loan approval process and determine whether loan presentations include an adequate analysis of the following items:

- **Loan purpose;**
- **Repayment sources and cash flows;**
- **Collateral;**
- **Background of borrower;**
- **Principals and management;**
- **Financial information including balance sheet and income statement;**
- **Financial projections;**
- **Industry and economic outlooks, including real estate trends;**
- **Borrowing and deposit histories;**
- **Loan structure, terms, and covenants; and**
- **Justification for policy exceptions.**

45. Determine whether the bank's financial analysis of borrowers is adequate in relation to the size and complexity of the debt.

- **Review financial analysis for appropriate financial ratios, trends, cash flow history, and projections sufficient to determine the financing needs and repayment capacity of the borrower.**
- **Assess whether the bank's credit assessment includes a review of a credit reports to identify other outstanding debts or contingent liabilities.**
- **Assess whether the bank's review evaluates important items such as salaries, fees, dividends, notes and accounts receivable, and notes and accounts payable, including those to insiders.**
- **Determine whether significant balance sheet and income statement changes are properly explained and whether the bank identifies and reviews contingent liabilities.**
- **Evaluate the bank's comparison of actual results to projected performance.**
- **Consider the prospects for support from any financially responsible guarantors, with emphasis on excess liquidity, cash flow, and demonstrated willingness to honor guaranty agreements.**

46. Determine whether management utilizes financial and reporting covenants. If so, evaluate how covenants are tracked and enforced.

APPLICABLE LAWS AND REGULATIONS
47. Determine the bank's regulatory and internal lending limits, and ascertain the bank's compliance with the limits.
48. Review transactions with affiliates for compliance with Section 23A of the Federal Reserve Act. (Note: 12 U.S.C. 371 (c) defines covered transactions; sets quality, terms, and collateral requirements; and places aggregate limits on such activities.)
49. Review extensions of credit to insiders for compliance with FRB Regulation O.
50. Review the bank's compliance with the anti-tying provisions of Section 106(b) of the Bank Holding Company Act Amendments of 1970 (12 U.S.C.1972),which prohibits extensions of credit that are conditioned upon the borrower obtaining or providing any additional credit, property or service to or from the bank or its holding company.
51. Determine whether the bank complies with applicable laws and regulations for loans secured by stock. Items to consider include: • **Loans secured by the bank's own stock;** ***(Note: 12 U.S.C.83, Section 5201 of the Revised Statutes and Section 9 of the Federal Reserve Act prohibit a bank from making a loan secured by its own stock.)*** • **Loans for the purpose of purchasing or carrying margin stock; and** ***(Note: If secured directly or indirectly by margin stock, Federal Reserve Board's Regulation U is applicable.)*** • **Determine that the institution is familiar with the Lost and Stolen Securities program (SEC Rule 240.17f1) and has taken the appropriate measures to minimize exposure on loans secured by stock. Refer to the securities information center webpage for further guidance.**
52. Review and assess the bank's compliance with applicable real estate lending and appraisal regulations.
CREDIT ADMINISTRATION
53. Assess the adequacy of management's actions to correct criticisms noted in the previous examination report, most recent loan review reports, as well as in recent internal and external audits.

54. Evaluate management's effectiveness at reacting to changing economic, industry, and regulatory environments.

55. Evaluate the membership composition of the loan committee. Determine whether members are independent and qualified to function effectively.

Other Loan Related Items

OTHER REAL ESTATE (ORE)

56. Determine whether ORE files are adequately documented. Consider the following:

- **Evidence of ownership;**
- **Book value (current and at the time of acquisition);**
- **Appropriateness of capitalized costs, if any;**
- **Current outside appraisal or internal valuation;**
- **Analysis of cost to carry (break-even analysis);**
- **Formal purchase offers (if applicable);**
- **Sales efforts or listing agreements;**
- **Current hazard and liability insurance;**
- **Receipt evidencing payment of RE taxes; and**
- **Disposal of the parcel (who, when, how), if applicable.**

57. Determine the appropriateness of ORE accounting procedures, carrying values, and dispositions. Consider the following:

- **Appropriateness of initial recording of ORE at fair value less cost to sell, which becomes the cost basis of the ORE;**
- **Prior liens, including recording such liens as liabilities;**
- **Appropriateness of accounting for ORE after acquisition at lower of cost or fair value less cost to sell, including the use of a property-specific valuation allowance for any decline in fair value less cost to sell below cost;**
- **Appropriateness of rental income and expense entries;**
- **Appropriate review of expenses;**
- **Adequacy of appraisal or evaluation;**
- **Environmental concerns; and**
- **Holding period in compliance with state laws.**

58. Evaluate the quality of the portfolio and classify parcels accordingly.
REPOSSESSED ASSETS
59. Determine the appropriateness of repossessed asset accounting policies, carrying values, holding periods, and dispositions. Classify as necessary.
NON-LEDGER ASSETS
60. Determine whether appropriate approval authorities and levels of review are in place given the volume and magnitude of chargeoffs.
61. Ascertain whether the audit practices are sufficient given the volume and magnitude of charge-offs. • **The audit program should determine the validity/existence of charged-off assets by physical inspection of items held at the bank or by direct confirmation with persons who have possession of them outside of the bank (e.g., attorneys or collection agents).** • **The validity of charged-off items should also be tested, with particular attention given to possibly fictitious loans that were charged-off. Methods of authenticating the validity of charged-off items include:** o **Direct confirmation with borrowers,** o **Evidence of personal contact with the borrower by persons other than the loan officer regarding borrowing relationship,** o **Verification through bank records that the borrower received the loan proceeds, and** o **Verification through non-bank records such as telephone and city directories that the borrower may exist.** • **The auditor may choose to confirm all charge-offs of more than a certain size or may prefer to confirm a statistical sample of all charges over a certain amount.** ***(Note: Coordinate with the examiners reviewing the internal audit function.)***
62. Determine that appropriate efforts are being made to collect charged off assets.
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

MANAGEMENT AND INTERNAL CONTROL EVALUATION

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. This module is intended to incorporate and summarize the findings from all of the completed ED Modules for a given examination. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. Does the board adequately supervise the affairs of the bank and provide for management depth and succession? ***Refer to Core Analysis Procedures #1-19, Procedure #22, Procedures #27-29, Procedure #43.***

C.2. Has management established an adequate control environment throughout the organization? ***Refer to Core Analysis Procedures #23-25, Procedure #29, Procedures #40-42, Procedures #44-47.***

C.3. Is management responsive to recommendations from auditors and supervisory authorities? ***Refer to Core Analysis Procedure #26.***

C.4. Are insider activities appropriate? ***Refer to Core Analysis Procedures #30-31.***

C.5. Are management capabilities sufficient for the size, activities, and condition of the bank? ***Refer to Core Analysis Procedures #20-21*****.**

C.6. Does management identify and assess the major risks confronting the bank? ***Refer to Core Analysis Procedures #33-42.***

C.7. Are policies and procedures generally adequate given the size and complexity of the bank? ***Refer to Core Analysis Procedure #24*** **&** ***Procedure #27-28.***

C.8. Do management information systems provide effective internal communication of the bank's risks? ***Refer to Core Analysis Procedures #48-49.***

C.9. Are appropriate governance systems in place to monitor the activities of the bank? ***Refer to Core Analysis Procedure #32*** **&** ***Procedure #50.***

MANAGEMENT AND INTERNAL CONTROL EVALUATION
Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. Review board, committee, and shareholder meeting minutes since the last examination and the most recent and year-end board packages to assess the extent and adequacy of board supervision. Document important details and consider the following items:

- **Director attendance;**
- **Changes in control since the prior examination;**
- **Board independence from executive management;**
- **Dominant control by a board member, shareholder, or executive management;**
- **Significant changes in the direction or activities of the bank;**
- **Adequacy of management information systems;**
- **Implementation and maintenance of adequate policies; and**
- **The bank's strategic plan.**

2. Review changes in management or the directorate since the last examination. Assess compliance with rules concerning notification of changes in executive management. (FRB: Section 914 of the Financial Institutions Reform, Recovery, and Enforcement Act of 1989. FDIC: Section 32 of the Federal Deposit Insurance Act (FDI Act).)

- **Consider why changes were made or are planned.**
- **Assess the effect of any changes on bank operations or risk profile.**
- **Review biographical information for new executive officers and directors.**

3. Review prior examination reports, workpapers, and correspondence for comments regarding board supervision, management, and internal controls.

Board and Management Supervision

4. Review the bank's charter, by-laws, and other related documents to understand the governance framework for the board of directors. Consider the following:

- **The number of directors;**
- **Qualifications or restrictions for directors, including the chairman of the board;**

- **Mandatory retirement age, if any, for board members;**
- **Advisory Directors or Advisory Board**
- **Directorate nomination and election process;**
- **Required committee structure; and**
- **Required frequency of board and committee meetings.**

5. **Assess the composition of the organization's board of directors. Consider the following:**
   - **The number of independent directors,**
   - **Involvement of the chairman in day-to-day operations,**
   - **The number of years each member has served on the board, and**
   - **The presence of any financial and other experts on the board.**

6. **Determine whether the board has an effective process to identify, nominate, and select qualified individuals.** ***(Note: Effective processes generally include recruiting board members whose relevant business, industry, or financial expertise corresponds with the institution's risk profile and strategic plans.)***

7. **Determine whether the organization provides new board members with an overview of their fiduciary responsibilities and opportunities for ongoing training.**

8. **Determine whether the board has adopted a code of ethics that applies to all board members, officers, and employees, and assess adherence to that code.**

9. **Determine whether the board adopted and management has implemented a strategic plan for the organization's operation over the next three to five years.**

10. **Determine whether the board is actively involved in the selection and retention of the chief executive officer (CEO) and other executive officers, and consider whether the board regularly assesses executive officers' performance.**

11. **Determine whether the board and management have talent development and succession plans for all key personnel and periodically reviews and updates such plans.** ***(Note: Succession plans may be formal***

or informal.)
12. Determine whether the board, either directly or through a compensation committee: • **Approves the compensation of senior executives;** • **Ensures that incentive compensation arrangements for covered employees are appropriately balanced and do not jeopardize the safety and soundness of the institution; and** • **Established a process for re-evaluating compensation in the event that employee decisions lead to adverse financial outcomes.**
13. Determine the extent and appropriateness of board and management reliance on external advisors or consultants.
14. Assess the appropriateness and effectiveness of board and management committee structures. Consider the following: • **Charters delineating a committee's size, responsibilities, and membership qualifications;** • **Selection process for committee members;** • **Rotation requirements;** • **Selection of committee chair;** • **Meeting frequency and attendance;** • **Meeting agendas and minutes;** • **Quality and timing of information flows from committees to the full board; and** • **Need for additional committees.**
15. Determine whether committee charters adequately address financial and non-financial risk governance. Consider if charter elements: • **Define the responsibilities for oversight of risk management policies and practices;** • **Outline board responsibilities to sanction, review, and amend committee practices;** • **Articulate the board's role and responsibility in establishing and reviewing risk levels;** • **Identify metrics for assessing and reporting risk levels relative to defined risk thresholds and limits; and** • **Provide for ongoing dialogue between board and management regarding risk management practices.**
16. Assess the process for setting board and committee meeting agendas, and evaluate the appropriateness,

accuracy, completeness, and timing of information received prior to meetings.

17. Determine whether the board established and communicated a whistleblower process that allows employees, vendors, and customers to anonymously report their concerns. (FDIC: consider FIL 80-2005, *Guidance on Implementing a Fraud Hotline.*)

18. Determine whether the board of directors, its committees, and executive management periodically conduct self-assessments of their performance.

19. Evaluate the reasonableness and appropriateness of compensation paid to the directorate. Consider the following:

- **Compensation or fees paid on a per meeting attended, annual, or other basis;**
- **Additional compensation for committee meetings;**
- **Compensation basis (cash, stock, stock option, or other basis);**
- **Deferred or other benefits; and**
- **Existence of performance-based compensation.**

20. Determine whether key executives have the appropriate knowledge, skills, and experience relative to the nature and scope of their responsibilities.

21. Identify and assess the influence exerted by any dominant official or policymaker.

Note: The presence of a dominant official should not be viewed negatively or as a supervisory concern in and of itself. Rather, the presence of a dominant official coupled with other risk factors such as ineffective internal controls, lack of board independence or oversight, or engaging in risky business strategies may create regulatory concerns or require enhanced supervision.

22. Determine whether the organizational structure is appropriate given:

- **The size, complexity, and overall risk profile of the bank; and**
- **The organization's strategic plan.**

Control Environment

23. Determine whether the board implemented an effective internal control system and ensures all personnel understand the importance of internal controls. Control systems should be designed to provide reasonable assurance that internal controls will prevent or detect:

- **Materially inaccurate, incomplete, or unauthorized transactions;**
- **Deficiencies in the safeguarding of assets;**
- **Unreliable financial or regulatory reporting; and**
- **Deviations from laws, regulations, and internal policies.**

24. Determine whether the bank has a policy that requires all officers and employees to be absent from their duties for an uninterrupted period of not less than two consecutive weeks. Assess its adequacy.

Note: Absence may involve vacations, rotations of duty, or a combination of both activities. Such policies are highly effective in preventing embezzlements, which usually require a perpetrator's ongoing presence to manipulate records, respond to inquiries, and otherwise prevent detection. The benefits of such policies are substantially, if not totally, eroded if the duties normally performed by an individual are not assumed by someone else.

25. Determine whether management addresses integrity in its code of conduct, ethics policy, and actions. (FDIC: refer to FIL 105-2005, *Corporate Codes of Conduct: Guidance on Implementing an Effective Ethics Program*, and Statement of Policy: *Guidelines for Compliance with Federal Bank Bribery Law*). Consider the following:

- **Internal guidelines regarding conflicts of interest, periodic training, and acceptable/unacceptable practices;**
- **Remedial action concerning policy exceptions; and**
- **Documentation concerning deviations from policy and associated remedial action.**

26. Determine whether management takes appropriate and timely action to address recommendations by auditors and regulatory authorities. *(Refer to the Internal and External Audit Evaluation module.)*

27. Determine whether the board, through effective monitoring and enforcement, restricts management's ability to override established policies and procedures.

28. Determine whether the organization has written policies governing compensation programs. Policies should address base pay and/or performance-based compensation arrangements. Areas of consideration include:

- **Cash and noncash payments;**
- **Equity compensation (stock options, stock appreciation rights, restricted stock/stock units, etc.);**
- **Deferred compensation and supplemental retirement plans;**
- **Severance (golden parachutes/change-in-control payments); and**
- **Forfeitures and clawbacks.**

29. Assess overall compensation practices.

- **Evaluate the appropriateness of incentive compensation arrangements for executive management and other employees (individually or as a group) that initiate material risk positions for the bank. When reviewing incentive compensation arrangements, consider:**
    - **The type, level, and significance of incentive compensation as part of the overall compensation model and its influence on the institution's risk profile;**
    - **Board approval of executive compensation incentives;**
    - **The use of golden parachute agreements (FRB: SR-96-21; FDIC: FIL-8-96, FIL-66-2010, and Part 359); and**
    - **Any incentive compensation issues identified during compliance examinations (e.g., mortgage loan origination compensation).**
- **Determine whether any compensation arrangements could be considered unsafe and unsound. When assessing compensation arrangements, review the combined value of all cash and noncash benefits provided to the individual and consider the following:**
    - **The compensation history of the individual and others with comparable expertise and responsibilities;**
    - **The financial condition of the institution;**
    - **Documentation of the board's review of compensation practices at comparable institutions *(Note: Such reviews typically consider factors such as asset size, geographical location, and complexity of activities)*;**
    - **For post-employment benefits, the projected total cost and benefit to the institution;**
    - **Connection between the individual and any fraudulent act or omission, breach of trust or fiduciary duty, or insider abuse;**
    - **Bank purchases of life insurance for compensation purposes; and**
    - **Any other relevant factors.**

    Note: Appropriate incentive compensation arrangements generally balance risks and rewards; reflect effective controls and risk management practices; and are supported by strong corporate governance. Examiners should refer to the Interagency Guidance on Sound Incentive Compensation Policies, issued June 21, 2010, for further discussion.

30. Determine whether adequate systems are in place to identify and mitigate self-serving practices or conflicts of interest. Consider compliance with applicable laws, and determine whether:

- **Insiders have undue influence over customer activities;**
- **Insiders are lending personal funds to customers or borrowers;**
- **Privileges or benefits given to insiders are commensurate with the services rendered;**
- **Insiders are conducting excessive non-bank related business at the bank or are spending inordinate**

amounts of time away from the bank; and

- **Transactions related to insiders' purchase or use of bank assets (such as other real estate, repossessed vehicles, equipment, or bank facilities) are appropriate.**

31. Determine whether the board appropriately monitors and manages potential conflicts of interest between the institution and its directors, management, principal shareholders, and affiliates (collectively, *affiliated parties*). The board should ensure the institution has policies and standards designed to ensure that:

- **All transactions between the institution and an affiliated party are sound, in the best interest of the institution, and appropriately documented; and**
- **Any exceptions to established policies and standards governing transactions with affiliated parties are legally permissible and appropriately approved and documented.**

32. Determine whether (and if so, why) the external auditor or legal counsel changed since the last examination.

Risk Assessment

33. Review the adequacy of internal risk assessments for all significant business activities. Determine whether the assessments identify all material risks and consider the adequacy of compensating controls. Consider whether the results of assessments are appropriately reported and that internal controls and risk-assessment methodologies are updated as needed to reflect changes in business activities and work processes.

34. Determine whether management's risk-taking practices are conservative, moderate, or aggressive by assessing practices relating to loans; investments; asset/liability management; growth; nontraditional banking services; deposit structures, rates, and products; and other pertinent areas.

- **Determine whether internal controls sufficiently mitigate higher-risk activities.**
- **Determine whether there are any material changes in management's risk-taking practices. For example, changes in deposit products or funding sources; loan products, underwriting, or portfolio mix; security investments, due diligence, or maturity distributions; or asset growth.**

35. Assess the effectiveness of the board and management's planning processes. Consider the following:

- **Strategic plans, budget processes, profit plans, and growth projections;**
- **Experience of individuals involved with the planning process;**
- **Reasonableness of assumptions;**

- **Method of comparing actual performance against objectives;**
- **Frequency of revisions;**
- **The use of stress tests in the strategic planning process to identify potential vulnerabilities *(Note: Stress testing is considered a prudent practice to assist in the identification, measurement, and mitigation of risks whether on a whole bank or portfolio basis.)*;**
- **The adequacy of research regarding new strategic initiatives such as new products and investments, branch expansions, acquisitions, or mergers; and**
- **The adequacy of business continuity planning that incorporates enterprise-wide considerations.**

36. Determine whether management adequately considers risks that influence the success or failure of established objectives. Generally, risk assessments should address:

- **External sources of risk, such as:**
  - **Technology changes,**
  - **Cyber-security risks,**
  - **Competition,**
  - **Economic conditions,**
  - **Legislative and regulatory environment, and**
  - **Accounting pronouncements.**
- **Internal sources of risk, such as:**
  - **Retention of key management and staff,**
  - **Availability of funds,**
  - **Information systems and related conversions,**
  - **Adequacy of capital funds,**
  - **Corporate restructuring,**
  - **Concentrations of credit and funding sources,**
  - **Rapid growth, and**
  - **New products or business lines.**
- **The significance and likely impact of identified risks, compensating controls, and any mitigating factors.**

37. Determine whether management monitors reputational risk arising from sources such as:

- **Media, internet, and social networks;**
- **Press releases and annual reports;**
- **Participation in or sponsorship of community events; and**
- **Public perception.**

38. Consider whether the bank has an appropriate marketing and public relations strategy to manage its reputational risk.

39. Consider whether risks identified by examiners and external auditors often differ from those identified by management.

Control Activities

40. Assess the appropriateness of blanket bond insurance levels. Consider:

- **Financial condition of bank, including capital levels and asset quality;**
- **Asset/deposit size and trends;**
- **Size of transactions, such as loans (in relation to legal lending limit) and wire transfers;**
- **Single-loss and aggregate liability levels;**
- **Effectiveness of internal controls;**
- **Whether areas of operations are rapidly expanding;**
- **Amount of cash, securities, and negotiable items normally held;**
- **Number, experience, and turn-over rate of personnel;**
- **Extent of trust and merchant-credit-card activities;**
- **Data processing activities and internet presence;**
- **Presence of a dominant official or policymaker; and**
- **Previous fraudulent activities or claims and suspicious activity reports.**

41. Consider the adequacy of other insurance policies including Director and Officer and any excess employee fidelity policy.

42. Determine the reasons for any significant fidelity insurance claims.

43. Determine whether employment practices for prospective directors, officers, employees, and significant third-party contractors address potential employment impediments. For example, criminal convictions subject to Section 19 of the FDI Act (crimes related to dishonesty, fraud, and money laundering) and banking prohibition orders. (*Note: all FDIC-insured depositories are subject to Section 19 of the FDI Act.*)

44. Determine whether policies, procedures, and practices are adequate for the size, complexity, and risk profile of the bank by reviewing findings from other modules completed during the examination.

45. **Determine whether existing controls help ensure adherence to established internal policies and appear reasonable in relation to risk exposures. Review the results of other reviews completed during the examination to determine the overall adequacy of internal controls.**

46. **Determine whether management maintains an effective system of controls and safeguards for activities that expose the bank to risk. Consider the following:**
    - **Authorization and reporting requirements;**
    - **Data access controls; and**
    - **Joint custody, dual control, and separation-of-duty arrangements.**

47. **Determine whether management takes appropriate steps to comply with laws and regulations.**

Information and Communication

48. **Determine the adequacy of information systems to identify, capture, and report relevant internal and external information.**
    - **Determine whether the systems are commensurate with risks.**
    - **Determine whether the board or management periodically evaluates the adequacy and accuracy of management information systems.**
    - **Consider the accuracy of the Consolidated Reports of Condition and Income.**

49. **Evaluate whether communication of information is sufficient for personnel to carry out their responsibilities.**

Monitoring

50. **Determine whether systems are in place to monitor material risks arising from all major activities in which the institution is engaged. Assess risk monitoring with respect to the following:**
    - **Credit risk,**
    - **Market risk,**
    - **Liquidity risk,**
    - **Operational risk,**
    - **Legal risk,**
    - **Reputation, and**

• **Compliance risk. (FRB: See SR 16-11)**
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

OTHER ASSETS AND LIABILITIES

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are operating policies, procedures, and risk limits adequate? *Refer to Core Analysis Procedures #9-10, Procedure #14, Procedure #18, Procedure #20, Procedure #22, Procedure #27, & Procedures #34.***
C.2.	**Are internal controls adequate? *Refer to Core Analysis Procedure #11, Procedure #15, Procedure #23, Procedure #28, & Procedure #35.***
C.3.	**Are audit or independent review functions adequate? *Refer to Core Analysis Procedures #5-8.***
C.4.	**Are information and communication systems adequate and accurate? *Refer to Core Analysis Procedure #12, Procedure #16, Procedure #21, Procedure #25, Procedure #29, Procedure #33, & Procedure #36.***
C.5.	**Is there adequate information to justify carrying values, and are adjustments made on a timely basis? *Refer to Core Analysis Procedure #13, Procedures #17, Procedure #24, & Procedures #37-38.***
C.6.	**Do the board and senior management provide effective supervision? *Refer to Core Analysis Procedure #6, Procedure #19, Procedure #26, & Procedures #30-32.***

OTHER ASSETS AND LIABILITIES

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. **Identify previous concerns by reviewing prior examination reports, file correspondence, and audits.**

2. **Develop a preliminary view of financial trends. Review Uniform Bank Performance Reports (UBPRs), financial statements, and other applicable data to identify material factors (levels, changes, or trends) that may require analysis or help in scoping this review.**

3. **Determine the primary responsibilities of the board of directors, board committees,[1] and executive management relating to other assets and other liabilities.**

4. **Determine whether any material changes (e.g., strategic, operational, economic) occurred or are expected that may affect this area. Discuss the changes and implications with management.**

Audit or Independent Review

5. **Evaluate the scope of audits and independent reviews. Consider whether audits and reviews are sufficient to identify internal control, reporting, and policy-compliance deficiencies.**

6. **Determine whether findings from audits and independent reviews are reported to the board or an appropriate board committee.**

7. **Determine whether audits and independent reviews assess policy-exception practices. Issues to consider include, but are not limited to exception approval, documentation, reporting, and tracking practices.**

[1] **Through discussions with management or by reviewing applicable policies.**

8. **Determine whether responses to audit and independent review findings are reasonable, timely, and tracked to completion.**

Cash Accounts

9. **Evaluate policies and procedures for controlling cash. Satisfactory guidelines generally address items such as:**
   - **Separation of duties and joint-custody controls for items such as vault access, night depository, and ATMs;**
   - **Separate cash drawers for each teller, dollar limits for cash drawers, and surprise cash counts;**
   - **Depth of review of overages and shortages;**
   - **Compliance with applicable laws and regulations; and**
   - **Compliance with limits stated on bonding applications.**

10. **Evaluate written policies for controlling cash items by reviewing whether policies address items such as:**
    - **Maximum holding periods (i.e., items cleared or charged-off timely),**
    - **Acceptable reasons why items can be held, and**
    - **Frequency of management reviews and level of oversight.**

11. **Assess the accuracy and timeliness of cash and cash-item reconciliations by:**
    - **Reviewing reconciling items for reasonableness,**
    - **Evaluating the use of suspense accounts,**
    - **Determining whether items in suspense accounts are stale, and**
    - **Determining whether employees who prepare reconcilements are independent from control of cash and preparation of entries to the accounting system.**

12. **Determine whether management receives and appropriately reviews cash item reports.**

13. **Evaluate the documentation maintained to support the carrying values of cash items.**
    - **Consider the reason(s) an item is held, the date originated, and collectability. Classify accordingly.**
    - **Determine whether items not in process of collection are reported appropriately in the Call Report.**

Correspondent Bank Accounts and Interest Bearing Balances

14. Evaluate policies and procedures for monitoring correspondent bank accounts and interest-bearing balances. Satisfactory guidelines generally address items such as:

- **Individuals responsible for reconcilements and for maintaining records;** ***(Note: If the institution's size precludes full separation of duties, mitigating procedures often ensure one individual does not have exclusive control over reconcilements while also preparing or entering data to the general ledger or subsidiary ledger.)***
- **Supervisors responsible for reviewing reconciliations and reconciling items;**
- **Arrangements regarding compensating balances for loans to the parent, an affiliate, or insiders; (*FRB 12 CFR Part 223 Regulation W)***
- **Approval procedures for entries to the accounts;**
- **Timeframes for charge-off of stale items; and**
- **Procedures to prevent excessive exposure, including all credit exposure, to individual correspondents.** ***(Note: Refer to Section 308 of the FDIC Improvement Act of 1991 and FRB 12 CFR Part 206 Regulation F, Limitations on Interbank Liabilities.)***

15. Examine a sample of reconcilements to evaluate internal controls. Consider whether:

- **Statements for each account are reconciled promptly upon receipt;**
- **Starting balances agree with general ledger accounts and correspondent bank statements;**
- **Individuals who prepare reconcilements are different than those who prepare or approve general ledger entries, effect funds transfers, issue drafts or official checks, or prepare or approve entries to due from bank accounts;**
- **Reconcilements include the preparer's name, preparation date, and document a review by an officer or supervisor;**
- **Records of open-item investigations are maintained even after an item cleared; and**
- **Credit and debit items clear timely. Generally, clearing time frames are as follows:**
  - **Cash letters - the next day;**
  - **ACH transactions - the same or next day;**
  - **ACH returns - generally within two days;** ***(Note: ACH rules allow for three returns rather than the paper-presentation rule of two times. However, only two of the returns can be by the same method, i.e., 1 physical and 2 ACH, or 2 physical and 1 ACH.)***
  - **Non-ACH returns - generally within one week;**
  - **E bonds - depends on how transmitted, but generally within two to three days;**
  - **Cash shipments - the next day;**
  - **Bond transactions - the same or next day; and**
  - **Interest payment or charges - the next day.**

16. Determine whether management reviews suspense account and aging (stale item) reports. Satisfactory aging reports generally reflect the number and amount of open items for each due-from account and

the status of large items and long-term open items. Consider whether the frequency of reviews coincides with the volume of accounts and stale items (i.e., level of risk).

17. Determine whether documentation supports general ledger carrying values.

- **Investigate unusual items or items outstanding for an undue period.**
- **Determine whether a charge-off or other classification is necessary.**

Permissible Activities and Equity Investments

NOTE: A listing of permissible national bank activities and equity investments is available on the FDIC website on the Bank Application Resources - Part 362 Activities and Investments web page or on the OCC website in the Activities Permissible for National Banks and Federal Savings Associations, Cumulative document.

18. Determine whether the bank obtained appropriate approvals for activities or equity investments that are not permissible for national banks. Consider the following:

- **Banks that engage, directly or indirectly, in activities or equity investments that are not permissible for national banks must meet applicable capital standards. *(FDIC: Part 362 of the FDIC Rules and Regulations, FRB: 12 CFR Part 208.)***
- **Banks must meet applicable capital standards when subsidiaries engage, directly or indirectly, in activities that are not permissible for national banks.**
- **Ensure management monitors compliance with regulatory conditions and restrictions imposed by approval orders.**
- **Make certain the investments and activities adhere to the strategies and business plans presented with the bank's application.**

19. Determine whether the board has approved all equity investments and activities.

20. Evaluate business plans and strategies regarding permissible and approved activities and equity investments.

21. Determine whether management and the board receive appropriate financial and operating information regarding each activity and equity investment.

Premises and Fixed Assets
22. Evaluate policies and procedures regarding premises and fixed assets. Satisfactory guidance generally discusses items such as: • **Specifying that the directorate approve all major purchases;** • **Discouraging conflicts of interest or self-dealing with vendors, servicers, and insurers; and** • **Maintaining the level and nature of premises and fixed asset investments in compliance with applicable laws and regulations (e.g., state laws and Section 24A of the Federal Reserve Act).**
23. Evaluate internal controls. Consider whether: • **Individuals who post purchase and sale records are responsible for the property custody or inventory;** • **Subsidiary ledgers of depreciation are balanced to the general ledger by persons who have sole custody;** • **Periodic physical inventories confirm asset values;** • **Adequate fire and extended insurance coverage is in force for bank premises, furniture, and equipment;** • **Asset sales, including the recognition of gains and losses, are appropriately recognized; and** • **Disclosures, including the existence of liens, are appropriate.**
24. Determine whether investment in premises and equipment is reasonable and complies with state laws.
25. Determine whether information and reporting regarding fixed assets to senior management and the board is adequate.
26. Determine whether real estate held for future expansion still qualifies as bank premises.
Deposit Activities
27. Evaluate policies and procedures for deposit account activity. Satisfactory policies generally include guidelines for the following: • **Opening and closing accounts,** • **Dormant and inactive accounts,** • **Held and returned mail,** • **Overdrafts,** • **Uncollected funds,**

- **Deposit sweep activities,**
- **Account maintenance, and**
- **Escrow accounts.**

28. Evaluate internal controls. Consider the following:

- **Reconciliation frequency;**
- **Segregation of duties exist so individuals who reconcile deposit accounts do not post items or handle cash or official checks;**
- **Suspense account items clear timely;**
- **New account opening (ensure appropriate segregation of duties);**
- **Transactions that affect customer accounts and other internal entries are properly and promptly processed with appropriate approval;**
- **Dormant and inactive account controls; and**
- **Overdrafts, large uncollected funds, and kiting suspect reports are reviewed regularly.**

29. Determine whether management receives appropriate periodic reports on open items in suspense, in process, and other deposit accounts and whether the reports include the aging and status of significant items.

30. Review and evaluate overdraft, large item, uncollected funds, and check kiting reports, periodically throughout the examination for irregular activity. Pay particular attention to activities of bank insiders.

31. Evaluate how management handles outstanding adjustments or differences (i.e., un-reconciled or stale items).

32. Determine whether the bank uses retail repurchase agreements (a.k.a. sweep accounts.) If so, confirm the following:

- **Advertising discloses that the instrument into which deposit funds are swept is not insured by the FDIC and is not an obligation of or guaranteed by the bank;**
- **Proceeds of deposit sweep arrangements are invested only in short-term bank obligations, short-term U.S. government securities, or other highly liquid, readily marketable investment grade assets that can be disposed with minimal loss of principal; and**
- **Confirmations comply with the requirements of the Government Securities Act.**

33. Determine whether management information systems are sufficient to track performance metrics (e.g., volumes, rates paid, maturities, originators, and concentrations) of brokered funds and other alternative deposits, and whether these funds are reported correctly in the Call Report.

Official Checks

34. Evaluate policies and procedures regarding official checks (e.g., expense checks, cashier's checks, loan disbursement checks, certified checks). Effective guidelines generally address items such as:

- **Accounts maintained for each type of official check.**
- **Board-approved individuals with signing authorities.**
- **Procedures and authorities for issuing and approving official checks, including enhanced procedures for handling certified checks.**

35. Evaluate internal controls. Consider whether management:

- **Maintains records that track official checks by serial number;**
- **Maintains reserve supplies of unissued checks under dual control;**
- **Periodically and independently reconciles reserve check supplies using the vendor's invoice;**
- **Periodically traces certified checks for appropriate charges to customers' accounts to determine whether the accounts had sufficient balances when certified; and**
- **Ensures that outstanding checks are regularly reconciled by an individual who does not have signing authority.**

36. Ascertain whether management maintains an appropriate reporting mechanism for reconcilements, inventories, and check signing.

Other Items

NOTE: Examiners are responsible for evaluating all significant risks relating to assets and liabilities. Consider whether the bank has comprehensive policies and procedures, strong internal controls, appropriate audit programs, and effective management information systems. Overstatements in asset accounts result in losses that, if material, should be detailed in the examination report.

37. Evaluate other asset categories on the general ledger. Common problem areas include the following:

- **Book values exceed cash surrender values for life insurance policies insuring the lives of key officers. *(Note: Substantial cash values in excess of carrying values may be shown in the report as Sound Banking Values Not Shown on Books. Overstatements should be classified loss. Refer to ASC 835-30, ASC 325-30, and Section 24 of the FDI Act for additional information.)***

- **The bank does not control non-booked assets (e.g., software and fine art).** ***(Note: Insurance riders might show assets insured but no longer in the bank.)***
- **Capitalized bonding company claims, which are rarely justified unless realization is assured beyond any reasonable doubt.**
- **Unrealizable deferred tax assets - deferred tax assets can be recognized for operating loss and tax credit carry-forwards just as they are for deductible temporary differences. A bank can recognize the benefit of a net operating loss for tax purposes or a tax credit carry-forward to the extent management determines that a valuation allowance is not necessary (i.e., if the realization of the benefit is more likely than not).**
- **Prepaid services costs (surety bonds, insurance policies, advance rental payments) are not charged to current expenses over the life of the purchased goods or services.**

38. Evaluate other liability categories on the general ledger. Determine whether:

- **Any liabilities are not reflected on the bank's books.** ***(Note: This information may be obtained through discussions with bank personnel, auditors, or through findings resulting from examiner review of other functional areas.)***
- **Reports that provide an aging of applicable liability accounts are prepared and reviewed by management periodically.**
- **Detailed records or calculations are maintained to support recorded liabilities.**

End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

RATE SENSITIVITY

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Do the bank's assets, investments, deposits, other funding sources, and financial derivatives present a low or well-controlled level of interest rate risk?** ***Refer to Core Analysis <u>Procedures #1-5</u>.***

C.2. **Have adequate corporate governance processes (policies, procedures, risk limits, and strategies) been established?** ***Refer to Core Analysis <u>Procedures #6-12</u>.***

C.3. **Are internal measurement processes and systems adequate? Refer to Core Analysis *<u>Procedures #13-16</u>*.**

C.4. **Are model inputs and management's assumption development process adequate?** ***Refer to Core Analysis <u>Procedures #17-19</u>.***

C.5. **Are the audit and internal control functions adequate?** ***Refer to Core Analysis <u>Procedures #20-22</u>.***

C.6. **Has an effective Independent Review function been established?** ***Refer to Core Analysis <u>Procedures #23-26</u>.***

C.7. **Are management information systems and reporting adequate?** ***Refer to Core Analysis <u>Procedures #27-29</u>.***

C.8. **Is the level of risk reasonable relative to capital and earnings levels?** ***Refer to Core Analysis <u>Procedure #30-33</u>.***

C.9. **Do the Board and senior management effectively supervise this area?** ***Refer to Core Analysis <u>Procedure #34-38</u>.***

RATE SENSITIVITY
Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review
1. Review prior examination reports, supervisory reviews, and file correspondence to identify prior rate-sensitivity concerns. Also, review internal, or third party, audits and reviews to identify any concerns or recommendations.
2. Review board or committee minutes and information packets for evidence of oversight, responsibility, routine management reports, and any identified rate sensitivity concerns.
3. Determine whether there are any recent or planned changes in strategic direction and discuss with management the implications for rate sensitivity risks.
4. Review offsite analytical reports (FDIC: IRRSA) to develop a preliminary assessment of rate sensitivity trends and risks.
5. Review UBPR, Call Report, balance sheet, and income statement data to develop an initial rate sensitivity profile. Note common risk areas such as: • **Shifts in long term assets and long term liabilities;** • **Mortgage-loan exposure (direct or indirect through mortgage backed investments);** • **Mortgage servicing assets;** • **Significant securities depreciation;** • **Structured notes;** • **Fluctuations in non-maturity deposits; and** • **Hedging activities, such as rate swaps, forwards, futures, options, or other derivative products.**
Policies, Procedures, and Risk Limits

6. Review rate sensitivity policies. Policy guidance may be incorporated in liquidity, loan, investment, interest rate risk (IRR), or other policies, but taken as a whole, should provide sufficient guidance to management relative to the board's risk tolerances and oversight responsibilities. Policy formality and sophistication will vary, depending upon the level of the bank's risk and the complexity of its holdings and activities. In general, satisfactory policies:

- **Assign authority and responsibility to an individual(s) or committee for establishing and maintaining an effective IRR management program that identifies, measures, monitors, and controls IRR within board-approved risk limits;**
- **Identify the types of instruments and activities that may be used to manage IRR exposure;**
- **Provide for comprehensive measurement systems that are commensurate with the size and complexity of the institution for valuing positions and assessing performance, including procedures for updating model scenarios and underlying key assumptions;**
- **Require regular, detailed reporting that informs management and the board of IRR exposures;**
- **Outline the process and responsibility for sensitivity testing of critical model assumptions;**
- **Require periodic back testing of IRR projections and analysis of significant variances;**
- **Establish earnings and capital exposure limits commensurate with the risk tolerance of the board;**
- **Require management to factor IRR into broader risk management considerations and strategic decisions to ensure interrelationships between IRR and other risks are considered and addressed;**
- **Require the board or a designated committee to periodically review and approve the policy, risk limits, and strategies;**
- **Assign responsibility for authorizing policy exceptions, and require documentation of the rationale for authorizing such exceptions; and**
- **Provide that the asset/liability committee (ALCO), or a similar committee, has sufficient representation across major functions that influence IRR exposure.**

7. Determine whether the board or a delegated committee oversees the establishment, approval, implementation, and annual review of IRR management strategies, policies, procedures, and limits (or risk tolerances).

8. Discuss IRR management processes and practices with management. Review ALCO meeting minutes and packages to evaluate the process. Potential topics for discussion include:

- **Lines of responsibility and authority for IRR exposure management;**
- **Development of IRR policies and practices;**
- **Adequacy of IRR measurement system used (e.g., gap, income simulation, economic value of equity);**
- **Assumptions used in the IRR measurement system (e.g., asset prepayments, deposit price sensitivity, decay rates, growth rates) and any adjustments to key assumptions;**
- **Management's understanding of the underlying analytics and methodologies of IRR models;**
- **Board/management understanding of model assumptions, particularly if developed by third parties;**
- **Strategies to manage IRR (e.g., cash flow or duration matching, altering balance sheet composition, hedging with derivatives);**
- **Technical expertise of staff relative to the complexity of products used and the complexity of the**

IRR measurement system; and,

- **Board and management understanding of the specific embedded risk characteristics of the institution, (e.g., basis risk, option risk).**

9. If IRR management processes include hedging with derivatives, determine whether policies outlining hedging strategies include:

- **Requirements for analysis of market, liquidity, credit, and operating risks;**
- **Requirements regarding the expertise/experience of personnel involved in implementing and monitoring derivative hedging strategies;**
- **Permissible strategies and types of derivative contracts;**
- **Risk limits for hedging activity such as position limits (gross and net), maturity parameters, and counterparty credit guidelines;**
- **Names of individuals authorized to initiate hedging transactions and their limits of authority;**
- **Requirements for monitoring hedging activity and ensuring activities fall within approved limits and lines of authority; and**
- **Descriptions of how management will ensure compliance with technical accounting guidance that governs hedging activity, most notably ASC Topic 815.**

10. Determine whether management uses static balance sheet modeling to assess baseline IRR exposure. Refer to the 1996 Joint Agency Policy Statement on IRR and the 2010 FFIEC Advisory on IRR Management for further discussion of balance sheet modeling.

11. Determine whether management uses IRR modeling to evaluate large-scale shifts in strategies, product offerings, or significant concentrations.

12. Determine whether procedures and risk limits are reasonable relative to current economic conditions and the overall condition of the bank. Determine whether management:

- **Evaluates the potential effect on income and capital levels when establishing risk limits;**
- **Reviews limits at least annually (and more frequently if the bank's financial condition, strategic direction, or products and services are changing); and**
- **Considers the risks and potential rewards of adverse/favorable rate movements when establishing an IRR position or strategy.**

Measurement System Capabilities

13. Determine whether the measurement system contains the functionality (and is updated as needed) to adequately assess risk exposures.

14. **Determine whether the IRR measurement system captures and reports all material on- and off-balance sheet positions. Consider the level of detail in charts of account, data input, and output reports.**

15. **Determine whether the system measures the potential effect of changes in market rates on both earnings and capital.**

16. **Determine whether the IRR measurement system has capabilities to provide meaningful stress-test simulations applicable to the institution. Consider the following:**
    - **Instantaneous and significant rate shocks (considering the current rate environment);**
    - **Substantial changes in rates over time (prolonged rate shocks exceeding periods of 1 year);**
    - **Changes in the relationships between key market rates (i.e., basis risk);**
    - **Various scenarios (e.g., base case, worst case, static, dynamic); and**
    - **Nonparallel yield curve shifts (e.g. steepened, flattened, and inverted yield curves).**

Assumptions and Data Inputs

17. **Assess management's process for developing and reviewing key scenarios and assumptions. Consider the institution's documentation, monitoring, and update procedures. Typical key assumptions include:**
    - **Asset prepayment speeds,**
    - **Non-maturity deposit price sensitivities,**
    - **Non-maturity deposit decay rates or average life, and**
    - **Key/driver rates.**

18. **Review the reasonableness and support for management's key assumptions.**

19. **Review the institution's sensitivity analysis on key assumptions.**

Internal Controls

20. **Determine whether management established sufficient lines of authority and separation of duties, or comparable controls, over the development and use of measurement systems and monitoring tools.**

21. Determine whether IRR reports are reviewed by senior management and the board at least quarterly.

22. Determine whether management complies with policy parameters and documents the reasons for variances, and any actions plans initiated. If applicable, discuss the board's oversight and approval of variances and any related mitigating actions.

Audit or Independent Review

23. Determine whether management provides for an adequate audit of the IRR measurement process.

24. Determine whether the independent review includes an adequate scope (certain aspects of which may have been completed by internal audit or an external model validation). Adequate scoping generally includes an assessment of items such as the:

- **Adequacy of, and compliance with, policies and procedures;**
- **Suitability of the bank's measurement system given the size and complexity of activities;**
- **Appropriateness of rate scenarios used;**
- **Validity of risk measurement calculations; and**
- **Reasonableness and accuracy of assumptions and data inputs including back testing.**

25. Ensure that the results of annual independent reviews are promptly reported to the board, or committee thereof. Determine whether management reviewed and reported the results of any validation performed on the IRR model used.

26. If recent reviews disclosed any deficiencies, or if back testing has shown past estimates deviated significantly from actual performance, determine whether management responses are reasonable and timely.

Reporting and Communication Systems

27. Determine whether internal reports provide sufficient information for ongoing IRR management decisions and for monitoring the results of those decisions. Reports should contain sufficient detail for the board and senior management to:

- **Analyze IRR levels and trends and estimate the potential effect on earnings and capital;**
- **Identify material risk exposures and sources;**
- **Evaluate key assumptions, including interest rate forecasts, deposit behaviors, and loan prepayments;**
- **Make pricing decisions;**
- **Verify compliance with risk limits/policy guidelines and to monitor policy exceptions;**
- **Assess the institution's IRR sensitivity in base-case and changing-rate scenario, and**
- **Assess important assumptions underlying the measurement systems.**

28. Determine whether interest rate risks are communicated to all relevant operational and oversight personnel.

29. Consider testing reports for accuracy by comparing results with regulatory reports and internal records.

Risk Exposure Considerations

30. Determine the level of IRR and assess the potential effect on the institution's risk profile. Consider IRR trends that, while still within established risk tolerances, may indicate an increasing risk profile.

31. Compare the earnings projections used in the IRR measurement systems to management's budget. Determine the magnitude of any differences and the reason for the differences. Determine the extent to which management relies on IRR projections and uses them in strategic and capital planning.

32. Determine whether recent or anticipated changes or trends in the balance sheet composition alter the IRR profile relative to historical data. When significant structural changes have or are expected to occur, de-emphasize historical analysis and focus on current and forecasted balance sheet composition. Significant structural changes may include:

- **Major shift in the maturity (repricing) characteristics of the investment portfolio, loans, borrowings, or deposit accounts;**
- **Increased holdings of financial instruments such as mortgage securities, callable securities, fixed-rate residential loans, and structured notes;**
- **Fundamental changes in liability mix between core deposits and other funding sources;**
- **Unexpected changes in level or trend of securities appreciation and depreciation; and**
- **Adoption of, or an increase in, the volume of derivative or hedging instruments.**

33. Analyze changes in the net interest margin and net operating income relative to:

- **Market interest rate fluctuations,**
- **Reliance on rate sensitive noninterest income activities (such as mortgage banking activities),**
- **Earnings and capital levels, and**
- **Strategies to manage the effect of the changes on earnings and capital.**

Oversight & Risk Mitigation

34. Determine whether the board understands and is regularly informed about the level and trend of IRR exposure. Consider the following board responsibilities:

- **Setting the bank's tolerance level for interest rate risk,**
- **Identifying lines of authority and responsibility for managing risk,**
- **Ensuring adequate resources are devoted to IRR management,**
- **Monitoring the overall IRR profile, and**
- **Ensuring that IRR is maintained at prudent levels.**

35. Determine whether senior management ensures that board-approved strategies, policies, and procedures for managing IRR are appropriately executed within the designated lines of authority and responsibility. Consider the following management responsibilities:

- **Implementing detailed reporting processes to inform senior management and the board of the level of IRR exposure;**
- **Maintaining comprehensive systems and standards for measuring IRR, valuing positions, and assessing performance, including procedures for updating IRR measurement scenarios and key underlying assumptions driving the institution's IRR analysis;**
- **Developing and implementing procedures that translate the board's goals, objectives, and risk limits into operating standards that are understood and followed by bank personnel;**
- **Providing sufficient staff to operate measurement systems, including back-up personnel who possess requisite technical expertise;**
- **Establishing adequate training and development programs;**
- **Implementing internal controls over the IRR process; and**
- **Ensuring independent reviews and validations of the IRR program are regularly completed.**

36. Determine whether historical performance indicates weakness in board and senior management oversight.

37. Determine whether the board effectively oversees and management effectively implements planned

initiatives and strategies.
38. If risk limits were breached, determine what steps management took, or plans to take, to remedy, or mitigate exposures. If management decides against corrective action, determine whether such decisions are reasonable and appropriately reported and documented.
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

RISK SCOPING ACTIVITIES

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should exclude unnecessary items from the request letter. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive. This module is intended to help the examiner-in-charge (EIC) determine the examination scope, allocate staff resources, and prepare a pre-examination memorandum. When specialty examinations are to be integrated with safety and soundness examinations and reports, procedures for these specialties should be added.

Activity Identification

Note: Completing the procedures below should require a discussion with bank management in advance of sending out the First Day information request letter (to assist in scoping the request) and after receipt of the information (to clarify understanding of information received). Also, discussions with the agency's case manager (or equivalent) and the results off-site monitoring will likely provide additional information for consideration in planning the scope of the examination.

1. **Determine whether concerns or higher-risk activities are present, such as :**
   - **Internal control/audit issues were cited in previous examination or audit reports, including:**
     - **Excessive internal control deficiencies,**
     - **Inadequate documentation,**
     - **Out-of-balance accounts,**
     - **Inadequate account reconciliations,**
     - **Significant policy exceptions or inadequate reporting of exceptions,**
     - **Inability or unwillingness to downgrade loans or recognize impairment/loss promptly, or**
     - **Inaccurate reporting of troubled debt restructures (TDRs) in the Consolidated Reports of Condition and Income (Call Reports).**
   - **Asset quality issues, such as:**
     - **Unusual loan types or particularly complex loans considering the profile of the institution and the expertise of lending staff;**
     - **A material volume of loans with high-risk characteristics (e.g., low quality, poor underwriting, nonperformance, watch-list or classified status);**
     - **Inadequate policies and procedures for obtaining appraisals/evaluations during renewals or extensions;**
     - **Significant concentrations in high-risk loans (based on loan type, borrower, geography, market segment, etc.);**
     - **Concentrations of assets for which valuation methods are complex or uncertain;**
     - **Significant volumes of loan modifications or TDRs;**
     - **Use of brokered, correspondent, or third-party arrangements to originate or service loans;**
     - **Use of volume incentives for loan originators; or**
     - **Over reliance on interest reserves.**
   - **Management/strategic planning issues, such as:**
     - **Excessive growth or over reliance on nontraditional funding sources;**
     - **High-risk strategies, reliance on non-core income sources, or significant business-line changes;**
     - **Significant personnel turnover, the departure of key staff, or inadequate succession plans; and**
     - **Over emphasis on earnings without proper risk management practices or internal controls.**
   - **Regulatory issues, such as:**

- **Several quarters of significant provision expenses;**
- **Marginal capacity to raise equity capital;**
- **High volume of consumer complaints;**
- **High volume of intercompany transactions (FRB Regulation W);**
- **Significant insider transactions that are not properly approved or documented (FRB Regulation O); or**
- **Parent company issues that limit its ability to serve as a source of strength to the bank (such as having low liquidity, high debt, or an overreliance on bank dividends for cash flow).**

2. Review available information to determine the significance of bank activities and associated risks.

- **Obtain from the bank:**
  - **Strategic plans and budgets;**
  - **Internal management reports;**
  - **Watch lists**
  - **Board packages;**
  - **Annual reports; and**
  - **Auditor reports, management letters, quality control reports, and other reviews (such as loan, interest rate risk, mortgage banking, and Small Business Association (SBA) loan reviews).**
- **Obtain from other sources:**
  - **Call Reports, Uniform Bank Performance Reports (UBPR), and Bank Holding Company Performance Reports;**
  - **Offsite surveillance monitoring reports;**
  - **Real Estate Stress Tests (FDIC: REST);**
  - **Problem Bank Review Summaries;**
  - **Interest Rate Risk Reports (FDIC: IRRSA);**
  - **Press releases, published news stories, and on-line information/databases;**
  - **Large Insured Depository Institution (LIDI) Reports (FDIC);**
  - **Reports of examination issued by the institution's primary regulator;**
  - **Regulatory reports of examinations relating to security- or insurance-activities conducted by bank subsidiaries or other entities;**
  - **FDIC-Assisted Transactions, loan pool purchases, mergers/acquisitions; and**
  - **Regional economic conditions.**

3. Discuss with management potential concerns identified through interim offsite reviews, financial analysis, or correspondence.

- **Identify economic conditions that may affect the bank's overall financial condition and discuss issues such as:**
  - **The bank's primary trade area and its principal business activities within the area. Consider issues such as the size of the bank's trade area, boundary descriptions, population levels and trends, per capita income, employment growth, and unemployment rates;**
  - **Management's views regarding local economic trends and other factors that may affect the bank (for example, new businesses, expansion plans, business closings, or planned layoffs);**

- **Deposit levels and trends and any plans for new or special-rate deposit products;**
  - **Types of loans currently emphasized and any material changes in loan types or volumes;**
  - **Competition and how it affects loan and deposit pricing; and**
  - **The bank's dependence on any particular industry or economic sector (for example, oil and gas, government, or agriculture).**
- **Identify managerial, operational, and functional changes. Determine if there have been any changes, or anticipated changes, in areas such as:**
  - **Overall bank objectives, risk appetites, or management philosophies;**
  - **Ownership, key personnel, or audit firms;**
  - **Board composition;**
  - **Investment strategies or brokers;**
  - **Operations, including information systems;**
  - **Policies and procedures;**
  - **Committee structures, reporting relationships, and recordkeeping systems;**
  - **The level and trend of regulated security or insurance activities conducted by bank subsidiaries or other entities on bank premises or on behalf of the bank; and**
  - **The scale or trend of other business lines (new or expanding) such as, mortgage banking, SBA lending, and commercial and industrial (C&I) lending.**
- **Determine what senior management considers the most significant factors affecting the bank, including high or emerging risks.**

Note: The EIC should schedule a pre-examination visit to the bank or conduct a telephone conversation with management if a visit is not feasible. The meeting or discussion should focus on emerging risks, changes to bank policies, strategic direction, new products or delivery channels, and significant activities that have occurred since the previous examination. The meeting provides the EIC the opportunity to solicit management's perspective about economic conditions, local and regional competition, internal and external audit programs, loan review activities, and overall risk management practices.

4. Review the findings of internal and external audits regarding the adequacy of internal control programs. Consider the degree to which examiners can rely on internal audits, and whether certain examination activities can be reduced or omitted due to the strength of internal controls, internal audit programs, and the absence of adverse audit findings. As part of this evaluation, review the:

- **Independence and experience of personnel conducting internal control reviews;**
- **Appropriateness of the audit universe, schedule, and scope;**
- **Adequacy of the size of the internal audit staff given the complexity and risk profile of the bank;**
- **Effectiveness of internal control reviews and reporting;**
- **Completeness of audit reports and the adequacy of management's written response to audit findings; and**
- **Accuracy and completeness of workpapers, if necessary.**

5. Review the findings of external auditors. Determine whether findings exist relating to:

- **Internal controls,**
- **Accounting practices,**

- **Regulatory reporting, and**
- **Exposure to high-risk activities.**

6. Assess any control weaknesses identified by internal or external audits, the previous examination, or other control procedures.

7. Review information regarding consumer complaints or problems noted in other specialty areas (Bank Secrecy Act, compliance, trust, information technology, mortgage banking, or other specialty activities), and assess any potential safety and soundness concerns. Consider the materiality of activities in terms of sales volume, revenues, and expenses, as well as the significance of risks posed to the bank.

8. Determine the significance of any activities conducted by a functionally regulated subsidiary of the bank or holding company and whether such activities pose a material risk to the insured depository institution. Contact the functional regulator to obtain available information about the functionally regulated subsidiary that warrants further review. Consider whether the subsidiary's functional regulator identified any significant supervisory concerns.

- **If supervisory information on a functionally regulated subsidiary of the insured depository institution is not available from the bank or the functional regulator of the subsidiary, information may be requested of a functionally regulated subsidiary itself only in limited circumstances. (FDIC: Consult with the regional office; FRB: Consult with Board staff.)**
- **An examination of a functionally regulated subsidiary should be undertaken only after consultation with and direction from the FDIC regional office or the FRB Board staff, except for subsidiaries that sell insurance products on bank premises or on behalf of the bank, which may be examined for compliance with the Rules and Regulations on Consumer Protections for Depository Institution Sales of Insurance [FDIC: 12 C.F.R. § 343; FRB: 12 C.F.R. § 208 (Regulation H)].**

Resource Allocation

9. Review relevant examination documentation modules and identify areas warranting greater emphasis or areas that may be suitable for limited reviews due to low risk profiles. Determine the feasibility of performing offsite loan review.

10. Allocate examination resources based on the bank's activities and risk profile, preliminary assessments of the control environment, and areas targeted in examination documentation modules. Also, consider the relative skills and experience of the available examination staff.

Scope Memorandum

11. Prepare a scope memorandum per applicable agency policy. The memorandum should be tailored to the risk, size, and complexity of the bank and define the objectives of the examination. The memorandum should address growth expectations, management or ownership changes, and the status of prior examination findings and criticisms. Include the following information:

- **Summary of pre-examination meetings or discussions;**
- **Summary of audit and internal control environment and a general statement regarding the level of reliance examiners can place on internal controls and the audit function;**
- **Preliminary risk assessments addressing CAMELS components, and comments regarding the ability to assess certain CAMELS components offsite (assess credit, market, liquidity, operational, legal/compliance, and reputational risk associated with the institution);**
- **Summary of examination procedures, including a discussion of the examination procedures to be completed and the depth of coverage in different areas;**
- **Summary of anticipated loan reviews (FRB: See SR 16-8, *Off-site Review of Loan Files* for more information on conducting all or portions of the loan review offsite);**
- **Summary of specialty areas to be targeted for examination (for example, mortgage banking, specialty lending, or other business lines); and**
- **Examination staffing requirements and identification of any training opportunities or specialized skills needed.**

End of Core Analysis.

SECURITIES AND DERIVATIVES

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

C.1.	**Are policies, procedures, and risk limits adequate? *Refer to Core Analysis Procedures #8-11.***
C.2.	**Are internal controls adequate? *Refer to Core Analysis Procedures #12-19.***
C.3.	**Are the audit or independent review functions adequate? *Refer to Core Analysis Procedures #20-22.***
C.4.	**Are information and communication systems adequate and accurate? *Refer to Core Analysis Procedures #45-46; Procedures #49-50; & Procedure #61.***
C.5.	**Does management appropriately identify and measure portfolio risks? *Refer to Core Analysis Procedures #23-26; Procedures #27-31* (ACL only); *Procedures #32-35* (non-ACL only); *Procedures #36-53; & Procedure #57.***
C.6.	**Do the board and management effectively oversee securities and derivatives activities? *Refer to Core Analysis Procedures #19-20; Procedure #24; & Procedures #55-66.***

SECURITIES AND DERIVATIVES EXAMINATION PROCEDURES

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. Review prior examination reports, pre-examination memorandum, and file correspondence for an overview of any previously identified investment deficiencies.

2. Review internal and external audit reports and other independent reviews.[1]

3. Review remedial actions taken by management to address audit and examination recommendations.

4. Analyze the level and trend of securities and derivatives activities in the Uniform Bank Performance Report or Interest Rate Risk Standard Analysis (IRRSA - FDIC), and assess any risks in the portfolio(s).

5. Review the securities portfolio, certificates of deposit held for investment purposes, and end-use derivative contracts.

- **Review transactions entered into or amended since the last examination.**
- **Identify securities that may require further analysis, such as instruments that have unusual, leveraged, or highly variable cash flows, including mortgage-backed securities (MBS), collateralized debt obligations, and asset-backed securities. The process may involve reviewing institution-prepared reports, investment prospectuses, trade confirmations, and accounting methods.**

6. Discuss with management the institution's investment philosophy, portfolio composition, and underlying business purpose(s) for investment activities.

[1] If the institution is subject to the Sarbanes-Oxley Act (SOX), review the SOX information pertaining to the investment portfolio, such as SOX narratives, flow charts, and internal control matrices.

7. Review investment committee minutes and other relevant committee minutes (such as asset-liability committee minutes) that discuss investment activities. Determine whether substantive investment activities are sufficiently discussed including any changes in strategy, philosophy, or responsibilities.

Policies, Procedures, and Risk Limits

8. Evaluate whether policies are appropriate for securities and derivatives activities. Effective policies are generally tailored to the institution's unique risk profile and address items such as:

- **The board's investment goals and objectives;**
- **Delegations of investment authority;**
- **Duties and responsibilities of individuals involved in the investment process;**
- **Transaction authorizations and trade limits for individuals responsible for initiating trades;**
- **Authorized activities and instruments;**
- **Unacceptable investment activities;**
- **Credit quality and ongoing monitoring guidelines;**
- **Investment guidelines or limits (e.g., portfolio composition, maturities);**
- **Required pre- and post-purchase analysis, including due diligence for more complex securities;**
- **Off-balance-sheet investments;**
- **Portfolio valuations and frequency requirements;**
- **Pledging requirements;**
- **Safekeeping procedures;**
- **Internal controls;**
- **Audit and independent reviews;**
- **Reporting requirements;**
- **Broker-dealer selection and ongoing monitoring;**
- **Accounting and taxation considerations, including whether debt securities are properly measured under ASC Topic 320, Investments – Debt Securities, or ASC Topic 326, Financial Instruments – Credit Losses, as appropriate;**
- **Conflicts of interest;**
- **Exception reporting; and**
- **Frequency of policy reviews by the board.**

9. Determine whether management established risk limits appropriate for the institution. Appropriate risk limits consider, as appropriate:

- **Credit risk,**
- **Concentration risk,**
- **Market risk,**
- **Liquidity risk,**
- **Price risk,**

- **Investment types, and**
- **Maturity and call features.**

10. When applicable, assess management's strategies to modify market risk (e.g., hedging). Effective policies generally address items such as:

- **Approved strategies and instruments,**
- **Activity limits,**
- **Analysis and documentation standards,**
- **Exposures needing modification,**
- **Accounting treatment,**
- **Monitoring requirements, and**
- **Counterparty credit risk requirements.**

11. Evaluate the frequency and timeliness of policy reviews and updates by the board.

Internal Controls

12. Assess the internal control program. Appropriate control programs generally:

- **Ensure transactions are conducted by authorized personnel;**
- **Assess the appropriateness of delineation of responsibilities for joint custody and dual control; and**
- **Maintain appropriate separation of duties (executing, posting, and reconciling).**

13. Determine whether internal control procedures are commensurate with the volume and complexity of investment activities. Adequate procedures generally address items such as:

- **Portfolio valuation(s),**
- **Personnel,**
- **Settlement procedures,**
- **Physical controls and documentation,**
- **Conflicts of interest,**
- **Appropriate accounting for debt and equity securities,[2]**
- **Reporting,**
- **Independent review, and**
- **Validation of risk measurement techniques.**

[2] In accordance with ASU 2016-01, equity securities may no longer be designated as available-for-sale.

14. **Determine whether management performs activities that may result in elevated risks or inadequate controls. Consider reviewing activities or file sampling for:**
    - **Gains trading, when-issued trading, pair-offs, extended settlements, repositioning repurchase agreements, short sales, or adjusted trading;**
    - **Incomplete transaction documentation;**
    - **Contravention of internal policy limits for transaction amounts or types with individual dealers;**
    - **Inaccurate reporting or accounting;**
    - **Failure to monitor personal investment activities of staff with securities activities responsibilities;**
    - **Transactions completed by unauthorized personnel;**
    - **Inappropriate delegation of investment authorities;**
    - **Inappropriate assignment of due diligence responsibilities to third parties; and**
    - **Exclusive reliance on credit rating agencies to assess credit risk.**

15. **Assess management's procedures for payment, reconciliation, exceptions, and control of securities and derivatives positions.**

16. **Determine whether investment activities are accurately reported in the Call Report and appropriately supported by work papers prepared by management.**

17. **Determine whether transfers of debt securities occur between the available-for-sale, held-to-maturity (HTM), or trading accounts.**

18. **Determine whether debt security sales from the HTM account have occurred, and if so, whether they are consistent with the safe harbor provisions in U.S. Generally Accepted Accounting Principles (GAAP).**

19. **Determine, by sampling transactions, whether management uses one dealer or representative for substantially all securities and derivatives activities. If so, determine whether management has safeguards to ensure the institution receives the best execution, including price and likelihood and speed of execution.**

Audit or Independent Review

20. Determine whether audits or independent reviews provide sufficient coverage relative to the institution's size, scope of investment activities, and risk profile. The independent review should:

- **Assess separation of duties, internal controls, and supervision of investment activities;**
- **Compare actual risk levels to board-approved limits;**
- **Determine whether policies and procedures are adequate and appropriately comprehensive;**
- **Determine compliance with internal policies and procedures, as well as regulatory requirements;**
- **Assess the adequacy and accuracy of risk measurement systems, including critical assumptions;**
- **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board;**
- **Assess the accuracy and timeliness of price information, including underlying assumptions;**
- **Validate the accuracy of accounting and inventory reports:**
  - **Assess management's procedures for identifying and measuring impairment for debt securities under ASC Topic 320 or properly measuring debt securities for the proper credit loss allowance under ASC Topic 326, as appropriate;**
  - **Assess management's procedures for establishing the fair value for equity securities and measuring changes in fair value through earnings, as appropriate (refer to procedure 36);**
  - **Verify correct accounting for debt securities and derivatives positions, including accrued interest; principal amortization, premium amortization, discount accretion, and valuation;**
- **Verify securities trial balance reconciliations to the general ledger and safekeeping reports (considering the frequency of reconciliations, disposition of reconciling amounts, and separation of duties when evaluating the adequacy of reconciliations);**
- **Ensure appropriate pre-purchase analysis and on-going due diligence is performed;**
- **Verify that appropriate on-going due diligence is conducted on brokers or brokerage firms used;**
- **Assess the documentation related to off-balance-sheet derivative transactions;**
- **Recommend corrective action, when warranted;**
- **Verify that corrective action commitments have been implemented; and**
- **Review third party assessments of the securities portfolio for reasonableness.**

21. Confirm that audit or independent review results and management's responses are reported to the board or designated committee, as appropriate, on a timely basis.

22. Determine whether management's responses to recent audits or independent reviews are timely and reasonable.

Risk Identification, Measurement, and Reporting Systems

DOCUMENTATION REVIEW

23. Review a sample of files that contain analysis of securities and derivatives positions entered into or amended since the last examination.[3] Determine whether management:

- **Adequately identified the risks associated with each security prior to acquisition and periodically thereafter, consistent with the institution's policies;**
- **Established an appropriate risk and performance measurement system, including pre-purchase analysis documentation requirements and periodic monitoring;**
- **Verified that securities are investment grade without relying exclusively on external credit ratings;**
- **Adequately assessed whether the instrument's cash flows, risks, and potential returns continue to fit within its investment strategy; and**
- **Obtained sufficient documentation to make an informed investment decision.**

24. Determine whether management's method of evaluating and selecting authorized securities dealers, investment bankers, and brokers is appropriate. When selecting a dealer, investment banker, or broker, prudent management generally reviews:

- **The firm's current financial information, such as annual reports and credit reports, and evaluate its ability to honor commitments;**
- **The firm's general reputation by contacting previous or current customers; and**
- **Information from state or federal securities regulators and industry self-regulatory organizations, such as FINRA, concerning any formal enforcement actions against the dealer, its affiliates, or associated personnel.**

CREDIT RISK

Procedures 27-31 apply to institutions that adopted ASU 2016-13. Procedures 32-35 apply to institutions that did not adopt ASU 2016-13. Procedures 25-26 and 36-41 apply to all institutions.

25. Determine whether management's pre-purchase and ongoing credit analysis is commensurate with the risk of the instrument.[4]

[3] The same level of pre-purchase analysis may not be appropriate for all investment instruments. It may be appropriate to conduct less analysis for noncomplex and standardized instruments, the risks of which are well known to the institution, than for complex, nonstandard, or volatile instruments. Detailed pre-purchase analysis and documentation may be appropriate for investments in relatively complex instruments, nonstandard instruments, and potentially volatile instruments.

[4] The depth of the due diligence reflects the security's credit quality, complexity, and size. For example, for structured instruments, pre-purchase and ongoing credit risk analysis typically enables management to understand the characteristics of the underlying collateral, the securitization structure (such as its cash waterfall and performance triggers), and how the instrument may perform under stressed scenarios. If credit analysis is outsourced to third parties, management should verify the third party's independence, understand its credit analysis methodology, and confirm the adequacy of that methodology.

26. Determine whether management's credit analysis and risk limits for repurchase agreements and counterparties are appropriate.[5]
27. For HTM debt securities, review and assess procedures, practices, and policies regarding the allowance for credit losses (ACL). • **Determine whether the ACL evaluation process is completed at least quarterly and verify that appropriate documentation is maintained to support management's assumptions, valuations, and judgements.[6]** • **Evaluate the institution's ACL policies and procedures. Assess the loss estimation method(s) used to arrive at overall estimates of ACLs, including the documentation supporting the reasonableness of management's assumptions, valuations, and judgements.** • **Evaluate whether management has appropriately considered historical loss information, current conditions, and reasonable and supportable forecasts, including significant qualitative factors that affect the collectability of the HTM debt securities portfolio.** • **Determine whether management evaluates expected losses on a collective basis when HTM debt securities share similar risk characteristics. If an HTM debt security does not share similar risk characteristics with other assets, expected credit losses for that security should be evaluated individually.** • **Evaluate the institution's policies and procedures for determining when HTM debt securities have zero expected credit losses. Examples of HTM debt securities that may result in expectations of zero credit loss include U.S. Treasury securities, as well as mortgage-backed securities issued and guaranteed by the Government National Mortgage Association, the Federal Home Loan Mortgage Corporation, and the Federal National Mortgage Association.**
28. Determine the method(s) used by management to measure the expected collectibility of HTM debt securities, and consider whether management maintains appropriate supporting documentation for the assumptions and estimates used.
29. For available-for-sale (AFS) debt securities, review and assess the institution's procedures, practices, and policies regarding the identification of impairment in the investment portfolio and the ACL. Impairment is assessed at the individual security level. • **Verify whether management determines at least each reporting period whether an individual AFS debt security's decline in fair value below amortized cost has resulted from a credit loss or other factors.**

[5] For more information, refer to the FFIEC Policy Statement on Repurchase Agreements of Depository Institutions with Securities Dealers and Others.

[6] Refer to the 2020 Interagency Policy Statement on Allowances for Credit Losses.

- **Determine how management estimated the portion of the decline in fair value that was attributable to the credit loss (i.e., did management compare the present value of cash flows expected from the security with its amortized cost).**
- **Determine whether the present value calculation included management's best estimate based on past events, current conditions, and a reasonable and supportable forecast. Verify the following:**
  - **The interest rate used to discount the cash flow is the effective interest rate on the AFS debt security when it was acquired (at inception) or the current accretable yield; and**
  - **Forecasts of future cash flows, such as:**
    - **The financial and operating condition of the issuer,**
    - **Reasonableness of estimates of expected default and recovery rates,**
    - **The value and characteristics of any underlying collateral securing the AFS debt security, and**
    - **Remaining payment terms of the debt security.**
- **Determine whether the institution's credit loss estimate is limited to the amount that the fair value is less than the amortized cost on the security (i.e., the fair value floor).**

30. Determine whether management intends to sell an AFS debt security, or whether it is more likely than not management will be required to sell a security before the recovery of its amortized cost.[7]

- **If management does not intend to sell the AFS debt security, or if it is more likely than not management will not be required to sell the AFS debt security before recovery of its amortized cost basis, determine whether the estimate of credit loss is recorded through an ACL with a charge to the provision for credit losses for the credit loss component in the decline in fair value. Determine whether any non-credit component in the decline in fair value is properly recorded as a fair value adjustment in other comprehensive income net of tax.**
- **If management intends to sell the AFS debt security or if it is more likely than not that management will be required to sell the AFS debt security before recovery of its amortized cost basis, determine whether management charged off any amount that was recorded as an ACL. Determine whether any additional decline in fair value that was not charged off through the ACL was charged down to fair value through earnings.**

31. Determine whether the overall level of the ACL for HTM and AFS debt securities is appropriate and reasonable. Assess management's implementation of policies, procedures, processes, and controls to maintain an appropriate ACL on HTM and AFS debt securities.

32. Review and assess the institution's procedures, practices, and policies regarding the identification of OTTI (other than temporary impairment) in the investment portfolio.

- **Determine whether management ascertains, at least quarterly, whether a decline in an individual debt security's fair value below its amortized cost is temporary or other-than-temporary.**

[7] Refer to ASC paragraphs 326-30-55-1- through 55-2 for more information pertaining to this assessment.

- **If the current fair value of the security is lower than its amortized cost basis, verify consistency with accounting rules under ASC 320-10-35.**
- **Determine whether management's OTTI analysis addresses the following:**
  - **The length of time and the extent to which the fair value has been less than the amortized cost;**
  - **Adverse conditions specifically related to the security, industry, or geographic area;**
  - **The historical and implied volatility of the fair value of the security;**
  - **The payment structure of the debt security and the likelihood of the issuer being able to make payments that may increase in the future;**
  - **Failure of the issuer of the security to make scheduled interest or principal payments;**
  - **A significant deterioration in the earnings performance, risk profile, asset quality, or business prospects of the investee;**
  - **Significant adverse change(s) in the regulatory, economic, or technological environment of the investee;**
  - **Factors that raise material concern about the investee's financial capacity, such as negative cash flow from operations, and working capital deficiencies, non-compliance with debt covenants.**

33. Determine whether OTTI exists by considering whether the institution expects to recover the entire amortized cost basis of the security.

- **If an institution is unable to assert that it will recover its amortized cost basis, an OTTI is considered to have occurred.**
- **In assessing whether the entire amortized cost basis of the security will be recovered, an institution may compare the present value of cash flows expected to be collected from the security with the amortized cost.**
- **If the present value of cash flows expected to be collected is less than the amortized cost basis of the security, a credit loss exists and an OTTI is considered to have occurred.**

34. Determine whether management intends to sell any OTTI security or if it is more likely than not that management will be required to sell any OTTI security before recovery of its amortized costs basis. Ensure any impact to earnings is appropriately reflected.

- **If a credit loss exists, and management intends to sell the OTTI debt security, or it is more likely than not that management will be required to sell the OTTI debt security before recovery of its amortized cost basis, the difference between the security's amortized cost basis and its fair value at the balance sheet date must be recognized in earnings.**
- **If a credit loss exists, and management does not intend to sell the OTTI security and it is *not* more likely than not that management will be required to sell the OTTI debt security before recovery of its amortized cost basis less any current-period credit loss that exists, the amount of the total OTTI related to the credit loss must be recognized in earnings, but the amount of the total impairment related to other factors must be recognized in other comprehensive income, net of applicable taxes.**

35. Determine whether management uses discounted cash flow analysis to identify credit impairment.[8] Verify the following:

- **The interest rate used to discount the cash flows is the effective interest rate on the security when it was acquired (at inception) or current accretable yield; and**
- **Assumptions affecting forecasts of future cash flows, such as:**
  - **The financial and operating condition of the issuer,**
  - **Reasonableness of estimates of expected default and recovery rates,**
  - **The value and characteristics of any underlying collateral securing the debt security, and**
  - **Remaining payment terms of the security.**

36. Determine whether all equity securities are measured at fair value through net income.[9] Determine whether:

- **All equity securities are properly measured at fair value at least quarterly, unless the practical expedient for non-marketable equity securities was elected.**
- **Management elected the practical expedient approach for any non-marketable equity securities, such as bankers' bank stock. If so, determine whether management appropriately adjusts these non-marketable equity securities for impairment, if any, and for subsequent movements in an observable price change. Any price adjustment is required to be made on the date of the observable price change.**

37. Determine whether management's counterparty credit analysis is adequate for off-balance-sheet derivatives. The analysis generally includes:

- **Identification of counterparties with material credit risk,**
- **Review of counterparty compliance with collateral agreements, and**
- **Review of netting agreements for capital calculations for institutions that report risk-based capital ratios.**

38. Determine whether the process for setting credit limits for issuers and counterparties is appropriate.

39. Determine whether the process for monitoring ongoing credit risk exposure is appropriate.

[8] A credit loss exists when the present value of the cash flows expected to be collected on a debt security is less than its amortized cost.

[9] Federal Home Loan Bank and Federal Reserve Bank stock are carried at cost and not subject to this accounting treatment.

40. Determine whether concentrations of credit exist in the institution's portfolio(s).
41. Determine whether credit risk exposure is significant relative to earnings, capital, and risk limits.
Note: Market, liquidity, and legal risk in the securities and derivatives portfolios also may be addressed by other examination team members with those findings documented in other ED Modules. If that is the case, coordinate the completion of the Market, Liquidity, and Legal Risk sections below with the appropriate examination team members.
MARKET RISK
42. Assess current appreciation or depreciation relative to earnings, capital, and risk limits.
43. Determine whether market risks are significant relative to earnings, capital, and risk limits. Consult with the examiner in charge of market risk.
44. Determine whether the market risk measurement system properly identifies and measures material risks. Appropriate systems generally: • **Identify and measure the price sensitivity of high duration, structured, or otherwise complex securities, including those with embedded options;** • **Incorporate stress testing with interest rate shocks large enough to measure realistic potential market movements and risk;** • **Adjust changes in instruments' prices when interest rate movements exceed 100 basis points, to account for the effect of convexity; and** • **Subject instruments that may be exposed to risk from changes in the shape of the yield curve (e.g., dual index bonds) to nonparallel interest rate shocks.**
45. Determine whether management has assessed the effectiveness of any risk reduction strategies implemented by management (e.g. hedging).
LIQUIDITY RISK
46. Determine whether the cash flows from periodic payments and maturing securities are consistent with liquidity objectives and projections.

47. Determine whether liquidity risk from investment activities is significant relative to earnings, capital, and risk limits.

48. Determine whether the pricing process provides timely, accurate, and objective data by:

- **Confirming that management periodically obtains pricing information from an independent source,**
- **Assessing whether management consistently applies an approach to pricing illiquid or complex instruments, and**
- **Verifying whether management obtains valuation estimates for illiquid or complex securities from more than one source.**

49. Determine whether management periodically reviews the assumptions used to calculate fair values for instruments that do not have readily observable market prices.

50. For off-balance-sheet derivatives, determine whether management assesses market factors, such as the number of market makers, transaction volumes, and contract liquidity before engaging in such derivative transactions.

51. Determine whether the volume of pledged securities, depreciated securities, or securities with limited marketability affect the institution's overall financial condition.

52. Determine the adequacy of the process for valuing derivatives positions.

LEGAL RISK

53. For off-balance-sheet derivatives, determine whether management properly documents the transactions through contracts and appropriate legal staff assesses the enforceability of those contracts.

Securities and Derivatives Classifications

54. Determine whether the investment portfolio contains any non-investment grade assets. Classify these assets as appropriate. Refer to the Uniform Agreement on the Classification and Appraisal of Securities Held by Financial Institutions (Financial Institution Letter 51-2013, and SR Letter 13-18).
55. Determine whether management has invested in any instrument that is highly sensitive to changing interest rates or is subject to high prepayment risk and may not return the institution's initial principal investment (e.g., interest only stripped MBS and principal-linked structured notes). Classify these instruments as appropriate.
56. Determine whether there are any material accounting errors in the financial statements that warrant adverse classification.
57. Estimate the potential loss for all derivative contracts for which counterparty performance is not sufficiently assured.
Board and Senior Management Oversight
GENERAL
58. Assess management's compliance with policies and risk limits established by the board.
59. Determine whether board reports appropriately identify and measure risk exposure and performance resulting from the securities and derivatives portfolio(s). Generally, effective board reports: • **Summarize all investment activity,** • **Describe investment portfolio risks and returns,** • **Indicate management's compliance with the investment policy and all risk limits,** • **List exceptions to internal policy,** • **Identify and describe instances of noncompliance with regulatory requirements, and** • **Discuss the effectiveness of derivatives used by management as part of a strategy to modify market risk.**
60. Determine whether board meeting minutes and relevant committee meeting minutes indicate appropriate oversight of securities and derivatives activities.

61. Through discussions with management, determine whether management has sufficient experience and expertise to understand, measure, monitor, and control risks in the investment portfolio and how those risks fit within the overall business strategy. When applicable, assess management's

- **Understanding of tranche structures and performance triggers related to any structured securities in the institution's portfolio,**
- **Monitoring of the performance of the underlying collateral, and**
- **Understanding of the impact that collateral deterioration may have on the security's performance.**

62. Determine whether current and planned investment strategies are consistent with the institution's strategic plan.

63. Determine whether the board or senior management has established an agreement delegating some aspects of the investment process to a third party.[10] Prior to establishing such an agreement, management should conduct appropriate due diligence and evaluate the third party's reputation, performance, creditworthiness, and compliance record. If such an agreement exists, determine whether it addresses the following items:

- **Compensation,**
- **Approved broker-dealers,**
- **Investment goals,**
- **Approved activities and investments,**
- **Risk limits,**
- **Risk and performance measurements,**
- **Reporting requirements,**
- **Settlement practices, and**
- **Independent reviews.**

COMPLIANCE WITH LAWS AND ACCOUNTING STANDARDS

64. Determine whether management adheres to U.S. GAAP. Some issues that may merit particular attention include interest accruals, principal amortization, premium amortization, and discount accretion.

- **Consider sampling trade tickets to validate purchase and sale price accuracy.**
- **Consider sampling interest accrual calculations or audits to validate accuracy of those calculations.**
- **Consider sampling premium amortization and discount accretion transactions.**
- **Review any procedures for making periodic adjustments for amortizing investments to assess appropriateness.**

[10] Management should not delegate complete investment authority to a third party and is expected to provide adequate oversight over aspects it does delegate.

65. Determine whether management complies with applicable laws and regulations, which may include the following: • **Various parts of title 12 of the Code of Federal Regulations (e.g., 12 CFR 1, 160, 351);** • **Government Securities Act of 1986 (in the Miscellaneous Statutes and Regulations), and related regulations issued by the U.S. Department of Treasury, which address requirements related to financial responsibility, protection of customer securities and balances, and recordkeeping and reporting of brokers and dealers in government securities; and** • **State laws and regulations.**
66. Determine whether management has implemented accounting principles regarding securities appropriately. Consider the following: • **Uniform Agreement on the Classification and Appraisal of Securities Held by Financial Institutions (Financial Institution Letter 51-2013 and SR Letter 13-18); and** • **FFIEC Supervisory Policy Statement on Investment Securities and End-User Derivatives Activities (Financial Institutions Letter 45-98 and SR Letter 98-12).**
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

CAPITAL ADEQUACY

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. **Has management taken sufficient action to address capital deficiencies?** ***Refer to Expanded Analysis Procedures #1-18.***

E.2. **Are capital deficiencies immaterial to the bank's condition?** ***Refer to Expanded Analysis Procedures #1-18.*** **If capital ratios are below regulatory minimums, proceed to *Impact Analysis*.**

CAPITAL ADEQUACY
Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Policies and Procedures

1. Determine why exceptions to internal policies or regulatory capital requirements exist. Consider whether management:

- **Overlooked issues,**
- **Is unfamiliar with or disregarded regulatory requirements, or**
- **Is unfamiliar with or disregarded established internal policies.**

2. Determine whether management commits to and supports the adoption of appropriate controls and monitoring practices that will ensure that internal policy and procedure guidelines will be followed in the future. Determine whether proposed controls, if any, are reasonable.

3. Evaluate management's response to examiner and auditor recommendations.

Internal Controls

4. Review general ledger transactions since the prior examination. Obtain or prepare a detailed capital reconciliation and scrutinize entries for appropriateness.

5. Review procedures regarding stock certificates to assess the following controls:

- **Unissued stock certificates are under dual control, and**
- **Redeemed stock certificates are properly controlled and canceled.**

Audit or Independent Review

6. Research all inadequacies cited in audit or independent reviews to determine the underlying cause(s).

7. Evaluate the materiality of any deficiencies disclosed in the audit or independent reviews.

Information and Communication Systems

8. Research the inaccuracies or inadequacies in reporting systems to determine underlying cause.

9. Evaluate the appropriateness of reports distributed to management and the board.

10. Determine whether any of the inaccuracies cited above compromise management's planning efforts or negatively affect the overall effectiveness of implementing strategic initiatives.

11. Consider the implications of employee stock ownership plans (ESOPs) and associated accounting procedures. Refer to the Consolidated Reports of Condition Instructions. (FDIC: Refer to Advisory Opinions 81-15, 84-22, 90-18, 91-33, and 93-75.)

Earnings Considerations

12. If there is significant uncertainty whether the bank's future performance will be satisfactory, estimate future capital levels under applicable and to-be-phased-in regulatory capital rules using information collected during the examination and discussions with management (such as, additional provision expenses, estimated impairment losses related to goodwill or core deposit intangibles, fees paid to the parent company, and non-recurring items).

13. Determine whether there is undue pressure to pay dividends. Items to consider include:

- **The holding company's financial condition and contractual obligations,**
- **The financial condition of affiliates,**
- **Stockholder or market pressure, and**
- **Capital distribution and bonus limitations under the capital conservation buffer (effective phase-in starting January 1, 2016).**

Risk Profile Considerations

14. Validate the following calculations if reported compliance with risk-based capital minimums is marginal: • **Risk-weighted assets, and** • **Capital ratios.**
15. If high levels of off-balance sheet activities exist, review supporting documentation and determine whether management properly monitors these exposures. (Note: Monitoring of concentrations should include contingent liabilities.)
16. Assess the adequacy of blanket bond insurance.
17. Review lawsuits (legal opinions or other documentation) that involve the bank or management (focus primarily on cases involving insiders or significant dollar amounts).
18. If capital exposure is significant, assess the board and management's capacity to mitigate or remediate the exposure in the near term (such as raising additional capital, selling assets, restructuring the balance sheet, etc.). Prospective capital raises should conform to the criteria mandated in the capital rules. ***Note: The rules are codified at Title 12 of the Code of Federal Regulations (CFR) for the FRB in Part 217 and codified at Title 12 of the CFR for the FDIC in Part 324.***
End of Expanded Analysis. If needed, Continue to Impact Analysis.

CAPITAL ADEQUACY

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Assess the impact current capital levels may have on the future viability of the bank. • **Assess management's ability to reverse deteriorating trends and augment capital through earnings.** • **Assess the bank's ability to raise capital from existing shareholders, by issuing new capital instruments, or accessing alternative sources of capital.** • **If the capital level and trend raise going-concern issues, estimate time to reach insolvency as well as time to reach the 2 percent of Tangible Equity to Total Assets.**
2. Determine the need for administrative or enforcement actions, formulate specific recommendations, and discuss concerns with appropriate regulatory supervisors.
3. After discussing concerns with appropriate regulatory supervisors, discuss potential regulatory responses with management and the board. Topics of discussion may include: • **Formal or informal enforcement actions or capital directives;** • **The submission of a capital restoration plan (for banks with less than the minimum leverage capital requirement);** • **Written agreements to increase capital to acceptable levels (for banks with less than a 2 percent of Tier 1 Tangible Equity to Total Assets ratio as of January 1, 2015; and** • **Other requirements or restrictions under PCA guidelines (for banks that are undercapitalized, significantly undercapitalized, or critically undercapitalized).**
End of Impact Analysis.

EARNINGS

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1.	**Are management and control of earnings functions satisfactory?** ***Refer to Expanded Analysis Procedures #1-28.***
E.2.	**Are earnings deficiencies or fluctuations immaterial?** ***Refer to Expanded Analysis Procedures #1-28.***

EARNINGS

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Profit Planning and Budgeting Practices

1. **Assess the significance and determine causes of budgeting deficiencies. Address areas that do not appear realistic in the examination report.**

2. **When appropriate, consider requesting that management revise budget projections using modified assumptions. Revisions to the budget should be presented to the board for approval.**

Internal Controls

3. **Determine the causes of inadequate accounting or reporting practices and evaluate the implications to earnings performance and as appropriate, stock price, and pending or needed capital raises.**

4. **Verify source documents against general ledger entries to determine whether errors on Consolidated Reports of Condition and Income (Call Reports) influence performance ratio levels and trends.**

5. **Consider transaction testing to verify the authorization, propriety, and accuracy of reviewed activity if internal controls are deemed insufficient.**

Audit or Independent Review

6. **Review audit or independent review workpapers and consider expanding examination activities in the areas of concern.**

7. **Research deficiencies cited in audit or independent review reports to determine the underlying causes and assess management's corrective efforts.**

Information and Communication Systems

8. Assess the significance of internal management reporting deficiencies and determine underlying causes.

9. Determine needed changes in report distribution throughout the organization.

10. Consider performing a detailed review of the Call Report where significant errors are indicated. Request that filings be amended where identified errors are material, and revise Report of Examination data where necessary.

Ratio and Trend Analysis

11. Determine the underlying reasons for a low or erratic return on average assets and discuss management's plans to improve or stabilize earnings performance.

12. Determine the extent a low or inconsistent net interest margin results from composition and yields of the loan and investment portfolios versus composition and costs of funding sources.

13. Where earnings concerns derive from interest income levels, identify the underlying cause(s). Potential reasons for low interest income levels may be:

- **The level and trend of nonaccrual loans and other nonearning assets,**
- **Ineffective asset pricing strategies,**
- **Investment decisions,**
- **Asset repricing structure and excessive interest rate risk exposure,**
- **Asset distribution,**
- **Changes in asset mix, and**
- **Competition.**

14. If interest income levels are fluctuating significantly, review IRRSA (FDIC), FOCUS (FRB), or other interest rate reports for possible interest rate risk exposure. Coordinate with examiners reviewing sensitivity to market risk.

15. Where earnings concerns derive from interest expense levels, determine the underlying causes, such as:

- **Use of high-cost borrowings;**
- **Concentration of high-cost deposits;**
- **Liability repricing structure and excessive interest rate risk exposure;**
- **Migration of core deposits to higher rate products;**
- **Ineffective funding strategies;**
- **Competition; and**
- **Low levels of core deposits.**

16. When earnings concerns derive from non-interest expenses, determine the underlying causes. Examples include:

- **Excessive personnel expenses, including unreasonable incentive compensation plans relative to the bank's business model, risk profile, complexity, and earnings performance;**
- **Unusually high personnel benefits;**
- **Inaccurate reporting of employee benefits;**
- **Inadequate authorization by the board of directors of all material employee benefits;**
- **Inefficient staffing levels relative to the organization's business lines and risk profile;**
- **Over-reduction of personnel (downsizing) and occupancy expense that negatively affect management's ability to prudently conduct and supervise banking activities;**
- **Unusually high expenses for premises and fixed assets (depreciation/amortization, property insurance, real estate taxes, etc.); and**
- **Abnormal impact of write-downs of intangible assets.**

17. Assess fixed asset investments and lease payments, paying particular attention to any insider or intercompany transactions (e.g., purchase of bank vehicles from a director's auto dealership, leasing office space to or from the parent company).

18. Review service fees paid to affiliated parties and others to ensure compliance with applicable laws or regulations. Review and assess service agreements or intercompany transaction agreements and compliance therewith.

19. Review legal expenses and identify underlying causes of increased legal charges. Discuss with the responsible examiner the bank's inherent level of litigation risk, adequacy of litigation risk management practices, and composite risk level and trend. Consider the following situations, which can elevate legal expenses:

- **Administration and disposal of problem assets;**

- **Involvement in significant litigation; and**
- **Significant changes in the bank's strategic objectives (purchases or mergers).**

20. Review the sources or activities generating significant volumes of non-interest income and determine whether the current volume is sustainable (e.g., insurance activities or mortgage banking programs).

21. Determine management's rationale or motivation for increased reliance on non-interest income. Consider the strategic decisions that support an increased level of non-interest income (such as new service or business ventures) and whether management prudently researched the risks and rewards of such initiative(s).

22. If there are asset quality concerns, analyze (or discuss with examiners reviewing asset quality) the potential impact to operating profitability from:

- **Increasing levels of nonperforming assets;**
- **Escalating administrative, legal, and collection expenses; and**
- **Increasing provisions for loan losses or inadequate reserves.**

23. Determine whether gains from asset sales result from strategic asset restructurings or a short-term response to improve earnings. If the latter, assess the sustainability of this income source and evaluate the potential, long-term affects to core earnings.

24. Review erratic or unusually large tax levels to determine the underlying reason. High or fluctuating tax liabilities may be indicative of:

- **Inaccurate financial reporting;**
- **Inaccurate accounting for applicable taxes;**
- **Poor tax planning; and/or**
- **A change in tax basis.**

25. Verify internal tax calculations, assess the timing of required interim payments, and review compliance with intercompany tax-sharing agreements and applicable laws or regulations.

Board and Senior Management Supervision
26. Where applicable, determine why previously identified deficiencies remain uncorrected.
27. Determine the reasons for poor compliance with internal policy guidelines, governing accounting standards, applicable regulations, or formal/informal enforcement actions.
28. Identify needed corrective actions and assess the adequacy and viability of management's commitments.
End of Expanded Analysis. If needed, Continue to Impact Analysis.

EARNINGS

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Analyze the impact of earnings deficiencies on the bank's overall condition. Estimate future earnings levels and calculate the impact on capital levels and access to liquidity sources if these performance issues continue.
2. Determine the need for administrative or enforcement actions, formulate specific recommendations, and advise the appropriate supervisory officials on the nature of the concerns.
3. Discuss the possibility of administrative or enforcement actions with senior management and the board of directors.
End of Impact Analysis.

LIQUIDITY

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. Are deficiencies immaterial to management's supervision of liquidity? ***Refer to Expanded Analysis Procedures #1-16.***

E.2. Are liquidity deficiencies immaterial to the bank's financial condition? ***Refer to Expanded Analysis Procedures #1-16.***

LIQUIDITY
Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Policies, Procedures, and Risk Limits

1. **Investigate why the bank's policies and procedures are deficient based on the Core Analysis. Discuss the deficiencies with management. Consider whether management:**
   - **Overlooked issues;**
   - **Is unfamiliar with prudent liquidity guidelines and procedures; or**
   - **Has not been responsive to prior recommendations to create or enhance policies and procedures.**

2. **If management is deficient in following the bank's policies and procedures, determine the reasons. Possible reasons include:**
   - **Lack of awareness of policies;**
   - **Disregard for established policies;**
   - **Misunderstanding of policy guidelines; and**
   - **Poor internal communication of revisions to policies and procedures.**

3. **Determine whether management commits to and supports proper controls and monitoring to ensure the bank's policy guidelines are followed in the future. Determine whether proposed controls and implementation periods are reasonable.**

Information and Communication Systems

4. **Determine the validity of internal liquidity reports and ratios by verifying the amounts to the bank's general or subsidiary ledgers, budgets, projections, or other records.**

5. **Assess the scope and frequency of internal reports for measuring and monitoring liquidity. Reportable items may include, but are not limited to:**
   - **Cash flow gaps,**
   - **Asset and funding concentrations,**
   - **Critical assumptions used in cash flow projections,**
   - **Key early warning or risk indicators,**
   - **Funding availability,**

- **Status of contingent funding sources,**
- **Available collateral, and**
- **Management of collateral usage.**

6. If management is not properly monitoring the bank's liquidity position, identify weaknesses and formulate recommendations to correct deficiencies. Prudent liquidity management techniques may include:

- **Monitoring and managing seasonal and cyclical factors that may cause loan and deposit levels to move in opposite directions. Failure to monitor these factors may cause insufficient liquidity to meet loan demand or deposit withdrawals;**
- **Monitoring intraday liquidity and applicable collateral requirements especially for institutions with material settlement and clearing activities;**
- **Monitoring daily cash letters and long-term liquidity needs through appropriate forecasting;**
- **Monitoring changes in economic conditions;**
- **Planning for contingencies including identifying minimum and maximum liquidity needs and weighing alternative courses of action;**
- **Monitoring the price and availability of credit and the level of liquid assets available to meet funding requirements; and**
- **Monitoring the incremental cost of liquidity, whether gained through asset management, liability management, or a combination of both.**

Analysis of Funding Sources and Uses

7. Consider completing a cash flow projection if liquidity requirements are significant.

- **Determine whether cash needs are likely to exceed available funding sources, and**
- **Determine how management plans to meet significant liquidity demands.**

8. If specific deposit rates are significantly above market rates, determine whether the bank is soliciting brokered deposits or experiencing pricing pressures from competitors.

- **Review internally prepared rate sheets, reflecting the bank's and competitors' rates, if available.**
- **Review interest rates for area banks.**
- **Verify compliance with interest rate restrictions that apply to less than well capitalized banks.**

9. If the Core Analysis indicates the bank relies on concentrations in unstable funding sources for growing a program and leveraging capital, perform an in-depth analysis of the sources to determine the extent of reliance; if excessive, assess management's plan to stabilize or reduce risk exposure. As needed:

- **Determine whether management understands its strategy;**

- **Perform migration analysis using internally prepared deposit schedules, the Uniform Bank Performance Reports, or Interest Rate Risk Standard Analysis (IRRSA) (FDIC). Determine whether certain deposit accounts are experiencing declines, the reasons for the declines, and the potential liquidity risk;** - **Compare deposit volumes with rate histories to see whether a significant correlation exists and how future events may impact these rates and volumes;** - **Review deposit accounts for any significant out-of-area deposits. Determine whether these deposits are stable funding sources or the customers are chasing attractive rates; and** - **Review insider deposit relationships.**
10. Determine whether the bank has securities that may be used for sale under agreements to repurchase and whether repurchase arrangements exist.
11. Determine whether the bank has adequate documentation to support lines of credit from other financial institutions.
12. Determine whether contingency funding plans, including funding commitments from other financial institutions, are periodically tested.
13. Determine whether credit lines contain material adverse change clauses that would preclude their use in problem situations.
14. Assess management's process for identifying, monitoring, and controlling risks associated with wholesale and rate-sensitive funding. When appropriate, assess management's plan to stabilize or reduce liquidity risks associated with complex or rate-sensitive funding.
15. For less than well-capitalized banks, assess management's plan to comply with Brokered Deposit and Interest Rate Restrictions in Section 29 of the Federal Deposit Insurance Act as implemented by Section 337.6 of the FDIC Rules and Regulations. **FDIC: Refer to FIL-42-2016 FAQ on Identifying, Accepting, and Reporting Brokered Deposits; and the Brokered and High-Rate Deposits ED Module.**

16. Determine whether appropriate stress testing was completed either internally or by a third party. Appropriate stress testing generally: • **Is completed prior to obtaining wholesale or rate sensitive funding;** • **Covers a reasonable range of contractual triggers and external events;** • **Includes the potential impact of these events on individual wholesale funding sources, the assets funded, and on the overall liquidity of the institution; and,** • **Provides for full disclosure to management regarding the risks associated with the wholesale funding.**
End of Expanded Analysis. If needed, Continue to Impact Analysis.

LIQUIDITY

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. For deficiencies identified in the Core and Expanded Analysis, measure the effect on the bank's financial condition.
2. Determine how management plans to meet daily cash needs if liquidity is severely strained.
3. Assess whether the bank can continue to operate profitably. Assess whether severe liquidity problems will impair growth objectives, profits, and the bank's reputation to a point where the bank's future viability is questionable.
4. Determine the need for administrative and enforcement actions, formulate specific recommendations, and advise appropriate supervisors on the nature of the concerns.
5. Discuss the possibility of administrative and enforcement actions with appropriate supervisory officials, executive management, and the board of directors.
End of Impact Analysis.

LOAN OPERATIONS REVIEW

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. Are deficiencies immaterial to the supervision of the lending function? ***Refer to Expanded Analysis Procedures #1-47.***

E.2. Are deficiencies immaterial to the bank's condition? ***Refer to Expanded Analysis Procedures #1-47.***

LOAN OPERATIONS REVIEW

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Policy Considerations

1. **Investigate why the lending and loan review policy or procedure deficiencies identified in the Core Analysis exist. Discuss with management its response to examiner recommendations. Possible reasons for policy deficiencies may include the following:**
   - **Management overlooked these issues,**
   - **Management is unfamiliar with prudent loan and loan-review guidelines and procedures, or**
   - **Management is unwilling to create or enhance policies and procedures.**

2. **If poor compliance with policies and procedures exist, determine the reasons. Possible reasons are detailed below:**
   - **Poor internal communication of policy and procedures or subsequent revisions,**
   - **Lack of awareness of policy existence,**
   - **Disregard for established policies, and**
   - **Misunderstanding of policy or procedures.**

3. **Determine whether management commits to and supports proper controls and monitoring to ensure policy and procedures are followed in the future. Determine whether proposed controls, if any, are reasonable.**

Internal Controls

4. **Determine the underlying cause of internal control deficiencies identified within the Core Analysis section.**

5. **If internal loan reconcilements are inadequate, perform loan account reconcilements.**

6. **Determine whether management gives proper attention to out-of-balance conditions regardless of the amount.**

7. Evaluate the ability of loan records to provide satisfactory audit trails that allow for the tracing of transactions from initiation to disposition.

8. Consider tracing loan proceeds for a sample of loans including large and unusual credits and ascertain the adequacy of the disbursement controls.

9. Determine whether loan terms and other information on new loans are checked for accuracy and verified against loan trial reports.

10. Determine that two employees are required to effect a status change in a customer account record.

11. Determine whether source documents supporting loan modifications are supported by proper authorizations.

12. Determine whether supervisory overrides or approvals are required to perform the following, or similar, functions:

- **Processing payments on loans and leases in the process of foreclosure or other legal action, and**
- **Waiving late charges or other penalties.**

13. Determine whether loan officers are prohibited from processing loan payments.

14. Determine whether the employees who receive or release collateral to borrowers are different from those who post related entries to the collateral register and general ledger. In addition, determine whether appropriate records are maintained.

15. Determine whether collateral receipts exist and identify each item retained by the bank.

16. **Determine whether negotiable collateral is under dual control.**

17. **Determine whether discount, interest, commission, and fee computations are compared or tested to initial records by employees who cannot originate entries.**

18. **Determine the extent of collateral attachment problems.**

19. **Determine whether the financial institution is identified as a loss payee on the collateral insurance coverages.**

20. **Determine whether tickler systems for insurance, taxes, and collateral filings are adequate.**

21. **Determine whether officers and employees are strictly prohibited from holding blank signed notes in anticipation of future borrowings.**

22. **Determine whether paid notes are canceled and promptly returned to customers.**

23. **Determine whether charged-off notes are adequately segregated, controlled, and verified.**

24. **Determine whether loan charge-offs are approved and reported to the board or appropriate committee.**

25. **Determine whether the record of charged-off loans is maintained by a person other than the one who has custody of the notes or receives payments.**

26. Determine whether subsidiary payment records and files for serviced loans are adequately segregated and identifiable.

27. Review situations where loans are purchased and sold between institutions and evaluate the appropriateness of reciprocal arrangements.

Audit or Independent Review

28. Research the inaccuracies or inadequacies cited in audit or independent review findings to determine the underlying cause.

Information and Communication Systems

29. Research the inaccuracies or inadequacies in the loan reporting systems to determine the underlying cause.

30. Determine the appropriate distribution of reports to operating management.

31. Determine whether any of the inaccuracies cited above compromise executive management's planning efforts and negatively impact the overall effectiveness of implementing strategic initiatives.

Credit Administration

32. If credits are funded that exceed established lending limits, determine why approval procedures were not followed.

33. Assess management’s plan for addressing staffing weaknesses.

34. Determine why collection and workout procedures are ineffective. Reasons for ineffective workout strategies and resolution of problem loans may include the following:

- **Inadequate or slow recognition of problem loans,**
- **Insufficient or inexperienced workout staff, and**
- **Management's reluctance to address problem loans and implement corrective action.**

Managerial Effectiveness

35. Determine the cause of any violations or non-compliance with internal policies and identify the responsible party or parties. Consider the following items:

- **Lack of familiarity with laws or regulations,**
- **Negligence,**
- **Misinterpretation, and**
- **Willful disregard or noncompliance.**

36. Determine why management has not addressed and corrected deficiencies cited by internal/external auditors, loan reviewers, and regulatory agencies.

End of Expanded Analysis.

LOAN OPERATIONS REVIEW

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine the impact of noted deficiencies on the institution's capital, earnings, and liquidity, and assess the future impact on the institution if these deficiencies continue.
2. Determine the impact of identified weaknesses in risk management practices on the institution's overall condition.
3. Determine the need for direct confirmation of loan accounts.
4. Determine the need for administrative and enforcement actions, formulate specific recommendations, and advise appropriate supervisors on the nature of the concerns. (FDIC: field office supervisor, regional office.)
5. Discuss the possibility of administrative and enforcement actions with executive management and the board of directors–after consultation with appropriate field and/or regional office personnel.
6. Evaluate the circumstances and facts surrounding risk management deficiencies and apparent violations. Consider potential recommendations for administrative actions, Civil Monetary Penalties, Suspicious Activity Reports, and law enforcement referrals as needed. (FDIC: Section 8 removal action; FRB: administrative hearing.)
End of Impact Analysis.

LOAN PORTFOLIO REVIEW

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. Are deficiencies immaterial to the supervision of the lending function? ***Refer to Expanded Analysis Procedures #1-20.***

E.2. Are deficiencies immaterial to the bank's condition? ***Refer to Expanded Analysis Procedures #1-20.***

LOAN PORTFOLIO REVIEW

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Identifying, Monitoring, and Reserving for Credit Risk

LOAN REVIEW

1. Evaluate the inadequacies in the loan review process to determine the underlying cause.

2. Expand loan sampling in order to gain a better understanding of the credit risk within the loan portfolio.

ALLOWANCE FOR LOAN AND LEASE LOSSES (ALLL) (or allowance for credit losses (ACL),[1] when applicable

When the overall ALLL (or ACL, when applicable) appears deficient, bank management should be directed to address the appropriateness of its ALLL (or ACL, when applicable) estimate and to provide additional allowances as necessary for estimated credit losses identified in the examination process that have not been included, or have not been fully included, in management's original ALLL (or ACL, when applicable) estimate.

Examiners should determine whether the bank's methodology could be utilized with adjustments to arrive at a reasonable and reliable estimate for additional needed provisions. If the bank's methodology can be utilized, examiners should direct bank management to make appropriate adjustments and use the most relevant information sources available to develop a reasonable estimate of the deficiency in the bank's ALLL (or ACL, when applicable). The information sources used should include examination loan review findings and publicly available data on real estate or other collateral values in the bank's lending area.

In the rare event, that the bank's methodology cannot be utilized even with adjustments (substantially inadequate loan review, material weakness in credit administration etc.) examiners should estimate the ALLL (or ACL, when applicable) deficiency in the absence of more relevant data. The selection and use of financial ratios or statistical models (utilizing bank-specific historical loss data) should be supported by sufficient analysis to demonstrate objective support for a short-term range of proxy estimates. However, such estimates based on industry or peer group information should only be used as a short-term proxy and cannot be accepted as a substitute for an effective ALLL (or ACL, when applicable) methodology. Bank management should be directed to correct deficiencies in their methodology as soon as possible.

Consider the following items in this section to determine an appropriate ALLL (or ACL, when applicable) level.

[1] **ACL replaces the term ALLL for those banks that adopted ASU 2016-13.**

3. **Determine if the ALLL (or ACL, when applicable) is sufficient to cover estimated credit losses on:**
   - **Loans classified Loss (in whole or in part) that have not yet been charged-off;**
   - **Loans classified Doubtful (without partial Loss classification);**
   - **All remaining adversely classified loans (without partial Loss or Doubtful classifications, either individually, if impaired under ASC Topic 310, or in groups);**
   - **Other problem loans (either individually, if impaired under ASC Topic 310, or in groups); and**
   - **Remaining categories of loans segmented into groups with similar risk characteristics.**

4. **Consider the bank's loan loss history in aggregate and by loan type.**
   - **Calculate the average loan loss history, generally for the past five years, using net loan chargeoffs to average total loans. Such data should available in year-end UBPRs.**
   - **Evaluate any aberrations in a specific year, and make adjustments as needed for current conditions to arrive at a realistic average that reflects loss expectations similar to current conditions.**
   - **Consider migration analysis.**

5. **Consider the most recent, average reserve coverage of nonperforming loans by state, rating, and charter.**

   Note: Care should be exercised when considering reserve coverage because these ratios compare banks' ALLLs (or ACL, when applicable) to the amount of these loans, but the ALLL (or ACL, when applicable) should cover the estimated credit losses on the nonperforming loans, which is an estimate of the net chargeoffs likely to be realized on the loans. Particularly for nonperforming loans that are collateralized, net chargeoffs are not likely to equal the entire amount of these loans.

6. **Consider the historical average of loan loss reserves to nonperforming loans for all banks within the region and the nation. (Reminder: Reserve coverage of nonperforming loans is typically higher at banks with sound loan portfolios. FDIC: Refer to the FDIC Quarterly Banking Profile.)**

7. **Consider the following factors to determine appropriate adjustments to the bank's average loss experience by loan type for nonclassified loans:**
   - **Degree of board or committee involvement, oversight, and control;**
   - **Expertise, training, and adequacy of loan staff;**
   - **Adequacy of and adherence to the bank's loan policy;**
   - **Effectiveness of collection procedures;**
   - **Adequacy of renewal and extension policies;**
   - **Adequacy of charge-off policies;**
   - **Effectiveness of internal loan review function;**
   - **Adequacy of appraisal procedures;**

- **Maintenance and analysis of financial information;**
- **Adequacy of documentation (other than financial information);**
- **Capitalization of interest;**
- **Over reliance on collateral values;**
- **Composition of the loan portfolio;** ***(Note: It may be appropriate to use different percentages for consumer, residential and commercial real estate, and commercial loans.)***
- **Existence of self-dealing and insider transactions;**
- **Level of classified loans and trend over past few examinations;**
- **Level and trend of internally identified loan problems;**
- **Level and trend of overdue and nonaccrual loans;**
- **General economic considerations (local, state, regional, national);**
- **Growth trends;**
- **Entry into new areas of lending;**
- **Extent of out-of-territory lending; and**
- **Adequacy of follow-up systems.**

(Note: If the bank uses a formula approach that includes both historical loss experience and adjustments for qualitative or environmental factors to determine an appropriate level for the ALLL (or ACL, when applicable), it may be feasible to use the internal formula in arriving at the estimated credit losses for these loans even though the overall system may be considered inadequate.)

Portfolio Quality

8. Determine the reasons for the current level of asset quality problems.

- **Evaluate the impact of local economic conditions on the loan portfolio.**
- **Determine if there are sectors of risk within the portfolio by either type of or concentrations of risk.**
- **Evaluate the impact of ineffective underwriting in new product areas on the level and severity of classifications or delinquencies.**
- **Determine that individual account officers as well as lending committees have appropriate lending authorities.**
- **Evaluate delinquency levels by individual account officers.**
- **Evaluate individual loan officers' experience levels and expertise.**

9. Based on the results of the above analysis, consider expanding the sample of loans (including off-balance sheet activities).

Managerial Effectiveness

APPLICABLE LAWS AND REGULATIONS

10. Determine the cause of any violations and identify responsible parties. Consider the following items:

- **Lack of familiarity with laws or regulations,**
- **Negligence,**
- **Misinterpretation, and**
- **Willful disregard or noncompliance.**

CREDIT ADMINISTRATION

11. Determine why collateral appraisals are not sufficient to support current loan advances.

12. Determine why management did not correct identified deficiencies. Consider whether:

- **Management overlooked issues,**
- **Management is unfamiliar with prudent loan portfolio practices and procedures, and**
- **Management is unwilling or unable to react to changing conditions.**

13. Determine why loan losses are not recognized in a timely manner. Reasons for not recognizing losses in a timely manner may include the following:

- **Inadequate identification or reporting of problem loans,**
- **Loss deferral motivated by earnings performance and bonus compensation, and**
- **Loss deferral motivated by poor financial condition.**

Other Loan Related Topics

OTHER REAL ESTATE (ORE)

14. Determine if management's non-compliance with regulations or accounting pronouncements are due to oversight, lack of requisite knowledge or experience, or a general disregard.

15. Compare expenses and income information contained in appraisals with the actual income and expenses of related income producing properties. Recalculate appraisal results using realistic assumptions, if necessary.

16. Investigate the deficiencies identified in managing foreclosed real estate.

17. Expand file sampling as necessary to accurately determine the quality of ORE. Where appropriate, consider conducting on-site inspections to assist in valuation and classification.
REPOSSESSION
18. Investigate the deficiencies identified in managing repossessed assets.
19. Expand file sampling as necessary to accurately determine the quality of repossessed assets. Where appropriate, consider physical inspections of the repossessed assets to assist in valuation and classification.
NON-LEDGER ASSETS
20. Determine the underlying reasons for asset write-offs.
End of Expanded Analysis. If needed, Continue to Impact Analysis.

LOAN PORTFOLIO MANAGEMENT AND REVIEW: GENERAL

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine the impact of noted deficiencies on the institution's capital, earnings, and liquidity, and assess the future impact on the institution if these deficiencies continue.
2. Assess the overall effectiveness of risk management practices in light of the identified deficiencies.
3. Determine the impact of an inadequate ALLL (or ACL, when applicable) on the bank's earnings and capital.
4. Determine the need for direct confirmation of loan accounts.
5. If administrative or enforcement actions appear necessary, form specific recommendations and discuss concerns with appropriate supervisors. (FDIC: field office supervisor, regional office.)
6. If approved by appropriate supervisors, discuss the possibility of administrative and enforcement actions with executive management and the board of directors.
7. Investigate the circumstances and facts surrounding apparent violations. When necessary, prepare recommendations for appropriate actions
End of Impact Analysis.

MANAGEMENT AND INTERNAL CONTROL EVALUATION

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. **Are management deficiencies or concerns immaterial?** ***Refer to Expanded Analysis Procedures #1-5.***

E.2. **Does management have the ability and commitment to implement corrective measures to effectively address deficiencies or concerns?** ***Refer to Expanded Analysis Procedures #1-5.***

MANAGEMENT AND INTERNAL CONTROL EVALUATION

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Expanded Analysis Procedures
1. Based on the volume and severity of weaknesses, consider citing, apparent violations or contraventions, as appropriate, listed under the Interagency Guidelines Establishing Standards for Safety and Soundness, FDIC: Part 364 Appendix A, or FRB: Appendix D, of Regulation H.
2. Determine the significance of insider abuses identified in other modules.
3. Determine the root cause of examination concerns with management or board oversight. Consider issues such as: • **Compliance with internal policies and applicable laws and regulations;** • **Inconsistencies with general safety and soundness tenets;** • **Adequacy of risk management practices, overall monitoring, management information systems, reporting processes, and audit programs;** • **Responsiveness to recommendations from auditors and supervisory authorities;** • **Rapid growth, and stressed or changing business conditions;** • **Effectiveness of mitigants in place to manage current business risks;** • **Management depth and succession;** • **Training and development of internal audit staff; and** • **Compensation practices.**
4. Assess management and the board's willingness and ability to correct deficiencies.
5. Determine if the viability of the organization is threatened by management's inability to correct problems and implement appropriate risk management practices.
End of Expanded Analysis. If needed, Continue to Impact Analysis.

MANAGEMENT AND INTERNAL CONTROL EVALUATION

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures

1. **Determine whether management deficiencies or suspicious activities have resulted in or could result in increased asset quality problems, earnings deterioration, reduced capital protection, or undue risk to the bank.**

2. **Consider whether an informal or formal enforcement action is warranted. Advise the appropriate supervisory officials. (FDIC: field office supervisor or regional office.)**

Civil Money Penalties (FDIC)

3. **Prepare recommendations for Civil Money Penalties (CMPs), if appropriate. (FDIC: The Manual of Examination Policies details specific instances in which CMPs may be assessed.) Complete the CMP matrix for fineable violations, unsafe and unsound practices, or breach of fiduciary duties. The matrix should be prepared whenever an examiner believes that a penalty may be warranted. The Interagency Policy Regarding the Assessment of Civil Money Penalties sets forth thirteen factors to consider when determining whether civil money penalties should be imposed:**
   - **Evidence that the violation or pattern of violations was intentional or committed with a disregard of the law or the consequences to the institution.**
   - **The frequency or recurrence of violations and the length of time the violation has been outstanding.**
   - **Continuation of violation after the respondent becomes aware of it, or its immediate cessation and correction.**
   - **Failure to cooperate with the agency in effecting early resolution of the problem.**
   - **Evidence of concealment of the violation, or its voluntary disclosure.**
   - **Any threat of or actual loss or other harm to the institution, including harm to public confidence in the institution, and the degree of any such harm.**
   - **Evidence that participants or their associates received financial or other gain, benefit, or preferential treatment as a result of or from the violation.**
   - **Evidence of any restitution by the participants in the violation.**
   - **History of prior violations, particularly where similarities exist between those and the violations under consideration.**
   - **Previous criticism of the institution for similar violations.**
   - **Presence or absence of a compliance program and its effectiveness.**
   - **Tendency to create unsafe or unsound banking practices or breach of fiduciary duty.**
   - **The existence of agreements, commitments, or orders intended to prevent the subject violation.**

4. **A CMP recommendation should only be considered if it meets the test of gravity after considering the above 13 points and when any one of the following criteria is present:**
   - **The bank suffers a substantial financial loss as a result of the violation;**
   - **The violation is willful, flagrant, or otherwise evidences bad faith on the part of the bank or individual involved in the violation;**
   - **An insider (or associate) directly or indirectly involved in the violation materially benefited from the transaction; or**
   - **Previous supervisory actions have not been effective in eliminating or deterring violations.**

5. **If the examiner recommends CMPs, follow these procedures:**
   - **Consult with the regional office to determine the documentation necessary to support the violation and the CMP recommendation.**
   - **Prepare a memorandum to the appropriate regional director addressing the 13 points and specifying the recommendation.**
   - **Include the home mailing addresses for all directors and any other individuals involved in a fineable violation in the confidential pages.**
   - **Discuss the violations with management, but do not refer to potential CMPs or to the possible amount of CMPs except in the most serious circumstances and <u>after obtaining regional office approval</u>.**
   - **If CMPs are approved for discussion, limit discussions to the criteria used to determine whether to assess a penalty.**
   - **Examiners should not discuss penalties regarding Section 8 matters. If questioned, discussions should be limited to stating that CMPs can be assessed for noncompliance with an order. (Note: For FDIC, only a regional director can determine compliance with a Section 8 Order.)**
   - **If the violation involves financial gain to an insider or financial loss to the bank, examiners should attempt to quantify the amount of loss. The violation write-up should include the monetary amount and method of calculation. If the amount cannot be determined, the examiner should include the reason why.**
   - **Copy evidence supporting the violations and retain in field office files in a separate labeled folder apart from the regular exam workpapers.**

Suspicious Activity Reports

6. **Notify the appropriate bank regulatory officials of suspected activities and actions taken.**

7. **Discuss the possibility of administrative and enforcement actions with executive management and the board of directors. If suspicious activity is discovered, and the Reserve Bank or regional office concurs, examiners should report the discovery of the suspicious activity and any related apparent violations to the bank's board of directors.**
   - **Examiners should present the facts giving rise to the apparent violation, but avoid any conclusions**

as to guilt or innocence of any particular individuals.

- **Remind the board of the regulatory requirements[1] to report apparent violations promptly to law enforcement agencies and the appropriate supervisory officials.**

8. Determine if management has or will file Suspicious Activity Reports (SARs). (Note: Examiners should generally bring apparent criminal activities to management's attention for reporting by the bank. Under certain situations, it may not be appropriate to notify bank officials.)

9. Prepare a SAR if the report submitted by the bank is deemed inadequate or the suspected criminal conduct has not been reported by the bank and the examiner believes it is in the best interest of the agency. (A SAR prepared and entered into the SAR system by the bank does not prevent examiners from making a more detailed report. SARs should be completed when the examiner first obtains evidence to support a belief that a crime has been committed. Do not wait until the examination concludes.)

10. If the examiner is preparing the SAR:

- **Use the appropriate software;**
- **Attach copies of documents that prove or support the suspected criminal violations; and**
- **Segregate and store additional supporting documents.**

End of Impact Analysis.

[1] References: FRB 12 CFR, 208.62, 211.5(k), 211.24(f), and 225.4(f); FDIC: 12 CFR, 353.

OTHER ASSETS AND LIABILITIES

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. Does management provide proper supervision and take appropriate action to address other asset and liability deficiencies? *Refer to Expanded Analysis Procedures #1-93.*

E.2. Are deficiencies immaterial to the bank's financial condition? *Refer to Expanded Analysis Procedures #1-93.*

OTHER ASSETS AND LIABILITIES

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Cash Accounts

Note: The primary objectives of cash and due from audits are to ensure account balances are properly recorded, cash items clear within a reasonable period, and due-from accounts are substantiated and tested. When appropriate, examiners should verify items (e.g., cash on hand, cash items, overdrafts, and other assets or liabilities held in suspense) to ensure items are properly controlled, recorded, and disposed.

CASH ON HAND

1. **Determine whether tellers, including relief tellers, have sole access to their cash supply and cash drawer.**

2. **Determine whether duplicate keys and combinations are under dual control.**

3. **Determine whether the total cash supply for tellers that are on vacation or absent for an extended period is counted under dual control.**

4. **Determine whether cash drawers or teller cages have locking devices to protect cash during periods when the teller is absent from his/her window.**

5. **Determine whether each office and teller maintains currency within pre-established cash limits. Cash items should not be kept as part of teller's cash.**

6. **Determine whether bait money is maintained appropriately and counted each day.**

7. **Determine whether daily procedures compare each teller's cash, in aggregate, to an independent control from the proof or accounting control department.**

8. Determine whether teller differences are cleared daily or appropriately documented.

9. Determine whether cumulative over-and-short records are maintained for all persons who handle cash.

10. Determine whether each teller prepares and signs a daily proof sheet detailing currency, coin, consignment items, and cash items.

11. Determine whether tellers report large differences to a responsible official for clearance.

12. Determine whether the bank has a policy that prohibits tellers from maintaining "kitties" of pooled funds that are not reconcilable to one individual.

13. Determine whether teller transactions identify the responsible teller.

14. Determine whether both tellers verify and initial teller transfer entries.

15. Determine whether tellers possess operational guidelines that establish dollar limits for check cashing or withdrawals not requiring officer approval.

16. Determine whether controls prevent tellers from processing transactions to their own accounts.

17. Determine whether tellers clear all checks from their funds daily.

18. Determine whether teller duties are restricted to teller operations, unless a well-defined business reason

exists.
19. Determine whether vault opening and closing procedures are adequate and require dual control.
20. Determine whether the vault cash is appropriately controlled and that all currency is counted on a surprise basis including verification of all strapped cash packets.
21. Determine whether the bank maintains records showing amounts and denominations of vault cash.
22. Determine whether currency shipments are prepared and sent, received, and counted under dual control.
23. Determine whether someone independent of the teller function controls the master teller-machine key.
24. Determine whether tellers remove their keys when they leave their window.
NIGHT DEPOSITORY
25. Determine whether the bank provides lockable night deposit bags to customers.
26. Determine whether written contracts authorize the institution to open night deposit bags.
27. Determine whether two employees open night deposit bags; initial recording of bag numbers, envelope numbers, and depositors' names in the register; and count and verify contents.

AUTOMATED TELLER MACHINES (ATM)
28. Determine whether the bank's ATMs limit the amount of cash and the number of dispense transactions during a specified period for each account.
29. Determine whether ATMs capture the card if the wrong personal identification number (PIN) is consecutively used or an invalid card is used.
30. Determine whether the ATM automatically shuts down after it experiences recurring errors.
31. Determine whether a bank representative is present during ATM maintenance.
32. Determine whether the ATM has adequate lighting.
33. Inquire about negative-file capabilities. (If the ATM is operated off-line, determine whether it has the capacity to recognize and capture lost, stolen, or other undesirable cards.)
34. Determine whether activity reports identify ATM use by a customer in excess of that customer's history (e.g., three uses during the past three days compared with a history of one use per month).
35. Ascertain whether safeguards prevent the observation of a customer's PIN by others who observe the PIN pad.
36. Determine whether a communication interruption between an ATM and the central processing unit triggers the alarm system.
37. Determine whether all ATMs contain alarm devices.

38. Determine whether the bank mails PINs separately from cards.

39. Determine whether personnel who have custody of cards are prevented from accessing PINs at any stage (issuance, verification, or reissuance).

CASH ITEMS

40. Determine whether someone other than the teller who originated the transaction handles returned items.

41. Determine whether an officer, or other designated individual, reviews all cash items over a specified dollar limit with respect to collection and credit.

42. Determine whether an officer, or other designated authority, reviews and initials a daily report of all cash items.

43. Determine whether the bank's procedures forbid holding overdraft checks in the cash item account.

44. Determine whether the directorate, a designated committee thereof, or an officer with no conflicting responsibilities reviews and approves cash items recommended for charge-off.

PROOF AND TRANSIT

45. Ensure appropriate internal controls, such as dual controls and separation of duties, govern proof and transit operations.

46. Determine whether the bank handles cash letters appropriately. Consider whether:

- **Cash letters are prepared, sent, and reconciled daily;**
- **Cash letters are imaged before they leave the bank;**
- **Copies of the proof or hand-run tapes are identified and retained;**
- **Records of cash letters sent to correspondent banks are maintained that identify the subject bank, date, and amount; and**
- **Remittances for cash letters are received by employees independent of those who send out the cash letters.**

47. Determine whether all entries to the general ledger have been proofed.

48. Determine whether all entries prepared by the general ledger or customer account department are reviewed by a supervisor other than the person preparing the entry.

49. Determine whether errors detected by the proof operator are corrected by another employee or designated officer.

50. Determine whether appropriate source documents support all general ledger entries.

51. Determine whether the bank appropriately handles returned items. Consider whether returned items:

- **Are handled by an independent section of the proof and transit department or delivered unopened to personnel not responsible for preparing cash letters or handling cash;**
- **Are periodically reviewed by supervisory personnel to determine that items are handled correctly by the proof and transit section and clear timely; and**
- **Are scrutinized for employee, large, or repeat items.**

52. Determine whether items reported missing from the cash letter are promptly traced with a copy sent for credit.

53. Evaluate the rotation of duties in the proof and transit area.

54. Ascertain whether the bank prohibits proof machine operators from filing checks or deposit slips, or preparing deposit account statements.

Correspondent Bank Accounts and Interest Bearing Balances

55. Consider contacting the correspondent bank to obtain an interim account statement. ***(Note: The statement should be sent to the examiner-in-charge's attention. If the bank receives a statement daily, obtain it before bank personnel open it.)***

56. Prepare correspondent account reconcilements and trace exception and open items. ***(Note: Examiners are instructed to review the bank's internal reconcilements in the Core Analysis. If reconcilements do not exist or are incomplete, then examiners should perform this function.)***

Permissible Activities and Equity Investments

57. Determine whether the bank complies with all conditions imposed by regulations and orders, including investment limitations or divestiture plans.

58. Determine whether accounting records accurately record income and expenses generated by the investments and ventures.

59. Determine whether contingent liabilities exist and the extent of any potential exposure.

Premises and Fixed Assets

60. Reconcile premises and equipment subsidiary ledgers to the general ledger.

61. Assess the reasonableness of investment in premises and equipment.

- **Review the current and prospective use of fixed assets in serving banking needs.**
- **Review Uniform Bank Performance Report schedules to determine whether investments in premises and fixed assets are reasonable in relation to total assets and consider the percentage of operating income absorbed by occupancy expense.**

Deposit Activities

62. Determine whether deposit records provide satisfactory audit trails (i.e., the transaction can be traced from initiation to final disposition).

63. Determine whether changes to customer account records require separation of duties between origination, input, and review.

64. Determine whether source documents for customer deposit account modifications are supported by proper authorizations (e.g., address change or name change).

65. Review a sample of internal control overrides for appropriateness and approval.

66. Verify that management does not pay fees until funds are verified and physically transferred (i.e., the bank does not give a broker an advance fee for his or her services prior to settling the transaction).

67. Determine whether the institution maintains documentation supporting a current reconcilement of each deposit account category recorded on the general ledger.

68. Verify that reconciliations are performed by an individual who is not directly involved in accepting or preparing transactions or entries to customer accounts.

69. Determine whether the preparation of input and posting of subsidiary deposit records are performed and adequately reviewed by persons who do not accept or generate transactions or handle cash.

70. Determine whether in-process, suspense, and interoffice accounts related to deposit accounts are closely monitored by individual(s) who do not have posting or reconciling duties.

71. **Determine whether the bank flags deposit account files of employees, officers, directors, and any of their related business interests.**

72. **Ascertain whether posting and check filing procedures are separated from statement preparation.**

73. **Determine whether customer account statements are appropriately controlled.**

74. **Determine whether individuals who open new accounts or who have access to unused new account records are different than individuals who make entries to customer accounts or the general ledger.**

75. **Determine whether a periodic review of inactive accounts is performed to ascertain whether to place them on dormant status.**

76. **Determine whether the closed account lists are prepared and circulated to appropriate management for review.**

77. **Determine whether accounts that do not reflect recent activity, and for which customer contact cannot be reestablished, are removed from active files, clearly classified as dormant, and in compliance with state escheat laws.**

78. **Determine whether signature cards for closed accounts are promptly pulled from the active account file and placed in a closed-account file.**

Official Checks

79. **Determine whether reconcilements are a part of the overall deposit function. Consider whether:**
    - **Outstanding checks are listed and reconciled to the general ledger.**

- **Permanent evidence of reconcilements is maintained.**
- **Clear separation of duties exist, or reconcilement duties are rotated.**
- **Reconcilements are reviewed by an officer.**
- **Authorized signatures and endorsements are verified.**

80. Investigate the types of checks issued. Appropriate safeguards or procedures generally address issues such as:

- **If multi-copy checks and certified check forms are not used, detailed registers of disbursed checks are maintained;**
- **All checks are pre-numbered and issued in numerical sequence;**
- **Check preparation and issuance are separate from recordkeeping;**
- **Signing checks in advance is prohibited;**
- **Procedures prohibit issuance of a check before the credit is processed;**
- **Customer accounts are debited when certified checks are issued; and**
- **Certified checks are stamped or marked across the face of the check and signed by an appropriate bank official. *(Note: Holes are often punched at the bottom of certified checks to prevent double posting.)***

81. Test for appropriate controls over check signing machines, if used. Verify whether:

- **Procedures preclude certification of checks drawn on uncollected funds.**
- **Voided checks and certified check forms are promptly defaced and filed with paid checks.**

Other Items

82. Test the accuracy of the accrual system. Determine whether any of the income earned but not collected is contingent upon items in default or of otherwise doubtful collectability.

83. Determine whether the preparation of entries and posting of subsidiary other liability records is performed or tested by persons who do not also have direct control of the related liabilities.

84. Determine whether subsidiary other liability records are approved and balanced to the general ledger monthly by persons who do not also have direct control of the related liabilities.

85. Ensure contingent liabilities for future expenditures or losses are booked at the time they become

probable and can be reasonably estimated. Ascertain if such accounts are closely monitored, with periodic status reports to management.

86. Ensure sufficient documentation (i.e. board resolutions) is available to support amounts due to officers, directors, or their related interests.

87. Determine whether payroll tax liabilities reconcile to appropriate payroll records.

88. Ascertain if liabilities for undistributed customer receipts (i.e., deposits, funds transfers, dividend/interest payments, securities fails) are controlled in separate accounts.

89. Determine whether customer receipts are treated as deposits for reporting and reserve requirements.

90. Determine whether amounts that cannot be credited or otherwise paid to the rightful owner are classified as dormant and placed under dual control.

91. Determine whether formal approval procedures are in place and independent from recordkeeping for all other liabilities that are charged off or revalued.

92. Determine whether obligations are booked immediately upon receipt of invoices or bills for services received.

93. Verify that procedures exist to ensure invoices and bills are:

- **Verified for accuracy prior to payment,**
- **Approved by designated employees prior to payment, and**
- **Paid within the discount period.**

End of Expanded Analysis. If needed, Continue to Impact Analysis.

OTHER ASSETS AND LIABILITIES

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine the impact of identified deficiencies on the bank's capital, earnings, and asset quality.
2. Determine the need for administrative and enforcement actions, formulate specific recommendations, and advise the appropriate supervisory officials.
3. Discuss the possibility of administrative and enforcement actions with the examiner-in-charge and applicable regulatory supervisors, and when appropriate, executive management and the board of directors.
4. Determine the circumstances and facts regarding Civil Money Penalties, Suspicious Activity Reports, and removal action under Section 8 of the FDI Act, if necessary.
End of Impact Analysis.

RATE SENSITIVITY

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1.	**Are management deficiencies immaterial to the oversight of the bank's interest rate risk (IRR) posture? *Refer to Expanded Analysis Procedures #1-12*.**
E.2.	**Is the level of IRR immaterial to the overall condition of the bank? *Refer to Expanded Analysis Procedures #1-12*.**

RATE SENSITIVITY
Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis. The procedures in the Expanded Analysis section focus on identifying risk exposures, verifying significant risks, and determining the capabilities and reliabilities of the internal measurement systems.

IRR Profile and Exposure Considerations

1. **Identify significant factors that contribute to IRR exposures and the institution's risk profile. Consider information from:**
   - **Supervisory IRR monitoring reports (FDIC: IRRSA),**
   - **Balance sheet and account data,**
   - **Internal IRR reports,**
   - **Strategic and business plans,**
   - **Product pricing guidelines,**
   - **Hedging or derivative activity, and**
   - **Other examination findings.**

2. **Identify factors that contribute to elevated risk exposures. Consider the following:**
   - **Long-term, fixed-rate assets;**
   - **Variable rate loans or securities with extended repricing intervals (more than two years);**
   - **Investment securities and associated unrealized gains and losses;**
   - **Trading portfolio activities;**
   - **Other funding sources;**
   - **Non-maturity deposits;**
   - **Option risk (stemming from callable bonds, mortgage-backed securities, structured notes, mortgage loans, non-maturity deposits, complex wholesale borrowings, or derivatives);**
   - **Off-balance sheet derivatives (interest rate swaps, futures, forwards, or options);**
   - **Other basis and yield curve risks in on- and off-balance sheet products;**
   - **Mortgage banking activities (including mortgage servicing assets);**
   - **Fee income levels; and**
   - **Product pricing strategies.**

3. **Assess price risks that could arise from changing market interest rates. Consider the following:**
   - **Security valuations and potential changes to accumulated other comprehensive income,**
   - **Gains and losses on the sale of mortgage loans and the possible effect on other income, and**
   - **Mortgage servicing asset valuations and the potential effect on earnings and capital.**

Internal Measurement System Capabilities

4. Assess the adequacy of the IRR measurement system.

- **Review a summary description of system capabilities, procedures manual for system, vendor updates on purchased systems, and other applicable documentation;**
- **Verify that the system contains the components and updates needed to generate applicable and accurate measurements commensurate with the types of IRR assumed; and**
- **Discuss the system's capabilities, limitations, and assumptions with management.**

5. Discuss whether the IRR measurement system sufficiently captures all material interest rate risk positions and enable management to identify risks arising from existing activities and new business initiatives. Consider the following attributes:

- **Static and dynamic rate scenarios,**
- **Severity of modeled stress scenarios, and**
- **Details of the measurement system input and output.**

Internal Measurement System Data and Assumptions

6. Review the bank's internal control system relative to data and assumptions used by the IRR measurement system.

7. Evaluate data inputs for the IRR measurement system to determine the accuracy of baseline instrument characteristics and data aggregation practices.

- **Review account data for larger, more complex account categories such as:**
  - **Contractual coupon rates and formulas,**
  - **Current balances,**
  - **Coupon reset dates,**
  - **Scheduled principal payments,**
  - **Scheduled interest payments,**
  - **Caps and floors, and**
  - **Maturities.**
- **Review the data aggregation process and ensure that it reasonably portrays the bank's cash flow characteristics.**
- **Determine whether base case interest rates and market values are accurate.**

8. Review information regarding all key assumptions including supporting documentation, IRR

management committee and board minutes, vendor's or consultant's reports, and independent reviews of the IRR program. Determine whether:

- **Interest rate forecasts are consistent with other forecasts used throughout the bank's planning processes and include increasing and decreasing rate environments,** ***(Note: Satisfactory forecasts generally provide useful results that consider potential interest rate shocks, yield curve risks, as well as basis risk.)***
- **Driver rates are supported and accurately applied,**
- **Reinvestment rates are reasonable and consistent with other bank forecasts,**
- **Non-maturity deposit-sensitivity factors (betas) are adequately supported with documented analysis,** ***(Note: IRRSA provides historical non-maturity deposit-analysis measures for examiner review.)***
- **Prepayment forecasts reasonably estimate unscheduled principal cash flows from amortizing instruments, and**
- **Growth estimates reflect the strategic goals and forecasts used in the strategic planning process.**

9. Review the sensitivity analysis of assumptions, which helps management identify the assumptions that have the most influence on model output. Institutions should have robust support for assumptions that significantly affect model results.

Internal Measurement System Results and Validation

10. Determine whether system reports are timely and identify:

- **Material risk exposures and sources,**
- **IRR levels expressed in measures that correspond to the board's risk limits,**
- **Trends in IRR exposure, and**
- **Deviations from policy risk limits.**

11. Review the results of the IRR measurement system for the current period and a sample of prior periods. Pay particular attention to results that:

- **Indicate risk exposures exceed board established risk limits;**
- **Demonstrate increasing risk trends, or rapid growth in risk exposure;**
- **Illustrate risks different from those identified by historical financial analysis; and**
- **Suggest that the system contains obvious flaws or deficiencies.**

12. Review internal control procedures to determine whether the system's prior forecasts reasonably estimated actual performance by comparing:

- **Past system results to actual results (i.e., back-testing);**
- **Market value assumptions to observable market prices; and**

• **The bank's measurement system and results to the independent reviewers'/internal or external auditors' measurement systems and results (i.e., challenger-model or parallel-model runs).**
End of Expanded Analysis. If needed, Continue to Impact Analysis.

RATE SENSITIVITY
Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine the effect of IRR levels and management deficiencies on the bank's earnings, liquidity, capital, and sensitivity to market risk. Assess the potential impact on the bank if the IRR exposure or management deficiencies continue.
2. Document deficiencies of the internal measurement system, such as design flaws, quantitative errors, data inaccuracies, unreasonable or unsupported assumptions, and reporting weaknesses. Attempt to resolve deficiencies with management during the examination.
3. Discuss IRR deficiencies with management and seek commitment to remedy corporate governance, IRR exposure, risk management, internal control, and independent review deficiencies.
4. Determine whether the severity of weaknesses warrant citing non-conformance with the *Interagency Guidelines Establishing Standards for Safety and Soundness*[1] in the ROE.
5. Consider recommending an accelerated IRR examination schedule if management's efforts to rectify deficiencies should be verified before the next regular safety and soundness examination.
6. Determine the need for administrative and enforcement actions, formulate specific recommendations, and advise the appropriate supervisors on the nature of the concerns. (FDIC: field supervisor and the regional office). Identify specific recommended provisions for potential actions.
7. After obtaining appropriate supervisory approval, discuss the possibility of administrative and enforcement actions with executive management and the board of directors.

[1] References: FDIC, Appendix A of Part 364 of the FDIC's Rules and Regulations. FRB: 12 C.F.R. Part 208, Appendix D-1.

8. Investigate potential recommendations for civil money penalties.
End of Impact Analysis.

SECURITIES AND DERIVATIVES

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

E.1.	**Are deficiencies immaterial to management's supervision of the securities and derivatives activities?** ***Refer to Expanded Analysis Procedures #1-19.***
E.2.	**Are deficiencies immaterial to the institution's condition?** ***Refer to Expanded Analysis Procedures #1-19.***

SECURITIES AND DERIVATIVES EXAMINATION PROCEDURES

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Policies, Procedures, and Risk Limits

1. Investigate the reason(s) policy deficiencies identified in the Core Analysis exist. Discuss recommendations with management. Possible reasons for policy deficiencies may include:

- **Management overlooked these issues,**
- **Management is unfamiliar with prudent guidelines and procedures, or**
- **Management is unwilling to create or enhance policies and procedures.**

2. If poor compliance with internal policies or procedures exists, determine the reasons. Possible reasons may include:

- **Poor internal communication of policies and procedures or subsequent revisions to either,**
- **Lack of awareness of policies or procedures,**
- **Disregard for established policies or procedures,**
- **Misunderstanding of policies or procedures, and**
- **Change in the institution's investment strategy.**

3. Determine whether management recognizes and supports proper controls and monitoring consistent with the institution's policy guidelines. Determine whether proposed controls, if any, are reasonable.

Internal Controls

4. Determine whether the institution's operations staff is knowledgeable with respect to existing policies, procedures, and controls.

5. When concerns with internal controls are identified in the core analysis, independently evaluate whether those internal control weaknesses may expose the bank to material risks.

6. Review a sample of trade tickets to assess whether purchase and sale prices are accurate.

7. Confirm clearing account reconciliations.

8. Verify that confirmations are reconciled against trade tickets in a timely fashion.

9. Review a sample of general ledger tickets to assess the accuracy of entries.

Audit or Independent Review

10. Assess any concerns regarding audit or independent review functions identified in the Core Analysis.

Risk Identification, Measurement, and Reporting Systems

MARKET RISK

11. Assess management's methods for measuring and forecasting market risk in the securities and derivatives portfolio(s). Consider whether:

- **The measurement methods are appropriate considering each instrument's or portfolio's cash flow characteristics.**
- **Management's assumptions concerning factors such as interest rate shocks, prepayment forecasts, and current prices are reasonable and supported.**

12. If appropriate, request enhanced management analysis during the examination, and use this enhanced analysis to assess the institution's market risk relative to earnings, capital, and board-established risk limits.

CREDIT RISK

13. Determine whether management's credit analysis demonstrates that the obligor has adequate capacity to meet its financial commitments with respect to the security for the projected life of the asset or exposure. Adequate capacity is evident when the probability of default is low and full and timely repayment of principal and interest is expected.

14. Assess credit risk from off-balance-sheet derivatives and perform credit analysis of all counterparties with whom management maintains material positions. Management typically maintains relevant financial information (e.g., annual reports, other SEC filings) on these counterparties.

LIQUIDITY RISK

15. Verify management's price information.

- **Obtain independent prices on a sample of the portfolio. If in the Core Analysis, prices were obtained, expand the sample as appropriate.**
- **For instruments valued using a model, determine whether assumptions are supported appropriately by management. If management cannot provide support for the assumptions, or the assumptions appear unrealistic, request a revised valuation using appropriate assumptions.**

16. Assess management's intentions and the institution's ability to hold instruments with significant depreciation.

17. To the extent the portfolio(s) includes material volumes of potentially illiquid instruments, verify that management's valuation methods appropriately consider liquidity risk under stressed scenarios.

18. Determine whether the portfolio(s) includes a significant volume of investments that potentially could not be sold at a price reflecting their expected economic value due to limited market depth or other unfavorable market conditions.

Board and Senior Management Oversight

COMPLIANCE

19. Identify the cause(s) of any compliance violations and identify the responsible party or parties. Consider the following factors:

- **Lack of familiarity with laws or regulations,**
- **Negligence,**
- **Misinterpretation of laws or regulations, and**
- **Willful disregard.**

End of Expanded Analysis. If needed, Continue to Impact Analysis.

SECURITIES AND DERIVATIVES EXAMINATION PROCEDURES

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Assess the potential effect of any concerns regarding management on the institution’s safety and soundness.
2. Assess the effect that market, credit, liquidity, operational, and legal risks from the institution’s securities and derivatives activities may have on the institution’s financial condition.
3. Evaluate the effect that management’s current and planned securities and derivatives activities may have on the institution’s capital, asset quality, earnings, liquidity, and sensitivity to market risk.
4. Gauge management’s willingness and ability to correct any identified weaknesses.
5. Determine whether formal or informal administrative actions are recommended, formulate specific recommendations, and discuss concerns with the appropriate supervisors.
6. Investigate potential recommendations with respect to civil money penalties.
End of Impact Analysis.

CREDIT CARD RELATED MERCHANT ACTIVITIES

Core Analysis Decision Factors

Examiners should evaluate Core Analysis factors to determine whether Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Are policies, procedures, and risk limits adequate?** ***Refer to Core Analysis Procedures #2-3.***

C.2. **Are internal controls adequate?** ***Refer to Core Analysis Procedures #4-7.***

C.3. **Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedures #8-10.***

C.4. **Are controls over merchants, agent banks, and Independent Sales Organizations (ISOs) adequate?** ***Refer to Core Analysis Procedures #11-47.***

C.5. **Does management properly monitor and control chargebacks?** ***Refer to Core Analysis Procedures #29-32.***

C.6. **Are reserves for chargebacks adequate?** ***Refer to Core Analysis Procedure #31.***

C.7. **Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #48-50.***

C.8. **Do the board and management effectively supervise this area?** ***Refer to Core Analysis Procedures #51-54.***

CREDIT CARD RELATED MERCHANT ACTIVITIES

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. Consider the following factors when determining the scope of the review of Credit Card Related Merchant Activities:

- **The significance that merchant activities play in an institution's overall strategic plans and budgeting process;**
- **The total-dollar sales volume of credit card related merchant activities processed and the number of merchants;**
- **Whether merchants are concentrated in one industry or geographic area that may pose increased risk to the financial institution;**
- **The bank's capital structure;**
- **Whether activities are conducted primarily to accommodate existing customers or if they represent a significant activity for the bank;**
- **Management expertise as reflected in previous examination reports, audit reports, and other correspondence; and, any remedial action taken by management to correct any deficiencies noted;**
- **Use of third party service providers that provide merchant processing activities; and, the adequacy of management's oversight of third parties (as reflected in prior audits and examinations);**
- **Use of Independent Sales Organizations (ISOs);**
- **Risk profiles of the merchants (examples of higher risk profiles include mail order businesses, telemarketing, retailers selling goods or services for future delivery, and merchants selling low-quality products or services);**
- **Prior losses from, and trends in the volume of, merchant chargebacks and unreconciled items in the settlement account; and**
- **Any contingent liabilities arising from the bank's processing activities.**

Policies, Procedures, and Risk Limits

2. Determine whether merchant processing policies adequately establish:

- **Lines of authority and responsibility;**
- **Risk-assessment and fraud-detection procedures;**
- **Cardholder information security standards;**
- **Risk identification practices and limits on the amount of risk the bank is willing to accept;**
- **Limits on individual and aggregate volumes and/or concentrations of merchant activity (*management should set limits on the amount of sales volume processed that correlates with merchants' risk profiles and the bank's management expertise and capital structure);***
- **Requirements for written contracts between all third parties;**

- **Due-diligence criteria for initially accepting merchants and periodically reviewing merchants' creditworthiness;**
- **Due-diligence criteria for initially ensuring, and periodically reviewing, third party compliance with Association (Visa and MasterCard) requirements regarding issues such as registration, contract provisions, audit accessibility, etc.;**
- **Guidelines for monitoring merchant activities and assessing their information-security practices;**
- **Criteria for determining the appropriateness of merchant reserve accounts;**
- **Criteria for contracting with any ISO to act as agent for the bank;**
- **Guidelines for acquiring or issuing rent-a-bins (see Procedure 34.);**
- **Guidelines for handling policy exceptions;**
- **Guidelines for accepting agent banks;**
- **Pricing policies; and**
- **Requirements for legal reviews of all contracts and applications (by legal counsel familiar with merchant processing).**

Note: Formal policies may not be necessary for banks with minimal merchant activity. Institutions are expected to assess the risks posed by individual merchants on a case-by-case basis and to implement controls to manage relationships commensurate with identified risks.

3. Determine whether the merchant-processing procedures manual appropriately provides for:

- **Establishing new business relationships;**
- **Monitoring existing relationships for credit and financial exposures;**
- **Monitoring potential or existing concentrations (for example, by merchant type/industry, geographic location, or processing volumes by one merchant);**
- **Dealing with ISOs;**
- **Handling complaints from merchants;**
- **Performing settlement procedures that include clearing items in a timely fashion;**
- **Processing merchant charge-backs; and**
- **Training new and existing personnel.**

Note: Banks with minimal activity may not need a formal procedures manual.

Internal Controls

4. Review recent risk assessments relating to merchant activities and determine whether internal and external threats are identified and appropriate controls are in place. Consider whether the bank uses:

- **Appropriate risk rating processes (using internal metrics or industry codes); and**
- **Reports that clearly display the types of merchants they serve and the risks involved, (including information on whether the merchants are generally swipe, keyed, or chip merchants).**

5. Determine whether the board and senior management regularly review pertinent merchant activity (using reports, dashboards, or other mechanisms that provide information commensurate with the

level of merchant risks).

6. Determine whether adequate separation of duties (or compensating controls) exists in sensitive areas such as:

- **Preparation of input and reconciliation of output, and**
- **Merchant acquisitions/approvals.**

7. Determine whether appropriate procedures are in place to prevent, detect, and respond to policy and procedural exceptions.

Audit or Independent Review

8. Review internal and external audit reports to identify any concerns relating to merchant processing.

9. Determine whether the board and management regularly review audit reports and Association correspondence and appropriately respond to audit findings and Association concerns.

10. Review the scope, frequency, and adequacy of the audit function and determine whether all merchant processing areas are addressed.

Note: Effective audit programs will identify contraventions of internal policy, Association regulations, and written contracts; and ensure timely settlement balancing.

Merchant Underwriting Standards and Monitoring Procedures

11. Evaluate practices designed to ensure compliance with the merchant-approval policy.

- **To assess compliance with policy guidelines, review a sample of files for recently approved merchants. The sample should include, when applicable, merchants solicited directly by the bank, through ISOs, and through agent banks. The merchant-approval policy should provide clear and measurable underwriting standards for merchants. Verify that standards are maintained and files contain, at a minimum, the following items:**
  - **Merchant applications listing the type of business, location, principal(s), and other relevant structure information;**
  - **Merchant processing agreements that detail all pertinent activities;**
  - **Corporate resolutions, if applicable;**

- **Onsite inspection reports;**
- **A credit bureau report on the principal(s) of the business;**
- **Documentation of the bank checking prospective merchants against the Member Alert to Control High Risk Merchants (MATCH) system;**
- **Financial information on the business (typically received annually);**
- **Sales tax number for the business (tax ID number);**
- **Evidence of review of previous merchant activity (recent monthly statements from the previous processor); and**
- **Estimate of the merchant's projected sales activity.**

- **Verify that management determines why a merchant has or is switching banks (could indicate excessive charge-backs with previous processor).**

12. Select a sample of merchant reserve accounts and review for compliance with merchant contracts and Association requirements.

13. Determine whether exceptions to merchant approval policies are approved, reasonable, and documented.

14. Determine whether merchant applications are reviewed by a person who has adequate credit experience.

15. Determine whether the acquiring bank maintains a list of restricted merchants. Characteristics that banks consider when determining restrictions may include:

- **Business plans, types of merchandise or services offered, and marketing practices; and**
- **Order, shipping, and return policies.**

16. Determine whether underwriting activities, monitoring procedures, and management information systems (MIS) adequately consider or include:

- **Sale volumes and product delivery periods;**
- **Projected and actual ticket sizes;**
- **Card-not-present transactions;**
- **Telemarketing, mail-order, or internet merchants metrics;**
- **Products sold for future delivery, e.g. travel agents and health clubs;**
- **Volume of disputes; and**
- **Chargeback volumes.**

17. **Determine whether merchant reserve accounts are separately maintained (not commingled with related operating accounts or other merchant reserve accounts).**

    Note: Commingling accounts can disguise insufficient reserve levels as it makes it difficult to ensure management is not using the cash flow generated from one merchant to cover the remittance requirement of another merchant.

18. **Review the composition of merchant customers for concentrations of industries, geographic areas, or other factors.**

    Note: Segmenting merchants according to location or activity can help identify concentration risks.

19. **Ensure procedures are in place to appropriately monitor the financial condition of merchants that present higher risks.**

20. **Evaluate the bank's pricing system. Pricing policies and practices should ensure that merchants are priced appropriately throughout the life of the contract. Consider the following:**

    - **Minimum discount rates should reflect:**
        - **The merchant's volume of sales activity,**
        - **Inherent risk in operations, and**
        - **Overall financial conditions.**
    - **Management's evaluation of:**
        - **Employee and equipment costs,**
        - **Cost of float in the clearing process,**
        - **Insurance and bonding needs,**
        - **Loss histories and the risk of future loss,**
        - **Annual budget and strategic plans, and**
        - **Competition.**

21. **Determine whether management verifies actual sales volumes and ticket sizes to ensure consistency with projected volumes and sizes, at least annually.**

22. **Evaluate management's compliance with internal risk limits related to capital held to support merchant processing and determine whether the level is appropriate.**

23. Determine whether additional capital is needed to support the level of merchant processing. ***(Note: No specific capital requirements exist for merchant processing activities; however, examiners should determine whether management periodically assesses the adequacy of capital support relating to credit card related risks. FDIC: Refer to the Credit Card Activities Manual, Chapter XIX, Merchant Processing.)***

Settlement Process

24. Review the vendor management program to ensure management periodically evaluates third-party contingency plans. Assess a sample of contingency plans for parties involved in the settlement process and agents involved in merchant servicing tasks.

Note: When practical, coordinate the vendor management review with Information Technology examiners.

25. Review the settlement process to determine the flow of funds, the parties involved, and who controls funding and settlement.

26. Review a sample of contracts and assess the financial liability of all parties.

27. Determine whether MIS reports provide accurate, timely, and sufficient information for management to assess the function's activities and results.

28. Determine whether outstanding items in the settlement account clear in a timely fashion.

Chargeback Processing and Reserves

29. Assess the adequacy of chargeback monitoring procedures:

- **Determine whether the bank generates chargeback reports.**
- **Evaluate the adequacy of the chargeback system. Determine whether the system can perform the following tasks:**
  - **Quantify outstanding chargebacks,**
  - **Identify the age of the chargebacks,**
  - **Prioritize the chargeback research process, and**
  - **Measure the efficiency of the chargeback process.**

- **Review significant trends in volume (dollar and number of accounts) and aging of chargebacks.**
- **Determine whether the bank's risk management systems sufficiently track excessive chargebacks.**

Note: The acquiring bank should not place undue reliance on the Association to identify merchants with excessive chargebacks.

30. Assess the institution's chargeoff policy for stale chargebacks. Classify stale chargebacks according to the FFIEC *Uniform Retail Credit Classification and Account Management Policy*.

31. Determine whether the bank establishes and periodically reviews the adequacy of its chargeback systems and reserves. Consider whether:

- **Management adequately plans for contingencies, such as a large merchant bankruptcy where a material volume of chargebacks occurred;**
- **Any significant losses incurred by the bank related to merchant chargebacks;**
- **The methodology for establishing required chargeback reserves is adequate;**
- **The bank establishes specific merchant reserves or holdback reserves for higher-risk merchants.**
- **Reserve deficiency reports identify all significant exposures; and**
- **The bank confirmed that merchants implemented chip technology, and (when applicable) assessed risks that could affect a merchant's financial condition if a merchant did not implement chip technology. (*Note: Chip cards contain an embedded microchip for enhanced security that creates an individual transaction code when used for in-store payments.)***

32. Assess how management reflects merchant chargeback losses on internal reports.

Note: Management should produce reports that identify, on an individual and aggregate basis, chargebacks attributed to individual merchants. For example: Chargeback 1234 of $50.00 from Merchant ABC. Merchant ABC: Chargebacks YTD total $9,000.00.

Independent Service Organizations (ISOs) / Merchant Service Providers (MSP)

ISOs solicit merchants' credit card transactions for an acquiring (clearing) bank. Examiners should only complete this section if the bank uses ISOs.

ISOs have assumed an increased role in retail merchant processing activities and rely heavily on sales commissions to generate business; therefore, examiners should assess the bank's processes controlling risks at ISOs. For example, ISOs should perform appropriate due diligence and monitoring of the retail merchants that they engage. FDIC: Refer to FIL 44-2008, Guidance for Managing Third-Party Risk.

33. Review a sample of ISO contracts and assess compliance with the contracts. In general, the contracts should appropriately address items such as:

- **Financial compensation and payment arrangements;**

- **Fee structures (fees should generally be tied to performance indicators such as sale volumes, number of merchants, and chargeback activity);**
- **Required security deposits by the ISO to offset potential merchant losses (security deposits should correlate to the ISO's financial condition, the quality of the merchants it solicits, and the level of sales volume it generates);**
- **Remedies to protect the bank if the ISO fails to perform as expected;**
- **Requirements for monetary transactions to be handled directly between the bank and the merchant;**
- **Prohibitions concerning the ISO's ability to assign the agreement or delegate responsibilities to a third party;**
- **Criteria for acceptability of merchants;**
- **Control of future use and solicitation of merchants;**
- **Allowable use of the name, trade name, and logo of the bank and the ISOs;**
- **Frequency and means of communication and monitoring of each party;**
- **Records each party must maintain (contracts should allow institutions access to ISO records);**
- **Frequency and type of financial statements to be required of the ISO;**
- **Warranties that all consumer laws are followed;**
- **Handling and other responsibilities for merchant chargebacks; and**
- **Onsite inspections by bank employees.**

34. Determine whether the acquiring bank permits ISO/MSPs to use the bank's VISA Bank Identification Number (BIN) or MasterCard Interbank Card Association number (ICA) to acquire merchants and/or settle credit card transactions. ***Note: This arrangement is often referred to as rent-a-bin (RAB). The BIN-owner retains the risk of loss as well as responsibility for settlement with the Associations consistent with the contract between the bank and the Association.***

- **Assess management's oversight and control of acquiring RAB arrangements to ensure the ISO/MSP is appropriately managing risks.**
- **Review any lending relationships the bank has with ISO/MSPs to ensure management analyzes total risk exposures.**

35. Review a sample of ISO credit files and assess compliance with policies and guidelines. The files should contain the following items:

- **A current financial statement on the principal(s) and the ISO, which should correlate to the size and complexity of the company;**
- **Initial onsite inspections of ISOs (and periodically thereafter based on performance) performed by a bank employee;**
- **Evidence of bank and trade references;**
- **A credit report on the principal(s) of the ISO; and**
- **A criminal check on the principal(s) of the ISO.**

36. Review management's analysis of the financial stability of ISOs, and determine whether ISO reserve accounts are consistent with the condition of the company and the volume of business generated.
37. Review and assess the procedures for monitoring the activities of the ISOs and determine whether adequate due diligence is performed. Consider management's reviews of the ISO's: • **Operational audits;** • **Past performance for evidence of misleading advertisements or inappropriate activities; and** • **Sales methods, customer service practices, and overall operations.**
38. Determine whether the bank has registered all ISOs with VISA or MasterCard.
39. Determine whether management reviews promotional material used by ISOs and attends sales training sessions for ISO salespersons.
40. Determine whether management appropriately performs initial and periodic due diligence, risk assessments, and vendor reviews of all ISO's with access to the bank's data systems. ***Note: Coordinate assessments with Information Technology examiners.***
41. If the ISO is performing servicing tasks, determine whether management requires an audit of the ISO's technology system.
42. Determine whether contingency plans exist to cover the accounting and servicing functions performed by ISOs to ensure data continuity.
Fraud Detection
43. Review the bank's fraud detection system and determine whether the scope and frequency of the fraud review is adequate. The primary tool of a bank's fraud detection system is the exception report, which is generated from parameters based on expected merchant activities. Fraud identification should not rely exclusively on unusual chargeback activity. A good fraud report should tailor exception parameters for each merchant (beginning with dollar volume of sales and customer chargebacks) and identify the following items:

- **Variances in average ticket size,**
- **Variances in daily volume,**
- **Multiple same-dollar amounts on tickets,**
- **Chipped, keyed, and swiped transactions,**
- **Multiple use of same cardholder number, and**
- **Inactive merchant accounts.**

Note: Exception reports listing merchant's out-of-parameter items should be generated and reviewed daily. Associations and sponsoring banks may also provide educational materials and provide fraudulent activity reports. Fraud monitoring or reports provided by Associations or sponsoring banks should supplement - not replace - the bank's own fraud system.

44. Assess the adequacy of actions taken if suspicious activity is detected. Consider:

- **Suspicious Activity Report guidelines,**
- **Placement of the merchant on MATCH,**
- **Termination of fraudulent merchant accounts, and**
- **Other actions taken to suspend or block settlement and/or authorization processing.**

Agent Banks

Note: Acquiring (clearing) banks often process credit card transactions for other banks, which are known as agent banks. Depending on the contractual arrangement, the agent bank may or may not be liable to the acquiring bank for chargeback or fraud losses. Only review this section if agent bank relationships exist.

***45.* Determine whether the bank has an agent bank policy that addresses the following items:**

- **Agent bank agreements, which should outline the agent bank's financial liability for merchant losses;**
- **Agent bank merchant underwriting standards, which should be similar to subject bank;**
- **Approval of policy exceptions;**
- **Agent bank liabilities and responsibilities regarding merchant fraud;**
- **Early termination of the agent bank relationship; and**
- **Approval authorities for each agent bank.**

Note: If the agent bank relationship involves only one or two agent banks with minimal activities, formal written policies may not be necessary as long as sound controls exist.

46. Review reports that show agent bank merchant volume by agent bank. Review the activities of agent banks that have significant merchant volume in comparison to the size of the agent bank. (Small banks with large merchant volume may have difficulty fulfilling their responsibilities regarding chargebacks.)

47. Review a sample of agent bank files, if necessary. Evaluate information and check for compliance with internal policy requirements (such as obtaining and reviewing periodic financial information).

Information and Communication Systems

48. Determine whether internal management reports provide sufficient information for risk management decisions and for monitoring the results of those decisions. Reports should provide sufficient detail for the board and senior management to:

- **Identify and monitor risks and their effect on earnings and capital;**
- **Evaluate profitability; and**
- **Verify compliance with risk limits and policy guidelines, including policy exception reporting.**

49. Determine whether merchant risks are effectively communicated to all areas affected.

50. Consider testing reports for accuracy by comparing them to regulatory reports and/or subsidiary records.

Board and Senior Management Oversight

51. Determine whether the board provides adequate management resources by (as appropriate):

- **Conducting interviews to determine whether the staff's technical expertise is commensurate with the scope of operations,**
- **Assessing whether current staffing levels are appropriate for present and future growth plans, and**
- **Determining whether training and development programs are adequate.**

52. Determine whether management's plans for the department are clear and communicated to the staff.

53. Review the blanket bond to ensure merchant processing activities have sufficient coverage.

Note: Servicers are typically not covered under a bank's fidelity coverage.

54. Review the department's operating statements. Compare the statement to the budget and investigate

significant variances.
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

ELECTRONIC FUNDS TRANSFER RISK ASSESSMENT

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Examiners are reminded that wire activity can have an impact on other exam assignments such as BSA, Asset Quality, Liquidity, and Sensitivity. Examiners reviewing Electronic Funds Transfer (EFT) have an opportunity to observe such things as suspicious activity, loan participation activity, borrowing activity, brokered deposits and other non-core inflows and outflows, among other important things. When observed, appropriate information should be shared with examiners reviewing those respective areas.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Are policies, procedures, and risk limits adequate?** ***Refer to Core Analysis Procedure #8.***

C.2. **Are internal controls adequate?** ***Refer to Core Analysis Procedures #9-34.***

C.3. **Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedure #35.***

C.4. **Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #36-37.***

C.5. **Do the board and senior management effectively supervise the electronic funds transfer area?** ***Refer to Core Analysis Procedures #38-43.***

ELECTRONIC FUNDS TRANSFER RISK ASSESSMENT

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review
1. Review previous examination reports, earlier work papers, and file correspondence for an overview of previously identified electronic funds transfer (EFT) concerns.
2. Obtain an organizational chart and flowchart for the EFT area and determine key job responsibilities and workflows. *Note: If the institution is subject to Sarbanes-Oxley (SOX), review the SOX information pertaining to the wire transfer function (e.g. SOX narratives, flow charts, and internal controls).*
3. Review the most recent audits and internal reviews of EFT activities to identify scope and noted deficiencies.
4. Review management's actions to correct examination and audit deficiencies.
5. Discuss with management recent or planned changes in EFT activities.
6. Review reports to determine the type and volume of wire activity. Ascertain if any alternative systems were implemented to supplement/replace wire transfer systems (e.g., ACH remittance programs).
7. Review the minutes of management committees that oversee EFT activity. Review for content and follow-up of material matters.

Policies and Procedures

8. Determine whether policies and procedures are adequate for the type and volume of funds transfer activities. At a minimum, guidance should addresses the following broad areas of concern:

- **Acceptable methods of wire requests (in-person, phone, fax, e-mail, E-Banking)**
- **Customer versus non-customer wire requests.**
- **Use of wire transfer request forms.**
- **Use of wire transfer agreements for recurring wire customers.**
- **Collected funds versus uncollected funds.**
- **Credit standards and overnight and daylight overdrafts limits.**
- **Callback requirements.**
- **Use of customer confirmations and advices.**
- **Maintenance of wire log.**
- **OFAC compliance.**
- **Separation of duties for funds transfer personnel including originating, receiving, testing, and approving functions; authorizing dollar limits; and preparing data entry.**
- **Clearly defined security procedures over payment orders and controls over source documents.**
- **Record retention.**
- **Exception reporting.**
- **Organizational reporting controls.**
- **Maintenance of adequate blanket bond coverage.**
- **Internal Audit coverage.**
- **Board reporting requirements.**
- **System testing.**
- **Network security.**
- **Incident response.**
- **Personnel hiring and dismissing.**
- **User security reviews.**
- **Implementation of a comprehensive business continuity, contingency planning, and disaster recovery program.**

Internal Controls

9. Evaluate management's procedures to prevent, detect, and respond to policy exceptions.

FUNDS TRANSFER REQUESTS

10. Review the bank's standard form of agreement or other written agreements with its customers, correspondent banks, and vendors. Determine whether those agreements are current and clearly define the liabilities and responsibilities to all parties.

11. Review the bank's procedures for validating transfer requests, including those received via on-line terminals, telephone, fax, E-Banking systems, or written instructions. Determine procedures provide for adequate security. For bank's that allow customers to submit requests via E-Banking products, determine whether appropriate authentication measures are in-place (refer to the FFIEC Supplement to *Authentication in an Internet Banking Environment*: FDIC: FIL-50-2011; FRB: SR 11-09).
12. Determine whether more than signature verification (tests, callbacks) are required on written requests. Verify that any callback procedures utilized by the institution comply with actual callback requirements (if any) stated in the blanket bond coverage.
13. Determine whether management maintains a current record of authorized signers for customers who use the bank's funds transfer services. The following items reflect prudent controls: • **Recurring wire transfer customers should be required to have current signed wire transfer agreements on file that outline duties and responsibilities of both the customer and the institution.** • **The record includes authorized sources of funds transfer requests (telephone, memo, and fax).** • **The bank advises its customers to limit the number of authorized signers.** • **Customer authorization lists limit the amount one individual is authorized to transfer.**
14. Ascertain if customer signature records are maintained under dual control or are otherwise protected.
15. Determine that procedures are in place to prohibit transfers of funds against accounts that do not have collected balances or preauthorized credit availability.
16. In situations where payments are to be made against uncollected funds and intraday overdrafts in excess of established limits, ensure that they are referred to appropriate authority for approval.
17. In situations where payments are made against uncollected funds and in excess of established limits, ensure that timely and appropriate steps are taken to obtain covering funds.
18. Evaluate management's compliance with Office of Foreign Assets Control (OFAC) procedures.

19. Determine if the Outgoing Wire Log is appropriately completed and documented. At a minimum, the log should include the following: ***Note: Ensure logs include customer-initiated and bank-purpose wires.***

- **Originator name.**
- **Originator account number.**
- **Dollar amount of transaction.**
- **Beneficiary Name.**
- **Beneficiary Account Number.**
- **Counterparty Institution.**
- **Counterparty Location.**
- **Domestic or Foreign.**

PAYMENT PROCESSING AND ACCOUNTING

20. Review the daily reconcilements of incoming and outgoing funds transfer activities, including both the dollar amount and number of messages. Determine whether appropriate controls are in place, such as:

- **Independent end-of-day reconcilements for messages sent to and received from intermediaries (Federal Reserve Bank, servicers, correspondents, and clearing facilities).**
- **System activity reconcilements to transfer request source documents.**
- **Daily supervisory review of funds transfer and message reconcilements.**
- **Daily activity balancing is performed separate from the receiving, processing, and sending functions.**
- **Federal Reserve Bank, correspondent bank, and clearing house statements used for funds transfers are reconciled and reviewed daily in another area of the bank (accounting or correspondent banking) to ensure they agree with the funds transfer records.**

21. Determine that the person reviewing rejects and exceptions is not involved in receiving, preparing, or transmitting funds.

22. Ensure that suspense items or adjustment accounts are appropriately accounted for, reviewed for abnormal fluctuations, and do not contain unusual or stale items.

CREDIT EVALUATION AND APPROVAL

23. Determine if there are well-documented, periodic credit reviews of funds-transfer customers and ensure that they are completed by credit personnel who are independent of account officer and operations staff.

24. Ensure that limits on intraday and overnight overdrafts are reasonable in view of the organization's capital position and the creditworthiness of the respective customers.

INCOMING FUNDS TRANSFERS

25. Determine whether incoming payments not received over a secure system (FedLine) are authenticated prior to processing.

26. Determine whether the bank maintains separation of duties over receiving instructions, posting to a customer's account, and mailing customer credit advices.

27. Determine whether management maintains audit trails from receipt through posting to a customer's account.

28. Determine whether management issues customer advices in a timely manner. (Best practices would indicate advices sent for incoming as well as outgoing wires)

29. Determine if the Incoming Wire Log is appropriately completed and documented. At a minimum, the log should include:

- **Beneficiary name.**
- **Beneficiary account number.**
- **Dollar amount of transaction.**
- **Sender Name.**
- **Sender Account Number.**
- **Counterparty Institution.**
- **Counterparty Location.**
- **Domestic or Foreign.**

Note: Ensure logs include customer-initiated and bank-purpose wires.

BUSINESS CONTINUITY AND DISASTER RECOVERY

(To the extent possible, leverage off the work of Information Technology examiners.)

30. Determine whether management has properly planned for contingencies and evaluate the reasonableness of the plan in relation to the volume of activity. Determine whether the contingency

plan incorporates appropriate safeguards, including:

- **A back-up system in the event of equipment failures and line malfunctions.**
- **A method for sending and receiving transfers if forced to operate at a different site.**
- **Procedures to ensure that data is recovered by the opening of the next day's processing.**
- **A requirement for supervisory approval for using back-up equipment.**
- **A requirement that the plan be distributed to all funds transfer personnel.**
- **Periodic testing of the back-up systems.**
- **Procedures and controls to prevent the inadvertent release of test data into the production environment.**

31. Determine whether procedures for backup and off-site storage of critical information and inventory control on hardware and software are in force.

FEDLINE ELECTRONIC FUNDS TRANSFER

Note: This type of transfer activity will be the most common type of funds transfer in community banks. Refer to the FFIEC IT Examination Handbook on Retail Payment Systems and the FedLine Advantage workprogram.

WHOLESALE ELECTRONIC FUNDS TRANSFER SYSTEMS (FTS)

Note: These procedures generally apply to larger banks that initiate large dollar transfers. Refer to the FFIEC IT Examination Handbook - Wholesale Payment Systems.

32. Review flowcharts or narratives of the bank's overall FTS to determine the degree of automated interface, linkage to functions not supported by the FTS, and separation of duties or functions. Review this information as it relates to any of the following systems used by the bank:

- **FedLine.**
- **CHIPS or other local payments system.**
- **SWIFT (Society for Worldwide Interbank Financial Telecommunications).**
- **Internal transfers (book entry).**
- **Customer networks.**
- **Internal networks.**

33. Review the adequacy of security procedures in place for both outgoing and incoming payment orders for each step of the FTS process.

- **Payment order origination such as message testing for fax, telephone, letters, or memos.**
- **Data entry.**
- **Payment order execution or release.**
- **Telecommunication lines.**
- **Physical security.**

34. Review a sample of contracts authorizing the bank to make payments from a customer's account and determine whether the contracts and disclosures adequately set forth responsibilities of the bank and the customer, primarily regarding the provisions of UCC Article 4A relating to authenticity and timing of transfer requests.

Audit or Independent Review

35. Determine that the audit or independent review program provides sufficient coverage relative to volume and nature of EFT activities. Independent review efforts should address all areas of EFT business, including:

- **Adequacy of and compliance with policies and procedures.**
- **Payment order origination (funds transfer requests).**
- **Message testing.**
- **Customer agreements.**
- **Payment processing and accounting.**
- **Personnel policies.**
- **Physical and data security.**
- **Contingency plans.**
- **Credit evaluation and approval.**
- **Incoming funds transfers.**
- **Outgoing funds transfers.**
- **Accuracy and completeness of wire logs.**
- **Bank Secrecy and Office of Foreign Assets Control (OFAC) issues, if applicable.**
- **Federal Reserve's Payment System Risk Program issues.**
- **Adequacy of blanket bond coverage, as well as compliance with any requirements of this insurance coverage for things such as callbacks.**
- **Evaluation of metrics utilized by management to measure the transactional risk inherent in the wire transfer function.**
- **Appropriateness of board reporting of wire activity that is commensurate with level of risk.**

Information Systems and Communication

36. Determine whether management reports provide sufficient information in relation to the nature and volume of EFT activities and that it is sufficient for the directorate to assess the organization’s inherent risk in EFT activities. Consider the following:

- **Identification of customers with large intraday and overnight overdrafts.**
- **Drawings against uncollected funds or in excess of established credit limits.**
- **Credit evaluation and approval.**
- **Total and average number of wires.**

- **Total and average dollar amount of wires.**
- **Volume of incoming vs. outgoing wire activity.**
- **Volume of domestic vs. international wire activity.**
- **Location of international activity.**
- **Volume of customer-initiated vs. bank-purpose wire activity.**
- **Trend of wire activity (number, dollar, average, etc.)**

37. Evaluate the accuracy and timeliness of information provided to the board and senior management.

Managerial Effectiveness

38. Assess compliance with board policies and guidelines.

39. Determine the adequacy of bank documentation of EFT activities, including the sufficiency of record retention practices.

40. Analyze compliance with laws and regulations, including requirements of the Bank Secrecy Act and Financial Recordkeeping.

41. Assess the adequacy of management's response to audit exceptions and recommendations.

42. Determine whether management has properly planned for contingencies and has developed reasonable contingency plans and safeguards that are commensurate with the volume of EFT activities.

43. Determine the adequacy of insurance coverage for each EFT operation and the overall EFT environment. (Note: Standard blanket bonds do not cover funds transfer operations. Banks typically obtain a special rider for funds transfers. However, the special rider does not normally provide coverage if telephonic requests for funds are honored.) Assess compliance with any requirements of the blanket bond coverage such as callback requirements.

End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

MORTGAGE BANKING - CORE

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Are policies, procedures, and risk limits for the mortgage banking operations adequate?** ***Refer to Core Analysis Procedures #3-4, Procedures #37-38, Procedure #48, Procedure #53, Procedure #58, & Procedure #63.***

C.2. **Are internal controls adequate?** ***Refer to Core Analysis Procedures #5-8, Procedures #23-25, Procedure #43, Procedure #49, Procedure #52, Procedure #55, Procedure #68, & Procedure #77.***

C.3. **Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedure #6, Procedures #9-12, & Procedure #56.***

C.4. **Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #13-15 & Procedure #43.***

C.5. **Does management use appropriate strategies to manage liquidity and limit interest rate risk exposure?** ***Refer to Core Analysis Procedures #34-40 & Procedures #73-74.***

C.6. **Are warehouse loans sold in a timely manner?** ***Refer to Core Analysis Procedures #31-33.***

C.7. **Is the mortgage banking department's financial performance acceptable?** ***Refer to Core Analysis Procedure #50, Procedure #54, & Procedure #72.***

C.8. **Are foreclosures handled properly to limit reputation and legal risk?** ***Refer to Core Analysis Procedures #63-69.***

C.9. **Do the board and senior management effectively supervise the mortgage banking area?** ***Refer to Core Analysis Procedure #4, Procedure #7, Procedure #15, & Procedures #76-80.***

MORTGAGE BANKING - CORE

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

This core module is intended for use in banks with more complex mortgage banking operations, including programs that service sold loans and retain mortgage servicing assets. Examiner judgment will ultimately determine whether to use the Abbreviated or Core Mortgage Banking module. Examiners should consider using the core module in more complex situations when the bank:

- ***Has a formal mortgage banking department or a mortgage banking subsidiary;***
- ***Has purchased and integrated a mortgage banking operation or company;***
- ***Engages in wholesale activities, including loans originated through third-parties;***
- ***Has warehouse line(s) of credit to fund the mortgage banking pipeline;***
- ***Is experiencing delinquencies, foreclosures, or extended agings within the warehouse;***
- ***Speculates on interest rate movements through unhedged positions;***
- ***Originates and sells nontraditional or subprime mortgage products; or***
- ***Services sold loans or retains mortgage servicing assets.***

- ***Servicing for Mortgage Loans: Supplemental Information for Loss Mitigation Strategies (FDIC FIL-77-2007)***
- ***Discontinuation of Foreclosure Proceedings (FDIC FIL-14-2016)***

Preliminary Review

1. **Review the following documents:**
   - **Previous examination reports and workpapers on mortgage banking;**
   - **Recent internal and external audit reports, management letters, and management's response to any criticisms or recommendations;**
   - **Reports, if available, from government-sponsored enterprises (GSE), Federal Housing Administration (FHA), and significant private investors;**
   - **Internal memoranda, board minutes, and management reports on mortgage banking operations;**
   - **Financial performance reports to gain a basic understanding of assets, liabilities, and profitability;**
   - **If the bank is a loan servicer, review GSE or rating agency reports on servicing performance; and**

- **Organizational charts pertinent to mortgage banking activities.**

Note: References to GSEs include the Federal National Mortgage Association (FNMA) and Federal Home Loan Mortgage Corporation (FHLMC).

2. Review the types of products offered, sales volumes, originator channels, and target markets.

Policies and Procedures

3. Review policies and procedures regarding mortgage banking activities. Consider the following:

- **Permissible mortgage banking activities, including hedging;**
- **Loan production, origination, and underwriting activities;**
- **Individual officer and employee responsibilities;**
- **Lending limits and segregations of duty;**
- **Position and earnings-at-risk limits; and**
- **Accounting procedures for loan sales, loans held for sale, and derivatives.**

4. Evaluate the process for granting exceptions to policies and procedures. Consider whether prompt exception reporting is made to senior management and the board of directors and whether compensating factors that support exceptions are documented.

Internal Controls

5. Determine whether management established an effective quality control program that is independent from the loan production process and ensures that loans, whether originated or purchased, are processed, underwritten, closed, and serviced according to lender and investor standards.

6. Determine whether the quality control program meets GSE, FHA, and/or private investor guidelines and addresses the following:

- **Pre- and post-closing reviews;**
- **Retail and wholesale loan production;**
- **Re-verification of pertinent underwriting criteria;**
- **On-site branch audits if the lender is FHA or GSE approved; and**
- **Compliance with applicable laws and regulations related to mortgage foreclosures, including the Servicemembers Civil Relief Act.**

7. Determine whether quality control findings (and management's response) are clearly documented and presented to the board and senior management at least quarterly.

8. Determine whether procedures exist to detect fraudulent activity, investigate suspected fraud, issue appropriate management reports, and, when warranted, file Suspicious Activity Reports.

Audit or Independent Review

9. Determine whether the scope of audits and independent reviews is sufficient to identify policy, reporting, and internal control deficiencies and whether results are fully and promptly reported to the board.

10. If recent reviews or audits disclosed deficiencies, determine whether management responses are reasonable.

11. Determine whether the internal audit program covers compliance with state and federal laws, auditing standards, and investor requirements.

12. If applicable, verify that there is an independent review or audit of monthly servicer reports.

Information and Communication Systems

13. Determine whether management information systems (MIS) have the capacity to handle existing volumes and activities, as well as projected levels, strategies, and objectives.

14. Determine whether MIS reports generate sufficient information for management to identify and monitor:

- **Closed held-for-investment and held-for-sale loans;**
- **Loans segregated by product type and investor;**
- **The dollar amount and percentage of total loans for each type and investor;**
- **Loan application volumes, throughout the origination process, including:**

- **Applications received, including locked applications,**
    - **Commitments outstanding and related delivery status, and**
    - **Historical fall-out rates for specific loan categories;**
- **The status of delivery commitments to investors and the effectiveness of hedges;**
- **Daily positions, including pipeline commitments, fallout estimates, warehouse inventories, and forward sales contracts;**
- **The status of warehouse lines of credit; and**
- **The status of loans serviced for investors, including payments, delinquencies, foreclosures, modifications, and servicer advances.**

15. Assess the quality of board reports and determine whether the following information is conveyed in sufficient detail given the size and complexity of the mortgage banking program. Consider:

- **Operating results, including profitability, efficiency, and cost information;**
- **Asset quality trends, including delinquencies, chargeoffs, foreclosures, and collection accounts;**
- **Production volumes and processing backlogs;**
- **Warehouse inventory agings and turnover rates;**
- **Servicer advances, including recoverable and non-recoverable advances;**
- **Valuations of servicing rights, held-for-sale loans, and derivatives, including significant valuation assumptions and adjustments; and**
- **Hedging activities, including products, results, and strategies.**

Internal Loan Production (Origination, Underwriting, and Closing)

16. Review organization charts to assess the structure and independence of the production function.

17. Review loan production guidelines, which generally may address:

- **Types of loans to be originated or purchased;**
- **Sources from which the loans will be acquired, such as retail, wholesale, and the Internet; and**
- **Underwriting and appraisal standards (typically set by the investors).**

18. Review the qualifications, experience, and compensation levels of originators, processors, and underwriters.

19. Evaluate how management plans for funding during peak origination periods. If funding from an external warehouse line, consider how many times the line turns on a monthly basis.

20. Determine how management monitors adherence to underwriting guidelines.

21. Determine whether management established an underwriting authority matrix and whether underwriting functions are outsourced. Determine how management tracks loan quality for each underwriter. Most notably, ensure underwriting standards address investor requirements regarding the assessment and documentation of borrowers' ability to repay.

22. Evaluate procedures for closing and funding loans. Determine whether management requires that necessary documents are obtained before funds are released.

Wholesale Activities

Wholesale loan sources include third-party originators (TPO), such as brokers and correspondents.

23. Determine the types and dollar volume of loans submitted from each approved TPO. Determine whether controls exist to prevent loans closing from non-approved sources. Investigate any closings or purchases from sources not on the approved TPO list.

24. Review management's process for evaluating and monitoring the quality of loans submitted by TPOs. The quality control process should consider:

- **Historical default and foreclosure levels,**
- **Non-delivery history (pull-through rates),**
- **Documentation deficiencies, and**
- **Repurchase demands and other investor concerns.**

25. Determine how frequently the bank is required to repurchase loans (putbacks) that originated from TPOs. Assess the reasons for putbacks, and determine whether the bank tracks putbacks by source in order to identify TPOs that should be considered for removal from the approved TPO list.

Pipeline Management

The pipeline represents applications approved, but not funded.

26. Review the appropriateness and timeliness of pipeline reconciliation reports. Satisfactory reporting is

generally performed at least monthly.

27. Review the timeliness and accuracy of pipeline commitment reporting.

- **Determine whether unfunded commitments are specifically identified by product type and interest rate.**
- **Determine whether fixed-, floating-, and adjustable-rate derivative loan commitments are separately identified and tracked.**
- **Review management's process for handling expired rate-lock commitments.**

28. Determine whether management reports all rate-lock commitments (on loans designated as held for sale) as derivatives (written options). ***(Refer to the May 2005 Interagency Advisory on Accounting and Reporting for Commitments to Originate and Sell Mortgage Loans.)***

29. Determine whether pipeline commitments are accurately reported in financial and regulatory reports.

30. Review procedures for monitoring and projecting fallout rates (withdrawn from the pipeline or unapproved commitments), which can depend on historical behavior, loan type, current and anticipated interest rates, or other factors. Assess how fallout rates correlate to hedging practices.

Warehouse Management

Warehouse loans are closed, funded, and waiting to be delivered to the secondary market.

31. Review internal warehouse reconciliation reports and determine whether warehouse loans are accurately reported as held-for-sale at the lower of cost or fair value within financial and regulatory reports. Satisfactory processes generally include at least monthly reconciliations.

32. Review warehouse turnover and aging reports.

- **Research any unusual characteristics that may indicate impaired marketability, such as delinquent loans or loans in the warehouse beyond normal periods.**
- **Consider the level of, and reasons for, nonconforming or unsaleable loans.**
- **Review management's methods for handling warehouse loans that are ineligible for sale. Advise examiners conducting the loan review if a significant volume of ineligible loans are being placed in, or transferred to, the bank's held-for-investment loan portfolio.**
- **Determine whether part of the warehouse line is designated for loan repurchases and the number**

of loans within that category of the warehouse line.

33. **Determine whether the bank’s estimates of fair value of mortgages held for sale appropriately include the framework and fair value inputs described in ASC Topic 820, Fair Value Measurements.**

Hedging Practices

Mortgage banking programs often use derivative instruments, such as forward commitments, to hedge the rate-lock pipeline and warehouse loans against changing market interest rates.

34. **Assess the effectiveness of hedging strategies used to offset risks in unfunded (rate-locked) commitments and funded but unsold (warehouse) loans. Review assumptions used in simulation models, if applicable.**

35. **Ensure management reports forward commitments and options (if they meet the ASC Topic 815 definition of a derivative) as derivatives in financial and regulatory reports.**

36. **Determine whether management failed to fill any forward commitments or paid any pair-off fees. Determine the exposures and causes, if applicable.**

    (Note: If management is unable to meet commitments, refer to the hedging activities section in the Expanded Analysis.)

37. **Determine whether hedging policies are interest rate neutral or speculative. Review the effectiveness of such hedging strategies.**

38. **Determine whether management adequately assesses counterparty risks and establishes appropriate limits.**

39. **Review recent profit or loss reports for the mortgage banking operation to evaluate the effectiveness of hedging strategies.**

40. Discuss with management the degree of interest rate risk the bank is willing to accept and strategies for achieving and maintaining desired goals.

Secondary Marketing

Note: Secondary marketing encompasses the process of selling and delivering mortgage loans to investors, which includes the risk of repurchase.

41. Review a sample of loan purchase and sale agreements (correspondent agreements) with investors and determine the amount, maturity, terms of the commitment, representations and warranties, and other recourse provisions (e.g., credit default provisions).

42. Determine the number of pools sold that lack final pool certification, the reasons why, and whether the mortgage banking group is required to post a letter of credit.

43. Determine whether appropriate controls exist over recourse provisions, which may include the following:

- **MIS reports adequately track all recourse obligations;**
- **Recourse liability reserves are at an appropriate level for loans sold with recourse; and**
- **Management properly accounts for all loans sold with recourse in the regulatory reports, including the accurate risk weighting of recourse associated with credit default and premium recapture.** ***Note: Low-level recourse rules apply to premium recapture provisions.***

44. Determine the number of loan repurchase demands the bank received from external investors over the past 12 months and the status of each (outstanding, repurchased, indemnification agreement, withdrawn by investor) as well as any associated losses.

45. Determine whether correspondent agreements contain pass-through recourse provisions, which require the bank to be responsible for recourse that is contained in subsequent sales agreements between the investor and other third parties.

46. **In regards to the Credit Risk Retention Rule, determine whether the bank sells, or intends to sell, mortgages (that it originates) that represent 20 percent or more of a securitization that is sponsored by another entity (FDIC: Refer to Part 373 of FDIC Rules and Regulations, FRB: Refer to Part 244). If so, determine whether:**

- **Management is aware of the allocation-to-originator option and has factored the potential effects into the secondary marketing program;**
- **Requests have been made to, or granted by, the bank to acquire an eligible interest of the risk retention obligation from the securitization sponsor;**
- **The allocation-to-originator option is addressed in the sales agreements;**
- **Management considered the impact of any risk retained under this option on the bank's financial condition; and,**
- **The bank complies with the hedging, transferring, and pledging restrictions of the Credit Risk Retention Rule for any interests retained for purposes of accepting an allocation to originator option.**

(Note: The option to allocate risk to the originator permits the sponsor (i.e., the securitizer) to allocate its risk retention obligation to the originator (i.e., the bank) of securitized assets if the originator contributed at least 20 percent of the total assets in the securitization and the originator agrees to retain the risk. The originator's allocation cannot exceed the originator's share of the securitized assets.)

Mortgage Servicing

PORTFOLIO SUPERVISION

47. **Review servicing agreements with investors and ascertain the bank's main responsibilities as servicer.**

48. **Determine whether written policies and procedures for mortgage loan servicing adequately cover all facets of the servicing operations (e.g., loan set-up, adjustable rate mortgage adjustments, investor accounting, escrow administration, insurance, collections, foreclosure, bankruptcy, other real estate owned, customer service).**

49. **Review a sample of investor account reconcilements and consider the following controls:**

- **Each investor account is reconciled at least monthly,**
- **A supervisor reviews and approves reconcilements,**
- **Outstanding items are resolved in a timely manner, and**
- **Stale and un-reconciled items are promptly charged off.**

50. **Assess current and projected operating results for servicing functions. Determine whether:**

- **Cost estimates are completed on an average or incremental basis,**
- **Management analyzes profitability for each product type, and**
- **Cost analyses include all direct and indirect servicing expenses.**

51. Review the list of external vendors and sub-servicers engaged by the bank, and determine how management assesses the quality of work performed by these third parties.

52. Review significant consumer complaints and any pending litigation to identify possible internal control deficiencies and ensure appropriate resolution practices.

53. Determine whether the bank has purchased any loans from the servicing portfolio.

- **Determine the reasons for purchases.**
- **Analyze the volume and trend of purchases.**
- **Assess the appropriateness of policies and procedures that govern purchases.**

54. Evaluate the asset quality of the servicing portfolio, review delinquency reports, and assess the potential impact on the bank's financial performance, profitability, and reputation.

55. Determine whether the bank, as servicer, is required to make servicer advances on delinquent principal or interest payments, escrow costs, or foreclosure expenses. If so, consider the:

- **Book balance and credit quality of the advances,**
- **Controls surrounding the advances,**
- **Designation between recoverable and non-recoverable advances,**
- **Potential recourse if the bank is not in first position, and**
- **Ability to collect advances.**

MORTGAGE SERVICING ASSETS (MSAs)

56. Determine the extent to which MSAs are reviewed by internal and external auditors.

57. Review management's procedures for initially recording, subsequently recording, and periodically re-

evaluating MSAs. Procedures should address the:

- **Valuation method and assumptions used for initially measuring each MSA, and**
- **Subsequent method (either fair value or amortization) for measuring and recording each MSA.**

58. For MSAs accounted for under the amortization method, determine whether impairment policies and procedures are sufficient and reasonable, and consider whether:

- **The bank's stratum (basis point range) used for analyzing and tracking impairment is acceptable;**
- **The bank's analysis for impairment includes assessments based on product type, terms, rates, and other risk-layering characteristics;**
- **The bank is assessing MSAs for impairment or increased obligation based on fair value at least quarterly; and**
- **The bank's procedures to ensure market price or valuation assumptions used for the impairment analysis are current and reflect expected levels of mortgage prepayments and discount rates.**

59. Evaluate the bank's fair value measurements for mortgage servicing rights. Ensure that:

- **Sources of value are reliable;**
- **Prices used for valuations are appropriate for the bank's MSAs;**
- **Servicing assets (pertaining to all loan types and securitizations) are consistently valued;**
- **Valuation processes include adjustments for impairment;**
- **Modeling assumptions for MSAs are appropriate; and**
- **Assumption factors, such as interest rate scenarios and prepayments, made in modeling MSAs are consistent with other assumptions used by the bank.**

60. Evaluate the due diligence process for bulk acquisitions of MSAs, if applicable.

- **Determine whether the bank performs a comprehensive due diligence review prior to purchasing a servicing portfolio.**
- **Determine whether management applies reasonable valuation assumptions, which may include data on underlying mortgages, servicing revenues and costs, prepayment speeds, and discount rates.**

61. Verify that management is properly reporting MSAs in financial and regulatory reports. Determine whether management is treating MSAs properly for regulatory capital purposes (FDIC: Part 324 of FDIC Rules and Regulations, FRB: 12 CFR - Part 217).

62. Ensure that the bank adheres to FASB ASC Topic 860, which requires the disclosure of accounting

policies, volumes, cash flows, and key assumptions made in determining fair values of servicing assets and liabilities. Items to consider include the:

- **Amount of MSAs capitalized (or purchased) during the reporting period,**
- **Method and amount of amortization for the reporting period,**
- **Fair value of MSAs, including valuations methods and sensitivity of those fair values to changes in key assumptions,**
- **Reasons for not estimating fair value of MSAs and mortgage loans without MSAs (for banks that do not to capitalize MSAs),**
- **Risk characteristics of underlying loans for the purpose of measuring MSAs, and**
- **Activity in valuation allowances.**

Collections and Foreclosures

63. Review policies and procedures associated with collecting delinquent loans.

- **Determine whether collection efforts follow serviced loan investor guidelines. If governing documents allow loss mitigation strategies, determine whether servicers:**
  - o **Proactively identify borrowers at heightened risk of delinquency or default, such as those with impending interest rate resets;**
  - o **Contact borrowers to assess their ability to repay;**
  - o **Assess whether there is a reasonable basis to conclude that default is “reasonably foreseeable” and,**
  - o **Explore, when appropriate, a loss mitigation strategy that avoids foreclosure or other actions that result in a loss of homeownership.**
- **Determine whether the bank documents all attempts to collect past due payments.**
- **Determine whether uncollectible balances are promptly charged off.**

64. Determine whether management avoids unnecessary foreclosures and considers mortgage loan modifications or other workout strategies that are affordable and sustainable.

65. Determine whether the institution thoroughly assesses the abilities of sub-servicers to fulfill their contractual obligations for collections and foreclosures.

66. Ensure that foreclosures are conducted properly and consistent with all applicable laws, and that:

- **Foreclosures are in the name of the holder of the note or the party entitled to enforce the note,**
- **The foreclosing entity has possession of the original note and either a recorded mortgage or a recorded valid assignment of the mortgage before initiating the foreclosure, and**
- **Lost note affidavits are only used after a good faith effort to locate the original note.**

67. Determine whether management has appropriate policies and practices relating to decisions to discontinue the foreclosure process that address:

- **Obtaining and assessing current valuation and other relevant information,**
- **Releasing liens,**
- **Notifying local authorities, and**
- **Notifying and contacting the borrower(s).**

68. Determine whether attestations in a foreclosure affidavit comply with local laws and contain:

- **Facts explaining the basis for the personal knowledge of the affiant (e.g., job title, job position, job duties, etc.); and**
- **Assurances that the affiant reviewed supporting records to ensure the inclusion of all necessary documents for foreclosure in the particular jurisdiction.**

69. Ensure that the complaint document and foreclosure affidavit address the:

- **Specific amount due under the note,**
- **Payment history (to sufficiently demonstrate servicing of the loan),**
- **Description of the quality control procedures governing the foreclosure process, and**
- **Authorization under which the mortgage is validly assigned to the foreclosing note holder.**

70. Review the compensation program and determine whether the institution pays bonuses to law firms, servicers, and/or employees for processing high volumes of foreclosures.

Financial Analysis

GENERAL

71. Review the mortgage banking department's balance sheet and income statement and research items that are large relative to operations or that pose undue financial risk for other reasons.

72. Evaluate officer compensation arrangements and determine whether any compensation or incentive programs encourage unsafe or unsound practices.

EARNINGS PERFORMANCE

73. Assess the profitability of mortgage banking activities in terms of the level, composition, and trend of net income. Consider growth plans, interest rates, economic environment, and industry comparisons when evaluating earnings.

LIQUIDITY AND FUNDING

74. Evaluate management's process for meeting the mortgage banking department's liquidity needs, considering loans in the pipeline and warehouse.

75. Determine whether liquidity sources are adequate for current conditions and projected funding needs.

- **Evaluate the methods used to fund mortgage operations. The methods may include repurchase agreements, commercial paper, revolving warehouse lines of credit, and long-term debt.**
- **Review asset/liability management practices to determine whether funding maturities approximate maturities of underlying assets.**

CAPITAL ADEQUACY

76. Assess the effect of mortgage banking activities on risk-based and total capital.

Board and Senior Management Oversight

77. Determine whether a separate board committee for mortgage banking activities exists, and review committee minutes, if applicable, for significant information.

78. Determine what management committees have oversight and control over mortgage banking operations and evaluate the effectiveness of the committee structures. Further, determine whether there are deficiencies or conflicts resulting from the structures.

79. Determine whether the experience, technical knowledge, and administrative capabilities of management are sufficient for mortgage banking operations.

80. Review the mortgage banking strategic planning process and determine whether goals are reasonable,

attainable, complement the bank's overall business plan, and reflect the board’s risk appetite.
81. Determine whether management depth and succession plans are adequate.
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

MORTGAGE BANKING – ABBREVIATED

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are policies, procedures, and risk limits for the mortgage banking operations adequate?** ***Refer to Core Analysis Procedures #3-4 & Procedure #19.***
C.2.	**Are internal controls adequate?** ***Refer to Core Analysis Procedures #5-6 & Procedure #24.***
C.3.	**Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedure #1 & Procedures #7-8.***
C.4.	**Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedure #4, Procedure #9, Procedure #12, Procedure #14, & Procedure #24.***
C.5.	**Does management use appropriate strategies to manage liquidity and limit interest rate risk exposure?** ***Refer to Core Analysis Procedures #9, Procedures #22, & Procedures #25-26.***
C.6.	**Are warehouse loans sold in a timely manner?** ***Refer to Core Analysis Procedures #15-18 & Procedure #23.***
C.7.	**Is the mortgage banking financial performance acceptable?** ***Refer to Core Analysis Procedure #25.***
C.8.	**Do the board and senior management effectively supervise the mortgage banking area?** ***Refer to Core Analysis Procedures #4-6, Procedure #11, Procedure #19, & Procedure #27-28.***

MORTGAGE BANKING - ABBREVIATED

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

This Abbreviated module is for use in banks with non-complex mortgage banking operations that sell loans with servicing released. Mortgage banking activities vary greatly among banks and it may not be necessary to perform all of these procedures. When useful, examiners can complete this Abbreviated module, or portions of it and portions of the Mortgage Banking - Core module. Examiner judgment should be used to determine whether to use abbreviated or core procedures. Generally, examiners should use the Mortgage Banking – Core module in more complex situations such as when the bank:

- ***Has a formal mortgage banking department or a mortgage banking subsidiary;***
- ***Has purchased and integrated a mortgage banking operation or company;***
- ***Engages in wholesale activities, including loans originated through third-parties;***
- ***Has warehouse line(s) of credit to fund the mortgage banking pipeline;***
- ***Is experiencing delinquencies, foreclosures, or extended agings within the warehouse;***
- ***Speculates on interest rate movements through unhedged positions;***
- ***Originates and sells nontraditional or subprime mortgage products; or***
- ***Engages in the servicing of sold loans and/or retains mortgage servicing assets.***

Preliminary Review

1. **Review the following documents.**
   - **Previous examination reports and workpapers, including consumer compliance examinations;**
   - **Internal audit reports;**
   - **The most recent external audit report, management letter, and management's response to criticisms and recommendations;**
   - **Government-sponsored enterprise (GSE), Federal Housing Administration (FHA), and significant private investor reports, if available; (*Note: References to GSEs include the Federal National Mortgage Association (FNMA) and Federal Home Loan Mortgage Corporation (FHLMC).)***
   - **Internal memoranda, board minutes, and management reports on the mortgage banking activities;**

- **Asset, liability, and profitability reports; and**
- **Organizational charts pertinent to the mortgage banking activities.**

2. Review the types of products offered and sold, originator channels, and target markets.

Policies and Procedures

3. Review bank policies and procedures regarding mortgage banking activities. Consider the following:

- **Permissible mortgage banking activities, including hedging;**
- **Loan production, origination, and underwriting guidelines;**
- **Individual officer and employee responsibilities;**
- **Lending limits and segregation of duties;**
- **Position and earnings-at-risk limits; and**
- **Accounting procedures for loan sales, loans held for sale, and derivatives.**

4. Evaluate the process for monitoring exceptions to policies and procedures. Satisfactory processes generally include monthly exception reporting to senior management and the board (including "no-exception" reports) and reports that detail compensating factors for each exception.

Internal Controls

5. Determine whether management established an effective quality control program that is independent from the loan production process and ensures that loans, whether originated or purchased, are processed, underwritten, closed, and serviced according to lender and investor standards.

6. Determine whether quality control findings are clearly documented and presented periodically to the board and senior management and include documentation of management's response.

Audit or Independent Review

7. Determine whether the scope of recent audits or independent reviews is sufficient to identify policy, reporting, and internal control deficiencies. Ensure detailed results are promptly reported to the board.

8. If internal audits or independent reviews disclosed any deficiencies, determine whether management responses are appropriate and timely.

Information and Communication Systems

9. Determine whether the management information systems (MIS) generate all necessary reports, such as:

- **Held-for-sale loans and inventory agings;**
- **Loans segregated by product type and investor;**
- **Application volumes (through origination), and any processing backlogs;**
- **The status of delivery commitments to investors;**
- **Daily positions, including pipeline, warehouse, and hedged loans;**
- **Operating results, including profitability, efficiency, and cost information; and**
- **Liquidity and capital needs.**

Loan Production (Origination, Underwriting, and Closing)

10. Assess the qualifications, experience, and compensation levels of originators and underwriters.

11. Evaluate procedures for underwriting and closing loans. Determine whether management ensures all necessary documents are obtained before funds are released.

Pipeline Management

Pipelines include loan applications that are approved, but unfunded.

12. Review the timeliness, accuracy, and composition of pipeline reporting.

- **Determine whether unfunded commitments are identified by product type, and adequately stratified, such as between fixed-, floating-, and adjustable-rate commitments and rate-locked or non-rate-locked commitments.**
- **Review management's process for monitoring and reporting expired rate-locked commitments.**

13. Ensure that management reports all rate-locked commitments (on loans designated as held for sale) as derivatives (written options) in financial and regulatory reports, as described in Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Topic 815.

14. Review management's procedures and assumptions for monitoring and projecting fallout rates, and consider how these rates correspond to hedging practices.

Warehouse Management

Warehouse loans are funded and closed loans waiting to be delivered to the secondary market.

15. Review the appropriateness and timeliness of internal warehouse-reconciliation reports.

16. Review warehouse turnover and aging reports, and determine whether there are any unusual characteristics that suggest impaired marketability, such as delinquencies, underwriting defects, or loans in the warehouse for extended periods. Determine the level of, and reasons for, any unsaleable loans.

17. Review the number and volume of loan-repurchase demands from investors since the prior examination. Consider the status (outstanding, repurchased, indemnified, or withdrawn by investor) and any associated losses.

18. Determine whether warehouse loans are accurately reported at the lower of cost or fair value. Determine whether estimates of fair value for held-for-sale loans use reasonable approaches, assumptions, and are valued in accordance with ASC Topic 820, Fair Value Measurements.

Hedging Practices

Many mortgage banking programs use derivative instruments, such as forward commitments, to hedge the rate-locked pipeline and warehouse loans against changing market interest rates.

19. Determine whether management established hedging policies that, at a minimum, address objectives, derivative types, authorizations, exposures, and exceptions.

20. Review the effectiveness of hedging strategies, such as forward sales or options, used to hedge risks associated with the pipeline and the warehouse.

21. Determine whether hedging instruments are accurately reported in financial and regulatory reports.

22. If the bank was unable to fulfill any forward commitments, assess the potential implications, such as pair-off fees, interest rate risk, and reputation risk.

Secondary Marketing

Secondary marketing encompasses the process of selling and delivering mortgage loans to investors, which includes repurchase risk.

23. Review a sample of loan purchase and sale agreements with investors (correspondent agreements). Identify volume commitments, expirations, representations, warranties, recourse provisions, repurchase guidelines, and other provisions.

24. Review a sample of correspondent agreements to determine whether the bank has any continuing recourse obligations to the purchaser beyond standard representations and warranties. If the bank is selling loans with recourse, determine whether appropriate controls exist over recourse provisions, which may include the following:

- **MIS reports adequately track all recourse obligations;**
- **Recourse liability reserves are at an appropriate level for loans sold with recourse; and**
- **Management properly accounts for all loans sold with recourse in the regulatory reports, including accurate risk weighting of recourse associated with credit default and premium recapture.**

Financial Analysis

25. Assess the earnings of the mortgage banking activities in terms of the level, trend, volatility, composition, and earnings at risk. Consider historic and projected gains on sales, growth plans, interest rates, economic environment, and industry comparisons when evaluating earnings.

26. Determine whether liquidity and capital levels support the demands and risks of the operation.

Board and Senior Management Oversight

27. Evaluate the effectiveness of management's oversight of the mortgage banking operations. Determine whether the experience, technical knowledge, and administrative capabilities of management are

sufficient.
28. Review the strategic planning process and determine whether mortgage banking goals are reasonable, attainable, and complement the bank's overall business plan and reflect the bank's associated risks.
End of Abbreviated Module. If needed, continue to Core Analysis Module.

RELATED ORGANIZATIONS
Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are bank policies and procedures adequate for the level of transactions among the holding company, affiliates, and subsidiaries?** ***Refer to Core Analysis Procedures #7-8.***
C.2.	**Are internal controls adequate?** ***Refer to Core Analysis Procedures #10-13.***
C.3.	**Are audit and independent review functions adequate?** ***Refer to Core Analysis Procedures #14-16.***
C.4.	**Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedure #17.***
C.5.	**Are affiliates appropriately separated from the bank and able to operate without threatening the bank's financial condition?** ***Refer to Core Analysis Procedures #18-28.***
C.6.	**Do transactions comply with applicable federal and state laws and regulations?** ***Refer to Core Analysis Procedures #29-32.***
C.7.	**Are all affiliated organizations adequately capitalized?** ***Refer to Core Analysis Procedure #34.***
C.8.	**Do the board and senior management effectively supervise this area?** ***Refer to Core Analysis Procedure #8-9, Procedure #13, Procedure #16, & Procedures #35-36.***

RELATED ORGANIZATIONS

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Important

The bank's corporate structure is subject to various laws and regulations, such as the Bank Holding Company Act (BHC Act) of 1956, Regulation W (which implements Sections 23A and 23B of the Federal Reserve Act), and Part 362 of the FDIC Rules and Regulations. A thrift's (savings association's) corporate structure is subject to laws and regulations such as the Home Owners' Loan Act (HOLA), FRB Regulation W, and FRB Regulation LL. These regulations define terms such as conclusive presumption, rebuttable presumption, covered transaction, low-quality asset, and affiliate. (This module includes general descriptions of terms and regulations; examiners should review the actual regulations when necessary for specific guidance and definitions.)

Different statutes and regulations have different definitions of affiliate. Affiliate is a broad term and includes the following: (1) Bank holding companies and savings and loan holding companies (SLHCs), (2) insured depository institution (IDI) subsidiaries of the holding company, (3) Nonbank subsidiaries of the holding company, (4) certain subsidiaries of the bank, and (5) Any company that the Federal Reserve determines by regulation or order to be an affiliate. Regulation W also provides that any company that is controlled by 25 percent or more of the shareholders that control 25 percent or more of the BHC/ SLHC or IDI is an affiliate for purposes of Regulation W.

An IDI is a state bank, national bank, trust company, banking association, or any institution that takes deposits insured by the FDIC, including savings associations (thrifts).

Section 312 of the Dodd-Frank Act transferred various powers and duties from the former Office of Thrift Supervision to the FRB, FDIC, and OCC. Under this provision, the FRB has oversight of SLHCs, the FDIC has oversight of state chartered thrifts, and the OCC has oversight of federally chartered thrifts. Examiners should be aware that SLHCs and thrifts are subject to certain restrictions under HOLA if the thrift does not maintain Qualified Thrift Lender status; see procedure #33.

Preliminary Review

1. **Review prior examination reports, pre-examination memorandums, file correspondence, and Federal Reserve holding company inspection reports for an overview of known related organizations and any previously identified criticisms.**

2. **Review recent external and internal audit reports to determine the scope of the review(s) and to identify criticisms and recommendations regarding transactions between the bank and its affiliates.**

3. Review relationships with holding companies or parent organizations, other affiliates and subsidiaries using such reports as the FR Y-6, the FR Y-10, the National Information Center (NIC) organizational hierarchy report (FRB), and the holding company organizational chart. Determine possible ownership ties not identified by the institution.

4. Examine the corporate structure surrounding the IDI and identify affiliate transactions. Carefully consider the following items:

- **Policies and practices regarding services and transactions between the IDI and its affiliates;**
- **Tax sharing arrangements and intercompany tax transactions;(see the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure for further discussion);**
- **Listing of affiliated transactions from the pre-examination information;**
- **Related interests of principal shareholders, directors, and executive officers; and**
- **Fixed-asset subsidiaries or affiliates.**

5. Review the holding company (or other parent organization) and the IDI's corporate structure for the possibility of a chain banking group. Determine whether the members of the chain-banking group control other companies through 25 percent common ownership. ***(Note: A chain banking group exists when a common individual or company, or group of individuals or companies ─ acting alone, through, or in concert with any other individual or company ─ owns, controls or has the power to vote at least 25 percent of the outstanding voting shares of two or more banks or savings associations.)***

6. Review the stockholders listing and most recent proxy statements of the holding company or parent organization. Identify ownership percentages and instances of control that satisfy the definition of control as set forth within the BHC Act (Section 225.2(e)) or HOLA.

7. Review, to the extent possible, other federal and state examination reports of the IDIs within the single holding company organization or within a chain banking organization for mutually shared risks. Consider the following items:

- **Size and complexity of the organizations;**
- **Overall condition of the institutions in the organization;**
- **Extent, type, and quality of transactions among institutions in the organization;**
- **Degree of interdependence among institutions;**
- **Common deficiencies in lending and investment policies;**
- **Possible insider abuse;**
- **Shared employees or management; and**
- **Degree and nature of control being exerted over individual institutions (absentee ownership).**

Policies and Procedures

8. Determine whether policies appropriately address relationships and transactions with related organizations.

9. Determine whether formal and informal employee sharing agreements are appropriate and dual employees' work allocation and compensation conform to the agreement. Satisfactory agreements generally:

- **Define employment relationships between the IDI and affiliate,**
- **Establish procedures and timeframes for payment,**
- **Are independently reviewed by the board of each affiliate, and**
- **Assign authority for managing dual employee relationships.**

Internal Controls

10. Assess the IDI’s methods for identifying transactions subject to Sections 23A and 23B of the Federal Reserve Act are adequate. Consider the following:

- **Internal reports**
- **Documentation of covered transactions,**
- **Loan records,**
- **Deposit accounts,**
- **Accounts payable and receivable, and**
- **Board minutes.**

11. Determine the volume and frequency of covered transactions. Ensure covered transactions are conducted on terms and conditions consistent with safe and sound banking practices and at readily determinable and well-documented market values. Review for noncompliance or abusive activities. Consider the following items:

- **Prohibitions on an IDI’s purchase of low quality assets from an affiliate or use of low quality assets as collateral,**
- **Prohibitions on the transfer of low quality assets to an IDI,**
- **Prohibitions on the acceptance of affiliate shares as collateral for loans to affiliates,**
- **Collectability of receivables,**
- **Collateral requirements,**
- **Restrictions on advertisements and agreements that suggest the IDI is responsible for the obligations of an affiliate, and**
- **Fixed asset arrangements.**

12. Review any formal or informal agreements regarding management or other fees paid by the IDI to affiliates. Satisfactory agreements generally detail and support the following:

- **Fee structures for services provided (e.g., based on asset size, number of employees, hours on-site, comparisons to market rates);**
- **Quality of services;**
- **Qualifications of service providers;**
- **Billings; and**
- **Timing of payments for services.**

13. Determine the IDI's compliance with any regulatory conditions/commitments pertaining to related organizations.

Audit or Independent Revie

14. Determine whether the independent review provides sufficient coverage relative to the institution's size, scope of related organization activities, and risk profile. Satisfactory independent reviews generally:

- **Determine compliance with policies, procedures, and regulatory requirements;**
- **Assess separation of duties, internal controls, and supervision of related organization activities;**
- **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board;**
- **Recommend corrective action, when warranted; and**
- **Verify that corrective action commitments were implemented.**

15. Determine whether the results of audits and independent reviews are promptly reported to the board or a designated committee. If results are presented to a designated committee of the board, ensure the committee includes at least one outside/independent director.

16. Determine whether management's responses to recent audits or independent reviews are reasonable and whether corrective actions, such as reimbursements, are promptly implemented.

Information and Communication Systems

17. Determine whether management reports provide accurate, timely and sufficient information relative to:

- **The size and frequency of affiliate transactions, and**
- **The organization's size and risk profile.**

Evaluation of Affiliate Operations

18. Confirm the holding company's control (ownership, control, or power to vote) of all IDIs, nonbank subsidiaries, and tiered holding companies.

Note: Portions of procedures 19 – 22 may be more applicable to BHC/SLHC inspections than to a bank examination.

19. Identify ownership levels that have increased to more than 10 percent.

- **If any company controls more than 10 percent of the bank holding company stock or thrift holding company stock, determine whether notice was submitted to the responsible Reserve Bank.**
- **For Employee Stock Ownership Plans (ESOPs) or Employee Share Ownership Trusts (ESOTs) controlling or approaching control of more than 10 percent of the bank holding company, determine whether the ESOP/ESOT submitted a notice of agreement to comply with the standard Passive Commitments and whether or not the ESOP/ESOT is in compliance therewith.**
- **Determine who votes or controls the ESOP/ESOT shares (usually a trustee or trustees) and ensure this control is reported on each individual's applicable regulatory reporting forms and disclosure statements.**
- **Determine whether there are any financial transactions between the IDI and the ESOP/ESOT and, if so, that the transactions are consistent with Sections 23A and 23B of the Federal Reserve Act.**

20. Determine whether there were changes among large shareholders and, if necessary, whether a change in control notice was filed with the responsible regulator.

21. Determine who votes/controls the shares of any trusts owning more than 5 percent of the bank or bank holding company's outstanding shares.

- **Determine whether the trust itself is a company as defined within the Bank Holding Company Act (Section 225.2(d)). If so, determine whether the trust submitted notice of ownership to the responsible Reserve Bank, whether any commitments are in place, and if so, compliance with the commitments.**
- **Determine whether the trust, when combined with other shares owned or controlled by the same individual or group of individuals, meets the definition of a bank holding company, and if so, has filed appropriate applications with the Federal Reserve Bank.**

22. Determine whether all required regulatory filings were submitted and are accurate (e.g., FR Y-6, FR Y-10, Notice of Change in Control).

23. Analyze the holding company's balance sheet, income statement, and statement of cash flows; and review the most recent holding company inspection report, rating, and Officer's Questionnaire. Consider, with particular scrutiny when the IDI's condition is dependent on direct financial support from the parent company, the:

- **Origin of long-term debt, short-term debt, unamortizing debt, and the level of pressure exerted on the bank to upstream dividends;**
- **Level of holding company or parent-organization borrowings used to provide equity contributions to the subsidiary bank (double leverage);**
- **Parent company cash flow sources and uses (note any undue reliance on bank dividends or management and service fee income from subsidiary banks);**
- **Ability of the parent company to borrow funds or raise capital, if needed, for the injection of capital into the subsidiary bank(s);**
- **Holding company or parent organization's transactions with subsidiaries;**
- **Timing and amount of quarterly income tax payments and settlement payments by and between the bank, the parent and the IRS (Refer to the 1998 Interagency Statement of Policy - Income Tax Remittance by Banks to Holding Company Affiliates and to the 2014 Addendum to the Interagency Policy Statement on Income Tax Allocation in a Holding Company Structure for additional information.);**
- **Level and trend of affiliate deposit relationships maintained at the bank; and**
- **Merchant banking or other activities at the holding company or parent organization that may affect credit decisions at the bank level.**

24. Review the management structure and programs of the holding company or parent organization and its subsidiaries. Assess the effect(s) on the institution and ensure compliance with applicable regulations and statutes. Consider the following issues:

- **Level of centralized control by the holding company or parent organization over bank and non-bank subsidiaries;**
- **Access to management/audit/loan review expertise or services and the potential benefits from economies of scale;**
- **Training programs and their ability to foster consistency among the management of sister banks and non-bank affiliates;**
- **Movement of officers between the bank, holding company, and non-bank affiliates and the potential benefit to management succession planning (note any unfilled positions within the bank subsidiary);**
- **Management contracts (and supporting documentation) between the holding company or parent organization and the bank or non-bank subsidiaries; and**
- **Allocation of bank management's time devoted to bank, holding company, or other affiliate issues.**

25. Determine whether fees (such as, management, service, lease, or other fees) paid between the bank and its affiliates are proportional to the value of the goods or services provided or received. Appropriate

fee arrangements often include:

- Service contracts in place between the IDI and the affiliates;
- Fees based on the fair market value of services provided or, when there is no market, based on actual costs plus a reasonable profit;
- Service and pricing factors that are thoroughly supported and documented;
- Transactions that comply with applicable laws and regulations; and
- Prompt reimbursement to the bank for all funds due from an affiliate.

26. Determine the extent of deposit gathering activities performed by employees of affiliates, and the potential application and reporting requirements of brokered deposit regulations.

27. Review any mortgage banking activities or servicing contracts with affiliates. When applicable, consider:

- The capacity in which the affiliate is acting (as principal, on behalf of, or as agent for the IDI);
- The nature of the services provided;
- The transfer of low quality assets from an affiliate to an IDI via purchase or sale;
- The adherence to regulatory requirements for mortgage servicing rights;
- The billing arrangement, frequency of billing, method of computation, and basis for fees;
- The method for compensating the bank for balances maintained, and net interest earned on warehouse loans and lines;
- The pricing of loans and sales of servicing rights;
- Risks related to mortgage servicing, delinquent loans, and foreclosed assets; and
- Whether asset purchases, including servicing rights and extensions of credit, satisfy the quantitative, collateral, and safety and soundness requirements of Section 23A of the Federal Reserve Act.

28. Analyze the financial information and operating policies of affiliates and determine whether they may be detrimental to the institution's financial position. Consider the following items:

- Quality of assets,
- Funding needs,
- Fees received from the bank,
- Salary structure of subsidiary's officers and shared officers, and
- Financial condition of the subsidiaries.

Compliance with Other Applicable Regulations

29. Confirm that the bank's loan agreements do not restrict a borrower from obtaining credit, property, or service from a direct competitor of the holding company/parent organization or the holding

company's/bank's subsidiaries as a condition of credit. ***(Note: These anti-tying provisions of the BHC Act are not intended to restrict the bank's ability to impose debt limitations on borrowers.)*** **For a thrift, confirm that the thrift complies with the anti-tying provisions outlined in Section 5(q) of HOLA.** ***(Note: Regulation LL (FRB) Section 238.7 outlines exceptions to thrift-related tying restrictions.)***

30. Determine whether bank customers who purchased financial products of affiliated organizations were notified of the affiliate relationship. If the customer received IDI financing to purchase the assets, determine whether the transaction was subject to and in compliance with Regulation W.

31. Determine whether the subsidiaries' activities are permissible and comply with appropriate federal and state laws and regulations.

32. Assess the adequacy of corporate, management, and physical separations that exist between the bank and affiliated organizations.

Qualified Thrift Lender

33. Determine the potential financial impact on a savings association (or state savings or cooperative bank that has been deemed a savings association under Section 10(*l*) of HOLA) if the savings association fails to maintain qualified thrift lender (QTL) status and the SLHC:

- **Is no longer eligible to engage in activities permissible for certain Unitary SLHCs (Sections 10(c)(3) and 10(c)(9)(C) of HOLA),**
- **Is no longer eligible to continue certain grandfathered activities permissible for certain unitary SLHCs (Section 10(c)(6)(B) of HOLA), and**
- **Is required to convert to a BHC within one year of the association failing to maintain QTL status (Section 10(m)(3)(C)) and is no longer eligible to engage in activities permissible for SLHC's but not BHCs.**

Affiliate Capitalization

34. Determine whether affiliates comply with the capital requirements of their functional regulator.

Board and Senior Management Supervision

35. Determine whether the board of directors reviews all affiliate relationships at least annually and approves all agreements between the institution and any related organizations.

36. Determine whether all affiliate relationships have adequate supervision by bank officers. (Affiliate relationships are subject to the same standards as any unaffiliated vendor relationship.)
End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

RETAIL INSURANCE AND SECURITIES SALES ACTIVITIES

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine whether an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are the bank's policies, procedures, and other risk limiting methods adequate?** ***Refer to Core Analysis Procedures #8-10* & *Procedure #27*.**
C.2.	**Are internal controls adequate?** ***Refer to Core Analysis Procedures #11-12, Procedure #25, & Procedures #28-29.***
C.3.	**Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedures #13-14 & Procedure #30.***
C.4.	**Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #15-16.***
C.5.	**Are third party agreements and the bank's reviews of compliance with such agreements adequate?** ***Refer to Core Analysis Procedures #17-19* & *Procedure #31*.**
C.6.	**Do the bank's board and senior management effectively oversee and administer sales and incentive programs and activities involving insurance or securities products offered directly by the bank or by third party entities from or on behalf of the bank?** ***Refer to Core Analysis Procedures #20-24 & Procedure #26.***

RETAIL INSURANCE AND SECURITIES SALES ACTIVITIES

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. **Review information such as prior examination reports, prior examination work papers, pre-examination memoranda, other regulator reports, and file correspondence for an overview of the bank's retail insurance or security-sales activities.**

2. **Review internal and external audit reports and independent reviews to determine their scope and to identify any concerns and conclusions relevant to insurance and security-sales programs.**

3. **Review the balance sheet, income statement, and cash flows of any insurance agency or security-sales unit that is a department or subsidiary of the bank.**

4. **Consider contacting the appropriate functional regulator(s) to obtain supervisory information regarding these activities.**

5. **Review board or committee minutes and internal management reports for evidence of managerial oversight, responsibility delegations, or concerns with respect to these activities.**

6. **Discuss insurance products, security-sales programs, and related controls with management.**

7. **Review the budget pertaining to the bank's insurance and security-sales activities.**

Policies, Procedures, and Other Risk Limiting Methods
8. Determine whether policies and procedures are adequate for the retail insurance or security-sales programs, and any networking arrangement the bank may have with a broker-dealer.
9. Determine whether the board approves policies at least annually, or more frequently if substantive changes occur.
10. Assess whether management conducts appropriate due diligence before entering into agreements with third parties to conduct insurance or security activities and before specific insurance or security products are offered to customers on bank premises or on behalf of the bank.
Internal Controls
11. Determine whether the bank's internal control program includes separation of duties between the sales, management, compliance, and accounting functions for retail insurance or security-sales activities.
12. Determine whether the bank has procedures to prevent, detect, and respond to written policy exceptions.
Audit or Independent Review
13. Determine whether the coverage and frequency of the audit or independent review are sufficient to identify deficiencies in policies and procedures, financial and operating risk management, internal controls, information and communication systems, and management relative to the bank's retail insurance agency or security-sales activities. The independent review process should: • **Determine compliance with policies, procedures, and regulatory requirements.** • **Assess the due diligence processes for purchased entities that conduct retail insurance or security-sales activities.** • **Verify compliance of third parties with contractual agreements.** • **Assess separation of duties, internal controls, and supervision of insurance agency or securities brokerage activities.** • **Test for the adequacy, accuracy, and timeliness of information produced by reporting systems.** • **Assess the adequacy, accuracy, and timeliness of reports to senior management and the board.** • **Review operations for potential conflicts of interest, self-serving practices, and insider abuses.** • **Recommend corrective action, where warranted.**

- **Verify that corrective action commitments have been implemented.**

14. Determine whether results of independent reviews are reported to the full board or a designated committee.

Information and Communication Systems

15. Determine whether management reports include the following types of information:

- **Sales volume of each type of product offered.**
- **Fees, product commission rates, expenses, and overall financial results of the retail insurance or security-sales programs.**
- **Status of premium collection and remittance processing by insurance agents, if applicable.**
- **Amount of compensation received by retail insurance and security salespeople.**

16. If the bank conducts insurance sales activities directly or owns an agency, determine whether management accurately reports these activities on its Consolidated Reports of Condition and Income. Verify that the reports are accurately consolidated using Generally Accepted Accounting Principles.

Third Party Agreements and Reviews

17. Determine whether management has entered into a formal written agreement with each third party involved in insurance or security-sales activities for the bank and if the agreement has been approved by the bank's board of directors.

18. Determine whether the bank's legal counsel reviews all contracts and agreements for content and enforceability of terms.

19. Determine how often management evaluates the operating soundness of third parties by reviewing compliance evaluations, independent audits, financial reports, examination reports and/or other information. ***Note: Insurance companies provide the products (insurance and annuities) sold by the bank or agency. These third parties are subject to examination by state insurance regulators (functional regulators). Their report of examination is a public document in most states and can be obtained from the state insurance regulator of the state in which the insurance company is based.***

Board and Senior Management Oversight

20. Determine whether there have been any technology system installations or conversions for insurance agencies or securities brokerage firms acquired and if such changes were successfully completed.

21. Determine whether the officers designated to implement and manage the bank's retail insurance or security-sales activities possess appropriate knowledge and experience.

22. Assess whether management mandates professional qualification training and continuing education opportunities for all officers and employees involved with the insurance or security programs.

23. Determine whether any plans for expansion of insurance or security activities are consistent with overall strategic plans and board approved policies.

24. Determine whether management adequately responds to audit or independent-review concerns.

Compliance with Insurance and NDIP Consumer Protections (Non-FDIC Only)

Note: FDIC: Defer to DCP for all compliance reviews. FRB examiners can review the Regulation R Training Modules on the Board's internal website for additional information.

25. Determine whether the bank's compliance function has processes to ensure the maintenance of appropriate agent licensing for retail insurance and security-sales programs conducted on behalf of the bank.

26. Review any customer complaints in the bank's retail insurance or security-sales program files. Also, review FRB, state insurance department, and FINRA or SEC complaint records for potential concerns over the administration of the activities (e.g., misrepresentations, untimely claims distributions, suitability issues, etc.).

27. Determine whether adequate policies and procedures exist to address consumer protection aspects of retail insurance sales or non-deposit investment products at an office of the bank, or on behalf of the bank. Consider if such policies and procedures sufficiently cover:

- **Training programs for all personnel involved in insurance or security referrals, recommendations, and sales activities conducted on bank premises or on behalf of the bank, including activities conducted through telemarketing contacts;**
- **Product suitability guidelines for customer sales;**
- **Compliance with applicable laws, regulations, and consumer protection rules that address prohibitions on:**
  - **Tying of sales of insurance to credit products,**
  - **Coercive sales practices, and**
  - **Discrimination against victims of domestic violence in sales of insurance products;**
- **Prominent display of required written minimum disclosures;**
- **Compliance with incentive compensation restrictions on unregistered bank employees that refer customers to a broker-dealer (in connection with networking arrangements) pursuant to the FRB and SEC's joint Regulation R and the Gramm-Leach Bliley Act (GLBA) Title II broker-push-out rules that have been incorporated into the Securities Exchange Act of 1934, Section 3(a)(4)(B)(i); and**
- **Restrictions on the activities of bank employees (other than associated persons of a broker-dealer who are qualified under securities self-regulatory organization (SRO) rules) to the performance of only clerical or ministerial functions in connection with brokerage transactions.**

28. Determine whether management has established adequate procedures that address:

- **Timing of minimum required disclosures;**
- **Minimum disclosures for advertising and promotions;**
- **Documenting customers' receipt of all required disclosures:**
  - **Before an account is opened,**
  - **Before an the initial sale of an insurance product is completed,**
  - **During any sales presentation,**
  - **When investment advice is provided, and**
  - **When an account is opened for an NDIP;**
- **Alternative disclosures for telephone and electronic sales;**
- **Compensation for referrals by non-licensed personnel;**
- **Physical segregation of retail insurance and NDIP sale activities from deposit taking areas; and**
- **The conditions in the Securities Exchange Act (Section 3(a)(4)(B)(i)) detailing when a bank may allow a broker-dealer to offer bank customers brokerage services on or off bank premises and not be considered a broker that is required to register with the SEC. These conditions include:**
  - **The broker dealer is clearly identified;**
  - **Brokerage services are provided in a clearly marked, and preferably physically separate area;**
  - **Advertising and promotional materials make clear that brokerage services are provided by the broker dealer, and not the bank;**
  - **Advertising and promotional materials are in compliance with federal securities laws;**
  - **Bank employees (other than broker dealers, or SRO-qualified associated persons) perform only clerical or ministerial functions;**
  - **Bank employees do not receive incentive compensation for brokerage transactions unless they are associated persons of a broker dealer and SRO-qualified, except that bank employees may receive customer referral compensation in the form of a nominal, one-time cash fee of a fixed dollar amount, if payment of the fee is not contingent on whether the referral results in a**

transaction;

- **Customers receiving brokerage services are fully disclosed to the broker dealer;**
- **The bank does not carry customer security accounts except as permitted under other GLBA trust, custody, or safekeeping exceptions; and**
- **The bank or broker dealer informs each customer that brokerage services are provided by the broker dealer and not the bank, and that securities are not deposits or other obligations of the bank, are not guaranteed by the bank, and are not FDIC-insured.**

29. Evaluate controls concerning product suitability. Determine whether procedures:

- **Require security-sales representatives or insurance agents to evaluate sufficient customer information before offering investment recommendations regarding NDIPs, including variable insurance products.**
- **Require representatives to clearly explain all recommendations to customers.**

30. Ascertain whether policies and procedures for internal controls require thorough reviews of sales practices, advertising methods, and customer complaints.

31. Determine whether the compliance program includes oversight of the documentation required of third parties to demonstrate compliance with customer acknowledgement requirements.

End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

SECURITIZATION

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are policies, procedures, and risk limits adequate?** ***Refer to Core Analysis Procedure #7.***
C.2.	**Are internal controls adequate?** ***Refer to Core Analysis Procedures #8-17.***
C.3.	**Are audit and independent review functions adequate?** ***Refer to Core Analysis Procedures #18-20 & Procedure #75.***
C.4.	**Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #21-28.***
C.5.	**Are risks associated with underlying assets clearly identified and measured?** ***Refer to Core Analysis Procedures #29-52.***
C.6.	**Are beneficial interests properly valued?** ***Refer to Core Analysis Procedure #26, Procedure #55, & Procedure #76.***
C.7.	**Are risks from securitizations that require consolidation adequately identified and managed?** ***Refer to Core Analysis Procedures #58-67.***
C.8.	**Do the board and senior management effectively oversee securitization activities?** ***Refer to Core Analysis Procedure #5-6, Procedure #20, & Procedures #68-77.***

SECURITIZATION

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Important

Refer to the Interagency Guidance on Asset Securitization Activities when completing this module. FDIC examiners should, when necessary, contact regional capital markets and securities specialists, or the Capital Markets Branch, for assistance in completing this module. Refer to the FDIC's Credit Card Securitization Activities Manual for supplemental guidance when examining banks that securitize credit card receivables.

Scope: Examiners should determine whether securitized assets were properly accounted for as transfers of financial assets, secured borrowings, or whether the variable interest entity (VIE) needs to be consolidated. This module primarily applies to examinations of institutions that use securitizations to transfer financial assets off their balance sheets and that meet any of the following criteria: 1) originate or purchase financial assets for securitization, 2) retain beneficial interests in securitized assets, or 3) provide liquidity or credit enhancements.

Procedures 58-67 address securitizations accounted for as secured borrowings where the financial assets remain on the balance sheet. This module does not include procedures for assessing servicing activities.

Preliminary Review

1. Determine whether securitization concerns were identified in:

- **Prior examination reports,**
- **File correspondence,**
- **Internal/external audit reports,**
- **Independent reviews, or**
- **10-K and 10-Q reports.**

2. Review reports, correspondence, and audits to identify activities and trends in:

- **Securitization volumes,**
- **Collateral types,**
- **Deal structures,[1]**
- **Cash flows, and**
- **Performance.[2]**

3. Review performance information (internal and publically available reports) for the institution's pools

[1] Such as, VIE type, concentration limitations, representations, and warranties.
[2] Consider issues such as delinquencies, chargeoffs, prepayments, excess spreads, and put-back volume.

and comparable pools.

4. Review internal and third-party valuation reports regarding beneficial interests.

5. Review board/committee minutes and internal management reports for evidence of oversight, responsibility, and any identified concerns.

6. Discuss with management, its securitization strategy and determine if it is consistent with the board's strategic plans and policies.

Policies, Procedures, and Risk Limits

7. Determine whether securitization policies, procedures, and risk limits adequately address:

- **Permissible (i.e., board authorized) securitization activities;**
- **Authority and responsibility over:**
  - **Transaction approvals and cancellations,**
  - **Deal negotiations and executions,**
  - **Deal summaries,**
  - **Counterparty approvals,**
  - **Transaction monitoring,**
  - **Pricing approvals,**
  - **Personnel supervision,**
  - **Risk management, and**
  - **Processes for reporting and approving policy exceptions;**
- **Underwriting standards for loans originated or purchased for securitization;**
- **Credit ratings;**
- **Servicing standards, including criteria for selecting third-party servicers;**
- **Exposure limits, such as beneficial-interest concentration limits by type, maturity, and volume as a percent of Common Equity Tier 1 and Tier 1 capital;**
- **Limits on the amount of funding derived from securitization;**
- **Standards (consistent with contractual recourse obligations) for repurchasing loans from securitized asset pools;**
- **Hedging activities, including embedded derivatives;**
- **Approval of hedging counterparties;**
- **Legal-counsel reviews of contracts and agreements;**
- **Accounting methodologies;**
- **Regulatory reporting requirements;**
- **Methods for valuing beneficial interests, including procedures for reviewing and approving**

underlying assumptions;

- **Management reporting;**
- **Contingency plans;**
- **Compensation policies; and**
- **Credit-risk-retention requirements and standards to ensure regulatory compliance.**[3]

Internal Controls

8. Determine whether internal control programs address key issues, such as:

- **Individual authority limits,**
- **Separation of duties,**
- **Physical and electronic access controls, and**
- **Independent reviews.**

9. Determine whether separation-of-duty controls effectively restrict interactions between management and operational personnel, so that no one can unduly affect established securitization procedures.

10. Determine whether controls adequately restrict access to, or manipulation of, securitization records.

11. Determine whether loan-servicing statements and trustee reports for each securitization are routinely reconciled.

12. Determine whether controls are in place to verify that transfers of financial assets to VIEs are not required to be consolidated under ASC Topic 810, Consolidation.

13. Determine whether controls are in place to verify that financial assets transferred meet the sales criteria in ASC Topic 860, Transfers and Servicing.

14. Determine whether policy deviations are addressed and reported in accordance with approved policies.

[3] **FDIC: Part 373. FRB: Part 244.**

15. When the bank retains recourse in a securitization, assess controls to ensure recourse payments to the trust do not exceed the bank's contractual obligation.

16. When the bank acts as servicer or retains a beneficial interest in the securitization, determine whether the bank properly identifies and tracks cash flows through lockboxes, trust accounts, and bond payments. Assess procedures for ensuring that collected servicing and finance fees are not comingled with the bank's own collection accounts.

17. If the bank uses models in securitization activities or to value beneficial interests, determine whether controls prevent the individual who establishes model assumptions from being responsible for reviewing model results.

Internal Audit or Independent Review

18. Determine whether the scope of internal audits/independent reviews is sufficient to identify policy, risk management, internal control, and compliance deficiencies. Typical audit/review scopes include assessments of:

- **The valuation process for beneficial interests and the appropriateness of underlying assumptions;**
- **Modeling processes and validation mechanisms;**
- **Verification procedures designed to prove that loans serviced by a third party, including a subsidiary or an affiliate, reconcile to internal records;**
- **Compliance with deal covenants;**
- **Conformance with pooling and servicing agreements;**
- **The adequacy of information systems to process data accurately;**
- **The accuracy of regulatory and public reporting;**
- **Compliance with policy guidelines;**
- **Procedures for monthly reconciliations of loans held-for-sale;**
- **Accounting procedures for loans held-for-sale;**
- **Accounting procedures for loans transferred from the institution's held-for-sale portfolio to the held-for-investment loan portfolio;**
- **Accounting procedures for original bookings, subsequent valuations, and regulatory reporting of beneficial interests;**
- **Policies and procedures to ensure that a sale under ASC Topic 860 occurred; and**
- **Compliance with the credit-risk retention rule.**[2]

19. Determine whether regular and unscheduled reviews are performed.

20. Determine whether internal audit results are promptly reported to the board, and whether responses to recent internal audits or independent reviews are reasonable and timely.

Information and Communication Systems

21. Review the use of modeling for beneficial interests (whether using an external party or using in-house models) and determine whether:

- **Bank personnel have a reasonable understanding of how the model works and what the output means (and if used in-house, the ability to operate the model);**
- **The model and model assumptions have historically produced results in line with past projections (back testing);**
- **Modeling software and systems are:**
  - **Appropriate for performing required tasks and calculations;**
  - **Appropriate for the types of collateral and transactions that create the cash flows being modeled; and**
  - **Independently maintained by individuals authorized to install updates and make changes to the model.**

22. Determine whether financial reports and disclosures are compliant with the SEC's Regulation AB and the enhanced disclosure requirements of Regulation AB II.[4] Assess the adequacy of other regulatory reports and disclosures as applicable.

23. Determine whether institutions using advanced approaches under Basel III capital rules comply with the qualitative and quantitative disclosure requirements related to their securitization activities.

24. Determine whether internal reports provide management with sufficient information to make informed decisions and to monitor the results of those decisions. If the institution maintains a beneficial interest in securitized assets, reports should address:

- **Deal summaries for completed, current, and prospective securitization transactions, that include relevant information, such as:**
  - **Collateral type,**
  - **Facility amount,**
  - **Maturity,**
  - **Class structure,**

[4] **Regulation AB applies to registered securities only.**

- Termination events,
  - Credit enhancement and subordination features,
  - Financial covenants,
  - Rights of repurchase,
  - Servicing responsibilities, and
  - Counterparty exposures;
- **Pool performance factors, such as:**
  - Gross portfolio yields,
  - Probability of default,
  - Loss severities (under default),
  - Payment rates, and
  - Excess spreads;
- **Vintage analysis (using monthly data) for each pool;**
- **Static pool cash-collection analysis;**
- **Monthly statements of covenant compliance;**
- **Quarterly (or more frequent) sensitivity analyses or stress tests;**
- **Exposure by counterparties and functions (e.g., originator, seller, servicer);**
- **Profitability analysis by securitization and function (e.g., originator, seller, servicer);**
- **Liquidity usage and expected funding requirements;**
- **Roll-rate analysis that tracks delinquency trends and the timing and age of chargeoffs; and**
- **Sufficient details on beneficial interests to allow management to assess credit, concentration, valuation, and liquidity risks.**

25. Determine whether management properly determines risk-based capital requirements for all securitization exposures.

26. Determine whether the bank correctly applies the appropriate approach for calculating regulatory capital for beneficial interests (e.g., supervisory formula approach, simplified supervisory formula approach (SSFA), or 1,250% risk weighting).

27. For re-securitization exposures, determine whether management is using the SSFA to measure risk-based capital charges based on the underlying exposures.

28. Determine whether information on securitization activities is effectively communicated to the lending, credit review, funds management, and risk management areas.

Risk Identification and Measurement
29. Review credit quality ratios for portfolio, securitized, and held-for-sale loans to determine whether underwriting standards for securitized and held-for-sale loans are comparable to portfolio loan ratios. Compare ratios such as: • **Noncurrent loans to gross loans,** • **Total past due loans to gross loans, and** • **Net losses to average total loans.**
30. Review performance factors and counterparty profiles to determine whether events triggered, or are close to triggering, over-collateralization or early-amortization protections as defined in the securitization documents.
31. Determine whether curing or re-aging practices mask poor performance in securitized assets.
32. Review internal standards for approving originators and brokers, and assess how management ensures originators and brokers maintain acceptable underwriting standards.
33. Determine whether management monitors portfolio risks by obtaining FICO scores, behavioral patterns or scores, or other credit data on borrowers.
34. Review aging reports for held-for-sale loans. Identify loans with longer-than-average holding periods and determine the cause.
35. Consider whether unmarketable loans are transferred from the held-for-sale loan portfolio to the general (held for investment) portfolio. Assess the level, frequency, and cause of transfers, and the effect on the institution's overall asset quality.
36. If the institution retains a beneficial interest in securitized assets, determine whether management monitors prepayments, delinquencies, defaults, and losses on sold assets.

37. For banks with beneficial interests, ensure documentation demonstrates the bank's clear ownership in the beneficial interests and the right to cash flows.

38. If the bank acts as servicer, determine if servicer advances are made for principal, interest, escrow, and/or foreclosure-related payments. If so:

- **Determine whether management:**
  - **Properly accounts for the advances as receivables,**
  - **Assesses the credit risk of the advances, and**
  - **Establishes contingency reserves as needed;**
- **Determine whether the advances fall under the risk-based capital rules as recourse arrangements, by considering whether:**
  - **The servicer is entitled to full reimbursement or, for any one loan, non-reimbursable advances are limited to an insignificant amount of the outstanding principal on that loan; and**
  - **The servicer's entitlement to reimbursement is not subordinated.**

39. Assess the financial impact on the institution if management takes action to prevent early amortizations or rating downgrades. Such actions may include purchasing pool assets, exchanging assets within the pool, or waiving certain fees.

40. Determine whether management identified any embedded derivatives[5] within securitizations. Consider:

- **The counterparties to the derivatives and their financial strength,**
- **Accounting implications, and**
- **The potential for reportable recourse arrangements (such as clean-up calls over 10% of pool).**

41. Determine whether the bank's beneficial interest is subject to basis risk due to differences between indices on the underlying loans and the bond classes. Assess how the risk is identified and managed.

42. Determine whether assets related to securitization activity (such as, beneficial interests and held-for-sale loans) are properly reflected in the bank's interest rate risk model.

[5] **Derivatives may include interest rate swaps, caps, forward arrangements, or call options.**

43. Review management's statements of covenant compliance and consider whether the institution's marketplace reputation may be damaged.

44. Assess the adequacy of capital and liquidity contingency plans designed to manage trigger events and market disruptions that could render further securitizations unfeasible. When applicable, sound stress-testing practices capture severe-but-plausible scenarios, and appropriate contingency planning addresses:

- **Alternative sources of liquidity; and**
- **Management and operation of cash flows to implement covenants concerning over-collateralization accounts, reserve funds, and other related accounts.**

45. If a third party servicer is used, including a subsidiary or an affiliate, determine whether management reviews audits or other documentation to analyze the operating soundness of this entity.

46. Determine whether the use of credit substitutes (such as standby letters of credit) is subject to the review and approval of the credit department.

47. Determine whether exposures arising from recourse exposures or direct credit substitutes are analyzed during internal credit reviews.

48. Review agreements to provide back-up liquidity and determine the institution's obligations to fund advances and its rights to withhold advances.

49. Determine whether the bank retains an ownership interest in, or acts as a sponsor to, a securitization structure that falls within the Volcker Rule's definition of a covered fund.

50. Determine whether covered funds qualify for exclusion from the Volcker Rule's restrictions.

51. Determine whether any bank plans to divest of beneficial interests that do not meet the Volcker Rule's exclusions comply with the divestiture timelines of the rule.

Prior to completing item 52, determine whether securitizations are, or create, asset-backed securities and whether the bank is a sponsor as defined in the credit risk retention rule. Complete item 52 only if the securitized assets consist of asset-backed securities and the bank is a sponsor.

52. Assess compliance with the requirements of the credit risk retention rule by reviewing items such as:

- **Type, amount, and measurement of risk retention;**
- **Eligibility conditions if a transaction-specific or allocation-to-originator option is used;**
- **Qualification standards and conditions if an exemption, exception, or reduction is used;**
- **Maintenance of, and adherence to, applicable policies and procedures when risk retention is allocated to the originator, originator-seller, or third-party;**
- **Disclosures;**
- **Repurchase, cure, or buy-backs for qualified residential mortgages or qualifying assets;**
- **Hedging and transfer prohibitions and pledging restrictions; and**
- **Record maintenance.**

Valuation of Retained Interests

53. Determine whether management reviews contractual documents to ensure valuation modeling is properly mapping the cash flows legally owed to the beneficial interests. The cash flows may include excess principal and interest payments from the collateral and the release of reserve funds.

54. Determine whether management appropriately stratifies securitized assets by loan characteristics when making valuation assumptions.

55. Assess the reasonableness of prepayment, default, loss, and discount rate assumptions used to value beneficial interests.

- **Review management's documentation supporting the appropriateness of assumptions.**
- **Determine whether management regularly (at least quarterly) reviews and updates (based on current and projected market conditions) the reasonableness of assumptions.**
- **Assess management's procedures for identifying impairment.**

56. Review cash flow documentation to determine whether:

- **The amount of interest paid to bond classes matches the stated coupon rate for each bond class;**
- **Cash flows are distributed to bond classes and beneficial interests according to the terms of the prospectus, offering circular, or pooling and servicing agreement; and**
- **The deal redemption or cleanup provision is accurately reflected in the cash flows to beneficial**

interest holders.

57. If a third party values the beneficial interest(s), review management's documentation, and evaluate the due diligence performed for determining the qualifications of the third party.

Securitizations that Require Consolidation

58. Determine whether the creditors of any of the bank's consolidated VIEs have recourse to the general credit of the institution rather than only to the assets of the VIE (i.e., whether the bank provided a guarantee to the securitization).

59. If creditors have recourse to the general assets of the institution, determine the circumstances under which creditors have recourse, whether management is monitoring the performance of the bank's securitizations (to assess the likelihood of general creditor claims), and actions management is taking to mitigate the risk exposure.

60. Determine whether management's assumptions and judgments are reasonable, adequately supported, and properly documented.[6]

61. Determine whether management considers the bank's exposure to general creditor claims in its assessment of capital adequacy and in capital planning.

62. Review the institution's involvement with consolidated VIEs, including judgments and assumptions made in determining consolidation requirements.[7]

63. Determine whether the institution's involvement with VIEs affects the institution's financial position, financial performance, or cash flows.

[6] **For example, if the bank provides guarantees, the obligation should be periodically fair valued based on the performance of the underlying collateral.**

[7] **Management should validate whether the institution is the primary beneficiary.**

64. Assess the impact of the interest income recognized on VIE financial assets and the interest expense on VIE liabilities on the bank's net interest income (since the financial assets and liabilities of the VIE are consolidated).
65. Determine whether: • **Management evaluates the collectability of VIE loans that are reported as held-for-investment,** • **The bank's methodology for the allowance for loan and lease losses (ALLL) properly incorporates VIE loans within its scope, and** • **The level of the consolidated ALLL is appropriate to cover the estimated credit losses on VIE loans.**
66. Assess the earnings impact resulting from timing differences caused by loan and lease losses that must be taken on VIE loans in the periods when the credit losses are incurred.[8]
67. Determine whether there are restrictions on consolidated VIE assets or the settlement of its liabilities reported on the institution's balance sheet.
Board and Senior Management Oversight
68. Determine whether management properly accounts for the transfer of financial assets in securitized transactions.[9]
69. Determine whether management properly designates SPEs as VIEs under ASC Topic 860.
70. Determine whether the institution is the primary beneficiary of the VIE.[10] If so, determine whether management appropriately consolidates VIEs.[11]

[8] Any expected reductions in the cash flow to investors who hold beneficial interests in the securitization normally will not result in a reduction in the VIE's liabilities to these beneficial interest holders.

[9] Refer to the Call Report Instructions and ASC Topics 810 and 860 for additional information.

[10] A controlling financial interest exists when the institution has the power to direct significant VIE activities and the obligation to absorb significant VIE losses or the right to receive significant VIE benefits.

[11] Sales accounting treatment cannot be achieved when the institution is the primary beneficiary (when the VIE is consolidated).

71. Assess management's analysis of securitization activities to determine whether the activities and associated risks are consistent with the institution's strategic and financial objectives. Appropriate analysis generally includes assessments of:

- **The cost of securitizing assets compared to the cost of alternative funding sources,**
- **Initial/ongoing costs and projected returns of transactions, and**
- **Risks related to a transaction.**

72. Determine whether securitization documents contain any adverse covenants[12] that are tied to supervisory actions or thresholds, (such as downgrades in the institution's composite CAMELS or RFI/(C) D ratings, changes in the institution's Prompt Corrective Action capital category), or if the institution is placed under any type of written enforcement action by a supervisory authority.[13]

73. Determine whether management provides sufficient capital in relation to risks arising from securitization activities.

74. Determine whether the board reviews and approves securitization policies (at least annually), new products, and material changes in securitization activities.

75. Determine whether management reviews financial audits (or other information) to analyze the condition of any third party credit enhancement provider, including a subsidiary or an affiliate,[14] involved in the institution's securitizations.

76. Determine whether management complies with laws, accounting standards, and regulatory requirements.

- **Determine whether management appropriately applies the minimum risk-based capital standards to securitization transactions that involve recourse, including low-level recourse.**
- **If the institution securitizes assets and retains an interest that serves as a credit enhancement supporting transferred assets, determine whether management reflects these transactions as assets**

[12] Adverse covenants include items such as termination triggers, early amortization events, and servicing transfer covenants.

[13] Refer to the Interagency Advisory On The Unsafe And Unsound Use Of Covenants Tied To Supervisory Actions In Securitization Documents. (FDIC: FIL-53-2002. FRB: SR 02-14)

[14] If necessary, refer to the Related Organizations Module to determine compliance with Sections 23A and B of the Federal Reserve Act.

sold with recourse in schedules RC-L, RC-R, RC-S of the Consolidated Reports of Income and Condition.

- **Determine whether the securitization and the beneficial interests are accounted for consistent with ASC Topic 810, ASC Topic 860, and other applicable accounting standards.**
- **Determine whether held-for-sale loans are valued at the lower of cost or fair value**
- **Determine whether management appropriately follows risk retention rules.**

77. Determine whether historical performance indicates adequate board and senior management oversight.

End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

TRUST
Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1.	**Are policies, procedures, and other methods for limiting risk adequate?** ***Refer to Core Analysis Procedures #12-13.***
C.2.	**Are internal controls adequate?** ***Refer to Core Analysis Procedures #14-28.***
C.3.	**Are the audit or independent review functions adequate?** ***Refer to Core Analysis Procedures #29-34.***
C.4.	**Are information and communication systems adequate and accurate?** ***Refer to Core Analysis Procedures #35-36.***
C.5.	**Are trust department earnings adequately managed and sufficient to support the institution's fiduciary activities?** ***Refer to Core Analysis Procedures #37-43.***
C.6.	**Does the institution comply with internal policies and procedures, governing instruments, applicable laws and regulations, and sound fiduciary principles?** ***Refer to Core Analysis Procedures #44-54.***
C.7.	**Are asset management and investment advisory practices adequate?** ***Refer to Core Analysis Procedures #55-89.***
C.8.	**Do the board and senior management effectively supervise fiduciary activities?** ***Refer to Core Analysis Procedures #90-102.***

TRUST

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. **Review prior examination reports, work papers, and file correspondence for an overview of any previously identified deficiencies or higher risk issues.**

2. **Review internal and external audit reports, engagement letters, and management responses.**

3. **Review remedial actions taken by management to correct audit and examination deficiencies.**

4. **Review other sources to determine the general risk profile of the trust department and identify the types of accounts administered (e.g., personal trust, corporate trust, employee benefit (defined contributions, defined benefit, and investment management). Consider the following:**
   - **Schedule RC-T in the FFIEC Reports of Income and Condition (Call Reports);**
   - **Other regulatory reports, examinations, investigations, and correspondence from state banking authorities, Securities and Exchange Commission, FINRA, or Department of Labor;**
   - **Public information such as stockholders reports, the bank's Internet site, press releases, and published news stories;**
   - **Current trust department Statement of Assets and Liabilities or trust department Statement of Condition;**
   - **Responses to the First Day Letter and the Trust Officer's Questionnaire;**
   - **Customer complaints, including complaints received by the FDIC, FRB, or state; and**
   - **Pending or threatened litigation.**

5. **Determine whether the trust department administers or uses common trust funds, collective investment funds, proprietary mutual funds, or other pooled investment vehicles.**

6. **Determine which of the following activities should be reviewed given the trust department risk profile:**

- **Securities lending,**
- **Fiduciary services delivered via electronic banking channels,**
- **Employee benefit participant record keeping,**
- **Fee sharing arrangements, including receipt of 12b-1 or sub-accounting fees from mutual funds,**
- **Services provided to or received from third parties,**
- **Sweep arrangements/cash management,**
- **Soft dollar arrangements,**
- **Institutional custody,**
- **Use of outside investment advisors,**
- **Open Architecture/Separately Managed Accounts,**
- **Securities transactions (i.e., compliance with the SEC/FRB Regulation R and GLBA broker exception rules.)**

7. Review regulatory information concerning any purchase, acquisition, or merger activity since the last examination.

8. Discuss the following issues with management, focusing on significant changes since the last examination or planned changes:

- **Key personnel and staffing,**
- **Organizational structures,**
- **Operations and automated systems,**
- **Marketing strategies,**
- **New products and services,**
- **Investment strategies, and**
- **SEC/FRB Regulation R and GLBA broker exception rules.**

9. Review the following information regarding management of the trust department:

- **Minutes of meetings of the board of directors and trust related committees;**
- **Organizational charts;**
- **Committee composition and structure; and**
- **Management information reports, such as:**
    - **Net overdrafts and other account liabilities,**
    - **Large cash balance reports,**
    - **Past-due loans (including participant loans in employee benefit accounts), and**
    - **Delinquent fee reports.**

10. Determine the scope of the account review. Consider the following:

- **General account selection criteria:**
  - **Pending or threatened litigation,**
  - **Customer complaints,**
  - **Previous examination criticisms,**
  - **New and closed accounts,**
  - **Successor appointments,**
  - **Co-fiduciary relationships,**
  - **Internal watch lists and accounts risk rated inherently "high" (e.g. ERISA-governed accounts),**
  - **Assets not carried on the department's books,**
  - **Accounts with liabilities,**
  - **Accounts lacking diversification,**
  - **Accounts holding unique assets (such as real estate, mineral, oil and gas interest, and limited partnerships), and**
  - **Administratively complex assets held in discretionary and investment advisory accounts;**
- **Actual or potential conflicts of interest, such as:**
  - **Discretionary investments in own institution or parent securities and deposits,**
  - **Discretionary investments in securities and other obligations of insiders,**
  - **Discretionary investments in proprietary products (such as mutual funds, insurance, and annuities),**
  - **Inter-trust transactions, and**
  - **Accounts where insiders serve as co-fiduciary;**
- **Employee benefit accounts with plans that:**
  - **Cover the institution's employees,**
  - **Are sponsored by directors or their related interests,**
  - **Hold participant loans, or**
  - **Are under investigation by the Department of Labor;**
- **Corporate accounts with issues that are:**
  - **In default or litigation, or**
  - **Subject to the Trust Indenture Act; and**
- **Estates that have been open for an extended time.**

11. Prepare the examination scope memorandum.

Policies, Procedures, and Other Risk Management Methods

12. Determine whether policies, procedures, and other methods for managing risks are adequate in relation to the institution's risk profile. When applicable, such policies and procedures should address the following:

- **Asset management, including investment reviews,**
- **Account liabilities (including overdrafts),**
- **Account administration and reviews,**
- **Conflicts of interest and self-dealing,**

- **Operations and internal controls,**
- **Securities trading,**
- **Broker and investment advisor selection,**
- **New-business development,**
- **Incentive compensation,**
- **Selection and retention of legal counsel,**
- **Ethical standards for trust department personnel,**
- **SEC/FRB Regulation R/GLBA broker exception rules,**
- **Investment selections,**
- **Fee concessions,**
- **Exception reporting and approval, and**
- **BSA/OFAC adherence.**

13. Determine whether the trust department's policies and procedures adequately address:

- **Privacy issues,**
- **Electronic banking,**
- **Electronic funds transfer, and**
- **Business continuity planning and testing.**

Note: Department guidelines may be contained in the institution's general policy framework as well as trust department specific policies.

Internal Controls

CONTROL ENVIRONMENT

14. Determine whether management and the board have provided for:

- **Adequate staffing for efficient operational processing and appropriate separation of duties;**
- **Compensating controls (if limited staffing precludes separation of duties);**
- **Clearly defined responsibilities, duties, and lines of authority; and**
- **Proper reporting and prompt correction of internal control deficiencies.**

PROTECTING AND CONTROLLING ASSETS

15. Assess the effectiveness of internal controls by considering whether:

- **Trust assets are separated from the assets owned by the institution**
- **Controls over the receipt and release of assets require:**
  - **More than one institution employee to be present when assets are received or inventoried in a residence, and**
  - **Account holders or beneficiaries to sign written confirmations for all items distributed to them;**
- **Assets held in the vault are under dual control and subject to periodic verification;**

- **The value of worthless assets are appropriately researched, documented, and periodically reviewed;**
- **Worthless assets are maintained on the department's books at nominal value;**
- **Hold and return mail procedures are appropriate;**
- **Account statements are mailed by trust operations personnel (or an outside data processor) and not the account administrator.**
- **Procedures over the disbursement of trust funds include:**
  - **Controls over unissued checks, such as using sequential or pre-numbered documents, and**
  - **Signature controls and defined authorization limits.**

16. Assess arrangements where a registered broker-dealer serves as custodian for trust assets, by considering:

- **The adequacy of management's analysis and documentation (both prior to entering arrangements and periodically thereafter) of the financial strength of the broker-dealer (including SEC/FINRA capital adequacy and Specific Reserve Account requirements); [See SEC Rule 15c3-3(c)]**
- **The adequacy of the governing written agreement, which should include provisions addressing:**
  - **Unauthorized conversions of trust assets,**
  - **Unauthorized securities lending,**
  - **Rights of offset against unpaid securities, and**
  - **Termination provisions;**
- **Whether the records of the broker-dealer segregate customer trust assets from the financial institution's own securities portfolio (for example, customer trust assets could be recorded in the name of the financial institution "as trustee for");**
- **Whether State law permits broker-dealers to serve as a custodian for trust assets; and**
- **The adequacy of Securities Investor Protection Corporation (SIPC) insurance coverage.** ***(Note: Generally, individual trust accounts must be separately identified on the broker-dealer's records for such accounts to be eligible for SIPC insurance.)***

17. Determine the nature, extent, and adequacy of controls over wire transfer activities. (Refer to Electronic Funds Transfer Risk Assessment ED Module.)

RECORDKEEPING

18. Determine whether internal controls provide for accurate and reliable record keeping and regulatory reporting by considering whether record keeping systems:

- **Maintain records in sufficient detail to properly reflect all trust department activities;**
- **Report the assets of each trust account separately from the assets of every other account;**
- **Account separately for principal and income in accordance with state requirements or governing account agreements;**
- **Facilitate the timely and accurate processing of all transactions, including:**
  - **Securities income,**

- **Distributed cash/assets,**
- **Securities prices and ratings,**
- **Mutual fund and cash sweep transactions (including allocated income and service fees), and**
- **Corporate actions that affect security holdings.**

- **Provide for accurate filing of Consolidated Reports of Condition and Income Schedule RC-T;**
- **Demonstrate compliance with SEC/FRB Regulation R and GLBA broker exception rules, in particular with the "Chiefly Compensated" provision of the Trust & Fiduciary Exception; and**
- **Provide for accurate and timely reporting of cost-basis information on Form 1099, as well as the provision and receipt of transfer statements. (See IRC §6045 and §6045A)**

RECONCILIATIONS

19. Determine whether reconciliation procedures are adequate for security depositories, brokerage accounts, internal accounts, mutual funds, and cash management services. ***Note: The status of all reconciliations should be reported to management on a timely basis.***

INFORMATION SYSTEMS

20. Evaluate the adequacy of internal controls over information systems used by the trust department, including the adequacy of contingency plans for possible failures of critical systems and the frequency with which contingency plans are tested.

OTHER INTERNAL CONTROL MATTERS

21. Assess the effectiveness of the department's internal controls in ensuring compliance with applicable laws and regulations.

22. Determine whether appropriate controls exist over securities transactions, including timely execution and proper segregation between account administration and settlement.

23. Determine whether proper procedures are in place to process securities proxies, corporate actions, and other shareholder communications. (Refer to the Shareholders Communications Act of 1985)

24. Determine whether the institution allows daylight overdrafts (a.k.a., free riding) during the securities settlement process in custody accounts. If allowed, consider whether the institution:

- **Sets guidelines and standards for the acceptance of new custodial accounts, such as customer**

background and credit reviews;

- **Requires identification of broker-dealers that will be sending securities and accepting payments from custodial accounts;**
- **Has systems to monitor trading and track accounts involving broker-dealers;**
- **Ensures that each account has sufficient funds to perform any trade, or:**
  - **That temporary overdrafts incurred for the purchase of exchange-traded or margin stocks are secured by collateral margins required in FRB Regulation U, and**
  - **Form FR U-1 is obtained from customers where credit in excess of $100,000 is extended;**
- **Rejects customer trades that would result in a violation of FRB Regulation U;**
- **Prohibits temporary overdrafts which could aid a broker-dealer in violating FRB Regulations T or X; and**
- **Has training programs for administrators and operations personnel involved in the securities settlement process.**

25. Determine whether the department maintains effective controls over dormant and unclaimed funds to ensure that such funds are adequately documented, monitored, aged, and escheated as required by applicable state law.

26. Evaluate the institution's process for providing customer account statements and other information.

27. Ensure that account administrators are not involved in the account statement generation and distribution process.

28. Determine whether original trust documents are adequately protected and copied/backed up.

Audit or Independent Review

29. Determine whether the board provides for an annual or continuous audit of fiduciary activities.

30. Determine whether the scope of audit coverage is commensurate with the level of risk associated with fiduciary activities. Determine whether audit activities adequately evaluate:

- **The accuracy and validity of transactions;**
- **Fee calculations, collections, and waivers;**

- **Compliance with governing instruments, internal policies, statutory and regulatory requirements, and securities laws and regulations such as SEC/FRB Regulation R and GLBA broker-exception rules;**
- **Internal routines and controls;**
- **Account administration practices such as documentation of:**
  - **Trust agreements and court orders,**
  - **Income receipts and distributions,**
  - **Principal invasions such as appropriate approvals,**
  - **Receipt of assets,**
  - **Co-fiduciary and grantor approvals,**
  - **Beneficiary and third-party approvals,**
  - **Unique assets, and**
  - **Annual administrative and investment reviews;**
- **Management information systems;**
- **Verification of assets;**
- **Trust committee minutes;**
- **Trading activities; and**
- **Assessment of management's corrective actions.**

31. Assess the adequacy of audit reporting procedures and consider whether:

- **Formal reports are provided to the board of directors or appropriate committee;**
- **Audit reports include a summary of the effectiveness of internal controls in the trust department;**
- **Audit findings, including actions taken as a result of the audit, are recorded in the board minutes or appropriate committee minutes; and**
- **Audit program deviations are appropriately reported and approved.**

32. Determine the reason for any change in internal or external auditors.

33. Evaluate auditor independence and consider whether:

- **The in-house audit function is free from the undue influence of senior management, and**
- **External audit providers perform other services for the institution that could adversely affect the independence of audit findings.**

34. Evaluate auditor experience and expertise.

Management Information Systems

35. Determine whether written reports and communication processes provide sufficient information to enable the board, senior management, and staff to make appropriate risk management decisions. Review the information provided to the board, trust committee, and trust-related subcommittees to determine the quality, accuracy, timeliness, and completeness of reporting on items such as:

- **New and closed accounts;**
- **New products, business opportunities, and marketing programs;**
- **Emerging risks;**
- **Accounts involving administrative difficulties;**
- **Accounts involving complaints or threatened/pending litigation;**
- **Conflicts of interest;**
- **Investment strategies and performance, including common and collective investment funds and proprietary investment products;**
- **Exposures to counterparties;**
- **Activities experiencing sustained or significant losses;**
- **Exceptions from established policies, procedures, and risk limits;**
- **Audit and regulatory reports;**
- **Profitability;**
- **Corporate trust issues in default; and**
- **Significant discretionary actions.**

36. Determine whether trust department personnel have sufficient, timely, accurate, and meaningful information to perform their responsibilities.

Earnings

37. Determine whether management's methodology for measuring trust department profitability is reasonable and commensurate with the volume and nature of services.

38. Assess the adequacy of the board or designated committee reviews of trust profitability. Consider the scope and frequency of reviews, including analysis of material business lines and individual accounts.

39. Assess the department's historical, current, and projected earnings by considering:

- **The level and trend of earnings;**
- **Whether revenues are sufficient to support overhead and provide a return commensurate with the risks assumed;**
- **The materiality of surcharges, losses, and litigation costs;**

- **The significance of credit for deposits (if the institution calculates it);**
- **The impact of nonrecurring expenses or revenues;**
- **The department's reliance on large fee-producing accounts; and**
- **Management's opinion of material future events that may impact earnings such as threatened or pending litigation, new business opportunities, and competition.**

40. In institutions where trust services are offered as a benefit to the community, and profit is not the primary motivation, determine whether the board:

- **Periodically evaluates whether trust services provide an essential service to customers or the community, and**
- **Establishes guidelines with respect to the amount of recurring losses that are acceptable if trust services cannot be offered profitably.**

41. Evaluate the adequacy of the budget process by considering:

- **Comparisons of forecasted to actual earnings performance;**
- **The reasonableness of growth and profitability assumptions;**
- **Whether forecasted earnings are sufficient to support fiduciary activities; and**
- **Whether the board or a designated trust committee periodically approves, reviews, and revises the budget.**

42. Review the department's marketing plan, if any, and consider whether the plan:

- **Establishes reasonable goals and strategies for attaining goals,**
- **Clearly defines marketing responsibilities for marketing staff and/or account administrators,**
- **Includes any incentive pay,**
- **Identifies appropriate products and target customer groups, and**
- **Provides for periodic progress reports.**

43. Evaluate any internal or external reports, analyses, or recommendations pertaining to trust profitability, including those contained in audit or consultant reports.

Compliance

ACCOUNT ADMINISTRATION

44. Determine whether account administration is adequate by reviewing a sample of accounts.

45. Assess compliance with governing instruments by considering whether:

- **Account files contain all necessary governing documents;**
- **Account officers are familiar with the terms of governing instruments;**
- **The trust department's actions, such as investments, co-fiduciary approvals, and discretionary distributions, are authorized under governing documents;**
- **The trust department is performing all fiduciary duties prescribed in the governing documents; and**
- **Synoptic records are accurate.**

46. Determine whether account documentation reflects adequate administration of accounts. Review and consider:

- **Synoptic records;**
- **Notes in files and customer call reports;**
- **Administrative and annual investment reviews;**
- **Minutes of committee(s) responsible for review accounts;**
- **Any problem issues with an account including problem grantors and/or beneficiaries; and**
- **Any documentation pertaining to litigation in an account.**

47. Evaluate the trust department's administrative review process.

- **Determine whether administrative reviews are:**
  - **Performed promptly and in accordance with account risks;**
  - **Performed by the trust committee, subcommittee, or disinterested account officer; and**
  - **Appropriately documented.**
- **Determine whether deficiencies are monitored and corrected in a timely manner.**

48. Determine whether customer complaints are appropriately addressed.

OPENING AND CLOSING ACCOUNTS

49. Determine whether account acceptance practices are adequate by considering:

- **Management's assessments of:**
  - **Real or potential conflicts of interest,**
  - **Unusual circumstances or administrative complexities,**
  - **The account's objectives and asset holdings,**
  - **The legal sufficiency of governing instruments,**

- **Environmental risks associated with real property,**
    - **Whether actions require third-party approvals (such as by a co-trustee or court), and**
    - **The expertise of trust department personnel;**
- **Procedures for avoiding potential liability such as obtaining:**
    - **Proof of the prior trustee's resignation or removal,**
    - **Prior accountings, and**
    - **Indemnification from the prior trustee or account beneficiaries for acts of the prior trustee;**
- **Whether all necessary governing instruments and supporting documentation are received and appropriately reviewed prior to accepting the account;**
- **Whether account fees are commensurate with risk levels and administrative duties; and**
- **Account set-up processes and whether there are appropriate secondary reviews.**

50. Assess the adequacy of account closing procedures by considering whether:

- **Necessary releases/receipts and discharges are obtained;**
- **Final accountings and tax returns are filed;**
- **Assets are properly distributed in a timely manner;**
- **Fees and expense reimbursements are received;**
- **Closed accounts are approved by the board or a board committee;**
- **Court releases are obtained when applicable; and**
- **The institution appropriately retained copies of all relevant documents.**

CONFLICTS OF INTEREST

51. Determine whether the trust department identifies and monitors actual and potential conflicts of interest and self-dealing. Consider the following potential conflicts:

- **The use of material inside information, including information arising from commercial bank relationships;**
- **Use of own-bank products and services such as deposit accounts, loans, proprietary mutual funds and brokerage services;**
- **Receipt of fees from other sources, including fees from mutual funds and sweep fees;**
- **Relationships with brokers and other agents, including soft-dollar arrangements;**
- **Investments in own-bank or affiliated securities;**
- **Transactions involving insiders or their interests;**
- **Proxy voting, including own-bank or affiliated securities;**
- **Investment in securities underwritten by the bank or affiliates; and**
- **Inter-account and multi-account transactions.**

52. Assess conflict-of-interest controls by considering whether management:

- **Makes full disclosures;**

- **Obtains appropriate consents;**
- **Obtains court approvals;**
- **Resolves conflicts in favor of account beneficiaries;**
- **Complies with self-dealing restrictions in the Employee Retirement Income Security Act, Internal Revenue Code, and state laws; and**
- **Obtains independent, reasoned legal opinions.**

LAWS AND REGULATIONS

53. Determine whether the institution complies with applicable federal and state statutes and regulations, such as:

- **Employee Retirement Income Security Act (ERISA) and related Department of Labor regulations;**
- **State fiduciary statutes, including the Uniform Trust Code and Prudent Investor Act; and**
- **Federal Deposit Insurance Act Section 11(a) prohibitions on the acceptance of deposits from employee benefit plans if the institution is less than adequately capitalized.**

54. Determine whether common and collective investment funds are operated in accordance with applicable laws and regulations. ***(Note: If the Pooled Investment Vehicles Module is completed, document procedures in that module.)***

Asset Management

55. Determine whether the board of directors, trust committee, or related subcommittee has approved general investment and administrative guidelines.

56. Review internal and external investment research methods and evaluate management's due diligence in selecting assets for purchase.

57. Determine the appropriateness of criteria for including or excluding securities from the approved list of investments.

58. Assess the process for retaining or selling assets that do not meet established investment criteria.

59. Review the methods for developing investment strategies and determine whether such strategies are consistently applied.
60. If the institution uses open architecture or offers separately managed accounts, consider the adequacy of: • **Due diligence governing the selection and retention of outside asset managers,** • **On-going monitoring of the performance of outside managers, and** • **Operational systems supporting open architecture and separately managed accounts.**
61. Determine whether quantitative and qualitative measurement tools are used in the asset management process, and consider whether the tools adequately evaluate and monitor financial risks.
62. Determine whether sales commissions or fee arrangements, such as 12b-1 fees received from mutual funds, do not unduly influence investment decisions. ***(Note: Refer to the Pooled Investment Vehicles Module for additional considerations.)***
63. Determine whether guidelines for using asset allocation models as a basis for making investment management decisions are in place, and consider: • **Which accounts will be invested based on modeling information,** • **How portfolios will be monitored to ensure they remain within model guidelines, and** • **How investment objectives are determined and monitored.**
64. Evaluate the appropriateness of investments in own-bank deposits and documentation that own-bank deposits receive a competitive rate of interest.
65. Review the use and performance of pooled investment vehicles, including proprietary and third-party mutual funds, common trust funds, collective investment funds, and, if applicable, conversions of common and collective funds to mutual funds. ***(Note: If the Pooled Investment Vehicles Module is completed, document procedures in the reference module.)***
66. Evaluate the use of derivatives and other complex securities. ***(Refer to the Personal Trust Module,***

FDIC Capital Markets Handbook, or FRB Trading and Capital Markets Activity Manual for specific considerations.)

67. Determine whether exceptions to investment guidelines are appropriately reported, documented, approved, and monitored.

68. Review any securities lending activity. ***(Refer as needed to the Employee Benefit Reference Module)***

69. Assess practices for establishing discretionary account objectives. Determine whether the institution considers:

- **General economic conditions,**
- **Tax consequences,**
- **Other resources of the grantor or beneficiaries,**
- **Expected total returns,**
- **Liquidity and income needs of beneficiaries,**
- **Beneficiary requests,**
- **Purpose of the trust,**
- **Limitations of the governing instrument,**
- **Requirements for preservation or appreciation of capital,**
- **Diversification standards, and**
- **Risk tolerance levels.**

70. Determine whether all discretionary accounts receive a documented investment review at least once each year. At a minimum, reviews should:

- **Be performed by an independent person or committee;**
- **Evaluate the continued appropriateness of the account objectives;**
- **Assess the suitability of the account's investments, including tax considerations, risk tolerance, and liquidity needs;**
- **Consider any asset allocation imbalances or lack of diversification;**
- **Compare relative portfolio/account investment performance to established benchmarks and investment objectives; and**
- **Ascertain attributes of investment performance.**

71. Determine whether appropriate investment objectives are established when an account is accepted. Also, determine whether investments received in-kind are reviewed within a reasonable time for

suitability and prudent retention.

72. Assess the appropriateness of assets held in discretionary and investment advisory accounts by considering:

- **Requirements of the governing document;**
- **The account's stated objective(s);**
- **Approved investment guidelines; and**
- **Applicable common-law standards, state laws, and federal laws (e.g., prudent person/prudent investor act, ERISA, and Internal Revenue Code).**

73. Assess the adequacy of the practices, including valuation methodologies, that the institution uses to administer unique assets. ***(Note: If the Personal Trust or the Employee Benefit Modules are completed, document procedures in those modules.)***

74. Assess the adequacy of cash management practices by considering whether:

- **Cash balances are promptly invested;**
- **Net-overdraft procedures include authorized approvals and controls to ensure overdrafts do not remain outstanding for an unreasonable period;**
- **Fees imposed under cash sweep arrangements are reasonable, comply with state laws, and are properly disclosed to the customer;**
- **Cash investment vehicles have a competitive interest rate;**
- **Management maintains sufficient cash to meet the liquidity needs of individual accounts; and**
- **Cash management vehicles are highly liquid and ensure the preservation of principal.**

TRADING AND BROKERAGE

75. Determine whether security transactions effected in a fiduciary or custodian capacity satisfy the requirements for exemption from the definition of "broker" in the Securities Exchange Act of 1934. (Refer to Section 3(a)(4)(B)(iii) of the Securities Exchange Act of 1934, and SEC/FRB Regulation R.) Consider the following requirements:

- **Trust & Fiduciary Exceptions:**
  - **Transactions are effected in a department or division of the bank that is regularly examined for compliance with fiduciary standards;**
  - **The percentage of relationship compensation to total trust and fiduciary compensation, averaged over the immediately preceding two years, is at least 70% if computed on a bank-wide basis, or more than 50% for each account if computed on an account-by-account basis (refer to Section 10.F of the FDIC Trust Examination Manual for the definition of relationship compensation and details on Regulation R, chiefly-compensated requirements);**
  - **Securities transactions are effected by a registered broker/dealer;**

- **Securities transactions are effected in a cross-trade or similar transaction that is not in violation of fiduciary standards or in any other way permitted by the SEC; and**
- **The institution does not publicly solicit brokerage business. (Note: A bank may, in conjunction with advertising its other trust activities, state that it effects securities transactions as part of its administration of fiduciary accounts.)**

- **Custody & Safekeeping Exemptions:**
  - **Employee Benefit, IRA, and Similar Accounts**
    - **The institution does not advertise that it accepts orders for employee benefit plan accounts or individual retirement accounts or similar accounts (except as part of advertising its other custody and safekeeping activities), and does not advertise that such accounts are brokerage accounts or that the bank's safekeeping and custody services substitute for brokerage accounts;**
    - **Advertisements and sales literature descriptions of order-taking services should not be more prominent than other aspects of an institution's custody and safekeeping services;**
    - **No employee of the institution is compensated based on whether a securities transaction is executed, or based on the quantity, price, or type of security involved;**
    - **The institution is not a trustee or fiduciary, other than a directed trustee;**
    - **The institution is not acting as a carrying broker; and**
    - **The institution complies with the Exchange Act Section 3(a)(4)(C) trade execution requirements.**
  - **Accommodation Trades (i.e. order taking for accounts that are not Employee Benefit, IRA, or similar accounts.)**
    - **The institution does not advertise that it accepts orders;**
    - **Sales literature does not state that the bank accepts orders, except as part of describing other aspects of its custodial and safekeeping services;**
    - **Sales literature should not describe order-taking services more prominently than other aspects of an institution's custody and safekeeping services;**
    - **No employee of the institution is compensated based on whether a securities transaction is executed, or based on the quantity, price, or type of security involved;**
    - **Any fee charged or received by the institution does not vary based on whether the bank accepted the order or the quantity or price of the securities bought or sold;**
    - **The institution is not a trustee or fiduciary, other than a directed trustee;**
    - **The institution does not provide investment advice or research, make recommendations, or solicit transactions;**
    - **The institution is not acting as a carrying broker; and**
    - **The institution complies with the Exchange Act Section 3(a)(4)(C) trade execution requirements.**
  - **Non-Custodial Third Party Administrators**
    - **The third-party administrator and the custodial institution that contracted with it must comply with the requirements for Employee Benefit, IRA, and similar accounts; and**
    - **The third-party administrator does not execute cross trades (other than crossing or netting open-end mutual funds not traded on an exchange) or crossing or netting orders for accounts of the custodial institution.**
  - **Sub-Custodians**
    - **Both the sub-custodial and the custodial institution comply with the relevant requirements for Employee Benefit, IRA, and similar accounts or accommodation trades, as applicable; and**
    - **The sub-custodian bank does not execute cross trades (other than crossing or netting open-end mutual funds not traded on an exchange) or crossing or netting orders for accounts of the custodial institution.**
  - **Other Exceptions and Exemptions**

- **Sweep Account/Money Market Fund,**
- **Networking/High Net Worth – Institutional Customer Referrals,**
- **SEC Regulation S Securities,**
- **Securities Lending Transactions,**
- **Permissible Securities Transactions,**
- **Stock Purchase Plans,**
- **Private Securities Offerings,**
- **Affiliate Transactions,**
- **Identified Banking Products,**
- **Municipal Securities, and**
- **De Minimis.**

References: FDIC: Section 10.F of the FDIC Trust Examination Manual; FRB: Regulation R.

76. Evaluate management's efforts to obtain best execution on securities trades.

77. Determine whether credit and operational risks with broker/dealers are adequately controlled. Consider whether the institution maintains an approved list of brokers, broker allocation guidelines, and credit or trading limits.

78. Determine whether an appropriate level of due diligence is performed on all counterparties, even when transactions do not expose the institution to credit risk.

79. Determine whether trade transaction reports include all necessary information to validate the transaction and whether the institution can reconstruct an account's trading history.

80. Determine whether transactions are executed and recorded in a timely manner.

81. Determine whether the allocation of securities and the prices paid for securities are fair and equitable. Consider whether:

- **Orders for the same security are received at approximately the same time.**
- **Securities are purchased and sold in block transactions.**
- **Buy and sell orders are matched between accounts (i.e., the crossing of buy and sell orders).**

82. Determine whether transaction discrepancies (such as failed trades, confirmation conflicts, securities not delivered or received, and pricing inconsistencies) are properly investigated and resolved.

- **Review trade investigation logs to determine the number and dollar amount of outstanding disputes.**
- **Determine whether trade metrics (such as trade volumes and the number of failed trades) are reported periodically to management for oversight and risk management purposes.**
- **Determine whether customer complaints are resolved by someone other than the person who executed the trade.**

83. Determine whether the institution prohibits traders from effecting personal securities trades. If traders are allowed to effect personal securities trades, determine whether management has established adequate controls to both prohibit and identify front-running, late trading in mutual funds, market timing in mutual funds, and other inappropriate trading practices.

84. Assess the separation of duties for confirming, reconciling, valuing, clearing, accounting, receiving, and disbursing assets related to trading and brokerage activities.

85. Determine whether access to trading programs is properly controlled. Consider, whether the programs prevent or identify late-trading or market-timing activities in mutual funds and whether only authorized personnel can initiate trades.

86. Determine whether broker statements are sent directly to accounting or operations personnel and not to trading personnel.

87. Determine whether discrepancies on broker statements are directed for resolution to someone outside the trading function.

88. Determine whether trading activities are covered in the audit program and whether the scope of review is appropriate for the level of activity.

89. Review management's compliance with securities record-keeping and confirmation requirements,

including reports of personal securities trading. (FDIC: Part 344/FRB: Reg. H)

Board and Senior Management

90. Determine whether board and trust committee minutes and supporting documentation reflect adequate supervision of fiduciary activities.

91. Determine the purpose and function of each trust sub-committee.

92. Determine whether organizational and committee structures are appropriate and provide for clearly defined lines of authority and responsibility.

93. Determine whether the trust committee meets at least quarterly and maintains comprehensive minutes of meetings held and actions taken.

94. Determine whether attendance by board and committee members is satisfactory.

95. Assess the board, trust committee, and management's ability to plan and respond to changing business conditions and determine whether fiduciary activities are adequately considered in the institution's strategic planning process.

96. Determine whether a dominant official exerts significant influence over department operations. If so, assess the adequacy of the Board’s oversight and mitigating controls.

97. Determine whether management takes adequate and timely corrective action to address recommendations by auditors and regulatory authorities

98. Determine whether the board retains legal counsel when necessary.

99. Determine whether the board provides for adequate insurance of fiduciary activities and periodically reviews blanket bond, errors and omissions, and other applicable insurance coverage.

100. Determine whether fiduciary lines of business are managed and staffed by persons with requisite knowledge, experience, and expertise. Consider the background of key management personnel and the adequacy of training for management and staff.

101. Determine the adequacy of management succession plans.

102. Evaluate management's due diligence process for selecting and monitoring outside service providers (e.g. investment managers, investment advisors, consultants, custodians, broker/dealers, etc.). Determine whether:

- **Delegations of fiduciary responsibility by the institution are authorized under state law.**
- **The board or its designated committee conducts and documents an adequate due diligence review before contracting with a third party. Consider whether the board evaluates the:**
  - **Financial strength of the servicing organization,**
  - **Ability of the servicing organization to handle the volume and nature of trust accounts and assets to be serviced,**
  - **Investment results of the servicing organization,**
  - **Policies/procedures and controls of the servicing organization,**
  - **Audit coverage of the servicing organization (including SSAE 16 reports if available), and**
  - **Fidelity insurance coverage of the servicing organization.**
- **Determine whether written agreements clearly define the scope and terms of any third-party relationships, including:**
  - **Duties and responsibilities of each party,**
  - **Service level agreements,**
  - **Business resumptions plans for critical vendors,**
  - **Compensation and any cost sharing agreements,**
  - **Ownership of files and records,**
  - **Access to trust accounts or activities by auditors and regulators,**
  - **Terms under which an agreement may be terminated,**
  - **Liabilities of each party in the event of surcharges or losses,**
  - **Requirements for bonding or fidelity insurance, and**
  - **Privacy responsibilities.**
- **Determine whether the board or a designated committee periodically reviews and approves written agreements with third parties and monitors performance and compliance with written agreements.**

End of Core Analysis. If needed, Continue to the Expanded and Impact Analyses.

TRUST - ABBREVIATED

Core Analysis Decision Factors

Examiners should evaluate the Core Analysis in this section to determine if an Expanded Analysis is necessary. Click on the hyperlinks found within each of the Core Analysis Decision Factors to reference the applicable Core Analysis Procedures.

Note: This module is intended for use in non-complex trust departments. The nature and extent of fiduciary activities vary greatly among banks and it is not always necessary to perform all procedures. Some procedures may not be applicable for institutions that engage in limited fiduciary activities or administer a limited number or type of trust accounts.

Do Core Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

C.1. **Are policies, procedures, and other methods for limiting risk effective?** ***Refer to Core Analysis Procedures #5-10* & *Procedures #14-16.***

C.2. **Are internal controls effective?** ***Refer to Core Analysis Procedure #9.***

C.3. **Are the audit or independent review functions effective?** ***Refer to Core Analysis Procedure #5.***

C.4. **Are information and communication systems effective and accurate?** ***Refer to Core Analysis Procedure #10 & Procedure #30.***

C.5. **Are trust department earnings effectively managed and sufficient to support the institution's fiduciary activities?** ***Refer to Core Analysis Procedures #11-13. (Note: Generally, the Earnings component rating is not assessed if the department has < $100 million in discretionary trust assets under management. This item should be answered as "Not Reviewed" if earnings are not assessed.)***

C.6. **Does the institution follow internal bank policies and procedures, governing instruments, and sound fiduciary principles and comply with applicable laws and regulations?** ***Refer to Core Analysis Procedure #14-16 & Procedures #17-22.***

C.7. **Are asset management and investment advisory practices effective?** ***Refer to Core Analysis Procedures #21-23.***

C.8. **Do the board and senior management effectively supervise fiduciary activities?** ***Refer to Core Analysis Procedures #24-30.***

TRUST - ABBREVIATED

Core Analysis Procedures

Examiners are to consider the following procedures but are not expected to perform every procedure at every bank. Examiners should complete only the procedures relevant for the bank's activities, business model, risk profile, and complexity. If needed, based on other identified risks, examiners can complete additional procedures. References to laws, regulations, supervisory guidance, and other resources are not all-inclusive.

Preliminary Review

1. Review prior examination reports, pre-examination memorandum, and file correspondence for an overview of any previously identified trust concerns and trends. Also, review Consolidated Reports of Condition and Income, Schedule RC-T - Fiduciary and Related Services.

2. Identify the types of accounts and the fiduciary capacity of the accounts, including the following:

- **Accounts:**
  - **Personal,**
  - **Corporate,**
  - **Employee benefit,**
  - **Investment management, and**
  - **Estates.**
- **Capacity:**
  - **Custodian, and**
  - **Trustee.**

3. Review publicly available bank information, including the bank's website, for any trust-related information.

4. Discuss with management, any significant changes that may have taken place such as:

- **Changes in risk profile, such as new business lines, products or personnel;**
- **Changes in governance or committee structures;**
- **Pending or threatened litigation and customer complaints;**
- **Mergers, acquisitions, or significant growth; and**
- **Changes in third party, fee-sharing, or outsourcing agreements.**

Operations, Internal Controls, and Audits

5. Determine whether the board maintains an effective trust audit program and follow-up procedures.

Ensure:

- **Audit scope is commensurate with level of risk (including cyber-security risks),**
- **Audit activities are appropriate, and**
- **Audit reporting functions and procedures are adequate.**

6. Determine whether trust activities are accurately reported in Consolidated Reports of Condition and Income (Schedule RC-T).

7. Determine whether recordkeeping and reconciliation practices are effective and there is appropriate segregation of duties.

- **Ensure that recordkeeping is accurate and reliable.**
- **Review reconciliation policies and procedures.**

8. Review net overdrafts and clearing procedures.

9. Evaluate the effectiveness of the internal control environment and ensure account administrators are not involved in statement generation or distribution. Assess the adequacy of:

- **Staffing,**
- **Lines of authority,**
- **Reporting,**
- **Procedural guidance, and**
- **Segregation of operational duties.**

10. Consider the effectiveness of the management information systems used to support trust activities and the timeliness and accuracy of management reporting.

Earnings

11. Determine whether trust department earnings have a significant impact on the earnings and capital of the bank.

12. Consider how future events (such as new products or services) may affect trust department earnings.

13. Determine whether procedures for monitoring fiduciary income and expenses are commensurate with the impact on bank-wide earnings.

Compliance

14. Determine whether trust and investment policies and procedures adequately address account and investment administration functions.

15. Determine whether the trust department effectively identifies and monitors conflicts of interest.

16. Review and assess compliance with SEC/FRB Regulation R and other state and federal regulations pertinent to trust activities.

Asset Management

17. Evaluate the investment process by reviewing the trust department's internal policies and holding discussions with management.

18. Assess management's procedures for promptly investing liquid assets.

19. Evaluate any outside investment services used and the trust department's oversight of those services. Review:

- **Contracts,**
- **Ongoing due diligence,**
- **Management reports, and**
- **Trust committee minutes.**

20. Determine whether account investments conform with governing instruments and comply with

applicable laws.

21. Determine whether account investments are diversified in accordance with the account's investment objectives, unless directed by the governing instrument, grantor/beneficiary(s), or court order.

22. Ensure that client accounts are rebalanced when necessary.

INDIVIDUAL ACCOUNT REVIEWS

Note: At the EIC's discretion, a discuss-only technique may be used to evaluate the bank's remediation of issues identified by examiners or management. For example, where prior examination reports contain account write-ups with similar weaknesses, examiners may wish to discuss actions management has taken to correct and prevent such weaknesses in general, rather than reviewing each individual account that was included in the previous report. A discuss-only technique may also be appropriate when assessing corrective actions or audit recommendations implemented by management.

23. Review individual accounts only to the extent necessary to assess the compliance and asset management components.
    - Non-managed (non-discretionary) accounts should receive equal consideration for review as managed (discretionary) accounts.
    - Maximize the use of internal account reviews where possible.

Management

24. Review and assess the governance framework to identify, measure, monitor and control the risks inherent in fiduciary activities, and respond appropriately to changing business conditions.

    (Note for FDIC: For more information see the Statement of Principles of Trust Department Management in the Trust Examination Manual.)

25. Assess management's use of exception reports to measure, monitor, and control risk.

26. Assess management's education, training, and expertise.

27. Assess the impact of client complaints and pending litigation.
28. Assess third-party, fee-sharing, or outsourcing agreements entered into since the previous examination. Review: • **Contracts,** • **Ongoing due diligence,** • **Management reports, and** • **Trust committee minutes**
29. Consider the department's practices regarding information security, backup planning, and safeguarding against cyber-attacks. (Contact the IT examiners if any concerns are identified.)
30. Evaluate the effectiveness of the governance and management reporting structure, including committee and governance processes. Consider items such as: • **Minutes,** • **Committee structure,** • **Authority and responsibility,** • **Attendance,** • **Strategic planning process, and** • **Response to audit and regulatory recommendations.**
End of Core Analysis.

CREDIT CARD RELATED MERCHANT ACTIVITIES
Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1.	**Are deficiencies immaterial to management's supervision of credit card merchant activities?** ***Refer to Expanded Analysis Procedures #1-7.***
E.2.	**Are deficiencies immaterial to the bank's financial condition?** ***Refer to Expanded Analysis Procedures #8-9.***

CREDIT CARD RELATED MERCHANT ACTIVITIES

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Expanded Analysis Procedures
1. Investigate why the policy deficiencies identified in the Core Analysis exist. Discuss recommendations with management. *Note: The Core Analysis reveals what the deficiencies are, whereas the Expanded Analysis is focused on the circumstances causing the deficiencies and management's ability to implement corrective action.* Possible reasons for policy deficiencies may include the following circumstances: • **Management overlooked issues.** • **Management is unfamiliar with prudent credit card related merchant activity guidelines and procedures.** • **Management is unwilling to create or enhance policies and procedures.**
2. If poor compliance with policies and procedures exist, determine the reasons. Possible reasons are detailed below: • **Lack of awareness of policy's existence.** • **Disregard for established policies.** • **Misunderstanding the intent of policy guidelines.** • **Poor internal communication of subsequent revisions to policy and procedures.** • **Weak internal controls, audit procedures, or reporting mechanisms.**
3. Determine why management and board reports are deficient. Seek management's responses to and corrective actions taken for these deficiencies. The cause(s) of deficient reports may stem from the following circumstances: • **Inaccurate information is contained in reports and input and output has not been tested.** • **Management information system is not able to generate necessary reports.** • **Management is unfamiliar with the information system's capabilities.** • **Management is unfamiliar with important monitoring reports.**
4. Determine if management supports proper controls and monitoring to ensure policy guidelines are followed in the future.
5. Research the reasons for weak controls and evaluate management's plan to correct these weaknesses.

Perform additional internal control evaluations as necessary:

- **Determine if access to merchant and ISO reserve accounts is restricted to authorized bank personnel.**
- **Review exception reports on merchants experiencing unusual activities. Determine the reasons for the exceptions.**

6. Investigate the causes of operating losses in the merchant credit card operations and evaluate the prospects for profitability.

7. Determine the reasons for inadequate chargeback reserves.

8. If the bank suffered significant losses on chargebacks from a particular merchant or group of merchants over the past several years, complete the following items:

- **Determine why certain merchants are generating significant chargebacks.**
- **Ascertain what actions management takes to reduce losses (implementing additional controls or terminating an arrangement with a merchant).**

9. Investigate reasons for merchants with low profitability or actual losses. Only review those that are significant.

- **Review a sample of written onsite inspections.**
- **Review a sample of merchant profitability accounts and compare actual pricing against the pricing policy.**
- **Review the most recent financial statement and assess the financial capacity of the merchant.**
- **Determine if the bank is giving the merchant a favorable discount rate because of an existing commercial loan or deposit relationship. (Although this is an acceptable practice for non-insiders, the bank should be able to measure the overall profitability of the merchant account to ensure the other banking relationship offsets the favorable discount rate.)**
- **Review any corrective actions management intends on implementing.**

End of Expanded Analysis. If needed, Continue to Impact Analysis.

CREDIT CARD RELATED MERCHANT ACTIVITIES

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine the impact merchant processing deficiencies have on the bank's earnings and capital. Consider potential losses due to inadequate reserves and any other contingent liability.
2. Consider whether an informal or formal enforcement action is warranted.
3. Discuss the possibility of administrative and enforcement actions with appropriate supervisory/agency personnel before discussing the matters with executive bank management and the board of directors.
4. Prepare appropriate recommendations for administrative and enforcement actions and associated memorandums.
End of Impact Analysis.

ELECTRONIC FUNDS TRANSFER RISK ASSESSMENT

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. **Are deficiencies immaterial to management's supervision of electronic funds transfers?** ***Refer to Expanded Analysis Procedures #1-28.***

E.2. **Are deficiencies immaterial to the bank's overall condition?** ***Refer to Expanded Analysis Procedures #1-28.***

ELECTRONIC FUNDS TRANSFER RISK ASSESSMENT

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Policies and Procedures

1. Investigate why the policy and procedure deficiencies identified in the Core Analysis exist. Possible reasons for policy deficiencies may include the following circumstances:

- **Management overlooked these issues.**
- **Management is unfamiliar with prudent electronic funds transfer guidelines and procedures.**
- **Management is unwilling to create or enhance policies and procedures.**

2. If poor compliance with policies and procedures exist, determine the reasons. Possible reasons are detailed below:

- **Lack of awareness of policies' existence.**
- **Disregard for established policies.**
- **Misunderstanding the intent of policy guidelines.**
- **Poor internal communication of subsequent revisions in policy and procedures.**

3. Determine whether management commits to and supports proper controls and monitoring to ensure policy guidelines are followed in the future. Determine whether proposed controls, if any, are reasonable.

Internal Controls

FUNDS TRANSFER REQUESTS

4. Determine whether the funds transfer function maintains a current list of bank personnel authorized to initiate transfer requests.

- **Ascertain if the bank limits the number of employees who initiate or authorize transfer requests.**
- **Determine whether authorized employee signature records are kept in a secure environment.**

5. Review a sample of funds transfer requests. Determine whether management uses standard, sequentially numbered forms or some other authentication system. Determine whether funds transfer requests include the following items:

- **The account title and number.**

- **A sequence number.**
- **The amount to be transferred.**
- **The person or other source initiating the request.**
- **The time and date.**
- **Authentication (callbacks, fax, personal identification numbers).**
- **Paying instructions.**
- **The name of the bank personnel authorizing the transfer and the dollar amount.**

6. Review the bank's procedures for recording all incoming and outgoing transfer requests. If calls are recorded, determine whether the bank advises its customers in written contracts, by audible signals, or by informing the caller that telephone calls are being recorded.

7. Determine whether transfer requests are recorded in a log, or another bank record, before execution.

- **Determine whether the funds transfer function maintains sequential control for requests it processes.**
- **If requests are not sequentially accounted for, determine whether there is an unbroken copy of all messages received via telex or other terminal printers kept throughout the business day.**
- **Determine whether someone not connected with equipment operations reviews sequence records and unbroken copies of messages.**

8. Determine whether incoming and outgoing messages are time stamped or sequentially numbered.

PAYMENT PROCESSING AND ACCOUNTING

9. Determine whether the funds transfer department verifies that work sent to and received from other bank departments agree with its totals.

10. Determine whether key fields are re-verified before transmission and messages are released by someone other than the individual originally entering the message.

11. Ascertain if transfer requests accepted after the close of business, or transfer requests with a future value date, are properly controlled and processed.

12. Determine whether open-statement items, suspense accounts, receivables or payables, and inter-office accounts related to funds transfer activity are controlled outside of the funds transfer operations. Determine whether the following controls exist:

- **Management prepares periodic reports on open-statement items, suspense items, and inter-office accounts.**
- **Reports include agings of open items, the status of significant items, and the resolution of prior significant items.**
- **Corrections, overrides, open items, reversals, and other adjustments are reviewed and approved by an officer.**

13. Determine whether all general ledger tickets, or other supporting documents, are initialed by the originator and supervisory personnel.

PERSONNEL

14. Determine whether screening procedures are applied to personnel hired for sensitive positions in the funds transfer area. Management should be implementing the following controls:

- **New employees working in sensitive areas are closely supervised.**
- **Temporary employees are either prohibited from working in sensitive areas or closely supervised.** ***(Note: The number of temporary employees allowed in sensitive areas should be limited.)***

15. Determine whether the bank requires statements of indebtedness for employees working in sensitive areas.

16. Review procedures governing personnel-related issues. Determine whether the following control activities exist:

- **Employees are subject to unannounced rotation of duties.**
- **Relatives of employees are precluded from working in the bank's bookkeeping, audit, data processing, or funds transfer requests departments.**
- **Employees are required to take a minimum number of consecutive days as part of their annual vacation.**
- **Employees who have given notice of resignation or have been notified of pending termination are re-assigned from sensitive areas.**

CREDIT EVALUATION AND APPROVAL

17. **Determine whether management establishes customer limits for daylight and overnight overdrafts. Management should complete the following tasks:**
    - **Ensure limits include groups of affiliated customers.**
    - **Monitor funds transfer requests during the business day to ensure that proper approval is granted before making payments that exceed limits.**
    - **Review and periodically update customer limits.**

18. **Determine whether management makes payments in anticipation of receiving funds that day to cover the daylight overdraft. Determine whether the following controls over daylight overdrafts exist:**
    - **Payments are approved by officers with appropriate credit authority.**
    - **Daylight exposures are limited to amounts expected to be received that same day.**
    - **Daylight overdraft limits are established after considering other types of credit facilities for the customer.**
    - **A daylight record is kept for each customer showing the following information:**
        - **Opening collected and uncollected balances.**
        - **Transfers in and out of the account.**
        - **Collected balance at the time payments are released.**

19. **Determine whether any overnight overdrafts exceed established limits:**
    - **Assess why the overdraft exceeded limits.**
    - **If a control failure caused the overdraft, Determine whether the following procedures were followed:**
        - **The cause was properly documented.**
        - **Adequate follow-up to obtain the covering funds in a timely manner.**

20. **Determine whether a person with appropriate credit authority approves payments that exceed established daylight and overnight limits.**

21. **If the bank is a participant of a net settlement system (CHIPS), determine whether bilateral-lateral credit limits are set based on a formal credit analysis. The limits should be reviewed by an appropriate level of management.**

PAYMENT SYSTEM RISK

22. **If the bank incurs overdrafts in its Federal Reserve account, determine whether it completed the payment system risk program (selected an appropriate net debit cap).**

23. If the bank has selected a self-assessment net debit cap, evaluate the adequacy of records supporting the bank's program and accuracy of the self-assessment rating.

INFORMATION TECHNOLOGY STANDARDS

24. Determine whether standards exist for the following activities:

- **Software and hardware acquisitions, including the following information:**
  - **Cost/benefit analysis.**
  - **Programming standards.**
  - **Documentation standards.**
  - **Ownership of programs, spreadsheets, etc., developed on the bank's time and equipment.**
  - **Escrow of source code of critical, tailor-made funds transfer software to ensure the bank can continue to maintain software in the event the vendor fails.**
- **Micro computer use including the following controls:**
  - **Use of the output or data.**
  - **Restrictions on personal and non-job related use.**
  - **Use of personal equipment and software.**
  - **Use of unauthorized software.**
  - **Modification of the hardware and software.**
  - **Copying or piracy of the software.**
  - **Requirements for file backup.**

OTHER

25. Review agreements that are in effect concerning funds transfer operations between the bank and its customers, correspondent banks, systems provider (Federal Reserve, CHIPS), servicers, and hardware and software vendors. Determine whether the agreements contain the following information:

- **Responsibilities of and accountability between all parties.**
- **Security procedures as defined by UCC Article 4A.**
- **Requirement that the bank obtain written waivers from customers who chose security procedures that differ from what the bank offers.**
- **Cut-off times for receiving, processing, and canceling or amending payment orders.**

Managerial Effectiveness

26. Determine why previously identified deficiencies remain uncorrected.

27.	**Determine the reasons for poor compliance with policy guidelines, accounting standards, or applicable regulations.**
28.	**Assess the adequacy and viability of management's corrective commitments.**

End of Expanded Analysis. If needed, Continue to Impact Analysis.

ELECTRONIC FUNDS TRANSFER RISK ASSESSMENT
Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine whether credit risk resulting from funds transfers will adversely affect overall asset quality and if the risk is included in determining the adequacy of the loan loss reserve.
2. Decide if the weaknesses identified in this area will negatively affect liquidity, earnings, or capital.
3. Determine the need for administrative and enforcement actions, formulate specific recommendations, and advise appropriate supervisory officials on the nature of the concern.
4. Discuss the possibility of administrative and enforcement actions with senior management and the board of directors.
End of Impact Analysis.

MORTGAGE BANKING

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. Are deficiencies immaterial to the supervision of mortgage banking operations? ***Refer to Expanded Analysis Procedures #1-34.***

E.2. Are deficiencies immaterial to the bank's overall condition? ***Refer to Expanded Analysis Procedures #1-34.***

MORTGAGE BANKING

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis.

Policies and Procedures

1. **Investigate why the policy and procedure deficiencies identified in the Core Analysis exist. Discuss recommendations with management. Possible reasons for policy deficiencies may indicate management:**
   - **Overlooked issues,**
   - **Is unfamiliar with prudent mortgage banking guidelines and procedures, and**
   - **Has not been responsive to previous recommendations to create or enhance policies and procedures.**

2. **If poor compliance with policies and procedures exist, determine the reasons. Possible reasons include:**
   - **Lack of awareness of the policies,**
   - **Disregard for established policies,**
   - **Misunderstanding of the intent of policy guidelines,**
   - **Poor internal communication of revisions to policy and procedures, and**
   - **Poor management oversight.**

3. **Determine whether management commits to and supports proper controls and monitoring to ensure policy guidelines are followed in the future.**

Internal Controls

ACCOUNTING

The following accounting pronouncements apply to mortgage banking activities:

- ***FASB ASC Subtopic 310-20 – Nonrefundable Fees and Other Costs***
- ***FASB ASC Topic 320 – Investments - Debt and Equity Securities***
- ***FASB ASC Topic 325 – Investments - Other***
- ***FASB ASC Topic 815 – Derivatives and Hedging***
- ***FASB ASC Topic 820 – Fair Value Measurements and Disclosures***
- ***FASB ASC Topic 825 – Financial Instruments***
- ***FASB ASC Topic 860 – Transfers and Servicing***
- ***FASB ASC Topic 948 – Financial Services - Mortgage Banking***
- ***SEC Codification Topic 5.DD – Written Loan Commitments Recorded at Fair Value***

4. **Determine whether held-for-sale assets are segregated from portfolio loans and recorded at the lower of cost or fair value as required by FASB ASC Topic 948.** ***(Note: Per FASB ASC Topic 815, the carrying value of assets held-for-sale may be adjusted to reflect the use of derivatives as hedges.)***

5. **Determine whether mortgage loans transferred from held-for-sale to held-for-investment are properly recorded (at the lower of cost or fair value) at the transfer date. Determine whether, after the transfer, any difference between the carrying amount of the loan and its outstanding principal balance is be recognized as an adjustment to yield by the interest method (as described in FASB ASC Subtopic 310-20).** ***(Note: If a bank elects to account for a loan under the fair value option for a loan held for sale, the assets remain to be accounted for at fair value when transferred to held for investment, since the election is irrevocable).***

6. **Determine whether loan sales are properly reported in regulatory reports.**

7. **Determine whether management continues to defer origination fees and costs in accordance with FASB ASC Subtopic 310-20 if the bank swaps loans for pass-through certificates issued by the investor.**

Audit or Independent Review

8. **Investigate why audit or independent review deficiencies identified in the Core Analysis exist.**

Information and Communication Systems

9. **Determine why management and board reports contain deficiencies. Determine management's response and consider corrective actions to address the deficiencies. The cause of deficient reports may stem from:**
   - **Inaccurate information contained in reports or input/output has not been tested,**
   - **Necessary information cannot or is not generated,**
   - **Management's unfamiliarity with the information system's capabilities, or**
   - **Management's unfamiliarity with necessary monitoring reports.**

10. **Review the quality of investor reporting. Investor reporting varies based on the servicing contract, but typically the servicing bank is responsible for reporting:**
    - **Detailed account reconciliations;**

- **Information such as the mortgagor's name, principal balance, and escrow balance; and**
- **Payment status, foreclosures, and transfers to their other real estate owned (OREO) account.**

Internal Loan Production (Origination, Underwriting, and Closing)

11. Review mortgage pricing strategies, and consider:

- **How prices are determined;**
- **If the pricing strategy is typically at, above, or below market; and**
- **The affect pricing strategies may have on current and future profitability.**

12. Determine the frequency of price changes for retail and wholesale channels by reviewing historic price levels. Evaluate the timing of changes relative to market rate movements.

13. Determine whether managers understand the marketability of new products and the bank's ability to price, deliver, and service the products. Ascertain that senior management approval is obtained prior to new product roll-out.

Pipeline, Warehouse, and Hedging

14. If the bank was unable to meet mandatory commitments, assess the reasons, and determine whether:

- **The situation was reported promptly to the directorate or other board committee.**
- **Management purchased loans from other sources or paid investors a pair-off fee.**

15. If hedging strategies are ineffective, determine the cause(s), such as:

- **Poor correlation of data,**
- **Unreliable data, or**
- **Speculation.**

16. Determine whether the following controls over forward sales activities exist:

- **Traders are prohibited from entering forward sales data into the system. (Trade tickets should be submitted to an independent person or unit for processing.)**
- **Third-party trade confirmations are received and reviewed by a separate unit.**
- **Management researches all unconfirmed trades and discrepancies.**

Mortgage Servicing

PORTFOLIO SUPERVISION

17. Review the procedures for receiving payments from borrowers, depositing funds into segregated custodial accounts, and remitting funds to investors.

- **Assess the bank's system for ensuring borrowers' payments are applied accurately and investors receive payments on schedule.**
- **Determine whether adequate controls exist over custodial accounts, such as daily balancing, monthly reconcilements, proper authority for disbursements, and segregation of administrative duties.**

18. Review written servicing agreements to determine investor servicing requirements, fund remittance schedules, contractual servicing fees, guarantee fees, and servicer representations and warranties.

- **Determine whether loan delinquencies prompted the use of bank funds to meet remittance requirements.**
- **Track the flow of funds from the investor cutoff date, the remittance of funds to investors and security holders, and the recognition of servicing revenue.**

19. If there is poor administration of servicer advances, assess these receivables for potential adverse classification and contingency reserves.

20. Review system reports to ensure the timely payment of taxes, insurance, and other obligations of the borrower.

21. Review the method for correcting shortages and surpluses in escrow accounts.

22. Review the procedures for ensuring tax and insurance payments are made on delinquent loans.

MORTGAGE SERVICING ASSETS (MSAs)

23. Determine whether the bank recognizes and initially measures at fair value a servicing asset or a

servicing liability that qualifies for separate recognition when it undertakes an obligation to service a financial asset. ***(For additional information, refer to ASC Subtopic 860-50, Transfers and Servicing – Servicing Assets and Liabilities; ASC 820, Fair Value Measurements; and Call Report-Glossary definitions for Servicing Assets and Liabilities, and Fair Value.)***

24. Complete an in-depth review of the valuation process (policies, procedures, and controls) for MSAs.

- **Determine whether management appropriately identifies servicing portfolio characteristics, such as:**
  - **Investors;**
  - **Product types;**
  - **Transactions made with or without recourse;**
  - **Geographic distribution of borrowers;**
  - **Average loan size;**
  - **Range of interest rates;**
  - **Projected life and average age of loans;**
  - **Delinquency, foreclosure, OREO, and bankruptcy levels; and**
  - **Loss experience.**
- **Review prepayment speed assumptions to determine if they are realistic and conform to acceptable industry standards.**
- **Determine whether discount rate assumptions are realistic and in-line with industry practices.**
- **If servicing costs exceed contractual servicing fees and other projected servicing income, determine whether the bank records a loss on the sale or a mortgage servicing liability.**
- **Determine whether changes in the servicing fee are caused by changes in the weighted-average coupon for each mortgage pool.**

25. For MSAs accounted for using the amortization method, determine whether the bank amortizes capitalized servicing assets (servicing liabilities) over the period of estimated net servicing income (net servicing loss).

- **Determine how the bank establishes amortization periods for its classes of servicing assets and servicing liabilities.**
- **Determine whether the bank adjusts the amortization when the actual prepayment speed is faster or slower than originally projected.**

26. If assumptions used in the MSA valuation appear unrealistic, or the reported MSA value appears materially overstated, consider recalculating the value of MSRs. If the bank's internal model is considered reliable, it may be used to recalculate the MSRs value, after substituting more realistic assumptions.

COLLECTIONS
27. Review loan delinquency reports. Select and review a sample of files for severely delinquent borrowers. • **Determine whether the bank initiates foreclosure proceedings in a timely manner and properly notifies borrowers, investors, and mortgage insurers.** ***(Note: Reference GSE Servicer Guides for state-specific foreclosure timelines.)*** • **Review a sample of loans in which the foreclosure action is delayed due to forbearance agreements. Determine whether the agreements are within investors' guidelines.**
28. Review procedures for filing mortgage insurance (MI) claims and the application of such funds. Select a sample for detail testing if procedures are inadequate or if there are indications that MI claims are not properly handled and posted.
29. Review a sample of investor-owned OREO properties to determine if administrative and marketing practices comply with investor guidelines.
30. Determine whether there are any contingencies resulting from improper administration of foreclosed properties.
Financial Analysis
31. Investigate the causes for operating losses in mortgage banking operations, and evaluate prospects for future profitability. • **Determine whether elevated operating costs or other inefficiencies are impairing profitability.** • **Determine whether repurchase demands have impaired profitability, the near and long-term effects on liquidity and capital, and the impact on earnings due to reserve implications.** • **Establish whether excessive borrowing activities have led to adverse changes in the cost of funds. Evaluate the impact that a change in the cost of funds would have on the net interest margin.** • **Determine the holding company's ability to provide capital support, if necessary.** • **Determine why hedging strategies have not appropriately controlled interest rate risk (improper hedging is often a major cause of poor profitability).**
End of Expanded Analysis. If needed, Continue to Impact Analysis.

MORTGAGE BANKING

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine which risks associated with mortgage banking pose material threats to earnings, capital, and liquidity. Consider credit, interest-rate, price, transaction, liquidity, reputation, legal, compliance, and strategic risks.
2. Consider the need for administrative and enforcement actions, formulate specific recommendations, and discuss the nature of the concerns with appropriate regulatory supervisors.
3. When appropriate, discuss the possibility of administrative and enforcement actions with executive management and the board of directors.
End of Impact Analysis.

RELATED ORGANIZATIONS

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. **Are deficiencies immaterial to management's supervision of transactions with related organizations? *Refer to Expanded Analysis Procedures #1-8*.**

E.2. **Are deficiencies immaterial to the bank's financial condition? *Refer to Expanded Analysis Procedures #1-8*.**

RELATED ORGANIZATIONS

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible procedures specified for the Core Analysis also apply to the Expanded Analysis. The procedures in the Expanded Analysis section focus on identifying risk exposures, verifying significant risks, and determining the capabilities and reliabilities of the internal measurement systems.

Expanded Analysis Procedures
1. Investigate why the internal policy and procedure deficiencies identified in the Core Analysis exist. Possible reasons for policy deficiencies may indicate: • **Management overlooked issues,** • **Management is unfamiliar with prudent guidelines and procedures, or** • **Management has not been responsive to previous recommendations to create or enhance policies and procedures.**
2. If poor compliance with internal policies and procedures exist, determine the reasons. Possible reasons include: • **A lack of awareness of policy existence.** • **A disregard for established policies.** • **A misunderstanding of the intent of policy guidelines.** • **Poor internal communication of policy and procedures or subsequent revisions.**
3. Determine whether management commits to and supports proper controls and monitoring to ensure internal policy guidelines are followed in the future. Determine whether proposed controls are reasonable.
4. Determine the effect on the bank of inappropriate employee allocation agreements or nonconformance with agreements.
5. Determine whether reimbursements are necessary for improper transactions.
6. Determine whether the affiliate's or subsidiary's financial position will require additional funding requirements. Identify the source of the additional funding and the effect on the bank.

7. Determine the cause of violations and identify responsible parties. Consider the following: • **Unfamiliarity with laws and regulations,** • **Negligence,** • **Misinterpretation of statutory or regulatory requirements or prohibitions, and** • **Willful disregard.**
8. If the bank is critically undercapitalized (under Section 38, Prompt Corrective Action definitions), determine whether the bank has engaged in any covered transaction as defined in Section 23A, without the prior approval of the FDIC or FRS.
End of Expanded Analysis. If needed, Continue to Impact Analysis.

RELATED ORGANIZATIONS

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine whether the risks associated with affiliate relationships pose a material threat to the institution's capital, asset quality, earnings, or liquidity. Assess the impact on the institution if these deficiencies continue.
2. Assess whether management can effectively reduce the risks associated with affiliated relationships.
3. Determine whether administrative and enforcement actions, Civil Money Penalties, or removal actions are necessary. Formulate specific recommendations, and advise the appropriate supervisory officials on the nature of the concerns. (FDIC: Field supervisor and regional office.)
4. After obtaining approval from appropriate supervisory officials, discuss the possibility of administrative and enforcement actions with executive management and the board of directors.
End of Impact Analysis.

RETAIL INSURANCE AND SECURITIES SALES ACTIVITIES

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. **Are management deficiencies immaterial to the supervision of the insurance and security-sales programs and activities?** ***Refer to Expanded Analysis Procedures #1-32*****.**

E.2. **Are performance deficiencies immaterial to the bank's overall condition?** ***Refer to Expanded Analysis Procedures #1-32*****.**

RETAIL INSURANCE AND SECURITIES SALES ACTIVITIES
Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Policies, Procedures, and Other Risk Limiting Methods

1. Investigate why policy or procedure deficiencies identified in the Core Analysis exist. Discuss recommendations for corrective action with management. Possible reasons for policy deficiencies may include:

- **Management overlooked issues;**
- **Management is unfamiliar with guidelines for retail insurance and security-sales activities, including those that ensure compliance with the GLBA broker exceptions and Regulation R rules applicable for bank networking arrangements with a broker-dealer; or**
- **Management is unwilling to create or enhance policies and procedures.**

2. Determine whether management commits to and supports proper controls and monitoring to ensure policy guidelines are consistently followed. Determine whether proposed controls, if any, appear reasonable and implementable.

3. For insurance programs:

- **Assess the risks to the institution caused by concentrations of sales of insurance products from troubled insurance carriers;**
- **If a represented insurance company is failing or will be placed in receivership, determine the effect on bank operations; and**
- **Review contingency plans for handling customer concerns.**

4. For bank proprietary insurance or securities activities, evaluate management's policies, procedures, and ability relative to potential cash injections or liquidity problems.

Internal Controls

5. When concerns with internal controls are identified in the Core Analysis, evaluate whether the internal control weaknesses may expose the bank to material loss.

6. Research any material deficiencies in management reports to determine the underlying cause.
7. If a bank or its subsidiary conducts insurance sales activities, evaluate internal controls designed to guard against misappropriation of funds for accounts that are used to hold payouts from insurers and deposits for insureds. Determine whether management established methods for fraud prevention and investigation.
8. Assess the internal controls employed to mitigate risks that accompany outsourcing arrangements, including contingency plans to address nonperformance by an external vendor.
Audit or Independent Review
9. Determine why audit or independent review deficiencies exist.
10. Verify the accuracy of independent-review reports to the board.
Information and Communication Systems
11. Review the deficiencies in information and communication systems and determine the underlying cause(s).
12. Determine whether management monitors insurance policy renewals, lapses, and surrender rates to identify fluctuations in the customer base that could result in loss of business and revenue.
13. Determine the impact weakness may have on the bank's liquidity posture and incorporate the analysis in the examination's liquidity assessments, where appropriate. Consider: • **Deposit run-off because of reputation concerns,** • **Deposit outflows to insurance or investment products, and** • **Deposit inflows associated with insurance or security-sales programs.**

14. In instances where the institution purchased an insurance agency, determine whether management properly accounts for intangibles (i.e., goodwill and restrictive management covenants).
15. If the bank owns an insurance agency, determine whether management follows accounting pronouncements that apply to insurance activities (e.g., premium recognition). Refer to the American Institute of Certified Public Accountants (AICPA) Audit Guide for more details.
Third Party Agreements and Reviews
16. Assess the magnitude of risk exposure arising from disputes with third parties or customers, such as contract breaches or pending lawsuits.
17. Determine whether management monitors an insurance agency's conformance with contractual servicing responsibilities. ***Note: Servicing responsibilities can range from file maintenance to premium collection and claims adjustment. Problems may indicate potential financial or operational supervisory concerns.***
18. Determine whether management periodically requests confirmation that third-party insurance agencies monitor represented insurers with respect to reinsurance agreements, if applicable.
Board and Senior Management Oversight
19. Determine the cause of any violations of Regulation R and identify the responsible party or parties. Consider the following: • **Lack of familiarity with laws, regulations, or policy statements;** • **Negligence;** • **Misinterpretation;** • **Willful disregard and noncompliance; and** • **Fraudulent activity.**
20. Determine whether any side letters to governing contracts exist.

Compliance with Insurance and NDIP Consumer Protections (Non-FDIC Only)
Note: FDIC: Defer to DCP for all compliance reviews.
21. Review the bank's sales records to verify that only qualified and licensed or registered personnel are recommending and selling insurance or securities products.
22. Review the personnel files that management should maintain for bank or dual employee insurance or security-sales representatives for background and regulatory histories.
23. Visit additional insurance or NDIP sales locations, and evaluate promotional materials and sample customer information.
24. Interview sales representatives and assess their knowledge of, and commitment to, providing adequate disclosures for insurance and NDIP sales programs. Consider required disclosures regarding: • **The uninsured nature of any insurance, annuity, or securities product offered for sale (i.e., the product is not insured by the FDIC or any other U.S. government agency or by the bank or, if applicable, by an affiliate);** • **The statement that an insurance, annuity, or securities product is not a deposit, other obligation of, or guaranteed by the bank or an affiliate;** • **The investment risk associated with any such product (in the case of an insurance, annuity, or securities product that involves investment risk);** • **Notice that the bank or a subsidiary may not condition an extension of credit on the consumer's purchase of an insurance, annuity, or securities product from the bank or any of its affiliates, and that the consumer is free to purchase insurance products or annuities from another source; and** • **In the case of NDIPs, other required disclosures, such as proprietary product risks, fees, commissions, and arrangements with affiliated investment advisors, as applicable.**
25. Assess the risk arising from customer confusion caused by inadequate observance of any consumer protection measures for insurance sales.
26. Review the sales operation for potential discriminatory, unsuitable, or deceptive sales practices. Analyze sales reports and promotional materials to determine whether the following situations exist: • **Questionable sales practices, such as churning; or** • **Unsuitable recommendations (for example, high volumes of volatile instruments or dramatic increases in the sale of a particular product may indicate suitability concerns).**

27. Review a sample of advertisements (including Internet related ads and telemarketing sales scripts) used in the sales program to market insurance products or NDIPs. Determine whether the promotions are misleading or confusing.

28. Determine whether referral incentives and other compensation packages are reasonable. Incentives and other packages should not be structured to promote or cause inappropriate insurance or NDIP sales practices.

29. Interview branch employees, including tellers and receptionists, to determine whether proper insurance and NDIP referral procedures are followed.

30. Review a sample of customer files to verify that the files contain the following items:

- **Signed disclosure acknowledgement statements.**
- **For NDIP sales programs:**
  - **Evidence of a registered representative's review of customer information for adequacy before offering investment recommendations,**
  - **Current customer data,**
  - **Evidence that registered representatives provide complete information to customers regarding risks, and**
  - **Recommendations that conform to customers' goals.**

31. In banks with multiple retail insurance and security-sales sites, evaluate a small sample of the sales locations to determine whether the bank conducts sales transactions in an area that is physically segregated, to the extent practicable, from areas where retail deposits are routinely accepted from the public.

32. Determine whether the independent review function:

Tracks customer complaints relative to insurance or NDIP sales activities,

- **Identifies documentation deficiencies, and**
- **Reports findings to the bank's board.**

End of Expanded Analysis. If needed, Continue to <u>Impact Analysis</u>.

RETAIL INSURANCE AND SECURITIES SALES ACTIVITIES
Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Assess the impact of the retail insurance and security-sales activities on the overall condition and risk profile of the bank. Consider the following issues: • **Settled, pending, and planned litigation against the bank.** • **Regulatory investigations and sanctions.**
2. Determine the effect that reputational, financial, operational and legal risk exposures resulting from insurance and security-sales programs have on the institution's safety and soundness.
3. Evaluate the effects that current or planned insurance and securities activities could have on capital, earnings, liquidity, and asset quality.
4. Gauge management's willingness and abilities to correct identified weaknesses and concerns.
5. Determine whether informal or formal administrative actions are warranted. Formulate recommendations, review implementation plans, and advise the appropriate supervisors of the nature of the regulatory concerns.
6. Consult with the functional regulator(s) of the insurance or securities unit regarding any significant.
End of Impact Analysis.

SECURITIZATION

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are adequately identified, measured, monitored, and controlled?

E.1. Are the deficiencies immaterial to securitization activities? *Refer to Expanded Analysis Procedures #1-8.*

E.2. Are the deficiencies immaterial to the institution's overall condition? *Refer to Expanded Analysis Procedures #1-8.*

SECURITIZATION

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Internal Controls

1. **Reconcile the dollar volume of loans serviced by a third party, including a subsidiary or an affiliate that has been transferred in a securitization, regardless of whether the securitization is accounted for as a sale or a secured borrowing.**
   - **Independently verify that the amount of loans being serviced ties to the institution's records.**
   - **For on-balance sheet loans (i.e., seller's interest), verify that the dollar volume of loans on the servicing statements ties to the dollar volume of loans on the institution's records.**
   - **For securitized loans, verify that the dollar volume of loans on the servicing statement ties to the dollar volume of loans reported to the trustee.**
   - **Verify that the servicing statement ties to the supporting cash flow documentation for the bank's initial and ongoing accounting for the securitization (including the measurement of any beneficial interests held by the bank transferor in securitizations accounted for as sales).**

2. **Review monthly held-for-sale loan account reconciliations.**

Risk Identification and Measurement

3. **If there are material differences between the credit quality of loans subject to the securitization, and on-balance sheet loans that have not been securitized, investigate the reasons(s) for the performance disparity by comparing characteristics such as:**
   - **Loan-to-value ratios;**
   - **FICO or other credit scores;**
   - **Behavioral patterns or scores; and**
   - **Loan characteristics such as weighted average coupon (WAC), weighted average maturity (WAM), variable vs. fixed rate.**

Valuation and Classification of Beneficial Interests in Securitizations held by the Transferor Bank

4. **Analyze the assumptions used to value beneficial interests in the securitizations.**
   - **Review the process for determining prepayment, default, loss, and discount-rate assumptions and verify calculations.**
   - **Compare the prepayment and loss assumptions used in valuing the beneficial interest to actual performance of the underlying collateral. If the underlying collateral does not have sufficient**

performance history, compare assumptions to those of deals with substantially similar underlying assets or proxies.

- **Compare the discount rate used in valuing the beneficial interest to the discount rate that other market participants use to value beneficial interests having substantially similar characteristics.**
- **Determine whether the discount rate is applied to the actual excess interest that the trust distributes to the beneficial interest (cash-out method). The discount rate should not be applied to the excess interest that the trust receives (cash-in method).**
- **Determine whether the following items are properly reflected in the cash flow waterfall attributed to the beneficial interests:**
  - **Payments from the securitized assets;**
  - **Payments to certificate holders;**
  - **Fees (e.g., trustee, servicer, insurer);**
  - **Release of, or additions to, a reserve or overcollateralization account;**
  - **Chargeoffs and recoveries;**
  - **Insurance coverage of losses (e.g., FHA guaranteed);**
  - **Interest earned on underlying investments from credit enhancements accounts (e.g., cash collection, reserve, spread accounts);**
  - **Net settlements from embedded derivatives; and**
  - **Servicer advancements and any associated losses or unreimbursed amounts.**

5. **Using the discount rate assumption, verify the present value calculations of the expected future cash flows to the beneficial interests.**

6. **Determine whether an other-than-temporary impairment occurred. Other-than-temporary impairment on certain beneficial interests held by the transferor bank in securitizations accounted for as sales must be recognized when:**
   - **The fair value of an individual beneficial interest is below its reference amount; and**
   - **Based on current information and events, there has been an adverse change in cash flows expected to be collected on the beneficial interest.[1]**

7. **If the servicer is funding payments to the trust that are delinquent (principal or interest), in escrow, or are collection-related, determine whether the servicing advance payments are included in management's loss assumption methodology.**

8. **If possible, obtain the valuation model and substantially change one or more valuation assumption to determine whether the model functions properly.**

[1] **Reference: ASC Subtopic 325-40, Investments - Other, Beneficial Interests in Securitized Financial Assets.**

End of Expanded Analysis. If needed, Continue to Impact Analysis.

SECURITIZATION
Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Assess the impact of securitization activity deficiencies on the bank's overall condition.
2. Assess the effect of credit, interest rate, liquidity, and reputational risks on the institution's safety and soundness.
3. Assess the effect of planned securitization activities on capital, asset quality, earnings, liquidity, and sensitivity to market risk.
4. Assess management's willingness and ability to correct deficiencies.
5. Determine whether formal or informal administrative actions are warranted, formulate specific recommendations, and advise the appropriate supervisors on the nature of the concerns.
6. Investigate potential recommendations for civil money penalties.
7. Determine whether the assumptions used to value the beneficial interests lack appropriate and verifiable support,[2] in which case, the beneficial interests should be classified Loss and disallowed for regulatory capital purposes.
8. Assess the effect on the bank's overall condition of: • **An improper initial or subsequent valuation of beneficial interests obtained by the transferor bank**

[2] **Refer to the *Interagency Guidance on Asset Securitization Activities* (FDIC: FIL 109-99, FRB: SR 99-37) for further discussion.**

in its securitizations accounted for as sales; and

- **An inappropriate level for the portion of the ALLL for loans transferred in securitizations accounted for as secured borrowings (i.e., securitizations not accounted for as sales, in which case the transferred loans remain on the bank's consolidated balance sheet, normally in the held-for-investment loan account).**

End of Impact Analysis.

Expanded Analysis Decision Factors

This section evaluates the significance of deficiencies or other specific concerns identified in the Core and Expanded Analyses. Click on the hyperlinks found within each of the Expanded Analysis Decision Factors to reference the applicable Expanded Analysis Procedures. If needed, proceed to the accompanying Impact Analysis.

Do Expanded Analysis and Decision Factors indicate that risks are appropriately identified, measured, monitored, and controlled?

E.1. **Are deficiencies immaterial to the supervision of the trust department?** ***Refer to Expanded Analysis Procedures #1-41.***

E.2. **Are deficiencies immaterial to the bank's condition?** ***Refer to Expanded Analysis Procedures #1-41.***

TRUST

Expanded Analysis Procedures

Generally, procedures used in the Expanded Analysis should target concerns identified in the Core Analysis and Decision Factors. The flexible guidelines specified for the Core Analysis also apply to the Expanded Analysis.

Policies and Procedures

1. **Investigate why trust policy or procedure deficiencies identified in the Core Analysis exist. Discuss with management its response to examiner recommendations. Possible reasons for policy deficiencies may include the following:**
   - **Management overlooked these issues.**
   - **Management is unfamiliar with prudent trust guidelines and procedures.**
   - **Management is unwilling to create or enhance policies and procedures.**

2. **If poor compliance with policies and procedures exists, determine the reasons. Consider the following:**
   - **Poor internal communication of policy and procedures or subsequent revisions.**
   - **Lack of awareness of policy existence.**
   - **Disregard for established policies.**
   - **Misunderstanding of policy and procedures.**

Internal Controls

3. **Determine if management commits to and supports proper controls and monitors to ensure policy and procedures are followed in the future. Determine whether proposed controls, if any, are reasonable.**

4. **Determine whether all potential losses resulting from internal control or operational deficiencies have been identified and appropriately recognized.**

PROTECTING AND CONTROLLING ASSETS

5. **Perform a full or partial verification of assets held in the vault.**

6. **Perform a full or partial verification of assets held by third party custodians.**

7. Determine that securities held by brokers are properly titled in the name of the institution as fiduciary or its nominee name.

8. Determine that unissued trust checks are in sequential order and properly controlled.

9. Review a sample of issued trust checks for signature controls.

10. Review a sample of daylight overdrafts for evidence of customer free-riding activity.

11. Review a sample of worthless assets for appropriate documentation.

CONTROL ENVIRONMENT

12. Trace a sample of transactions from origination through posting.

13. Observe the in-house securities trading process to ensure that appropriate controls are in place.

14. Verify the accuracy of Consolidated Reports of Condition and Income Schedule RC-T.

15. Review proxy-voting records to determine if procedures are consistently applied.

RECONCILIATION

16. Reconcile subsidiary control and suspense accounts that are out of balance or have not been reconciled on a timely basis.

17. Reconcile bank, securities depository or brokerage accounts that are out of balance or have not been reconciled on a timely basis.

18. Research significant outstanding suspense items and evaluate the institution's follow-up procedures.

19. Review significant outstanding trust checks and evaluate the institution's follow-up procedures.

Audit or Independent Review

20. Determine why examination deficiencies have not been identified through the institution's audit program.

21. Determine why management has failed to take action to address audit deficiencies.

22. Contact the external auditor and determine if external audit work papers should be reviewed.

Information and Communication Systems

23. Determine whether lack of information, inaccurate information, or faulty communication processes compromise risk management activities or the effective implementation of strategic initiatives.

Earnings

24. Evaluate the effect of operating losses on the bank's earnings, capital, and liquidity.

25. Evaluate the viability of any plans to improve earnings.

26. Estimate the department's earnings if trust income and expenses are not adequately measured.
27. Evaluate methods for allocating indirect income and expenses or management's reasons for electing not to allocate such items.
28. Evaluate the effect of fee schedules and any discounts, fee waivers or uncollected fees on earnings.
29. Evaluate the reasonableness of salaries and other operating expenses.
Compliance
30. Assign and evaluate the materiality of any contingent liabilities, potential losses or estimated losses identified during the examination.
31. Expand the sample of accounts reviewed or transaction testing to evaluate the extent and severity of identified deficiencies or areas where additional analysis is necessary.
32. Determine the extent and severity of actual and potential conflicts of interest and self dealing.
33. Determine whether self-dealing issues in employee benefit plans and charitable foundations are subject to excise taxes under the Internal Revenue Code.
34. Sample written directives for holding own bank or parent holding company stock.
35. Obtain information regarding officers and directors and their outside interests and compare against a list of fiduciary assets.

36. Review soft dollar contracts and documentation to determine compliance with the safe harbor provisions of Securities and Exchange Commission Section 28(e).

37. Review reports of personal securities transactions (FDIC: Part 344; FRB: 12CFR 208.34) for noncompliance with the institution's ethics policies or other insider abuse.

Asset Management

38. Assess the reasonableness of assumptions used in securities evaluation models.

39. Determine if management uses consistent and reasonable methods for reporting investment performance.

40. Review trading account records for churning or excessive trading.

Board and Senior Management Oversight

41. Review incentive-based compensation programs to determine that they do not promote the assumption of excessive risk.

End of Expanded Analysis. If needed, Continue to **Impact Analysis.**

TRUST

Impact Analysis Procedures

Impact Analysis reviews the impact that deficiencies identified in the Core and Expanded Analysis and Decision Factors have on the bank's overall condition, and directs the examiner to consider possible supervisory options.

Impact Analysis Procedures
1. Determine if management has the ability and willingness to correct deficiencies.
2. Assess the impact of contingent liabilities, potential losses, and estimated losses on the institution's capital and earnings.
3. Determine the effect that reputation, operational, strategic, compliance, legal, financial and other risk exposures have on the institution's safety and soundness.
4. Determine whether any significant violations of the Employee Retirement Income Security Act should be referred to the Department of Labor. The interagency referral agreement states that the following violations will be considered significant: • **Violations of Sections 404 and 405 involving $100,000 or more;** • **Violations of Sections 406 or Section 407 involving prohibited transactions, except where the harm to the beneficiaries is minimal;** • **Violations of Section 411, relating to prohibition against certain persons holding certain positions;** • **Violations of Section 412, relating to bonding requirements for the institution itself.**
5. Consider whether informal or formal enforcement action regarding fiduciary activities is warranted, such as a board resolution, a Memorandum of Understanding, a Cease and Desist Order, or a removal action. Advise the appropriate supervisory officials.
6. Consider recommendations for Civil Money Penalties and prepare formal recommendations, as appropriate. (Refer to the guidance in the Management and Internal Control Evaluation module.)
7. Notify the appropriate bank regulatory officials of suspected activities and actions taken relating to Suspicious Activity Reports. (Refer to the guidance in the Management and Internal Control

Evaluation module.)
End of Impact Analysis.

FINANCIAL SERVICES COMMISSION
OFFICE OF FINANCIAL REGULATION
AGENDA ITEM # 5: REQUEST APPROVAL TO PUBLISH NOTICE OF PROPOSED RULE

Action Requested

The Office of Financial Regulation ("OFR") requests approval to publish a Notice of Proposed Rule regarding Rules 69U-120.001, 69U-120.003, 69U-120.004, 69U-120.005, 69U-120.045, 69U-120.330, and 69U-120.670, Florida Administrative Code ("F.A.C."), pertaining to banks, trust companies, and associations.

Summary and Justification of Rules

Rule 69U-120.001, F.A.C.: The OFR proposes to amend Rule 69U-120.001, F.A.C., to delete language that duplicates section 658.16, Florida Statutes ("F.S."), regarding good faith reliance on a rule or order of the OFR.

Rule 69U-120.003, F.A.C.: The OFR proposes to amend Rule 69U-120.003, F.A.C., to remove language that is ambiguous or lacking in delegated authority regarding "foreseeably detrimental" stock option plans, director liability for certain losses, and direct stock bonuses.

Rule 69U-120.004, F.A.C.: The OFR proposes to amend Rule 69U-120.004, F.A.C., to replace a vague and ambiguous term ("appropriate") with clear, definite language.

Rule 69U-120.005, F.A.C.: The OFR proposes to amend Rule 69U-120.005, F.A.C., to update a citation in the introductory paragraph.

Rule 69U-120.045, F.A.C.: The OFR proposes to amend Rule 69U-120.045, F.A.C., to delete a reference to an outdated guidebook on auditing standards.

Rule 69U-120.330, F.A.C.: The OFR proposes new Rule 69U-120.330, F.A.C., to implement section 658.33, F.S., by incorporating by reference two new proposed forms. Proposed form OFR-U-658-List, List of Directors and Officers, will be used by banks and trust companies to submit the list of officers and directors elected during the annual shareholder's meeting as required by section 658.33(3), F.S. Proposed form OFR-U-658-Oath is the director's oath required pursuant to section 658.33(4), F.S.

Rule 69U-120.670, F.A.C.: The OFR proposes to amend Rule 69U-120.670, F.A.C., to: delete subsection (1), which duplicates statutory language in section 658.67(11), F.S.; delete the definition of "exposure" as a result of the deletion of the portion of the rule that references that term; and update material incorporated by reference (the federal rule on the 20 percent risk weight category in 12 C.F.R. § 324.32(d)(2) applicable to investments in foreign bank deposits).

Proposed Text of Rules

69U-120.001 List of Stockholders.

~~(1)~~ Within 2 calendar weeks of any demand therefor made by the Office of Financial Regulation (OFR), a state bank or trust company shall file with OFR a list containing the name of each stockholder of the bank or trust company together with the number of shares held by each according to its records as of the close of business on a date specified by OFR.

~~(2) Action in compliance with any such demand by OFR shall be deemed action in good faith in reliance upon a subsisting order or regulation by OFR and in reliance upon section 655.016, F.S.~~

Rulemaking Authority 655.012(2)~~(3)~~ FS. Law Implemented 655.057(8) ~~655.012~~ FS. History–New 7-31-75, Amended 6-30-81, Formerly 3C-11.15, 3C-11.015, 3C-120.001, Amended ______.

69U-120.003 Stock Options; Requirements for OFR Approval; Stock Bonuses Prohibited.

(1)-(2) no change

(3) ~~Any plan which is detrimental or which may be foreseeably detrimental to the bank, its depositors or creditors or which is contrary to safe and sound banking practices may not be approved.~~ OFR shall ~~may~~ not approve any stock option plan where:

(a) no change

(b) The number of shares subject to the plan is unreasonable in relation to the bank's capital structure and anticipated growth; or

(c) no change

(4) The option shall ~~may~~ not be assignable by the optionee, except that the personal representative or legal guardian of the optionee's estate may have a reasonable time to exercise such option.

(5) The plan or agreement shall not permit ~~board of directors of the bank may be liable to reimburse the bank for any loss sustained by reason of~~ the grant of an option at less than par value or fair market value where such grant would result in a loss to the bank.

~~(6) The Florida Financial Institutions Code does not authorize stock bonuses; accordingly, direct stock bonuses will not be permitted.~~

Rulemaking Authority 655.012(2)~~(3)~~ FS. Law Implemented 658.34, 658.35 FS. History–New 2-13-77, Amended 6-30-81, Formerly 3C-11.16, 3C-11.016, Amended 10-29-97, Formerly 3C-120.003, Amended ______.

69U-120.004 Loans Secured by Secondary Liens on Real Estate.

For computation of total loans to any one borrower, loans secured by secondary liens will be considered unsecured unless the following criteria are met:

(1) no change

(2) The state bank shall maintain records ~~Appropriate records shall be maintained~~ to fully establish the bank's equity in the ~~their~~ mortgage at the time the loan is made.

(3)-(4) no change

Rulemaking Authority 655.012(2) FS. Law Implemented 658.48 FS. ~~(See also 12 U.S.C. 371)~~ History–New 6-13-77, Amended 4-23-78, 6-30-81, Formerly 3C-11.17, 3C-11.017, 3C-120.004, Amended 10-29-12,______.

69U-120.005 Lease Financing; Purchase of Leases.

State banks may purchase leases (in addition to those leases where the bank is the owner and lessor) covering specified goods as defined in section 679.1021(1)(rr), ~~679.105(1)(h),~~ F.S., except the unborn young of animals and growing crops, with or without recourse or guarantee by the lessor, subject to the following conditions:

(1)-(3) no change

Rulemaking Authority 655.012(2)~~(3)~~ FS. Law Implemented ~~658.48,~~ 658.67(8) FS. History–New 9-26-78, Amended 6-30-81, Formerly 3C-11.19, 3C-11.019, 3C-120.005, Amended ______.

69U-120.045 Minimum Internal Audit Procedures.

(1)-(3) no change

(4) To satisfy the requirements of this section, each internal audit shall:

(a) Assess the effectiveness of the financial institution's internal control policies and procedures, including the electronic data processing function; and~~,~~

(b) ~~Be conducted in accordance with generally accepted auditing principles as set forth in the 1996 GAAS Guide and~~ S~~s~~hall include an assessment of each of the following areas:

(b)1.-5. no change

(5)-(7) no change

Rulemaking Authority 655.012(2)~~(3)~~ FS. Law Implemented ~~655.012(3),~~ 655.045 FS. History–New 7-18-74, Amended 1-5-77, 6-30-81, Formerly 3-1.13, 3C-11.13, 3C-11.013, Amended 1-31-96, Formerly 3C-120.045, Amended _____.

69U-120.330 List of Directors and Officers; Director's Oath.

(1) Within 30 days following the annual meeting or any other meeting at which directors or officers are elected as provided in section 658.33(3), F.S., each bank or trust company must file with OFR the names and residence addresses of those persons on Form OFR-U-658-List, List of Directors and Officers (effective __/____), incorporated herein by reference and available at http://www.flrules.org/Gateway/reference.asp?No=Ref-XXXXX.

(2) The signed copy of the director's oath required by section 658.33(4), F.S., shall be completed on Form OFR-U-658-Oath, Director's Oath (effective __/_____), incorporated herein by reference and available at http://www.flrules.org/Gateway/reference.asp?No=Ref-XXXXX, and filed with OFR within 30 days after election.

(3) Forms shall be filed with OFR by mail or email as follows:

69U-120.670 Investments/Deposits in Foreign Banks.

~~(1) Sections 658.67(11) and 665.013(34), F.S., provides that the Financial Services Commission may, by rule, approve additional investments for banks, trust companies, or associations.~~

(1)~~(2)~~ As used in this rule, "foreign bank" ~~section, the following definitions shall apply:~~

~~(a) "Foreign bank"~~ means a person organized under the laws of a foreign country, or of a dependency or insular possession of the United States or a foreign country, which is principally engaged in the business of a commercial bank; recognized as a bank by the appropriate supervisory or monetary authorities of the country of its organization or principal banking operations; receives deposits to a substantial extent in the regular course of business; and has the power to accept demand deposits.

~~(b) "Exposure" means the potential that an obligation will not be paid timely or in full. Exposure includes credit and liquidity risks, including operational risks, related to intraday and interday transactions. It also includes the same credit risks and country risks as an extension of credit.~~

(2)~~(3)~~ State-chartered banks, trust companies, and associations may invest in foreign bank deposits, both demand and time, of the 20 percent risk weight category, as provided in 12 C.F.R. § 324.32(d)(2) (Apr. 13, 2020), which is adopted and incorporated herein by reference and available at http://www.flrules.org/Gateway/reference.asp?No=Ref-XXXXX, ~~Category 2-20% Risk Weight, as defined in the FDIC Rules and Regulations, Part 325, Appendix A, Procedure For Computing Risk-Weighted Assets (effective 1-27-94),~~ up to an aggregate of 25 percent ~~%~~ of the capital of the investing bank, trust company, or association in all foreign banks within a foreign country.

(3)~~(4)~~ The board of directors of each bank, trust company, or association shall adopt standards and policies for the investment of funds in foreign bank deposits. Such standards and policies shall be reviewed and approved at least annually by the board of directors with the approval recorded in the minutes of the meetings of the board of directors.

(4)~~(5)~~ At a minimum, the standards and policies shall include:

(a)-(b) no change

(c) An aggregate limitation on the currency of deposit; and~~,~~

(d) no change

~~(6) The board of directors shall assure itself that adequate procedures have been implemented to comply with its policy on foreign bank deposits and safeguard the bank, trust company or association against undue exposure.~~

Rulemaking Authority ~~120.53(1)(b),~~ 655.012(2)~~(3)~~ FS. Law Implemented 658.67(11), 665.013(32)~~(34)~~ FS. History–New 11-14-94, Formerly 3C-120.670, Amended ______.

(b) Total risk-weighted assets for general credit risk equals the sum of the risk-weighted asset amounts calculated under this section.

[Codified to 12 C.F.R. § 324.31]

§ 324.32 General risk weights.

(a) *Sovereign exposures*--(1) *Exposures to the U.S. government*. (i) Notwithstanding any other requirement in this subpart, an FDIC-supervised institution must assign a zero percent risk weight to:

(A) An exposure to the U.S. government, its central bank, or a U.S. government agency; and

(B) The portion of an exposure that is directly and unconditionally guaranteed by the U.S. government, its central bank, or a U.S. government agency. This includes a deposit or other exposure, or the portion of a deposit or other exposure, that is insured or otherwise unconditionally guaranteed by the FDIC or National Credit Union Administration.

(ii) An FDIC-supervised institution must assign a 20 percent risk weight to the portion of an exposure that is conditionally guaranteed by the U.S. government, its central bank, or a U.S. government agency. This includes an exposure, or the portion of an exposure, that is conditionally guaranteed by the FDIC or National Credit Union Administration.

(iii) An FDIC-supervised institution must assign a zero percent risk weight to a Paycheck Protection Program covered loan as defined in section 7(a)(36) of the Small Business Act (15 U.S.C. 636(a)(36)).

(2) *Other sovereign exposures*. In accordance with Table 1 to § 324.32, an FDIC-supervised institution must assign a risk weight to a sovereign exposure based on the CRC applicable to the sovereign or the sovereign's OECD membership status if there is no CRC applicable to the sovereign.

TABLE 1 TO § 324.32—RISK WEIGHTS FOR SOVEREIGN EXPOSURES

		Risk Weight (in percent)
CRC	0--1	0
	2	20
	3	50
	4--6	100
	7	150
OECD Member with No CRC		0
Non-OECD Member with No CRC		100
Sovereign Default		150

(3) *Certain sovereign exposures*. Notwithstanding paragraph (a)(2) of this section, an FDIC-supervised institution may assign to a sovereign exposure a risk weight that is lower than the applicable risk weight in Table 1 to § 324.32 if:

(i) The exposure is denominated in the sovereign's currency;

(ii) The FDIC-supervised institution has at least an equivalent amount of liabilities in that currency; and

(iii) The risk weight is not lower than the risk weight that the home country supervisor allows FDIC-supervised institutions under its jurisdiction to assign to the same exposures to the sovereign.

(4) *Exposures to a non-OECD member sovereign with no CRC*. Except as provided in paragraphs (a)(3), (a)(5) and (a)(6) of this section, an FDIC-supervised institution must assign a 100 percent risk weight to an exposure to a sovereign if the sovereign does not have a CRC.

(5) *Exposures to an OECD member sovereign with no CRC*. Except as provided in paragraph (a)(6) of this section, an FDIC-supervised institution must assign a 0 percent risk weight to an exposure to a sovereign that is a member of the OECD if the sovereign does not have a CRC.

(6) *Sovereign default*. An FDIC-supervised institution must assign a 150 percent risk weight to a sovereign exposure immediately upon determining that an event of sovereign default has occurred, or if an event of sovereign default has occurred during the previous five years.

(b) *Certain supranational entities and multilateral development banks (MDBs).* An FDIC-supervised institution must assign a zero percent risk weight to an exposure to the Bank for International Settlements, the European Central Bank, the European Commission, the International Monetary Fund, the European Stability Mechanism, the European Financial Stability Facility, or an MDB.

(c) *Exposures to GSEs*. (1) An FDIC-supervised institution must assign a 20 percent risk weight to an exposure to a GSE other than an equity exposure or preferred stock.

(2) An FDIC-supervised institution must assign a 100 percent risk weight to preferred stock issued by a GSE.

(d) *Exposures to depository institutions, foreign banks, and credit unions*--(1) *Exposures to U.S. depository institutions and credit unions*. An FDIC-supervised institution must assign a 20 percent risk weight to an exposure to a depository institution or credit union that is organized under the laws of the United States or any state thereof, except as otherwise provided under paragraph (d)(3) of this section.

(2) *Exposures to foreign banks.*

(i) Except as otherwise provided under paragraphs (d)(2)(iii), (d)(2)(v), and (d)(3) of this section, an FDIC--supervised institution must assign a risk weight to an exposure to a foreign bank, in accordance with Table 2 to § 324.32, based on the CRC that corresponds to the foreign bank's home country or the OECD membership status of the foreign bank's home country if there is no CRC applicable to the foreign bank's home country.

Table 2 TO § 324.32—RISK WEIGHTS FOR EXPOSURES TO FOREIGN BANKS

		Risk Weight (in percent)
CRC:	0--1	20
	2	50
	3	100
	4--7	150
OECD Member with No CRC		20
Non-OECD Member with No CRC		100
Sovereign Default		150

(ii) An FDIC--supervised institution must assign a 20 percent risk weight to an exposure to a foreign bank whose home country is a member of the OECD and does not have a CRC.

(iii) An FDIC--supervised institution must assign a 20 percent risk-weight to an exposure that is a self-liquidating, trade-related contingent item that arises from the movement of goods and that has a maturity of three months or less to a foreign bank whose home country has a CRC of 0, 1, 2, or 3, or is an OECD member with no CRC.

(iv) An FDIC--supervised institution must assign a 100 percent risk weight to an exposure to a foreign bank whose home country is not a member of the OECD and does not have a CRC, with the exception of self-liquidating, trade-related contingent items that arise from the movement of goods, and that have a maturity of three months or less, which may be assigned a 20 percent risk weight.

(v) An FDIC--supervised institution must assign a 150 percent risk weight to an exposure to a foreign bank immediately upon determining that an event of sovereign default has occurred in the bank's home country, or if an event of sovereign default has occurred in the foreign bank's home country during the previous five years.

(3) An FDIC-supervised institution must assign a 100 percent risk weight to an exposure to a financial institution if the exposure may be included in that financial institution's capital unless the exposure is:

(i) An equity exposure;

(ii) A significant investment in the capital of an unconsolidated financial institution in the form of common stock pursuant to § 324.22(d)(2)(i)(c);

(iii) Deducted from regulatory capital under § 324.22; or

(iv) Subject to a 150 percent risk weight under paragraph (d)(2)(iv) or Table 2 of paragraph (d)(2) of this section.

(e) *Exposures to public sector entities (PSEs)*--(1) *Exposures to U.S. PSEs*. (i) An FDIC-supervised institution must assign a 20 percent risk weight to a general obligation exposure to a PSE that is organized under the laws of the United States or any state or political subdivision thereof.

(ii) An FDIC-supervised institution must assign a 50 percent risk weight to a revenue obligation exposure to a PSE that is organized under the laws of the United States or any state or political subdivision thereof.

(2) *Exposures to foreign PSEs*. (i) Except as provided in paragraphs (e)(1) and (e)(3) of this section, an FDIC-supervised institution must assign a risk weight to a general obligation exposure to a PSE, in accordance with Table 3 to § 324.32, based on the CRC that corresponds to the PSE's home country or the OECD membership status of the PSE's home country if there is no CRC applicable to the PSE's home country.

(ii) Except as provided in paragraphs (e)(1) and (e)(3) of this section, an FDIC-supervised institution must assign a risk weight to a revenue obligation exposure to a PSE, in accordance with Table 4 to § 324.32, based on the CRC that corresponds to the PSE's home country; or the OECD membership status of the PSE's home country if there is no CRC applicable to the PSE's home country.

(3) An FDIC-supervised institution may assign a lower risk weight than would otherwise apply under Tables 3 or 4 to § 324.32 to an exposure to a foreign PSE if:

(i) The PSE's home country supervisor allows banks under its jurisdiction to assign a lower risk weight to such exposures; and

(ii) The risk weight is not lower than the risk weight that corresponds to the PSE's home country in accordance with Table 1 to § 324.32.

TABLE 3 TO § 324.32—RISK WEIGHTS FOR NON-U.S. PSE GENERAL OBLIGATIONS

		Risk Weight (in percent)
CRC	0--1	20
	2	50
	3	100
	4--7	150
OECD Member with No CRC		20
Non-OECD Member with No CRC		100
Sovereign Default		150

TABLE 4 TO § 324.32—RISK WEIGHTS FOR NON-U.S. PSE REVENUE OBLIGATIONS

		Risk Weight (in percent)
CRC	0--1	50
	2--3	50
	4--7	150
OECD Member with No CRC		50
Non-OECD Member with No CRC		100
Sovereign Default		150

(4) *Exposures to PSEs from an OECD member sovereign with no CRC*. (i) An FDIC-supervised institution must assign a 20 percent risk weight to a general obligation exposure to a PSE whose home country is an OECD member sovereign with no CRC.

(ii) An FDIC-supervised institution must assign a 50 percent risk weight to a revenue obligation exposure to a PSE whose home country is an OECD member sovereign with no CRC.

(5) *Exposures to PSEs whose home country is not an OECD member sovereign with no CRC*. An FDIC-supervised institution must assign a 100 percent risk weight to an exposure to a PSE whose home country is not a member of the OECD and does not have a CRC.

(6) An FDIC-supervised institution must assign a 150 percent risk weight to a PSE exposure immediately upon determining that an event of sovereign default has occurred in a PSE's home country or if an event of sovereign default has occurred in the PSE's home country during the previous five years.

(f) *Corporate exposures.*

(1) A FDIC-supervised institution must assign a 100 percent risk weight to all its corporate exposures, except as provided in paragraph (f)(2) of this section.

(2) A FDIC-supervised institution must assign a 2 percent risk weight to an exposure to a QCCP arising from the FDIC-supervised institution posting cash collateral to the QCCP in connection with a cleared transaction that meets the requirements of § 324.35(b)(3)(i)(A) and a 4 percent risk weight to an exposure to a QCCP arising from the FDIC-supervised institution posting cash collateral to the QCCP in connection with a cleared transaction that meets the requirements of § 324.35(b)(3)(i)(B).

(3) A FDIC-supervised institution must assign a 2 percent risk weight to an exposure to a QCCP arising from the FDIC-supervised institution posting cash collateral to the QCCP in connection with a cleared transaction that meets the requirements of § 324.35(c)(3)(i).

(g) *Residential mortgage exposures*. (1) An FDIC-supervised institution must assign a 50 percent risk weight to a first-lien residential mortgage exposure that:

(i) Is secured by a property that is either owner-occupied or rented;

(ii) Is made in accordance with prudent underwriting standards, including standards relating to the loan amount as a percent of the appraised value of the property;

(iii) Is not 90 days or more past due or carried in nonaccrual status; and

(iv) Is not restructured or modified.

(2) An FDIC-supervised institution must assign a 100 percent risk weight to a first-lien residential mortgage exposure that does not meet the criteria in paragraph (g)(1) of this section, and to junior-lien residential mortgage exposures.

(3) For the purpose of this paragraph (g), if an FDIC-supervised institution holds the first-lien and junior-lien(s) residential mortgage exposures, and no other party holds an intervening lien, the FDIC-supervised institution must combine the exposures and treat them as a single first-lien residential mortgage exposure.

(4) A loan modified or restructured solely pursuant to the U.S. Treasury's Home Affordable Mortgage Program is not modified or restructured for purposes of this section.

(h) *Pre-sold construction loans*. An FDIC-supervised institution must assign a 50 percent risk weight to a pre-sold construction loan unless the purchase contract is cancelled, in which case an FDIC-supervised institution must assign a 100 percent risk weight.

(i) *Statutory multifamily mortgages.* An FDIC-supervised institution must assign a 50 percent risk weight to a statutory multifamily mortgage.

(j) *High-volatility commercial real estate (HVCRE) exposures*. An FDIC-supervised institution must assign a 150 percent risk weight to an HVCRE exposure.

(k) *Past due exposures.* Except for an exposure to a sovereign entity or a residential mortgage exposure or a policy loan, if an exposure is 90 days or more past due or on nonaccrual:

(1) An FDIC-supervised institution must assign a 150 percent risk weight to the portion of the exposure that is not guaranteed or that is unsecured;

(2) An FDIC-supervised institution may assign a risk weight to the guaranteed portion of a past due exposure based on the risk weight that applies under § 324.36 if the guarantee or credit derivative meets the requirements of that section; and

(3) An FDIC-supervised institution may assign a risk weight to the collateralized portion of a past due exposure based on the risk weight that applies under § 324.37 if the collateral meets the requirements of that section.

(l) *Other assets.*

(1) An FDIC-supervised institution must assign a zero percent risk weight to cash owned and held in all offices of the FDIC-supervised institution or in transit; to gold bullion held in the FDIC-supervised institution's own vaults or held in another depository institution's vaults on an allocated basis, to the extent the gold bullion assets are offset by gold bullion liabilities; and to exposures that arise from the settlement of cash transactions (such as equities, fixed income, spot foreign exchange and spot commodities) with a central counterparty where there is no assumption of ongoing counterparty credit risk by the central counterparty after settlement of the trade and associated default fund contributions.

(2) An FDIC-supervised institution must assign a 20 percent risk weight to cash items in the process of collection.

(3) An FDIC-supervised institution must assign a 100 percent risk weight to DTAs arising from temporary differences that the FDIC--supervised institution could realize through net operating loss carrybacks.

(4) An FDIC-supervised institution must assign a 250 percent risk weight to the portion of each of the following items to the extent it is not deducted from common equity tier 1 capital pursuant to § 324.22(d):

(i) MSAs; and

(ii) DTAs arising from temporary differences that the FDIC-supervised institution could not realize through net operating loss carrybacks.

(5) An FDIC-supervised institution must assign a 100 percent risk weight to all assets not specifically assigned a different risk weight under this subpart and that are not deducted from tier 1 or tier 2 capital pursuant to § 324.22.

(6) Notwithstanding the requirements of this section, an FDIC-supervised institution may assign an asset that is not included in one of the categories provided in this section to the risk weight category applicable under the capital rules applicable to bank holding companies and savings and loan holding companies under 12 CFR part 217, provided that all of the following conditions apply:

(i) The FDIC-supervised institution is not authorized to hold the asset under applicable law other than debt previously contracted or similar authority; and

(ii) The risks associated with the asset are substantially similar to the risks of assets that are otherwise assigned to a risk weight category of less than 100 percent under this subpart.

[Codified to 12 C.F.R. § 324.32]

[Section 324.32 amended at 79 Fed. Reg. 20760, April 14, 2014, Effective April 14, 2014, mandatory compliance date: January 1, 2014, for advanced approaches FDIC-supervised institutions, January 1, 2015 for all other FDIC-supervised institutions; 84 Fed. Reg. 35275, July 22, 2019; 85 Fed. Reg. 4431, January 24, 2020, 85 Fed. Reg. 20394, April 13, 2020]

§ 324.33 Off-balance sheet exposures.

(a) *General*. (1) An FDIC-supervised institution must calculate the exposure amount of an off-balance sheet exposure using the credit conversion factors (CCFs) in paragraph (b) of this section.

(2) Where an FDIC-supervised institution commits to provide a commitment, the FDIC-supervised institution may apply the lower of the two applicable CCFs.

(3) Where an FDIC-supervised institution provides a commitment structured as a syndication or participation, the FDIC-supervised institution is only required to calculate the exposure amount for its pro rata share of the commitment.
